Preface

MY purpose is to record and contemplate the origin, growth, maturity, and decline of Greek civilization from the oldest remains of Crete and Troy to the conquest of Greece by Rome. I wish to see and feel this complex culture not only in the subtle and impersonal rhythm of its rise and fall, but in the rich variety of its vital elements: its ways of drawing a living from the land, and of organizing industry and trade; its experiments with monarchy, aristocracy, democracy, dictatorship, and revolution; its manners and morals, its religious practices and beliefs; its education of children, and its regulation of the sexes and the family; its homes and temples, markets and theaters and athletic fields, its poetry and drama, its painting, sculpture, architecture, and music; its sciences and inventions, its superstitions and philosophies. I wish to see and feel these elements not in their theoretical and scholastic isolation, but in their living interplay as the simultaneous movements of one great cultural organism, with a hundred organs and a

hundred million cells, but with one body and one soul.

Excepting machinery, there is hardly anything secular in our culture that does not come from Greece. Schools, gymnasiums, arithmetic, geometry, history, rhetoric, physics, biology, anatomy, hygiene, therapy, cosmetics, poetry, music, tragedy, comedy, philosophy, theology, agnosticism, skepticism, stoicism, epicureanism, ethics, politics, idealism, philanthropy, cynicism, tyranny, plutocracy, democracy: these are all Greek words for cultural forms seldom originated, but in many cases first matured for good or evil by the abounding energy of the Greeks. All the problems that disturb us today-the cutting down of forests and the erosion of the soil; the emancipation of woman and the limitation of the family; the conservatism of the established, and the experimentalism of the unplaced, in morals, music, and government; the corruptions of politics and the perversions of conduct; the conflict of religion and science, and the weakening of the supernatural supports of morality; the war of the classes, the nations, and the continents; the revolutions of the poor against the economically powerful rich, and of the rich against the politically powerful poor; the struggle between democracy and dictatorship, between individualism and communism, between the East and the West-all these agitated, as if for our instruction, the brilliant and

turbulent life of ancient Hellas. There is nothing in Greek civilization that does not illuminate our own.

We shall try to see the life of Greece both in the mutual interplay of its cultural elements, and in the immense five-act drama of its rise and fall. We shall begin with Crete and its larely resurrected civilization, because apparently from Crete, as well as from Asia, came that prehistoric culture of Mycenae and Tiryns which slowly transformed the immigrating Achaeans and the invading Dorians into civilized Greeks; and we shall study for a moment the virile world of warriors and lovers, pirates and troubadours, that has come down to us on the rushing river of Homer's verse. We shall watch the rise of Sparta and Athens under Lycurgus and Solon, and shall trace the colonizing spread of the fertile Greeks through all the isles of the Aegean, the coasts of Western Asia and the Black Sea, of Africa and Italy, Sicily, France, and Spain. We shall see democracy fighting for its life at Marathon, stimulated by its victory, organizing itself under Pericles, and flowering into the richest culture in history; we shall linger with pleasure over the spectacle of the human mind liberating itself from superstition, creating new sciences, rationalizing medicine, secularizing history, and reaching unprecedented peaks in poetry and drama, philosophy, oratory, history, and art; and we shall record with melancholy the suicidal end of the Golden Age in the Peloponnesian War. We shall contemplate the gallant effort of disordered Athens to recover from the blow of her defeat; even her decline will be illustrious with the genius of Plato and Aristotle, Apelles and Praxiteles, Philip and Demosthenes, Diogenes and Alexander. Then, in the wake of Alexander's generals, we shall see Greek civilization, too powerful for its little peninsula, bursting its narrow bounds, and overflowing again into Asia, Africa, and Italy; teaching the cult of the body and the intellect to the mystical Orient, reviving the glories of Egypt in Ptolemaic Alexandria, and enriching Rhodes with trade and art; developing geometry with Euclid at Alexandria and Archimedes at Syracuse; formulating in Zeno and Epicurus the most lasting philosophies in history, carving the Aphrodite of Melos, the Laocoon, the Victory of Samothrace, and the Altar of Pergamum; striving and failing to organize its politics into honesty, unity, and peace; sinking ever deeper into the chaos of civil and class war; exhausted in soil and loins and spirit; surrendering to the autocracy, quietism, and mysticism of the Orient, and at last almost welcoming those conquering Romans through whom dying Greece would bequeath to Europe her sciences, her philosophies, her letters, and her arts as the living cultural basis of our modern world.

viii

Acknowledgments

I am grateful to Mr. Wallace Brockway for his scholarly help at every stage of this work, to Miss Mary Kaufman, Miss Ethe. Durant, and Mr. Louis Durant for aid in classifying the material; to Miss Regina Sands for her expert preparation of the manuscript, and to my wife for her patient encouragement and quiet inspiration.

I am deeply indebted to Sir Gilbert Murray and to his publishers, the Oxford University Press, for permission to quote from his translations of Greek drama. These translations have enriched

English literarure.

I am also indebted to the Oxford University Press for permission to quote from its excellent Oxford Book of Greek Verse in Translation.

W.D.

Notes

ON THE USE OF THIS BOOK

- t. This book, while forming the second part of the author's Story of Civilization, has been written as an independent unit, complete in itself. The next volume will probably appear in 1943 under the title of Caesar and Christ—a history of Roman civilization and of early Christianity.
- To bring the book into smaller compass, reduced type (like this) has been used for technical or recondite material. Indented passages in reduced type are quotations.
- 3. The rused numbers in the text refer to the Notes at the end of the voltime. Haruses in the numbering of the notes are due to last initiate curtailments.
- 4. The chronological table given at the beginning of each period is designed to free the text as far as possible from numer dates and royal trivialities. All dates are n.c. unless otherwise stated or evident.
- 5. The maps at the beginning and the end of the book show nearly all the places referred to in the text. I be glossary defines all unfamiliar foreign words used, except when these are explained where they occur. The starred titles in the library taphy may serve as a guide to further reading. The index pronounces ancient names, and gives dates of birth and death where known.
- 6 Greek words have been translaterated into our alphabet according to the rules formulated by the *Journal of Hellenic Studies*, certain inconsistencies in these rules must be forgiven as concessions to custom, e.g., Hieron, but Plato(n); Hippodamicia, but Alexandr(e)ia.
- 7. In pronouncing Greek words not established in English usage, a should be sounded as in father, a as in neigh, t as in machine, o as in hone, it is in futte, y are French u or German u, at and et like at in aule, ou as in route, o as in car, ob as in chorus, g as in go, 2 like dz in adze.

CHAPTER I

Crete

L. THE MEDITERRANEAN

AS we enter the fairest of all waters, leaving behind us the Atlantic and Gibraltar, we pass at once into the arena of Greek history. "Like frogs around a pond," said Plato, "we have serried down upon the shores of this sea." Even on these distant coasts the Greeks founded precarious, barbarian-bound colonies many centuries before Christ, at Hemeroscopmin and Ampurias in Spain, at Marse kes and Nice in France, and almost everywhere in southern Italy and Sichy, Greek colonists established prosperous towns at Cyrene in northern Africa, and at Naucratis in the delta of the Nile, their restless enterprise stirred the islands of the Aegean and the coasts of Asia Minor then as in our century, all along the Dardanelles and the Sea of Marmora and the Black Sea they built towns and emes for their farventuring trade, Mainland Greece was but a small part of the ancient Greek world.

Why was it that the second group of historic civilizations took form on the Mediterranean, as the first had grown up along the rivers of Egypt, Mesopotamia, and India, as the third would flourish on the Atlantic, and as the fourth may appear on the shores of the Pacific? Was it the better chimate of the lands washed by the Weilsterranean? There, then as now, winter rains nourished the earth, and moderate frosts stimulated men, there, almost all the year round, one might live an open-air life under a warm but not enervating sun. And yet the surface of the Mediterranean coasts and islands is nowhere so rich as the alluvial valleys of the Ganges, the Indus, the Figns, the I uphrates, or the Nile, the summer's drought may begin too soon or last too long, and everywhere a rocky basis lucks under the thin crust of the dusty earth. The temperate north and the tropic south are both more fertile than these historic lands where patient peasants, weary of coixing the soil, more and more abandoned talage to grow olives and the vine. And at any moment, along one or another of a hundred faults, earthquakes might split the ground beneath men's feet, and frighten them into a fitful piety. Chimate did not draw civilization to Greece, prohably it has never made a civilization anywhere.

What drew men into the Aegean was its islands. The islands were beautiful, even a worried mariner must have been moved by the changing colors of those shadowed hills that rose like temples out of the reflecting sea. Today there are few sights loveher on the globe, and sailing the Aegean, one begins to understand why the men who peopled those coasts and isles came to love them almost more than life, and, like Socrates, thought exile litterer than death. But further, the mariner was pleased to find that these island jewels were stream in all directions, and at such short intervals that his slap, whether going between east and west or between north and south, would never be more than forry miles from land. And since the islands, like the mainland ranges, were the mountaintops of a once continuous territory that had been gradually submerged by a pertinacious sea," some welcome peak always greeted the outlook's eye, and served as a beacon to ships that had as yet no compass to guide them. Again, the movements of wind and water consurred to help the sailor reach his goal. A strong central current flowed from the Black Sea into the Aegean, and countercurrents flowed northward along the coasts, while the northeasterly etesian winds blow regularly in the summer to help back to their southern ports the ships that had gone to fetch grain, fish, and furs from the Fuxine Sea. Fog was rare in the Mediterrancen, and the unfailing sunslane so varied the coastal winds that at almost any harbor, from spring to autumn, one might be carried out by a morning, and brought back by an evening, breeze.

In these propinous waters the acquisitive Phoenicians and the amphibious Greeks developed the art and science of navigation. Here they built sinps for the most part larger or faster, and yet more easily handled, than any that had yet sailed the Mediterranean. Slowly, despite pirates and harassing uncertainties, the water routes from Europe and Africa into Asia—through Cyprus, Sidon, and Tyre, or through the Aegean and the Black Sea—became cheaper than the long land routes, arduous and perilous, that had carried so much of the commerce of Egypt and the Near East. Trade took new lines, multiplied new populations, and created new wealth. Egypt, then Mesopotamia, then Persia withered, Phoenicia deposited an empire of caties along the African coast, in Sicily, and in Spain; and Greece blossomed like a watered rose.

^{*}The Greeks coiled the Mediterranean Ho Pantas the Passage or Road, and exphenistically termed the Black Sea Ho Pontos Enternos the Sea kindly to Guests—perhaps because it welcomed ships from the seath with accesse currents and wards. The broad rivers that fed it, and the frequent mixts that reduced its rate of evaporation, kept the Black Sea at a higher level than the Mediterranean, and caused a powerful current to rush through the narrow Bosperus (Ox ford) and the Hellespant into the Augests. The Sea of Marmora was the Propontial Before the Sea.

11. THE REDISCOVERY OF CRETE

"There is a land called Crete, in the midst of the wine-dark sea, a fair, rich land, begirt with water, and therein are many men past counting, and mnety enties." When Homer sang these lines, perhaps in the minth century before our era, Greece had almost forgotten, though the poer had not, that the island whose wealth seemed to him even then so great had once been wealthier still, that it had held sway with a powerful fleet over most of the Aegean and part of mainland Greece, and that it had developed, a rhousand years before the siege of Troy, one of the most artistic civilizations in history. Probably it was this Aegean culture—as ancient to him as he is to us—that Homer recalled when he spoke of a Golden Age in which men had been more civilized, and life more refined, that in his own disordered time.

The rediscovery of that lost civilization is one of the major nehievements of modern archeology. Here was an island twenty times larger than the largest of the Cyclides, pleasant in climate varied in the products of its fields and once richly we oded hals, and strategically placed, for trade or war, mislway between Phoenicia and Italy, between Egypt and Greece, Aristorle had pointed out how excellent this situation was, and how "it had enabled Minos to acquire the en pire of the Acgean " But the story of Minos, accepted as fact by all classical writers, was rejected as legend by modern scholars, and until sixty years ago it was the custom to suppose, with Grote, that the history of civilization in the Aegean had begun with the Dorian invasion, or the Olympic games. Then in A.D. 1878 a Cretan inerchant, appropriately named Minos Kalokatrinos, uncarthed some strange antiquines on a halside south of Candia. The great Schliemann, who had but larely resurrected Mycenae and I roy, visited the sire in 1866, announced his conviction that it covered the remains of the ancient Chossus, and opened negotiations with the owner of the lond so that excavations might begin at once. But the owner baggled and tried to cheat, and Schliemann, who had been a merchant before becoming an archeologist, withdrew in anger, losing a g. lden chance to add another en dization to history. A few years later he died."

In 1893 a British archeologist, Dr. Arthur Fvans, bought in Athens a number of milkstones from Greek women who had worn them as amulets. He was curious about the hieroglyphics engraved upon them, which no scholar could read. Tracing the stones to Grete, he secured passage thither,

^{*} All dates in this volume are i.e. unless otherwise started or obviously A.D.

[†] The modern capital, now officially renance Heracleans.

and wandered about the island picking up examples of what he believed to be ancient Cretan writing. In 1895 he purchased a part, and in 1900 the remainder, of the site that Schliemann and the French School at Athens had identified with Chossus, and in mine weeks of that spring, digging fevershly with one hundred and fifty men, he exhumed the richest treasure of modern historical research—the palace of Minos. Nothing yet known from antiquity could equal the vasiness of this complicated structure, to all appearances identical with the almost endless Labyrinth so famous in old Greek tales of Minos, Daedalus, Theseus, Ariadne, and the Minotaur. In these and other ruins, as if to confirm Evans' intuition, thousands of seals and clay tablets were found, bearing characters like those that had set him upon the trail. The fires that had destroyed the palaces of Chossus had preserved these tablets, whose undeciphered pictographs and scripts still conceal the early story of the Aegean.*

Students from many countries now hurned to Crete While Evans was working at Chossus, a grot p of resolute Italians—Halbhett, Permer, Savignoni, Paribent—intearthed at Hagia Triada (Hory Trimity) a sareophagus painted with illuminating scenes from Cretan life, and uncovered at Phaestus a palace only less extensive than that of the Chossus kings. Meanwhile two Americans, Seager and Mrs. Hawes, made discoveries at Vasible, Mochlos, and Goarma, the British Hogarth, Bosanquet, Dawkins, Myres—explored Palaikastro, Psychro, and Zakro, the Cretans themselves became interested, and Xanthoudidis and Hatzadakis dag-up aneleut residences, grottoes, and tombs at Arkalochori, Tylissas, Koumasa, and Chamaizi. Half the nations of Europe united under the flag of science in the very generation in which

their statesmen were preparing for war.

How was all this material to be classified—these palaces, paintings, statues, seals, vases, metals, tablets, and renefs? to what period of the past were they to be assigned? Precariously, but with increasing corrobi ration as research went on and knowledge grew. Evans dated the relies according to the depth of their strata, the gradation of styles in the pottery, and the agreement of Cretan finds, in form or motive, with like objects exhumed in lands or deposits whose chronology was approximately known. Digging down patiently beneath Chossus, he found himself stopped, some forty-three feet below the surface, by the virgin rock. The lower half of the excavated area was occupied by remains characteristic of the Neonthic Age—primitive forms of handmade pottery with simple linear ornament, spindle whorls for spinning and weaving, fat-buttocked

Evans labored brilliantly at Chossus for many years, was kinglered for his discoveries, and completed at 1936, his monumenta four-volume report, The Palace of Almor.

goddesses of painted steatute or clay, tools and weapons of polished stone, but nothing in copper or bronze.* Classifying the pottery, and correlating the remains with those of ancient Mesopotamia and Egypt, Evans divided the post-neolithic and prehistoric culture of Crete into three ages. Early, Middle, and Late Minoan—and each of these into three periods.*

The first or lowest appearance of copper in the strata represents for us, through a kind of archeological shorthand, the slow rise of a new civilization out of the neolithic stage. By the end of the Larly Minoan Age the Cretans learn to mix copper with tin, and the Bronze Age begins. In Middle Minoan I the earliest palaces occur the princes of Chossus, Phaesrus, and Malba build for themseives luxurious dwellings with countless rooms, spacious storehouses, specialized workshops, alters and temples, and great dramage conduits that startle the arrogant Occidental eye. Pottery takes on a manycolored brilliance, wails are enlivened with charming frescoes, and a form of linear script evolves out of the hieroglyphics of the preceding age. Then, or the close of Middle Minoan II, some strange carastrophe writes its cynical record into the strata, the palace of Chossus is laid low as if by a convulsion of the earth, or perhaps by an attack from Phaestus, whose palace for a time is spared. But a little later a like destruction falls upon Phaesens, Mochlos, Gourma, Palaskastro, and many other caties in the island; the pottery is covered with asnes, the great jars in the storerooms are filled with debris. Middle Minoan III is a period of comparative stagnation, in which, perhaps, the southeastern Mediterranean world is long disordered by the Hyksos conquest of Egypt.

In the late Minoan Age everything begins again. Humanity, patient under every cataciysm, renews its hope, takes courage, and builds once more. New and finer palaces rise at Chossus, Phaestus, Tylissus, Hagia Triada, and Gourma. The lordly spread, the five-storied height, the literatious decoration of these princely residences suggest such wealth as Greece would not know till Pericles. Theaters are erected in the palace courts, and gladiatorial spectacles of men and women in deadly combat with animals amuse gentlemen and ladies whose aristocratic faces, quietly alert, still live

[&]quot;Since the earliest layer of copper impleations at Cuossas may be dated, by correlation with the remains of neighboring cultures, about 1400 mm, we about 1300 years ago, and since the neolithic stratu at Cuossas occupy aims fifth two per cent of the total depth from surface to rock. I can currently that the Neonthic Ago in Crete had aimed at least 4500 years before the corong of metals approximately from 8000 to 1400. Such calculations of time from depth of stratu are of course higher problematical, the rate of deposition may change from age to age. Allowance has been 1 ide for a shaper rate after the maniforment of Cuossas as an urban are in the fourteenth consure is "No published to remain have been found in Crete." For the approximate duration of these epocals of the Chronological Table on p. 2.

for us on the bright frescoes of the resurrected walls. Wants are multiplied, tastes are refined, literature flourishes, a rhousand industries graciously permit the poor to prosper by supplying comforts and delicacies to the rich. The halls of the king are noisy with scribes taking inventories of goods distributed or received, with artists making staturity, paintings, pottery, or reliefs, with high officials conducting conferences, hearing judicial appeals, or dispatching papers stamped with their finely wrought seals, while waspwaisted princes and jeweled duchesses, alluringly decoileté, crowd to a royal feast served on tables shining with bronze and gold. The sixteenth and fifteenth centuries before our era are the zenith of Aegean civilization, the classic and golden age of Crete.

III. THE RECONSTRUCTION OF A CIVILIZATION

If now we try to restore this birded culture from the relies that remain—playing Cuvier to the scattered bones of Crete—let us remember that we are engaging upon a hazardous kind of fustorical television, in which imagination must supply the hving continuity in the gaps of static and fragmentary material artificially moving but long since dead. Crete will remain inwardly unknown until its secretive tablets find their Champollion.

1. Men and Women

As we see them self-pictured in their art, the Cretans curiously resemble the double as so prominent in their religious symbolism. Male and female alike have torsos narrowing pathologically to an ultramodern waist. Nearly all are short in stature, sught and supple of build, graceful in movement, athletically trun. Their skin is white at birth. The lodies, who court the shade, have fair complex one conventionally pale, but the men, pursuing wealth under the sin, are so tanned and ruiddy that the Greeks will call them (as well as the Phoenicians) Phointhes: the Purple Ones, Redskins. The head is rather long than broad, the features are sharp and refined, the hair and eyes are brilliantly dark, as in the Itahans of today, these Cretans are apparently a branch of the "Mediterranean race." The men as well as the women wear their hair partly in coils on the head or the neck, partly in ring-

^{*}Current anthropology divides post-neolative Entropeans into three types, respectively preponderating in north, central, and southern Furope () "Northe" man dang-neaded, call, and fair of thin and eyes and hair, (2) "Al ne man-broad-headed, of medium height, with eyes tending in gray and hair to brown, and (3) "Mediturranean" man-long headed, short, and dark. No people it exclusively any of these "races."

lets on the brow, partly in tresses falling opon the shoulders or the breast. The women add ribbons for their curls, while the men, to keep their faces clean, provide themselves with a variety of razors, even in the grave."

The dress is as strange as the figures. On their heads-most often barethe men have turbans or tam-o' shanters, the women magnificent hats of our early twentieth-century style. The feet are usually tree of covering; but the upper classes may hind them in white leather shoes, which among women may be damedy embroidered at the edges, with colored beads on the strips. Ordinarily the male has no clothing above the waist, there he weres a short skirt or waisteloth, occasionally with a codpiece for modesty, The skirt may be slit at the side in workingmen, in dignitaries and ceremonies it reaches in both sexes to the ground. Occasionally the men wear drawers, and in winter a long outer garment of wool or skins. The clothing is tightly liked about the middle, for men as well as women are resolved to be -or seem-triangularly sam. To rival the men at this point, the women of the later periods resort to stiff corsets, which gather their skirts snugly around their hips, and lift their bare breasts to the sun. It is a pretty custom among the Cretans that the female bosom should be uncovered, or revealed by a diaphanous chemise," no one seems to take offense. The bodice is laced below the bust opens in a careless circle, and then, in a gesture of charming reserve, may close in a Medici cultar at the neek. The sleeves are short, sometimes puffed. The skirt, adorned with flounces and gay times, widens out spaceously from the hips, staffened presumably with metal ribs or horizontal hoops. There are in the arrangement and design of Cretan feminine dress a warm harmony of colors, a grace of line, a delicacy of taste, that suggest a rich and luxurious civilization, already old in arts and wiles. In these matters the Cretans had no influence upon the Greeks; only in modern capitals have their styles triumphed. I ven staid archeologists have given the name La Parmenne to the portrait of a Cretan lady with profulgent bosom, shapely neck, sensual mouth, sinpudent nose, and a persuasive, provocative charm, she sits saucily before us today as part of a frieze m which high personages gaze upon some spectacle that we shall never see."

The men of Crete are evidently grateful for the grace and adventure that women give to hie, for they provide them with easily means of enhancing their loveliness. The remains are rich in jewelry of many kinds hairpins of copper and gold, stickpins adorned with golden animals or flowers, or heads of crystal or quartz, rangs or spirals of filippee gold mangling with the hair, fillets or diadems of precious metal binding it, rangs and pendants hanging from the ear, plaques and beads and chains on the breast,

bands and bracelets on the arm, finger rings of silver, steatite, agate, carnelian, amethyst, or gold. The men keep some of the jewelry for themselves, if they are poor they earry necklaces and bracelets of common stones, if they can afford it they flaunt great rings engraved with scenes of bards or the chase. The famous Cupbearer wears on the biceps of his left arm a broad band of precious metal, and on the wrist a bangle inlaid with agate. Everywhere in Cretan life man expresses his vainest and noblest

passion-the zeal to beautify.

This use of man to signify all humanity reveals the prejudice of a patriarchal age, and hardly suits the almost matriarchal life of ancient Crete. For the Minoan woman does not put up with any Oriental seclusion, any purdah or harem, there is no sign of her being limited to certain quarters of the house, or to the home. Soe works there, doubtless, as some women do even today, she weaves clothing and backers, grinds grain, and backers bread. But also she labors with men in the fields and the potterials she mingles freely with them in the crowds, she takes the front scar at the theater and the games, she sweeps through Cretan society with the air of a great lady hored with adoration, and when her nation eresites its gods it is more often in her lakeness than in man's. Soher students, secretly and forgivably enamored of the mother image in their hearts, how down before her relies, and marvel at her domination."

2. Society

Hypothetically we pieture Crete as at first an island divided by its mountains among petty jealous clans which live in independent villages under their own chiefs, and right, after the manner of men, imminerable territorial wars. Then a resolute leader appears who unites several clans into a kingdom, and builds his fortress palace at Chossus, Phaestus. Tylissus, or some other town. The wars become less frequent, more widespread, and more efficient in killing, at last the cities fight for the entite is and, and Chossus wins. The victor organizes a navy, dominates the Aegean, suppresses piracy, exacts tribute, builds palaces, and patronizes the arts, like an early Pericles." It is as difficult to begin a civilization without robbery as it is to maintain it without slaves.*

The power of the king, as echoed in the ruins, is based upon force, re-

^{*} The usually cautious and accurate Thic yieldes writes: "The first person known to us by tradition as having established a navy is Minos. He made himself master of what is now called the Hebenic Sea, and ruled over the Cytandes... He do no best to put down pracy in these waters, a necessary step to secure the revenues for his own use,"

his priests explain to the people that he is descended from Velchanos, and has received from this deary the laws that he decrees, and every nine years, if he is competent or generous, they reanoint him with the divine authority. To symbolize his power the miniarch, anticipating Rome and France, adopts the (double) ax and the fleur-de-lis. To administer the state he employs (as the latter of tablets suggests) a staff of ministers, bureaucrats, and setibes. He taxes in kind, and stores in giant jars his revenues of grain, oil, and wine, and out of this treasury, in kind, he pays his men. From his throne in the palace, or his judgment seat in the royal villa, he settles in person such litigation as has run the gauntlet of his appointed courts, and so great is his reputation as a magistrate that when he dies he becomes in Hades, Homer assures us, the mescapable judge of the dead. We call him Minos, but we do not know his name, probably the word is a title, like *Pharaoh* or *Caesar*, and covers a multitude of kings.

At its height this civilization is surprisingly urban. The Iliad speaks of Crete's "ninety cities," and the Greeks who conquer them are astomshed at their teeming populations, even today the student stands in awe before the runed mazes of paved and guttered streets, intersecting lanes, and countless shops or houses crowding about some center of trade or government in all the huddled gregariousness of timud and talkative men. It is not only Chossus that is great, with palaces so vast that imagination perhaps exaggerates the town that must have been the chief source and bencheary of their wealth. Across the island, on the southern shore, is Phaestus, from whose harbor, Homer tells us, the dark-prowed ships are borne to Egypt by the force of the wind and the wave " I he southbound trade of Minoan Crete pours our here, swelled by goods from northern merchants who ship their cargoes overland to avoid a long detour by perilous seas. Phaestus becomes a Cretan Piracus, in love with commerce rather than with art. And yet the palace of its prince is a majestic edifice, reached by a flight of steps forty-five feet wide, its halls and courts compare with those at Chossus, its central court is a paved quadrangle of ten thousand square feet, its megaron, or reception room, is three thousand square feet in area, larger even than the great Hali of the Double Ax in the northern capital.

Two miles northwest is Hagia Triada, in whose "royal villa" (as archeological imagination calls it) the Prince of Piaessus seeks refuge from the summer heat. The eastern end of the island, in Minoan days, is rich in small towns: ports like Zakro or Mochles, villages like Praesus or Pseira, residential quarters like Palaikastro, manufacturing centers like Gourna. The

main street in Palaskastro is well paved, well drained, and lined with spaclous homes, one of these has twenty-three rooms on the surviving floor. Gournia boasts of avenues paved with gypsam, of homes built with mortarless stone, of a blacksmatt's shop with extant forge, of a carpentur shop with a kit of tools, of small factories noisy with metalworking saleemaking, vasemaking, oil refitting, or textile industry, the modern warkinen who excavate it, and gather up its tripods, jars, pottery, ovens, lamps, knives, mortars, polishers, hooks, pins, daggers, and swords, marvel at its varied products and equipment, and call it be mechanike pous-"the town of machinery," By our standards the moor streets are narrow, mere alleys in the style of a semitropical Orient that fears the sun, and the rectangular houses, of wood or brick or stone, are for the most part confined to a single floor. Yet some Middle Minoan plaques exhumed at Chossus show us homes of two, three, even five stories, with a cubicle attic or turret here and there, on the upper Boors, in these pictured houses, are windows with red panes of unknown material. Double doors, swinging on posts apparently of express wood, open from the ground floor rooms upon a shaded court. Starways lead to the upper floors and the roof, where the Cretan sleeps when the nights are very warm. If he spends the evening indoors he lights his room by burning oil, according to his income, in lamps of clay, steatite, gypsom, marble, or bronze."

We know a trifle or two about the games he plays. At home he likes a form of chess, for he has bequeathed to us, in the ruins of the Chossus palace, a magnificent gaming board with frame of ivory, squares of silver and gold, and a border of seventy-two daisies in precious metal and stone. In the fields he takes with yest and audacity to the chase, goaled by half-wild cats and slender thoroughbred hounds. In the towns he patronizes pagaists, and on his vases and reliefs he represents for us a variety of contests, in which bight-weights spar with bare hands and kicking teet, middleweights with plumed helmets batter each other mantally, and heavy weights, coddied with helmets, checkpieces, and long padded gloves, bight till one falls exhausted to the ground and the other stands above him in the conscious grandeur of victory."

But the Cretan's greatest thrill comes when he wins his way into the crowd that fills the amphitheater on a holiday to see men and women face death against huge charging buils. Time and again he pictures the stages of this lusty sport, the daring hunter capturing the bull by jumping astride its neck as it laps up water from a pool, the professional tamer twisting the animal's head until it learns some measure of tolerance for the aerobat's annoying tricks, the skilled performer, slim and agale, meeting the bull in

the arena, grasping its horns, leaping into the air, somersaulting over its back, and landing feet first on the ground in the arms of a female companion who lends her grace to the scene." Liven in Vinoan Crete this is already an ancient art, a clay cylinder from Cappadocia, ascribed to 2400 B.C., shows a bull-grappling sport as vigorous and dangerous as in these frescoes." For a moment our oversimplifying intellects catch a gampse of the contradictory complexity of man as we perceive that this game of blood-lust and courage, still popular today, is as old as civilization.

3. Religion

The Cretan may be brutal, out he is certainly religious, with a thoroughly human moreure of fetishism and superstinen, idealism and reverence. He worships mountains, caves, stones, the number 3, trees and pillars, sun and moon, goats and snakes, doves and bulls, hardly anything escapes his theology. He conceives the air as tiked with spirits genial or devaish, and hands down to Greece a sylvan-ethereal population of dryads, silent, and nymphs. He does not directly adore the phalae em aem, but he venerates with awe the generative vitality of the bull and the snake." Since his death rate is high he pays devout homage to fernity, and when he rises to the notion of a homan divinity he pictures a mother goldess with generous mammie and sublime flanks, with reptales creeping up around her arms and breasts, coiled in her hair, or rearing themselves proudly from her head. He sees in her the lauce fact of naturethat min's greatest enemy, death, is overcome by woman's mysterious power, reproduction, and he identifies this power with deity. The mother goddess represents for him the source of all life, in plants and animals as well as in men, if he surrounds her image with fauna and flora it is because these exist through her creative fertiars, and therefore serve as her symbols and her emanations, Occasionally she appears holding in her arms her dis ne child Velchanos, whom she has home in a mountain cave. Contemplating this ancient image, we see through it liss and Horus, Ishtar and Tammuz, Cybele and Attis, Aphrodite and Adonis, and feel the unity of prehistoric culture, and the continuity of religious ideas and symbols, in the Mediterranean world.

The Crean Zeus, as the Greeks call Velchanes, is subordinate to his mother in the affections of the Creans. But he grows in importance. He becomes the personification of the fertilizing rain, of the moisture that in this reagion, as in the philosophy of Tbales, underbes all things. He dies, and his sepulcher is shown from generation to generation on Mt. Jouktas, where the majestic profile of his face can stin be seen by the imaginative traveler, he rises from the grave as a symbol of reviving vegetation, and the Kouretes priests celebrate with dances and clashing shelds his g armos resurrection." Sometimes, as a god of fertility, he is conceived as incarnate in the sacred bull, it is as a bull that he

mares in Cretan myth with Minos' wife Pasiphaë, and begets by her the monstrous Minos-bull, or Minotaur.

To appease these derties the Cretan uses a lavish rite of prayer and sacrifice, symbol and ceremony, administered usually by women priests, sometimes by officials of the state. To ward off demans he burns incense, to arouse a negligent divinity he sounds the conch, plays the flute or the lyre, and sings, in chorus, hymns of aduration. To promote the growth of orchards and the fields, he waters trees and plants in salenin ritual, or his priestesses in nude frenzy sheke down the ripe burden of the trees; or his women in festal procession carry fruits and flowers as hints and rubute to the goddess, who is borne in state in a pasanquin. He has apparently no temple, but raises alears in the pasace court, in sacred groves or grottees, and on mountaintops. He adorns these sanctuaries with tables of bliation and sacrifice, a medicy of idols, and "horns of consecration" perhaps representative of the sacred bull. He is profuse with holy symbols, which he seems to worship along with the gods whom they signify first the shield, presumably as the emblem of his goodless in her warrior form, then the cross-in both its Greek and its Riman shapes, and as the swastiles-cut upon the forehead of a bull or the thigh of a goddess, or carved upon seals, or raised in marble in the palace of the king, above all, the double ax, as an instrument of sacrifice magically currected with the virtue of the blood that it sheds, or as a boly weapon unerraply guided by the god, or even as a sign of Zeus the Thunderer cleaving the sky with his holts."

Finally he offers a modest care and worship to his dead. He humes them in clay coffins or massive jars, for if they are unburied they may return. To keep them content below the ground he depos is with them modest pertions of food, articles for their toilette, and clay figurines of women to tend or console them through all eternity. Sometimes, with the sly economy of an incipient skeptic, he substitutes clay animals in the grave in place of actual food. If he buries a king or a noble or a rich trader he surrenders to the corpse a part of the precious plate or jewelry that it once possessed, with touching sympathy he baries a set of chess with a good player, a clay orchestra with a mose into a boar with one who loved the sea. Periodically he returns to the grave to offer a sustaining saentice of food to the dead. He hopes that in some secret Elysium, or Islands of the Blest, the just god Rhadamanthus, son of Zeus Velchanos, will receive the purified soul, and give it the happiness and the peace that she so clusively through the fingers in this earthly quest.

4. Culture

The most troublesome aspect of the Cretan is his language. When, after the Doman invasion, he uses the Greek alphabet, it is for a speech completely alien

to what we know as Greek, and more akin in sound to the Egyptian, Cypriote, Hirtie, and Anatolian dialects of the Near East. In the earl est age he confines himself to hierogryphies, about 1800 a.c. he begins to shorten these into a linear script of some ninety syllabic signs, two centuries later he contrives another script, whose characters often resemble those of the Phoenician alphaber, perhaps it is from him, as well as from the legyptians and the Sciiutes, that the Phoenicians gather together those letters they with scatter throughout the Mediterranean to become the unassuming omnipresent instrument of Western civilization. Even the common Cretan composes, and like some privy councilor, leaves on the walls of Hagia Thiada the passing inspirations of his muse. At Phaestus we find a kind of prehistoric printing the hierogly plis of a great disk uncarthed there from Middle Minoan III strata are impressed upon the clay by stamps, one for each pictograph, but here, to add to our befuildlement, the characters are apparently not Cretan but foreign, perhaps the disk is an importation from the East."

The clay tablets upon which the Cretan writes may some day reveal to us his accompushments in science. He has some astronomy, for he is famed as a navigator, and tradition hands down to Dorian Crete the ancient Minoan calendar. The Ligs prians acknowledge their indebtedness to him for certain medical prescriptions, and the Greeks borrow from long, as the words suggest, such aromatic and medicinal herbs as mant (mantha), wormwood (apunthon), and an ideal drug (datakos) reputed to cure obesity without disturbing gluttony.** But we must not mistake our guessing for history.

Though the Cretan's literature is a sealed book to us, we may at least contemplate the ruins of his theaters. At Phaestus, about 2000, he builds ten tiers of stone seats, running some eighty feet along a wall overlooking a flagged court, at Chossus he tauses, again in stone, eighteen tiers thirty-three feet long, and, at right angles to them, six tiers from eighteen to lifty feet in length. These court theaters, seating four or five hundred persons, are the most ancient playhouses known to us-older by fifteen hundred years than the Theater of Dionysus. We do not know what took place on those stages, frescoes picture audiences viewing a spectacle, but we cannot tell what it is that they see. Very likely it is some combination of music and dance. A painting from Chossus preserves a group of aristocratic ladies, surrounded by their gallants, watching a dance by gaily petricoated girls in an ohie grove, another represents a Dancing Woman with flying tresses and extended arms, others show us rustic folk dances, or the wild dance of priests, priestesses, and worshipers before an idol or a sacred tree. Homer describes the "dancing-floor which once, in broad Chossis, Daedalus made for Aradne of the lovely hair, there vouths and seductive maidens prin hands in the dance . . and a divine hard sets the time to the sound of the lyre," The seven-stringed lyre, ascribed by the Greeks to the inventiveness of Terpander, is represented on a sarcophagus at Hagia Triada a thousand years before Terpander's birth. There, too, is the double flute, with two pipes, eight holes, and fourteen notes, precisely as in classical Greece. Carved on a gem, a woman blows a trumper made from an enormous conch, and on a vase we see the sutrum beating time for the dancers' feet.

The same youthful freshness and lighthearted grace that animate his dances and his games enliven the Cretan's work in the erts. He has not left us, aside from his architecture, any accompashments of massive grandeur or exsited style; like the Japanese of samurar days he delights rather in the refinement of the lesser and more intimate arts, the adornment of objects daily used, the patient perfecting of little things. As in every aristocratic civilization, he accepts conventions in the form and subject of his work, avoids extravagant novelnes, and learns to be free even within the limitations of reserve and taste. He exects in pottery, geni cutting, bezel earlying, and reliefs, for here his microscopic skid finds every stundos an Lopportunity. He is at home in the working of silver and gold, sets all the precious stones, and makes a rich diversity of sewels. Upon the seas that he cuts to serve as official signatures, commercial labels, or business forms, he engraves in delicate detail so much of the life and scenery of Crete that from them alone we might picture his civilization. He hammers bronze into basins, ewers, daggers, and swords ornamented with floral and animal designs, and inlaid with gold and siever, ivory and rare stones. At Gourna he has left us, despite the thieves of thirty centuries, a silver cup of finished artistry, and here and there he has molded for us rhytons, or drinking horns, rising out of human or animal heads that to this day seem to hold the breath of life.

As a potter he tries every form, and reaches distinction in nearly all of them. He makes vases, dishes, cups, chalices, lamps, jars, asimals, and gods. At first, in Early Mimoan, he is content to shape the vessel with his hands along lines bequeathed to him from the Neolithic Age, to paint it with a glaze of brown or black, and to trust the fire to mottle the color into haphazard tints. In Middle Minoan he has learned the use of the wheel, and rises to the height of his skill. He makes a glaze rivaling the consistency and delicacy of porcelain; he scatters recklessly back and brown, white and red, orange and yellow, crimson and vernation, and margles them happile into novel shades, he fines down the clay with such confident thoroughness that in his most perfect product, the graceful and I ng tilv colored "eggshell" wares found in the cave of Kamares on Mr. Ida's slopes- he has dared to that the walls of the vessel to a millimeter's thickness, and to pour our upon it all the motifs of his rich imagination. From 2100 to 1950 is the apogee of the Cream potter, he signs his name to his work, and his trade-mark is sought throughout the Mediterranean. In the Late Minoan Age he brings to full development the technique of faience, and forms the

brilliant paste into decorative plaques, vases of turquoise blue, polychrome goddesses, and marine reliefs so readstre that Evans mistook an enamel crab for a fossil." Now the artist talls in tove with nature, and delignis to represent on his vessels the liveliest animals, the gaudiese fish, the most deheate thowers, and the most graceful plants. It is in flate Minoan I that he creates his surviving masterpieces, the Boxers' Vase and the Harvesters. Vase in the one he presents us crudely with every aspect and attitude of the pugilistic game, adding a zone of scenes from the bull-leaper's life, in the other he follows with fond fidelity a procession probably of peasants marching and singing in some harvest festival. Then the great tradition of Critish pottery grows weak with age, and the art decimes, reserve and taste are forgotten, decomition overruns the vase in bizarre irregularity and excess, the courage for slow conception and patient execution breaks down, and a lazy cureressness called freedom replaces the finesse and finish of the Kamares age. It is a forgivable decay, the unavoidable death of on old and exhausted art, which will be in refreshing sleep for a thousand years, and be reborn in the perfection of the Attic vase.

Sculpture is a minor art in Crete, and except in bas-relief and the story of Daedalus, seldom graduates from the statuette. Many of these little figures are stereoty ped crudities seemingly produced by rote, one is a delightful snapshot in lyory of an athlete planging through the air, another is a hundsome head that has lost its body on the way down the centuries. The best of them excels in anatomical precision and in vividness of action anything that we know from Greece before Myron's time. The strangest is the Snake Goddess of the Boston Museum, a sturdy figure of ivory and gold, half manamae and half snakes, here at last the Gretan artist treats the linman form with some on plittide and success. But when he essays a larger scale he falls back for the most part upon animals, and confines himself to painted reliefs, as in the buil's head in the Heraeleum Museum, in this startling relie the fixed wild eyes, the snorting nostrils, the gasping mosth, and the trembling tangue achieve a power that Greece itself will never surpass.

Nothing else in ancient Crete is quite so attractive as its painting. The scripture is negligible, the pottery is fragmentary, the architecture is in runs, but this fradest of all the arts, easy victim of indulerent time, has left us legible and admirable masterpieces from an age so old that it slipped quite out of the memory of that classic Greece of whose painting, by contrast so recent, not one original remains. In Crete the earthquisks or the wars that overturned the palaces preserved here and there a frescoed wail, and wandering by them we molt forty centuries and meet the men who decorated the rooms of the Minoan kings. As far back as 2500 they make wall contings of pure lime, and conceive the idea of painting in fresco upon the wet surface, wielding the brush so rapidly that the colors sink into the studeo before the surface dries. Into the

dark halls of the palaces they bring the bright beauty of the open fields, they make plaster sprout lines, tulips, narcissi, and sweet marjoram; no one viewing these scenes could ever again suppose that nature was discovered by Rousseau. In the museum at Heracleum the Saffron Picker is as eager to pluck the crocus as when his creator painted him in Middle Minoan days, his waist is absurdly thin, his body seems much too long for his legs, and yet his head is perfect, the colors are soft and warm, the flowers st.ll fresh after four thousand years. At Hagia Triada the painter brightens a sarcophagus with spiral scrolls and queer, almost Nubian figures engrossed in some religious ritual, better yet, he adorns a wall with waving foliage, and then places in the midst of it, darkly but vividiy, a stout, tense cat preparing to spring unseen upon a proud bird preening its plumage in the sun. In Late Minoan the Cretan painter is at the top of his stride, every wall tempts him, every plutocrat calls him, he decorates not merely the royal residences but the homes of nobles and burghers with all the lavishness of Pompen. Soon, however, success and a surfeit of commissions spoil him, he is too anxious to be finished to quite touch perfection, he scatters quantity shout him, repeats his flowers monatonously, paints his men impossibly, contents himself with sketching outlines, and falls into the lassitude of an art that knows that it has passed its zenith and must die. But never before, except perhaps in Egypt, has painting looked so freshly at the face of nature.

All the arts come together to build the Cretan palaces. Political power, commercial mastery, wealth and hixury, accumulated refinement and taste commandeer the architect, the builder, the artisan, the sculptor, the potter, the metalworker, the woodworker, and the painter to fuse their skills in producing an assemblage of royal chambers, administrative offices, court theaters, and arenas, to serve as the center and summit of Cretan life. They build in the twenty-first century, and the twentieth sees their work destroyed, they build again in the seventeenth, not only the palace of Minos but many other splendid edifices at Chossus, and in half a hundred other enties in the thriving island. It is one of the great ages in architectural history.

The creators of the Chossus palace are limited in both materials and men. Crete is poor in metal and quite devoid of marble, therefore they build with limestone and gy pours, and use wood for entablatures, roofs, and all columns above the basement floor. They cut the stone blocks so sharply that they can put them together without mortar. Around a central court of twenty thousand square feet they raise to three or four stories, with spacious stairways of stone, a rambling maze of rooms—guardhouses, workshops, wine press, storerooms, administrative offices, servants' quarters, anterooms, reception rooms, bedrooms, bathrooms, chappl, dungeon, throne room, and a

"Hall of the Double Ax"; adding near by the conveniences of a theater, a royal villa, and a cemetery. On the lowest floor they plant massive square pillars of stone, on the upper floors they use circular columns of cypress, tapering strangely downward, to support the ceilings upon smooth round capitals, or to form shady porticoes at the side. Safe in the interior against a gracefully decorated wall they set a stone seat, simply but skillfully carved, which eager diggers will call the throne of Minos, and on which every tourist will modestly seat himself and be for a moment some inches a king. This sprawling palace in all likelihood is the famous Labyrinth, or sanctuary of the Double Ax (labrys), attributed by the ancients to Daedalus, and destined to give its name in afternine to any maze—of rooms, or words, or ears.

As if to please the modern spirit, more interested in plumbing than in poetry, the builders of Chossus install in the palace a system of drainage superior to anything else of its kind in antiquity. They collect in six ne conduits the water that flows down from the tuils or falls from the sky, direct it through shafts to the bathrooms* and latrines, and lead off the waste in terra-cotta pipes of the latest style—each section six inches in diameter and thirty inches long, equipped with a trip to catch the sed ment, tapering at one end to fit into the next section, and bound to this firmly with a necking of cement.* Possibly they include an apparatus for supplying running hot water to the household of the king..!

To the complex interiors the artists of Chossus add the most delicate decorations. Some of the rooms they adorn with vases and statuettes, some with paintings or reliefs, some with higge stone amphorae or massive urns, some with objects in avory, fasence or bronze. Around one wail they run a limestone frieze with pretty trigly plis and half rosettes, around another a panel of sparals and frets on a surface painted to samulate marble, around another they carve in high relief and living detail the contests of man and ball. Through the halls and chambers the Minoan painter spreads all the glories of lus cheerful are here, caught chattering in a drawing room, are Ladies in Blue, with classic features, shapely arms, and cozy breasts, here

^{*}The ascription of rooms is, of course, highly connectural—it should be added that nearly all the exhanced decorations of the passes associate been removed to the noises in at Heracieum of elsewhere, while much of what remains in site has been morelessy restored.

then no longer agreed that the square deptermons that I is the theory of some rooms were boths, they have not dets, and are made of gypoun, which water would gradually dissolve."

these found another descripe paper or the value of Hages Tends. "One day after a beavy downpour of rain, I was interested to find that all the draws acted perfectly, and I saw the water flow from the sewers, through which a man could walk upright. I doubt if there is any other instance of a drainage system acting after four thousand years."

are fields of lotus, or lilies, or olive spray, here are Ladies at the Opera, and dolphins swimming motionlessly in the sea. Here, above all, is the lordly Cupbearer, erect and strong, carrying some precious outment in a slim blue vase, his face is cluseled by breeding as well as by arr, his hair descends in a thick braid upon his brown shoulders, his ears, his neck, his arm, and his waist sparkle with jewelry, and his costly robe is embroidered with a graceful quarrefoil design, obviously he is no slave, but some aristocrane youth proudly privileged to serve the long. Only a civilization long familiar with order and wealth, leisure and taste, could demand or create such hixury and such ornament.

IV. THE FALL OF CNOSSUS

When in retrospect we seek the origin of this brilliant culture, we find ourselves vacillating between Asia and I gypt. On the one hand, the Cremns seem kin in language, race, and religion to the Indo-Luropean peoples of Asia Minor, there, too, clay tablets were used for writing, and the shekel was the standard of measurement; there, in Caria, was the cult of Zeus Labrandeus, i.e., Zeus of the Double Ax (labrys); there men worshiped the proar, the bull, and the dove, there, in Phrygia, was the great Cybele, so much like the mother goddess of Crete that the Greeks called the latter Rhea Cybele, and considered the two divinities one. And yet the signs of Egyptian influence in Crete abound in every age. The two cultures are at first so much alike that some scholars presume a wave of Egyptian emigration to Crete in the troubled days of Menes." The stone vases of Mochlos and the copper weapons of Early Minoan I are strikingly like those found in Proto-Dynastic tombs, the double ax appears as an amulet in Egypt, and even a "Priest of the Double Ax"; the weights and measures, though Asiane in value, are Egyptian in form; the methods used in the glyptic arts, in faience, and in painting are so similar in the two lands that Spengler reduced Cretan civilization to a mere branch of the Egyptian."

We shall not follow but, for it will not do, in our search for the continuity of civilization, to surrender the individuality of the parts. The Gretan quality is distinct; no other people in antiquity has quite this flavor of manute refinement, this concentrated elegance in life and art. Let us believe that in its racial origins the Gretan culture was Asiatic, in many of its arts Egyptian, in essence and total it remained unique. Perhaps it belonged to a complex of civilization common to all the Lastern Mediterranean, in which each nation inherited kindred arts, behefs, and ways from a wide-spread neolithic culture parent to them all. From that common civilization

Crete borrowed in her youth, to it she contributed in her maturity. Her rule forged an order in the isles, and her merchants found entry at every port. Then her wares and her arts pervaded the Cyclades, overran Cyprus, reached to Caria and Palestine," moved north through Asia Minor and its islands to Troy reached west through Italy and Sichy to Spain," penetrated the mainland of Greece even to Thessaly, and passed through Mycenae and Thryns into the heritage of Greece. In the history of civilization Crete was the first link in the European chain.

We do not know which of the many roads to decay Crete chose; perhaps the took them all. Her once famous forests of cypress and cedar vanished; today two thirds of the island are a stony waste, incapable of holding the winter rains." Perhaps there too, as in most declining cultures, population control went too far, and reproduction was left to the failures. Perhaps, as wealth and luxury increased, the pursuit of physical pleasure sapped the vitality of the race, and weakened its will to live or to defend itself, a nation is born stoic and dies epicurean. Possibly the collapse of Egypt after the death of Ikhnaton disrupted Creto-Egyptian trade, and diminished the tiches of the Minoan kings. Crete had no great internal resources, her prosperity required commerce, and markets for her industries; like modern England she had become dangerously dependent upon control of the seas, Perhaps internal wars decimated the island's munhood, and left it disunited against foreign attack. Perhaps an earthquake shook the palaces into ruins, or some angry revolution avenged in a year of terror the accumulated oppressions of centuries.

About 1450 the palace of Phaestus was again destroyed, that of Hagia Triada was burned down, the homes of the rich burghers of Tylissus disappeared. During the next fifty years Chossus seems to have enjoyed the zenith of her fortune, and a supremacy unquestioned throughout the Aegean. Then, about 1400, the palace of Chossus itself went up in flames. Everywhere in the runs I vans found signs of uncontrollable fire—charred beams and piliars, blackened walls, and clay tablets hardened against time's tooth by the conflagration's heat. So thorough was the destruction, and so complete the removal of metal even from rooms covered and protected by debris, that many students suspect invasion and conquest rather than earthquake.** In any case, the catastrophe was sudden, the workshops of artists

If archeological chronology would permit the deferment of this configuration to the neighborhood of 1250 it would be convenient to interpret the tragedy as an incident in the Achieran conquest of the Aegean premimary to the surge of Troy.

and arusans give every indication of having been in full activity when death arrived. About the same time Gournia, Pseira, Zakro, and Palaikastro were

leveled to the ground.

We must not suppose that Cretan civilization vanished overnight. Palaces were built again, but more modestly, and for a generation or two the products of Crete continued to dominate Aegean art. About the middle of the thirteenth century we come at last upon a specific Cretan personality that King Minos of whom Greek tradition told so many frightening tales. His brides were annoyed at the abundance of serpents and scorpions in his seed; but by some secret device his wife Pasiphae cluded these," and safely bore him many children, among them Phaedra (wife of Theseus and lover of Hippolytus) and the fair-haired Ariadne. Minos having offended Poseidon, the god afflicted Pasiphae with a mad passion for a divine buil. Daedalus pitted ber, and through his contrivance she conceived the terrible Minotaur. Minos imprisoned the animal in the Labyrouth which Daedalus had built at his command, but appeased it periodically with human sacrifice."

Pleasanter even in its tragedy is the legend of Dacdalus, for it opens one of the proudest epies of human history. Greek story represented him as an Atheman Leonardo who, envious of his nephew's skill, slew him in a moment of temperament, and was banished forever from Greece. He found refuge at Minos' court, astonished him with mechanical inventions and novelnes, and became chief arrist and engineer to the king. He was a great sculptor, and fable used his name to personify the graduation of statuary from stiff, dead figures to vivid portraits of possible men, the creatures made by ham, we are informed, were so lifelike that they stood up and walked away unless they were chained to their pedestals." But Minos was preved when he learned of Daedalus' connivance with Pasiphae's amours, and confined him and his son learns in the maze of the Labyrinth. Daedalus fashioned wings for himself and learns, and by their aid they leaped across the wans and soared over the Mediterranean. Disdaming his father's counsel, proud learns flew too closely to the sun, the not says melted the wax on his wings, and he was lost in the sea, pointing a moral and adorning a tale. Daedalus, empty-hearted, flew on to Sicily, and surred that island to civilization by bringing to it the industrial and artistic culture of Crete.**

^{*}Pausinias, father of all Buedekers, credes Duedalus with several statues, mostly of wood, and a marble relief of Ariadne dancing, as all extant in the second century An. The Greeks never disabled the reactiv of Duedalus, and the experience of Schulenium warm us to be skeppical even of our skepticisms. Old traditions have a way of being easily rejected by one generation of scholars, and laboratedly confirmed by the next.

More tragic still is the story of Theseus and Ariadne. Minos, victorious in a war against youthful Athens, exacted from that city, every minth year, a tribute of seven girls and seven young men, to be devoured by the Minotaur. On the coming of the third occasion for this national humination the handsome Theseus his father King Aegeus reluctantly consenting—had himself chosen as one of the seven youths, for he was resolved to slay the Minotaur and end the recurrent sacrifice. Ariadne pitied the princely Athenian, loved him, gave him a magic sword, and taught him the simple trick of unraveling thread from his arm as he penetrated the Labyrinth. Theseus killed the Minotaur, followed the thread back to Ariadne, and took her with him on his flight from Crete. On the isle of Naxos he married her as he had promised, but while she slept he and his companions sailed treacherously away.

With Anadne and Minos, Crete disappears from history till the coming of Lyenrgus to the island, presumably in the seventh century. There are indications that the Achaeans reached it in their long raid of Greece in the fourteenth and thirteenth conturies, and Dorian conquerors settled there towards the end of the second millenman before Christ. Here, said many Cretans and some Greeks," Lycurgus, and in less degree Solon, had found the model for their laws. In Crete as in Sparta, after the island had come under Doman sway, the ruling class led a life of at least outward simplicity and restraint, the boys were brought up in the arrny, and the adult males ate together in public mess balls, the state was ruled by a senate of elders, and was administered by ten kormot or orderers, corresponding to the ephors of Sparta and the archons of Athens." It is difficult to say whether Crete taught Sparta, or Sparta Crete, perhaps both states were the parallel results of similar conditions -the precarious life of an alien military aristocracy unid a narive and hearile population of serfs. The comparatively enlightened law code of Gortyna, discovered on the walls of that Cretan town m A.D. 1884, belongs apparently to the early fifth century, in an earlier form it may have influenced the legislators of Greece. In the sixth century Thaletas of Crete taught choral music at Sparta, and the Cretan sculptors Dipoenus and Scyllis instructed the artists of Argos and Sieyon. By a hundred channels the old civilization emptied itself out into the new.

[•] The Atheneus counted all the as hotory. They treasured for centuries, by continually repairing it, the slip in which Theseus had sailed to Crete, and used it as a sacred vessel in tending cryopa annually to the feast of Apollo at Delos.

CHAPTER II

Before Agamemnon

1. SCHLIEMANN

TN the year 1822 a lad was born in Germany who was to turn the spadework of archeology into one of the comances of the century. This father had a passion for ancient lustory, and brought him up on Homer's stories of the siege of Troy and Odyssens' wanderings. "With great grief I heard from him that Troy had been so completely destroyed that it had disappeared without leaving any trace of its existence." At the age of eight, having given the matter mature consideration, Henrich Schliemann announced his intention to devote his life to the rediscovery of the lost city. At the age of ten he presented to his father a Latin essay on the Trojan War. In 1836 he left school with an education too advanced for his means, and became a grocer's apprentice. In 1841 he shapped from Hamburg as cabin boy on a steamer bound for South America. I welve days out the vessel foundered, the erew was tossed about in a small boat for nine hours, and was thrown by the tide upon the shores of Holland. Heinrich became a clerk, and carned a hundred and fifty dellars a year, he spent half of this on books, and lived on the other half and his dreams.' His intelligence and application had their natural results, at twenty five he was an independent merchant with interests on three continents, at thirty-six he felt that he had enough money, retired from commerce, and gave all his time to archeology. "In the midst of the bustle of business I had never forgotten Troy, or the agreement I had made with my father to excavate it ""

In his travels as a merchant he had made it a practice to learn the language of each country he traded with, and to write in that language the current pages of his diary.' By this method he learned English, French, Dutch, Spanish, Portuguese, Italian, Russian, Swedish, Polish, and Arabic. Now he went to Greece, studied the language as a living speech, and was soon

Henceforth, he declared, "I should find it impossible to live anywhere but on classical soil." Since his Russian wife refused to leave Russia, he advertised for a Greek wife, laid down precise specifications for the position, and at the age of forty-seven chose a bride of nineteen from among the photographs he received. He married her almost at sight, and unwittingly in the ancient style of purchase, her parents charged him for her a price commensurate with their conception of his fortune. When his new wife bore him children he reloctantly consented to baptize them, but solemnized the ceremony by laving a copy of the *Iliad* upon their heads and reading a hundred hexameters aloud. He named them Andromache and Agamemnon, called his servants Telamon and Pelops, and christened his Athenian home Bellerophon.' He was an old man mad about Homer.

In 1870 he went to the Troad—the northwest corner of Asia Minor—and made up his mind, against all current scholarly opinion, that Priam's Troy lay buried under the hill called Hissariak. After a year of negotiations he secured permission from the Turkish Government to explore the site, he engaged eighty laborers, and set to work. His wife, who loved him for his eccentricities, shared his toil in the earth from sunrise to sunset. All winter long an key gale from the north drove a blinding dust into their eyes, and swept with such violence through the cracks of their frail cortage that no lamp could be kept lit in the evening. Despite the fire in the hearth the water froze nearly every right. "We had nothing to keep us warm

except our enthusiasm for the great work of discovering Troy.16

A year passed before they were rewarded. Then, blow by blow, a work-man's pick exposed a large copper vessel, and this, opened, revealed an astonishing treasure of some nine thousand objects in silver and gold. The carmy Schliemann hid the find in his wife's shawl, dismissed his workmen to an unexpected siesta, hurried to his hur, locked the door, spread out the precious things on the table, linked each one fondly with some passage in

[&]quot;In order to acquire quickly the Greek vocabulary," Schliemann writes, "I procured a modern Greek standation of Paul et Virginie, and read it through, comparing every word with its equivalent in the French original. When I had finished the task I knew at least one half the Greek words the book contained, and after repeating the operation I mew them all, or nearly so, without having lost a single namure by being obliged to use a dictionary. Of the Greek grammar I nearned only the declarations and the verbs, and never lost my precious time in studying its rules, for as I saw that boys, after being troubled and tormented for eight years and more in school with the redous rules of grin mar, can nevertheless none of them write a letter in ancient Greek without making hundreds of attractions blunders, I thought the method pursuent by the schoolmasters must be altogether wrong. . . . I learned ancient Greek as I would have learned a living language."

Homer, adorned his wife with an ancient diadem, and sent messages to his friends in Europe that he had unearthed "the Treasury of Priam." No one would believe him, some critics charged him with having placed the objects where he found them, and at the same time the Sublime Porte sued him for taking gold from Turkish soil. But scholars like Virchow, Dorpfeld, and Burnouf came to the site, verified Schnemann's reports, and carried on the work with him until one buried Troy after another was uncovered, and the problem was no longer whether Troy had existed, but which of the mine Troys exhumed had been the libos of the Iliad.

In 1876 Schhemann resolved to confirm the epic from another direction—to show that Agamemnon too was real. Guided by Pausamas' classic description of Greece,* he sank thirty-four shafts at Mycenae in the eastern Peloponnesus. Turkish officials interrupted the work by claiming half of the material that he had found at Troy. Unwilling to let the precious "Treasury of Priam" he unseen in Turkey, Schhemann clandestinely dispatched the objects to the State Museum at Bethin, paid the Porte five times more damages than were required of nini, and resumed his digging at Mycenae. Again he was rewarded, and when he saw his workers carrying up to lum skeletons, pottery, jewelry, and golden masks, he telegraphed joyfully to the King of Greece that he had discovered the tomos of Atreus and Agamerinion." In 1884 he moved on to Tiryus and, guided again by Pausamas, uncarthed the great palace and cyclopean walls that Homer had described."

Seldom had any man done so much for archeology. He had the faults of his virtues, for his enthusiasin drove him into a reckless haste that destroyed or confused many exhanted objects in order to reach at once the goal that he sought, and the epics that had inspired his labors misled him into thinking that he had discovered Priam's hoard at Troy, and the tomb of Agameninon at Mycenae. The world of scholarship doubted his reports, and the maseums of England, Russia, and France long refused to accept as genuine the relies that he had found. He consoled himself with vigorous self appreciation, and went on digging courageously until disease struck him down. In his last days he hesitated whether to pray to the God of Christianity or to the Zeus of classic Greece. "To Agamemnon Schliemann, best believed of sons, greeting?" he writes. "I am very glad that you are going to study Plutarch, and have finished Xenophon . . . I pray Zeus the Father and Pallas Athene that they will grant you a hundred returns of the

^{*} Pagenness traveled through Greece about A.D. 60, and described it in his Periegens, or Tour.

day in health and happiness." He died in 1890, worn out by climatic hardships, scholastic hostility, and the incessant fever of his dream.

Like Columbus he had discovered a world stranger than the one he sought. These sewels were older by many centuries than Priam and Hecuba, these graves were not the tombs of the Atridae, but the runs of an Aegean civilization, on the Greek mainland, as ancient as the Minoan Age in Crete. Unknowingly Schliemann had proved Horace's famous linevixerum fortes ante Agamenmona-"there lived many brave men hefore Agamemnon." Year by year, as Dorpfeld and Muller, Tsountas and Stematakis, Waldstein and Wace dug more widely into the Peloponnesus, and still others explored Attica and the islands, I alinea and Bocotta, Phocis and Thessaly, the soil of Greece gave up the ghostly relies of a culture before history. Here too men had been lifted from barbarism to civilization by the passage from nomadic hunting to settled agriculture, by the replacement of stone tools with copper and bronze, by the conveniences of writmg and the stimulus of trade. Civilization is always older than we think; and under whatever sod we tread are the bones of men and women who also worked and loved, wrote songs and made beautiful things, but whose names and very being have been lost in the careless flow of time.

IL. IN THE PALACES OF THE KINGS

On a long low hill five miles east of Argos and a mile north of the sea, stood, in the fourteenth century before our era, the fortress-palace of Tiryns. Today one reaches its ruins by a pleasant ride from Argos or Naupha, and finds them half lost aread quiet fields of corn and wheat. Then, after a little climb up prehistoric stone steps, the traveler stands before the cyclopean walls built, said Greek tradition, for the Argive prince Proctus, two centuries before the Irojan War.! Even then the town itself was old,

^{*} Towards the end of his life Dörpfeld and Varchow amost convinced him that he had found the ren am not of Against man but of a far eather generation. After many heartsches Schleenman ame die matter good naturedly. "What "he exclaimed, as this is not Agamement body, these are not his mathematical". All right, let's call and Schulze", and thereafter they always spoke of "Schulze,"

t The Greeks gave the name Cyclopean to such armstures as in their mythical fancy could have been built only by grants like the anti-cycl. I mans could Cyclopes (Round I ver - who labored at the lorges of Flepharstus as the containes of the Mediterranean. Architecturally the term implied large armortisted stones, anhown or roughly out, and filled in at the joints with publics laid in casy. Tradition added that Process had imported celebrated masons, called Cyclopes, from Lycia.

having been founded, said ancient memory, by the hero Tiryns, son of Argus of the hundred eyes, in the infancy of the world." Proteus, the story went on, gave the palace to Perseus, who ruled Tiryns with the dusky

Andromeda as his queen.

The walls that protected the citadel rose from twenty-five to fifty feet in height, and were so thick that at several places they contained spacious galleries, vaulted and arched with unmense overlapping horizontal slabs. Many of the stones still in place measure six feet in length by three in breadth and depth, the smallest of them, said Pausinias, "could hardly be moved by a pair of muses."4 Within the walls, behind a propylon or gateway that set a style for many an aeropolis, lay a broad paved court bounded with colonnades, and around this, as at Chossus, was a medley of rooms gathered about the megaron-a hall of state thurseen hundred square feet in area, with a pavement of painted cement, and a ceiling supported by four columns enclosing a hearth. Here, in contrast to merry Crete, was established a lasting principle of Greek architecture-the separation of the women's quarters, or gynaeceum, from the chambers of the men. The king's room and the queen's room were built side by side, but, so far as the remains reveal, they were eremineably scaled against intercommunication. Of this palace-castle Schuemann found only the ground plan, the column bases, and portions of the wall. At the foot of the hill were the remnants of stone or brick houses and bridges, and some fragments of archaic pottery; there, in prehistoric days, the town of Tiryns huddled for protection below the palace walls. We must picture the life of Bronze Age Greece as moving insecurely around and within such feudal fortresses.

Ten males farther north, perhaps in the fourteenth century before Christ, Perseus (if we wish to believe Pausanus") built Mycenae—the greatest capital of prehistonic Greece. Here too, around a forbidding citadel, a town of several villages grew, housing a busy population of peasants, merchants, artisans, and slaves, who had the happiness of cluding history. Six hundred years later Homer called Mycenae "a well-built city, broad-avenued and abounding in gold." Despite a hundred despoiling generations some parts of these also cyclopean walls survive, to attest the minemonal cheapness of labor and uneasiness of kings. In a corner of the wall is the famous Lion Gate, where, carved upon a stone triangle over a massive lintel, two royal beasts, now worn and headless, dumbly stand guard over a grandeur that is gone. On the acropolis beyond are the ruins of the palace. Again, as at Tiryns and Chossus, we can trace the divisions of throne room, altar room, storerooms, bathroom, and reception rooms. Here once

were painted floors, columned porticoes, frescoed walls, and majestic flights of stairs.

Near the Lion Gate, in a narrow area enclosed by a ring of erect stone slabs, Schliemann's workers dug up nineteen skeletons, and relics so rich that one could forgive the great amateur for seeing in these shafts the burial chambers of the children of Atreus. Had not Pausanias described the royal graves as "in the ruins of Mycenae"?" Here were male skulls with crowns of gold, and golden masks on the hones of the face, here were osseous ladies with golden diadems on what had been their heads, here were painted vases, bronze caldrons, a silver rhyton, beads of amber and amerbyst, objects of alabaster, avory, or faience, heaving ornamented daggers and swords, a gaming board like that at Chossus, and almost anything in gold—seals and rings, pins and studs, cups and beads, bracelets and breastplates, vessels of toilette, even clothing embroidered with thin plates of gold." These were assuredly royal jewels, royal bones.

In the hiliside opposite the acropolis Schliemann and others discovered nine tombs altogether different from these "shaft graves." Leaving the road that comes down from the citadel, one enters at the right a corridor lined with walls of large, well-cut stones. At the end is a plain portal, once adorned with slim cylindrical columns of green marble, now in the British Museum, above it is a simple lintel of two stones, one extending thirty feet and weighing it is tons. Within, the traveler finds himself under a dome, or tholos, lifty feet high and as many wide, the walls are built of sawn blocks reinforced with decorative bronze rosettes, each stratom of stones overlaps the one beneath, until the uppermost layer closes the top. This strange structure, Schliemann thought, was the tomb of Agameimon, and a smaller tholos near by, discovered by his wife, was at once described as the tomb of Ciytaemnestra. All the "bechive" tombs at Mycenae were found empty, thieves had anneipated the archeologists by several centuries.

These gloomy rums are the reminders of a civilization as ancient to Pericles as Charlemagne to ourselves. Current opinion dates the shaft graves near to 1600 B.C. (some four hundred years before the traditional age of Agamenmon), and the beeling tombs about 1450, but prehistoric chronology is not a precision tool. We do not know how this civilization began, not what people it was that built towns not only at Mycenae and Tiryns but at Sparta, Amyelae, Aegma, Fleusis, Chaeronea, Orchomenos, and Delphi. Probably, like most nations, it was already composite in stock and heritage, Greece was as diverse in blood before the Dorian invasion (1100 B.C.) as England before the Norman Conquest. So far as we can guess, the

Mycenaeans were akin to the Phrygians and Carians of Asia Minor, and to the Minoans of Crete." The lions of Mycenae have a Mesopotanian countenance, this ancient motif probably came through Assyria and Phrygia to Greece." Greek tradition called the Mycenaeans 'Pelasgi' (possibly meaning People of the Sea pelagor), and pictured them as coming down from Thrace and Thessaly into Attica and the Peloponnesus in a past so distant that the Greeks termed them autochthonoi-aborigmes. Herodorus accepted this account, and ascribed the Olympian gods to a Pelasgic origin, but he "could not say with any certainty what the language of the Pelasgi was." No more can we.

Doubtless these autochthonoi were themselves late-comers into a land that had suffered cultivation since neolithic days, there are no aborigines. In their turn they too were overrun, for in the later years of Myceolean lustery, towards 1600, we find many indications of a cultural-commercial, if not a military-political, conquest of the Peloponnesus by the products or emigrants of Crete." The palaces at Tiryns and Myceolae, except for the gynacceum, were designed and decorated in the Minoan manner, Cretan vases and styles reached into Aegma. Chalcis, and Thebes, Myceolaeun ladies and goddesses adopted the charming fashions of Crete, and the art revealed in the later shaft graves is immistakably Minoan." Apparently it was this stimulating contact with a higher culture that lifted Myceolee to the peak of its civilization.

III. MYCENAEAN CIVILIZATION

The remains of this culture are too fragmentary to give us a picture as distinct as those that take form in the trans of Crete or the poetry of Homer. Life on the mainland was a little nearer to the builting stage than in Crete. The bones of deer, wild boars, goats, sheep, hares, oxen, and pigs among the Mycenaean leavings—not to speak of fishbones and marine shells indicate an appetite already Homeric, and unfriendly to the Cretan waist. Here and there the relics reveal the stringe contemporaneity of "ancient" and "modern" modes—obsidian arrowheads waig beside a hollow bronze drill apparently used in boring dowel holes into stones."

Industry was less advanced than in Crete, there are no signs on the mainland of such industrial centers as Gournia. Trade grew slowly, for the seas were troubled with pirates, including the Mycenaeans, the kings of Mycenae and Tiryns had Cretan artists engrave for them, on their vases and rings, a proud record of their achievements in piracy.* To protect themselves against other

pirates they built their cities inland, far enough from the sea to guard against sudden attack, close enough to take readily to their ships. Lying on the road from the Argune Gulf to the Isthmus of Corinth, Turins and Mycenae were weil situated both to plander traders with fendal tods, and to set out occasion ally on burcaneering raids. Seeing Crete grow tich on orderly trade, Mycenae learned that paracy—like its civilized offspring, tariff does—can strangle commerce and international ze poverty, it reformed, and allowed piracy to subside into trade. By 1400 its increantile fleet was strong enough to defy the sea power of Crete, it refused to ship its Africa-bound goods across the island, but sent them directly to Figs pt, possibly this was the cause, or result, of a war that ended in the destruction of the Cretan citadels.

The wealth that grew from this trade was not accompanied by any commeasurate culture visible in the remains. Greek tradition credited the Pelasgians with having learned the alphabet from Phoenic an traders. At Lityns and Thebes some tars have been found bear ng unnite, igible characters, but no clay tablets, or inscriptions, or documents have been discovered, probably when My cense decided to be literate it used perishable writing materials, as the Cretans did in their final period, and nothing has been preserved. In art the My cenaeans followed Cretan modes: and so faithfully that archeology suspects them of importing their major artists from Crete. But after Cretan art declined, painting flourished vigorously on the mainland. The decorative designs of borders and cornices are of the first order, and persist into classic Greece, while the surveying frescoes indicate a keen feeling for moving life. The Ladies in the Box are splended dowagers, who might adorn any opera promenade today and be in full fashion of co flure and gowns, they are more alive than the stiffly conscious Ladies in the Chanot, who are out for an afternoon drive in the park Better still is the Boar Hunt, a tresco from Tirvns, the boar and the flowers presunctions include a convenience, the incredials pank bounds are distiguized with stylized spots of scarlet, back, or blue, and the hand quarters of the plunging boar taper away into the likeness of some high-heeled maiden falling from her palace hower, nevertheless the chase is real, the boar is desperate, the dogs are in fast flight through the air, and man, the most semimental and terrible of all beases of prev, stands ready with his murderous spear." One may suspect from such samples the active and physical life of the Mycenaeaus, the proud beauty of their women, the vivid adorament of their palices.

The highest art of Mycenae was in metals. Here the mainland equaled Crete, and dared to use its own forms and decoration. If Schliemann did not quite find the bones of Agameimon, he found their weight in silver and gold jewelry of many kinds, in spendthrift quantities, stud buttons worthy of any king, intaghos alive with scenes of hunting, war, or piracy and a cow's head in shiring silver, with home and frontal rosette of gold at any moment one expects from

is the plaintive mooing to which Schliemann, never at a loss for explanations, traced the name Mycenae (Mukenai)." The finest of these metal renes from Turyns and Mycenae are two bronze daggers inlaid with electron and I urnished gold, and elegantive engraved with wildcars chasing ducks, and lions pursing leopards or righting men." Most peculiar of all the remains are the golden masks, apparently laid over the faces of dead royalty. One masks looks for all the world like the tare of a cat, however, the gallant Schliemann ascribed it not to Clytaennessra but to Agamemnon.

The unquestioned masterpieces of Mycenzean art were found neither at Tirens nor at Mycenae but in a tomb at Vaphio, near Sparta, where a minor prince once emulated the magnificence of the northern kings. Here, amid another treasure of sewelry, were two thin cups of beaten gold, simply formed and set worked with the loving patience of all great art. The craftsmanship is so like the best. Minoan that most students are inclined to attribute these cups to some Cretan Centur, but it would be a pity to deprive the Mycenaean culture of its most perfect memorials. The subject-the snaring and raming of a bull-seems characteristically Cretan, and yet the frequency with which such scenes are engraved upon Mycensean rings and seals or painted upon the polace walk shows that the bull sport was as popular on the mainland as on the island. On one of the cups the bull is caught in a net of heavy rope, his mouth and nostrals gape with breathiess anger and fatigue as he struggles to get free and imprisons himself the more, while on the other side a second bull gallops off in terror, and a third charges at a cowhor who catches it bravely by the horns. On the companion cup the captured hall is being led away; as we turn the vessel around we see him arready reconcised to the restraints of cavilization, and engaged, as Evans puts it, in "amorous conversation" with a cow." Many centuries were to pass before such skillful work would appear again in Greece.

The Mycenaean himself, as well as most of his art, is found in the tombs, for he fooded and buried his dead in uncomfortable jars, and seldom cremated them as the Heroic Age would do. Apparently he believed in a future life, for many objects of use and value were placed in the graves. For the rest Mycenaean teligion, so far as it reveals itself to us, gives every evidence of Cretan origin or kinship. Here as in Crete are the double ax, the sacred pillar, the how dove, and the cult of a mother goddess associated with a young male deity, presumably her son, and here again are attendant dissuites in the form of snakes. Through all the transformations of religion known to us in Greece the mother goddess has remained. After the Cretan Rhea came Demeter, the Mater Doloroia of the Greeks, after Demeter the Viegin Mother of God. Today, standing on the runs of Mycenae, one sees, in the little village below, a modest Christian church. Grandeur is gone, ampacity and consolation remain. Civilizations come and

go, they conquer the earth and crumble into dust, but furth survives every desolation.

After the fall of Cnossus Mycenae prospered as never before; the rising wealth of the "Shaft Grave Dynasty" raised great palaces upon the hills of Mycenae and Tiryns. Mycenaean art took on a character of its own, and captured the markets of the Aegean. Now the commerce of the mainland princes reached eastward into Cyprus and Syria, southward through the Cyclades to Fgypt, westward through Italy to Spain, northward through Boeotia and Thessaly to the Danube, and found itself balked only at Troy. Like Rome absorbing and disseminating the civilization of Hellas, so Mycenae, won by the culture of dying Crete, spread the Mycenaean phase of that culture throughout the Mediterranean world.

IV. TROY

Between the Greek mainland and Crete 220 islands dot the Aegean, forming a circle around Delos, and therefore called the Cyclades. Most of them are rugged and barren, precarious mountain survivals of a fand half drowned in the sea, but some were rich enough in marble or nictal to be already busy and civilized, as the world goes, long before Greek history comes into our view In 1896 the British School of Athens dug into the soil of Melos at Phylakopi and found tools, weapons, and pottery remarkably akin, age by age, to the Minoan, and a like research in other slands has built up a prehistoric picture of the Cyclades conforming in time and character, though never comparable in artistic excellence, with the bioscope of Crete. The Cyclades were cramped for land, totaling less than a thousand square miles among tuem, and proved, like classic Greece, incapable of uniting under one political power. By the seventernth century B.c. the little isles had passed in government and art, even, here and there, in language and writing, under Cretan domination. Then, in the final period (1400-1200), the imports from Crete fell away, and the islands mereasingly took their pottery and their styles from Mycenae

Moving eastward into the Sporades (Scattered) Islands, we find in Rhodes another prehistoric culture of the simpler Aegean repe. In Cyprus the rich deposits of copper that gave the island its name brought it a measure of wealth throughout the Bronze Age (14 section), but its wares remained crude and undistinguished before the contrig of Cretan influence. Its population, predominantly Asiatic, used a syllabic script akin to the Minoan, and worshiped a

^{*} Sedulously collected by General de Casnola, and now as the Metropolitan Museum of Art in New York.

goddess apparently descended from the Semitic Ishtar, and destined to become the Aphrodite of the Greeks," After 1600 the metal industry of the island developed rapidly, the mines, owned by the royal government, exported copper to Fgypt, Crete, and Greece the foundry at Enkonu made famous daggers, and the potters sold their globular bowls from Egypt to Troy. The forests were cut into timber, and express from Cyprus began to compete with the cedars of Lebanon. In the thirteenth century, Mycenaean colonists founded the colonies that were to become the Greek emes of Paphos, sacred to Aphrodite, and Citium, birthplace of the Store Zeno, and Cyprian Salams, where Solon paused in his wanderings to replace chaos with law.

From Cyprus Mycensean trade and influence crossed to Syria and Caria, and thence, as well as by other "rowing-stones," they moved up the coasts and islands of Asia until they reached Troy. There, on a hill separated by three miles from the sea, Schliemann and Dorpfeld found nine cities, super-

imposed each upon its predecessor, as if Troy had had nine lives.

(t) In the lowest strata were the remains of a neolithic village coming down to 3000 B.C. Here were walls of rough stones, mortared with mud, clay whorls, bits of worked ivory, tools of obadian, and pieces of hand-polished black pottery. (2) Above this lay the roins of the Second City, which Schliemann believed to have been Homer's Troy. Its enclosing walls, like those of Tiryns and Mycenae, were of cyclopean stones; at intervals there were fortresses, and at the corners great double gates, of which two are well preserved. Some houses survive to a height of four feet, their walls built of brick and wood upon a stone foundation. The red-painted pottery, wheel-turned but crude, indicates a life span for this city from approximately 2400 to 1900. Bronze has replaced stone for tools and weapons, and jewelry abounds, but the statuertes are unprepossessingly primitive. The Second City was apparently destroyed by fire, signs of conflagration are numerous, and persuaded Schliemann that this was the work of Agamemnon's Greeks.

(3-5) Above the "Burnt City" are the relies of three successive hamlets, small and poor, and negligible in archeological content. (6) About 1600 another city rose on the historic hill. Through the passionate haste of his work, Schnemann mixed the objects of this stratum with those of the second, and dismissed the Sixth City as an unimportant "Lydian settlement." But Dorpfeld, continuing the excavations after Schliemann's death, and for a time with Schliemann's money," revealed a town considerably larger than the Second, ornate with substantial buildings in dressed stone, and enclosed by a thirty-foot wall of whose four gates three remain.

In the ruins were monochrome vases of finer workmanship than before, vessels like the "Minyan" ware of Orchomenos, and potsherds so like those found at Mycenae that Dorpfeld considered them to be importations from that city, and therefore contemporary with the Shaft Grave Dynasty (1400-1200) On these and other slufting grounds current opinion identifies the Sixth City with Homer's Troy, " and assigns to it the "Treasury of Priam" that Schliemann thought he had found in the Second City-six bracelets, two goblets, two diadems, a fillet, sixty earrings, and 8700 other pieces, all in gold." The Sixth City too, we are assured, perished by fire. shortly after 1200. Greek historians traditionally assigned the siege of Troy

to 1104-1184 B.C.T

Who were the Trojans? An Egyptian papyrus mentions certain "Dardenui" as among the alies of the Hittites at the battle of Kadesh (1287), it is likely that these were the ancestors of the "Dardenor" who in Homer's terminology are one with the Trojans." Probably these Dardani were of Balkan origin, crossed the He.lespont in the sixteenth century with the kindred Phrygians, and settled in the lower values of the Scamander." Herodotus, however, identified the Trojans with the Teuerians, and the Teuchans, according to Straho, were Cretans who settled in the Troad, f perhaps after the fail of Chossus." Both Crete and the I road had a sacred Mr. I.la, the "many-fountained Ida" of Homer and Tennyson. Presumably the region was subject at various times to pointical and ethnic influences from the Huttre hinterland. All in all, the excavations indicate a civilization partly Minoan, partly Mycenaean, partly Asiatic, partly Danubian. Homer represents the Trojans as speaking the same language and worshiping the same gods as the Greeks, but later Helleric imagination preferred to think of I roy as an Asiatic city, and of the fam has siege as the first known episode in an endless contest between Semite and Arvan, Fast and West."

More significant than the racial complexion of its people was the strategic

^{*} Dr. Carl Blegen field director of the University of Cinconnati excavations at Troy (1941), believes that these have shown that Troy VI was destroyed about 1900, probably by earthquake and that upon its runs rose the Seventh Univ which he calls Prum's Troy. Dorpledd prefers to call this Troy VIII Cf. Journal of Helleme Studies, £11, 156.

f (7, Iroy VII was a small unfortaited settlement, which occupied the site oil (8) Alexander the Great, in 114, built upon a Fron VIII in hourige to H met 9 About the beginning of the Christian era the Romans buat Novam lluon, or New Troy, which survived till

t The name Troy was traced by Greek tradition to the eponymous here Trus, father of the fifth century AD. Bus, father of Lambedon father of Pream " Hence the variant has nes of the city. Tross thos, then them. An eponymous here, or eponym, is a probably agendary person to whom a social or polytical group attributes its origin and name. The Dardam for example besieved or pretended that they were descended from Dardams, son of Zeus, so the Dorman traced themselves to Dorus, the lonsons to lon, etc.

position of Troy near the entrance to the Hellespont and the rich lands about the Black Sea. Throughout history that narrow passage has been the battleground of empires, the siege of I roy was the Gal. pon adventure of 1194 B.C. The plain was moderately fertile, and precious metals lay in the soil to the east, but this alone would hardly account for the wealth of Troy, and the renacious attack of the Greeks. The city was admirably placed to levy tolls upon vessels wishing to pass through the Hellespont, while it was too far inland to be conveniently assailed from the sea, "perhaps it was this, and not Helen's face, that launched a thousand ships upon Illium. On a likeher theory the southward current and winds in the strait persuaded merchants to unload their eargoes at Troy and ship them overland into the interior; from the charges exacted for this service. I roy may have derived its wealth and power." In any case the city's trade grew rapidly, as may be judged from the varied provenance of its remains. From the lower Aegean came copper, olive oil, wine, and pottery, from the Danube and Thrace came pottery, amber, horses, and swords, from distant China came so great a ranty as jade " In return I roy brought from the interior, and exported, number, silver, gold, and wild asses. Seated proudly behind their walls, the "horse-ranning Frojans" dominated the Troad, and taxed its trade on land and sea.

The picture that we derive from the Hud of Priam and his household is one of Biblical grandeur and patriarchal benevolence. The King is polygamous, not as a diversion but as a royal responsibility to continue his high breed abundantly, his sons are monogamous, and as well behaved as the fictitious Victorians excepting, of course, the gay Paris, who is as innocent of morals as Alcabiades. Hector, Helenus, and I rodus are more likable than the vacillating Agamemnon, the treacherous Odysseus, and the petulant Achilles, Andromache and Polyxena are as charming as Helen and Iphigenia; and Hecuba is a shade better than Clytaemnestra. All in all, the Trojans, as pictured by their enemies, seem to us less decenful, more devoted, better gentlemen, than the Greeks who conquered them. The conquerors themselves felt this in later days, Homer had many a kind word to say for the Trojans, and Sappho and Euripides left no doubt as to where their sympathies and admiration lay. It was a pity that these noble Dardans stood in the way of an expanding Greece which despite its multitude of faults, would in the end bring to this and every other region of the Mediterranean a higher civilization than they had ever known.

CHAPTER III

The Heroic Age

L THE ACHAEANS

MODEST Hittite tablets from Boghaz Keill, of approximately 1325 B.C., speak of the "Ahhijava" as a people equal in power to the Hittites themseives. An Egyptian record towards 1221 B.C. mentions the "Akaiwasha" as joining other 'Peoples of the Sea" in a Libyan invasion of Fgypt, and describes them as a roying band "righting to fil, their beliefs." In Homer the Achaeans are, specifically, a Greek-speaking people of southern Thessaly," often, however, because they had become the most powerful of the Greek tribes, Homer uses their name for als the Greeks at Troy. Greek historians and poets of the classic age called the Achaeans, like the Pelasgians, autochthonous-native to Greece as far back as memory could recall, and they assumed without hesitation that the Achaean culture desembed in Homer was one with that which has here been termed Mycenaean. Schliemann accepted this identification, and for a brief while the world of scholarship agreed with hun.

In 1901 an unusually iconoclastic Englishman, Sir William Ridgeway, upset this happy confidence by pointing out that the ugh Achaean civilization agreed with the Mycenacin in many ways, it differed in vital particulars. (1) Iron is practically unknown to the My cenacians, the Achaeans are familiar with it (2) The dead in Homer are cremated, in Tirvis and My cenae they are buried, implying a different conception of the afterlife. (3) The Achaean gods are the Olympians, of whom no trace has been found in the culture of Mycenae. (4) The Achaeans use long swords, round shields, and safety pin brooches, no objects of such form appear in the varied Mycenaean remains. (5) There are considerable dissimilarities in confure and dress. R dgeway concluded that the Mycenaeans were Pelasgians, and spoke Greek, that the Achaeans were blond 'Celts," or Central Europeans, who came down through I prus and Thessaly from 2000 onward, brought with them the worship of Zeus, invaded the Peloponnesus about 1400, adopted Greek speech and many Greek ways, and established

themselves as feudal chieftains ruling from their fortress-palaces a sub-

jugared Pelasgian population.

The theory is illuminating, even if it must be substantially modified. Greek interature says nothing of an Achaean invasion, and it would not be wise to hang a rejection of so unanimous a tradition upon a gradual increase in the use of from, a change in modes of burial or conflure, a lengthening of swords or rounding of shields, or even a safety pin. It is more likely that the Achaeans, as all classic writers supposed, were a Greek tribe that, in its natural multiplication, expanded from Thessaly into the Peloponnesus during the fourteenth and thirteenth centuries, mingled their blood with the Pelasgo-Mycenaeans there, and, towards 1250 B.C., became the ruling class.' Probably it was they who gave Greek to the Pelasgians, instead of receiving it from them. In such place names as Corinth and Tiryns, Parnassus and Olympia,* we may have echoes of a Creto-Pelasgo-Mycenaean tongue. In the same manner, presumably, the Achaeans superimposed their mountain and sky gods upon the "chthonic" or subterranean deities of the earlier population. For the rest there is no sharp line of separation between the Mycenaeun culture and that later phase of it, the Achaean, which we find in Homer; the two ways of life seem to have mingled and melted into one. Slowly, as the amalgamation proceeded, Aegean civilization passed away, dying in the defeat of Troy, and Greek civilization began.

IL. THE REPORT LEGENDS

The legends of the Heroic Age suggest both the origins and the destinies of the Achaeans. We must not ignore these stories, for though a sanguinary fancy enlivers them, they may contain more history than we suppose, and they are so bound up with Greek poetry, draina, and art that we should be at a loss to understand these without them.

^{*} And in such Greek words as testimon (sesame), hypanistos (cypress), hystopos (hystop), olnos (wine , sandaton (sandat) chalkos (copper) (halasis (sea), moryhdos (lead), tephyros (zephye), hybernao (stees), tiphongos (spenge), laos (people), tabyrmibis, dithyrambos, hubaris (zithes), syrina (flate and paran (paran)

to regard these and the other beroes of this age. As purely mythical creations. The later Greeks, in critic range the records of their past had no doubt that they were historical persons who actually ruled in Argus and other kingdoms, and after a period of extreme skepticism many modern critics have begun to revert to the Greek view as that which explains the evidence most satisfactority. The heroes of the tases, like the geographical scenes in which they moved, are real."—Cambridge Ancient History, 11, 478. We shall assume that the importaged are true in essence, imaginative in detail.

Hittire inscriptions mention an Atarissyas as King of the Ahhijavas in the thereenth century B.C., he is probably Atreus, King of the Achaeans.' In Greek story Zeus begat Tantalus, King of Phrvgia,* who begat Pelops, who begat Atreus, who begat Agamemmon. Pelops, being exiled, came to Elis in the western Peloponnesus about 1283, and determined to marry Hippodameia, daughter of Oenomaus, Elis' king. The east pediment of the great temple of Zeus at Olympia still tells us the story of their courtship. The King made a practice to test his daughter's suiturs by competing with them in a chariot race: if the suitor won he would receive Hippodameia; if he lost he was put to death. Several suitors had tried, and had lost both race and life. To reduce the risks Pelops bribed the King's charioteer, Myrtilus, to remove the linchpins from the royal chariot, and promised to share the kingdom with him if their plan succeeded. In the contest that ensued the King's chariot broke down, and he was killed. Pelops married Hippodamesa and ruled Elis, but instead of sharing the kingdom with Myrrilus he threw Myrrilus into the sea. As Myrrilus sank he laid an ommous curse upon Pelops and all his descendants.

Pelops' daughter married Sthenelus, son of Perseus and King of Argos; the throne passed down to their son Eurystheus, and, after the latter's death, to his mucle Atrens. Arreus' sons Agamemnon and Menelaus married Clytaemnestra and Helen, daughters of King Tyndareus of Lacedaemon, and when Atrens and Tyndareus died, Agamemnon and Venelaus between them ruled all the eastern Peloponnesus from their respective capitals at Mycenae and Sparta. The Peloponnesus, or Island of Pelops, came to be called after their grandfather, whose descendants had quite forgotten the

curse of Myrrilus.

Meanwhile the remainder of Greece was also busy with heroes, usually founding cities. In the fifteenth century before our era, said Greek tradition, the miquity of the human race provoked Zeus to overwhelm it with a flood, from which one man. Deucalion, and his wife Pyrrha, alone were saved, in an ark or chest that came to rest on Mr. Parnassus. From Deucalion's son Hellen had come all the Greek tribes, and their united name, Hellenes. Hellen was grandfather of Achaeus and lon, who begot the

^{*}Tantales angered the gods by divulging their sterets, smaling their nectar and unbresis, and offering them his son Pelops, boiled and sheed. Zens put Pelops together again, and punished Tuntales, in Hades, with a raging thirst. Tantales was placed in the modst of a lake whose waters recorded whenever he tried to drink of them, over his head branches righ in front were hung, which withdraw when he sought to reach them, a great rock was suspended above him, which at every moment threatened to fall and crush han."

Achaean and Ionian tribes, which, after many wanderings, peopled respectively the Peloponnesus and Attica. One of Ion's descendants, Cecrops, with the belp of the goddess Athena, founded (on a site whise acropolis had already been settled by Pelasgians) the city that was named after her, Athens.' It was he, said the story, that gave envilvation to Attica, instituted marriage, abolished bloody sacrifices, and taught his subjects to worship the Olympian gods—Zeus and Athena above the rest

The descendants of Ceerops ruled Athens as kings. The fourth in line was Erechtheus, to whom the city, honoring him as a god, would later dedicate one of its loveliest temples. His grandson, Theseus, about 1150, merged the twelve demes or villages of Attica into one political mory, whose citizens, wherever they hyed, were to be called Athenans, perhaps it was because of this historic tynochimios, or municipal cohabitation, that Athens, like Thebes and Mycenae, had a plural name. It was Theseus who brought order and power to Athens, ended the sacrifice of her children to Minos, and gave her people security on the roads by slaving the highwayman Procrustes, who had liked to stretch or cut the legs of his captives to make them fit his bed. After Theseus' death Athens worshiped him, too, as a god As late as 476, in the skeptical age of Pericles, the city brought the bones of Theseus from Seyros and deposited them as sacred relies in the temple of Theseus.

To the north, in Boeoria, a rival capital had equally stirring traditions, destined to become the very substance of Greek drama in the classic age. Late in the fourteenth century u.c. the Phoenician or Cretan or Egyptian prince Cadmus founded the city of Thebes at the meeting of the roads that cross Greece from east to west and from north to south, taught its people letters, and slew the dragon (perhaps an ancient phrase for an infecting or infesting organism) that lundered the settlers from using the waters of the Arcian spring. From the dragon's teeth, which Cadmus sowed in the earth, sprang armed men who, like the Greeks of history, attacked one another until only five survived, these five, said Thebes, were the founders of her toyal families. The government established itself on a hill citadel called the Cadmeia, where in our own time a 'palace of Cadmus' has been uncarthed. There, after Cadmus, reigned his son Polydorus, his grandson Labdacus, and his great-grandson Laius, whose son Ocdapus, as all the world knows, slew his father and married his mother. When Ocdapus died

^{*} Assigned to 1400-1200 a.c. It contained fragments of writing in undeciphered characters, probably of Cremo integer.

his sons quarreled over the scepter, as is the habit of princes. Ecocles drove our Polymoes, who persuaded Adrastus, King of Argos, to attempt his restoration. Adrestus tried (ca. 1213), in the famous war of the Seven (Albes) against Thebes, and again sixteen years later in the war of the Epigoni, or sons of the Seven. This time both Eteocles and Polymoes were killed, and Thebes was burned to the ground.

Among the Theban aristocrats was one Amphitryon, who had a charming wife, Alemene. Her Zeus visited while Amphitryon was gone to the wars, and Heracles (Flercules) was their son. Hera, who did not relish these jovial condescensions, sent two serpents to destroy the babe in the eradle, but the boy grasped one in each hand and strangled them both; therefore he was called Heracles, as having won glory through Hera. Linus, oldest name in the history of music, tried to teach the youth how to play and sing, but Heracles did not care for music, and slew Linus with the lyre. When he grew up-2 clumsy, bibulous, gluttonous, kindly grant-he undertook to kill a lion that was ravaging the flocks of Amphirryon and Thespius. The latter, King of Thespiae, offered his home and his fifty daughters to Heracles, who rose to the occasion manfully " He slew the bon, and wore its skin as his garb. He married Megara, daughter of Creon of Thebes, and tried to sett e down, but Hera sent a madness upon him, and unwittingly he killed his own children. He consulted the oracle at Delphi, and was instructed to go and live at Tirvins and serve Eurystheus, the Argive king, for twelve years, after which he would become an immortal god. He obeyed and carried out for I urystheus his famous twelve labors, I Released by the king, Heracles returned to Thebes. He performed many

[&]quot;Zeus," says Diodorus, made that right three times its normal length and by the magnitude of the time expended on the procreation he presided the exceptional might of the child."

If He strangled the bon that troubled the flocks at Nemes, he desired the main headed livides that the rangled Lerna he captured a fleet stag and carried it to Enrisheds he caught a will hear from Mr. It can ant ma and carried it. I harywheus, in one day he cleaned of the stables of Anguas of the thousands with he diversing the thresh Aphens and Pences into the stables of Anguas. Of the thousands with his to extend he the Ots open games, he destroyed the stables of Anguas of the day of Arcadia he captured the market was destroyed the market may be and the man heads of Arcadia he captured the main built that was destroyed the market and carried to make the man extend he escended to the head of Arcadia he captured the magnetic and the main extend he seed of Door. Its he at a real of the Anguard of the Market man confirming proof of the main faile Market man, captured the owner of Gerson and brought them through Guid across the Anguartheous he for a while held up the carth for Farmities the form of the angles and delivered Theseus and Ascalabhus from tornest. The Hesperides, is aghters of Arlas had been entrusted by Hera with the golden apples given her by Great (harth) at her welding with Zeis. The apples were guarded by a dragon, and conferred semidivine qualities upon those who are them.

other exploits; he joined the Argonauts, sacked Troy, helped the gods to win their battle against the giants, freed Prometheus, brought Alcestis back to life, and, now and then, killed his own friends by accident. After his death he was worshiped as hero and god, and since he had had countless

loves, many tribes claimed him as their progenitor."

His sons made their home at Trachis in Thessaly, but Eurystheus, fearing lest they depose him in revenge for the unnecessary labors that he had laid upon their father, ordered the Trachinian king to exile them from Greece. The Heracleidae (i.e., children of Heracles) found refuge in Athens, Eurystheus sent an army to arrack them, but they defeated and killed him. When Atreus came against them with another force, Hyllus, one of the sons, offered to fight any of Atreus' men in single combat, on condition that if he won, the Heracleidae should receive the kingdom of Mycenae, if he lost, the Heracleidae would depart and not return for fifty years, after which time their children were to receive Mycenae. He lost, and led his partisans into exile. Fifty years later a new generation of Heracleidae returned, it was they, not the Dorians, said Greek tradition, who, being tesisted in their claims, conquered the Peloponnesus, and put an end to the Heroic Age.

If the tale of Pelops and his descendants suggests the Asia Minor origin of the Achaeans, the theme of their destiny is struck in the story of the Argonauts. Like so many of the legends that served as both the historical tradition and the popular fiction of the Greeks, it is an excellent narrative, with all the elements of adventure, exploration, war, love, mystery, and death woven into a fabric so rich that after the dramatists of Arhens had almost worn it bare it was rewoven into a very passable epic, in Hellenistic days, by Apollonius of Rhodes. It begins in Bocotian Orchomenos on the harsh note of human sacrifice, like Agametinion's tragedy. Finding his land stricken with famine, King Athamas proposed to offer his son Phrixus to the gods. Phrixus learned of the plan and escaped from Orchomenos with his sister Helle, riding with her through the air on a tam with a golden fleece. But the ram was unsteady, and Helle fell off and was drowned in the struct which after her was called the Hellespont. Phrixus reached land

This amozing "culture hero." Door run thought, was a principle engineer, a prehistoric Empedix es, the legends told about his meant that he had diesised the springs, cleaved mountains, changen the courses of rivers, reclaimed waite areas, rid the woods of dangerous beasts, and made Greece a habitable land. In another aspect Heracles is the beloved son of god who suffers for manking, raises the dead to life, descends into Hades, and then estends and heavest.

and found his way to Colchis, at the farther end of the Black Sea, there he sacrificed the ram and hung up its fleece as an offering to Ares, god of war. Aieres, King of Colchis, set a sleepless dragon to warch the fleece, for an oracle had said that he should die if a stranger carried it off, and to better assure himself he decreed that all strangers coming to Colchis should be put to death. His daughter Medea, who loved strange men and ways, pitied the wayfarers who entered Colchis, and helped them to escape. Her father ordered her to be confined, but she fled to a sacred precanct near the sea, and lived there in butter brooding till Jason found her wandering on the shore.

Some twenty years before (Greek chronologists said about 1245), Pelias, son of Poseidon, had usurped the throne of Aeson. King of Ioleus in Thessaiy. Aeson's infant son Jason had been hidden by friends, and had grown up in the woods to great strength and courage. One day he appeared in the market place, dressed in a leopard skin and armed with two spears, and demanded his kingdom. But he was simple as well as strong, and Pelias persuaded him to undertake a heavy task as the price of the throne—to recover the Golden Fleece. So Jason built the great ship drgo (the Swift), and called to the adventure the bravest spirits in Greece. Heracles came, with his beloved companion History, and Peleus, father of Achilles, Theseus, Meleager, Orpheus, and the fleet footed maiden Atalanta. As the vessel entered the Hellesport it was halted, scennigly by some force from Troy, for Heracles left the expedition to sack the city and kill its King Laomedon, and all his sons but Prizm.

When, after many tribulations, the Argonauts reached their goal, they were warned by Medea of the death that awaited all strangers in Colchis. But Jason persisted, and Medea agreed to help him gain the Fleece if he would take her to Thessaly and keep her as his wife until he died. He pledged himself to her, captured the Fleece with her aid, and fled back to his ship with her and his men. Many of them were wounded, but Medea quiekly healed them with roots and herbs. When Jason reached loleus he again asked for the kingdom, and Pelias again delayed. Then Medea, by the arts of a sorceress, deceived the daughters of Pelias into boiling him to death. Frightened by her magic powers, the people drove her and Jason from Ioleus, and debarred him forever from the throne." The rest belongs to Euripides.

A myth is often a bit of popular wisdom personified in poetic figures, as the story of Eden suggests the disillusionment of knowledge and the habilities of love; legend is often a fragment of history swelling with new fictions as it rolls down the years. It is probable that in the generation before the historic stege of I roy the Greeks had tried to force their way through the Hellespoot and open the Black Sea to colomization and trade, the story of the Argonauts may be the dramatized memory of that commercial exploration; and the "golden fleece" may refer to the woolen skins or cloths anciently used in northern Asia Minor to catch particles of gold carried down by the streams." A Greek settlement was actually made, about this time, on the island of Lemnos, not far from the Hellespoot. The Black Sea proved inhospitable despite its propriating name, and the fortress of Troy rose again after Heracles' visitation to discourage adventures in the strait. But the Greeks did not forget, they would come again, a thousand ships instead of one, and on the plain of lbon the Achaeans would destroy themselves to free the Hellespoor.

III. HOMERIC CIVILIZATION

How shall we reconstruct the life of Achaean Greece (1300-1100 BC.) out of the poetry of its legends? Our chief reliance must be upon Homer, who may never have existed, and whose epies are younger by at least three centuries than the Achaean Age. It is true that archeology has surprised the archeologists by making realines of Troy, Mycenae, Thyns, Chossus, and other cities described in the Iliad, and by exhuming a Mycenaean civilization strangely akin to that which spontaneously takes form between the lines of Homer; so that our inclination today is to accept as real the central characters of his fascinaring tales. None the less, it is impossible to say how far the poems reflect the age in which the poet lived, rather than the age of which he writes. We shall merely ask, then, what did Greek tradition, as gathered together in Homer, conceive the Homeric Age to be? In any case we shall have a picture of Hellas in buoyant transit from the Aegean culture to the civilization of historic Greece.

1. Labor

The Achaems (i.e., the Greeks of the Heroic Age) impress us as less civilized than the Mycenaeaus who preceded them, and more civilized than the Durans who followed them. They are above all physical—the men tall and powerful, the women ravishingly lovely in an unusually literal sense. Like the Romans a thousand years after them, the Achaeaus look down upon interary

culture as efferminate degeneration, they use wirring under protest, and the only literature they know is the martial lay and unwritten song of the troubadoor. If we believe Homer we must suppose that Zeus had realized in Achaean society the aspiration of the American poet who wrote that if he were God he would make all men strong, and all women beautiful, and would then himself become a man. Homene Greece is kalligy narka"-it is a dream of fair women The men too are handsome, with their long hair and their brave beards, the greatest gift that a man can give is to car off his hair and lay it as an offering upon the funeral pyre of his friend." Nakedness is not yet cultivated, both sexes cover the body with a quadrangular garment folded over the shoulders, ned with a clasp pin, and reaching nearly to the knees, the women may add a veil or a girdle, and the men a louich th-which, as dignity increases, will evolve into drawers and trousers. The well to do go in for costly robes, such as that which Priant brings build by to Achilles in ransom for his son." The men are barrelegged, the women bare-armyd, both wear shoes or sandals outdoors, but are usually barefoot within. Both seves wear jewelry, and the women and Paris amoint the body with "rose secured oil ""

How do these men and women live? Homer shows them to us filling the soil. spilling with pleasure the freshly rurned dark earth, running their eyes with pride along the furrows they have ploughed so straight, winnowing the wheat, irrigating the fields, and banking up the streams against the winter floods," he makes as feel the despair of the peasant whose mainths of toil are washed out by "the torrent at the full that in swift course shatters the dykes, neither can the long one of mounds hold it in, per the walls of the fruitful orchards stay its sudden coming "The land is hard to turn, for much of it is mountain, or swamp, or deeply wooded bul, the viltages are visited by wild beasts, and hinting is a necessity before it becomes a sport. The nich are great stockbreeders, raising cattle, sheep, pigs, goals, and horses, one Erichthoni is keeps three thousand brood mares with their foxe." The poor eat fish and grain, occasionally vegetables, warmers and the riel rely upon great portions of roast meat, they breakfast an owat and wine. Odvssens and his swineherd eat, between them, a small reast pig for luncheon, and a third of a five-year-old hog for dinner." They have honey instead of sugar, meat far instead of butter, instead of bread they eat cakes of grain, baked large and thin on a plate of iron or a hot stone. The diners do not recline, as the Athenians will do, but sit on chairs, not at a central table but along the walk, with attle tables between the seats. There are no forks, spoons, or napkins, and only such knoves as the guests may carry, eating is managed with the fingers." The staple drink, even among the poor and among children, is diluted wise.

The land is owned by the family or the clan, not by the individual, the father administers and controls in, but he cannot sell it." In the third great traces are

called the King's Commons or Demesne (temenos), in effect it belongs to the community, and in its fields any man may pasture his flocks. In the Odyssey these common lands are being divided, and sold to—or appropriated by—rich or strong individuals; the commons disappears in ancient Greece precisely as in modern England.*

The soil might yield metal as well as food, but the Achaeaus neglect to mine the earth, and are content to import copper and tin, silver and gold, and a strange new luxury, iron. A shapeless mass of iron is offered as a precious prize at the games held in honor of Patroclus," it will make, says Achilles, many an agricultural implement. He says nothing of weapons, which are still of bronze." The Odyssey describes the tempering of iron, but that opic probably belongs to a later age than the iliad.

The single at his forge and the potter at his wheel work in their shops; other Homeric craftsmen—saddlers, masons, carpenters, cabinetmakers—go to work at the home that has ordered their product. They do not produce for a market, for sale or profit, they work long hours, but leasurely, without the sting and stimulus of visible competition. The family itself provides most of its needs, everyone in it labors with his hands, even the master of the house, even the local king, like Odysseus, makes bed and chairs for his home, boots and saddles for himself, and unlike the later Greeks he prides himself on his manual skill. Penelope, Helen, and Andromache, as well as their servant women, are hisy with spinning, weaving, embroidery, and household cares; Helen seems livelier when she displays her needlework to Telemachus* than when she walks in beauty on the battlements of Troy.

The craftsmen are freemen, never slaves as in classic Greece. Peasants may in emergency be conscripted to labor for the king, but we do not hear of serfs bound to the soil. Slaves are not numerous, nor a their position degraded, they are mostly female domestics, and occupy a position in effect as high as that of household servants today, except that they are bought and sold for long terms instead of for precariously brief engagements. On occasion they are briefally treated, normally they are accepted as members of the family, are cared for in illness or depression or old age, and may develop a humane relation of affection with master or mistress. Nausician helps her bondwomen to wash the family linen in the stream, plays ball with them, and altogether treats them as companions." If a slave woman bears a sun to her master, the child is usually free." Any men, however, may become a slave, through capture in battle or in piratical raids. This is the bitterest aspect of Achaean life.

Homeric society is rural and local; even the "cities" are mere villages nestling against hilltop citadels. Communication is by messenger or herald, or, over

^{* &}quot;When a smith tempers in cold water a great ax or an adze, it gives off a husing; this is what gives from an atrength."

long distances, by signal fires flashing from peak to peak. Overland traffic is made difficult and dangerous by roadless mountains and swamps and bridgeless streams. The carpenter makes carrs with four wheels boasting of spokes and wooden tires, even so most goods are carried by mules or men. Trade by sea is easier, despite parates and storms, natural harbors are numerous, and only on the perilcus tour-day trip from (rete to Fgy pt does the ship lose sight of land. Usually the boar is beached at hight, and crew and passengers sleep on trusty land. In this age the Phoenicians are still better merchants and mariners than the Greeks. The Greeks revenge themselves by despising trade, and preferring paracy.

The Homeric Greeks have no money, but use, as media for exchange, ingurs of fron, bronze, or gold, the oy or cow is taken as a standard of value. A gold ingot of fifty-seven pounds is called a talent talenton weight. Alunch barter remains. Wealth is compared real sticulty in goods, especially cattle, tartier than in pieces of metal or paper that may lose or after their value at any moment through a change in the economic theology of men. There are rich and poor in Homer as in afe, society is a rumbing carr that travels an uneven road, and no matter how carefully the eart is constituted, some of the varied objects in it will sink to the bottem, and others will rise to the top, the potter has not made ad the vessels of the same earth, or strength, or fragility. Already in the second book of the hand we hear the sound of the class war, and as Thersites flies orators ally at Againstinion we recognize an early variation on a persistent theme."

Z. Morals

As we read Homer the impression forms that we are in the presence of a society more lawless and primitive than that of Chossus or Mycenae. The Achaean culture is a step backward, a transition between the brilliant Aegean civilization and the Dark Age that will follow the Dorian conquest Homeric life is poor in art, rich in action, it is instructionarily, buoyant, swift, it is too young and strong to bother much about manners or philosophy Probably we misjudge it by seeing it in the violent criss or disorderly aftermath of war.

There are, it is true, many tender qualities and scenes. Even the warriors are generous and affectionate, between parent and child there is a love as profound as it is silent. Odvsseus kisses the heads and shoulders of the members of his family when, after their long separation, they recognize him, and in like manner they kiss him. Helen and Menclaus weep when they learn that this noble lad, Telemachus, is the son of the lost Odvsseus who fought so valiantly for them." Agameilmon hunself is capable of tears

Friendships are firm among the heroes, though possibly a degree of sexual inversion enters into the almost neurotic attachment of Achilles to Patroclus, especially to Patroclus dead. Hospitality is lavish, for "from Zeus are all strangers and beggars." Maids bathe the foot or the body of the guest, amont him with unquents, and may give him fresh garments, he receives food and lodging if he needs them, and perhaps a gift." "Lo," says "fair-cheeked Helen," as she places a costly robe in Telemachus' hands, "I too give thee this gift, dear child, a remembrance of the hands of Helen, against the day of thy longed-for marriage, for thy bride to wear." It is a picture that reveals to us the human tenderness and fine feeling that in the Huad must hide themselves under the panoply of war

Even war does not thwart the Greek passion for games. Children and adults engage in skalfal and difficult contests, apparently with farmess and good humor, Penelope's suitors play draughts, and throw the disk or javelin, the Phaeacian hosts of Odysseus play at quoits, and a strange medley of ball and dance. When the dead Patroclus has been cremated, according to Achaean custom, games are played that set a precedent for Olympia—foot races, disk-throwing, javehu-throwing, archery, wrestling, chariot races, and single combat fully armed, all in excellent spirit, except that only

the ruling class may enter, and only the gods may cheat."

The other side of the jicture is less pleasing. As a prize for the charior race Achilles offers "a woman skilled in fair handiwork"; and on the funeral pyre horses, dogs, oxen, sheep, and hannan beings are sacrificed to keep the dead Patroclus well tended and fed." Achilles treats Priam with fine courtesy, but only after drugging Hector's body in mangled ignormity around the pyre. To the Achaean male, human life is cheap, to take it is no serious matter; a moment's pleasure can replace it. When a town is captured the men are killed or sold into slavery, the won en are taken as concubines if they are attractive, as slaves if they are not. Piracy is still a respected occupation, even langs organize maranding expeditions, plunder towns and valuges, and enslave their population, "Indeed," says Thucyddes, "this came to be the main source of avelshood among the early Hel-

[&]quot;Then Alemous ordered Halas and Landan as to dance, by thereselves, for never did any one date join hanself with the it. They took in their bands the true bail purple dyed ... and played. The first bending by tody right back, would had the hall towards the shadowy crowds, white the other in I is turn would spring high into the air and eatch it greezfully before his feet touched the ground. Then, after they had made full trial of tossing the hall high, they began bassing it back and forth between them, all the what they danced upon the fruitful earth."

lenes, no disgrace being yet attached to such an occupation, "hut some glory; very much as, in our times, great nations may conquer and subjugate defenseless peoples without loss of dignity or righteousness. Odysseus is insulted when he is asked is he a merchant, "mindful of the gains of his greed"; but he tells with pride how, on his return from Troy, his provisions having run low, he sacked the city of Ismarus and stored his ships with food; or how he ascended the river Acgyptus "to pillage the splendid fields, to carry off the women and little children, and to kill the men." No city is safe from sudden and unprovoked attack.

To this lighthearted relish for robbery and slaughter the Achaeans add an unabashed mendacity. Odysseus can hardly speak without lying, or act without treachery. Having captured the Trojan scour Dolon, he and Diomed promise him life if he will give them the information they require; he does, and they kill him." It is true that the other Achaeans do not quite equal Odysseus in dishonesty, but not because they would not, they envy and admire him, and look up to him as a model character, the poet who pictures him considers him a hero in every respect, even the goddess Athena praises him for his lying, and counts this among the special charms for which she loves him. "Cunning must he be and knavish," she tells him, smiling, and stroking him with her hand, "who would go beyond thee in all manner of guile, aye, though it were a god that met thee. Bold man, crafty in counsel, insatiate in deceit, not even in thine own land, it seems, wast thou to cease from guile and deceiful tales, which thou lovest from

the bottom of thine heart." In truth we ourselves are drawn to this heroic Munchausen of the ancient world. We discover some likable traits in him, and in the hardy and subtle people to which he belongs. He is a gentle father, and in his own kingdom a just ruler, who "wrought no wrong in deed or word to any man in the land," "Never again," says his swineherd, "shall I find a master so kind, how far soever I go, not though I come again to the house of my father and mother" We envy Odysseus his 'form like unto the ummortals," his frame so athletic that though nearing fifty he throws the disk farther than any of the Phaeacian youths, we admire his "steadfast heart," his "wisdom like to Jove's";" and our sympathy goes out to him when, in his despair of ever seeing again "the smoke leaping up from his own land," he yearns to die, or when, in the mudst of his perils and sufferings, he steels hanself with words that old Socrates loved to quote "Be patient now, my soul, thou hast endured still worse than this." He is a man of iron in body and mind, yet every inch human, and therefore forgreable.

The secret of the matter is that the Achaean's standard of judgment is as different from ours as the virtues of war differ from those of peace. He lives in a disordered, harasted, hungry world, where every man must be his own policeman, ready with arrow and spear, and a capacity for looking calmly at flowing blood. "A ravening belly," as Odysseus explains, "no man can hide . . . Because of it are the benched ships made ready that bear evil to foeman over the unresting sea " Since the Achaean knows little security at home, he respects none abroad, every weakling is fair play, the supreme virtue, in his view, is a brave and ruthiess intelligence. Virtue is literally virtue, manuness, arete, the quality of Ares or Mars. The good man is not one that is gentle and forbearing, furthful and sober, industrious and honest, he is simply one who fights bravely and well. A had man is not one that drinks too much, hes, murders, and betrays, he is one that is cowardly, stupid, or weak. There were Nietzscheans long before Nietzsche, long before Thrasymachus, in the lasty munaturity of the European world.

3. Sexes

Achaean society is a patriarchal despotism tempered with the beauty and anger of woman, and the herce renderness of parental love." Theoretically the father is supreme the may take as many concubines as he likes, the may offer them to his guests, he may expose his children on the mountaintops to die, or slaughter them in the a tark of the thirsty gods. Such paternal immipatence does not necessarily imply a brutal society, but only one in which the organization of the state has not yet gone far enough to preserve social order, and in which the tamily, to create such order, needs the powers that will later be appropriated by the state in a nationalization of the right to kill. As social organization advances, paternal author by and farmily unity decrease, freedom and individualism grow. In practice the Achaean male is usually reasonable, listens patiently to domestic eloquence, and is devoted to his children.

Within the patriarchal framework the position of woman is far higher in Homeric than it will be in Periclean Greece. In the legends and the

^{*}There are vestiges of an earlier and "materatelia" condition before flavores, said Athenian residuon, "charless did not know their own father—e presumable descent was recknied carrough the mother and even in Homene days more or the good repectally worthinged by Greek cities were good resses. Here at Argos, Athenia at Athens, Demeter and Persephone at freezo with no vestide a disciplination to any time deity."

† These as had so many waves that an instrument drew up a learned caralogue of them.

epies she plays a leading role, from Pelops' courtship of Hippodameia to Iplugenia's gentleness and Llectra's hate. The gynaeceum does not confine her, nor does the home, she moves treely among men and women alike, and occasionally shares in the serious discourse at the men, as litelen does with Menelaus and Telemachus. When the Achaean leaders wish to fire the imagination of their people against Troy they appeal not to political or racial or religious ideas, but to the sentiment for woman's beauty, the loveliness of Helen must put a pretty face upon a war for land and trade Without woman the Homeric hero would be a clumsy boor, with nothing to live for or die for, she teaches him something of courtesy, idealism, and

softer ways.

Marriage is by purchase, usually in oxen or their equivalent, paid by the sunter to the father of the girl, the poet speaks of "cattle-bringing maidens." The purchase is reciprocal, for the tarber usually gives the bride a substantial dowry. The ceremony is familial and reagrains, with much eating, dancing, and leose-tongued merriment. Beneath a biaze of torches they led the brides from their chambers through the city, and loud rose the bridal song. The young men whirled in the dance, and high among them did sound the flute and the fyre"," so changeless are the essentials of our life. Once married, the woman becomes matress in her home, and is honored in proportion to her clinkleen. Love in the truest sense, as a profound mutual tenderness and solicitude, comes to the Greeks, as to the French, after marriage rather than before, it is not the spark thrown off by the contact or nearness of two bodies, but the fruit of long association in the cares and industries of the home. The Homeric wife is as faithful as her husband is nor There are three adulteresses in Homer Clytaemnestra, Helen, and Aphrodite, but they do mjustice to the mortal average, if not to the divine

Formed out of this background, the Flomene family (barring the enormines of legends that play no part in Hicmer) is a wholesome and pleasing institution, rich in tine women and loyal children. The women function not only as mothers but as workers, they grand the grain, eard the wool, spin, weave, and embroider, they do lattle sewing since garments are mostly without seams, and en king is normally left to men. Amid these labors they bear and rear children, heal their burrs, pacify their quarrels, and teach them the manners, morals, and traditions of the tribe. There is no formal education, apparently no teaching of letters, no spelling, no grantmar, no books, it is a hov's utopia. The girl is taught the arts of the home, the boy those of the chase and war, he learns to fish and swim, to till the fields, set snares, handle animals, aim the arrow and the lance, and take care of himself in all the emergencies of a half-lawless life. When the oldest boy grows up to manhood he becomes, in the absence of his father, the responsible head of the family. When he marries he brings his bride to his father's home, and the rhythm of the generations is renewed. The individual members of the family change with time, but the family is the lasting unit, surviving perhaps for centuries, and forging in the turbulent crucible of the home the order and character without which all government is in vain.

4. The Arts

The Achaeans leave to merchants and lowly scribes the art of writing, which has presumably been handed down to them from Mycenaean Greece, they prefer blood to mk and flesh to clay. In all of Homer there is but one reference to writing," and there in a characteristic context, a folded tablet is given to a messenger, directing the recipient to kill the messenger. If the Achievans have time for literature it is only when war and maranding allow a peaceful interlude, the king or prince gathers his retuiners about him for a feast, and some wandering ministrel, stranging the lyre, recounts in simple verse the explicits of ancestral heroes, this is, for the Achaeans, both poetry and history. Homer, perhaps wishing like Pheidias to engrave his own portrait upon his work, tells how Alemons, King of the Phaeacians, calls for such song in enterraining Odysseus. "Summon hither the divine minstrel, Demoducus, for to him above all others has the god granted skill in song . Then the herald drew near, leading the good minstrel, whom the Muse loved above all other men, and gave him both good and evil, of his sight she deprived him, but gave him the gift of sweet pong."

The only are except his own that interests Homer is toreutics—the hammering of metals into plastic forms. He says nothing of painting or sculpture, but calls up all his inspiration to describe the scenes in aid or damascened upon Achilles' shield, or raised in relief upon Odysseus' brooch. He speaks briefly but illuminatingly about architecture. The common dwesing in Homer is apparently of sun-dired brick with a footing of stone, the floor is ordinarily of beaten earth, and is cleaned by scraping, the roof is of reeds overlaid with elay, and slipes only enough to carry off the cain. The doors are single or double, and may have bolts or keys. In the better dwellings the interior walls are of painted studed, with ornamental border or frieze, and are hung with weapons, shields, and tapestries. There is no kitchen, no chunney, no windows, an opening in the roof of the central hall lets out some of the smoke that may rise from the hearth, the test finds its way through the door, or settles in soot on the walls. Rich establishments have a bathroom, others content themselves with a tub.

The formule is of heavy wood, often artistically carved and finished, Iemahus fushions for Penelope an armichair set with wory and precious metals, and Odysseus makes for himself and his wife a massive bedstead designed to last for a century.

It is characteristic of the age that its architecture ignores temples and spends itself upon palaces, just as Periclean architecture will neglect palaces and lavish itself upon tempers. We hear of the "sumpturus home of Paris, which that prince had built with the aid of the most cunning architects in Troy";" of King Alemous' great mansion, with wass of bronze, frieze of bore glass paste, doors of silver and gold, and other features that may belong rather to poetry than to architecture, we bear something of Agamemnon's reval residence at Mycenae, and a great deal about Odysseus palace at Ithaca. This has a front court, paved in part with stone, surrounded by a palisace or plastered wall, and ad irried with trees, stalls for horses, and a heap of steaming dung on which Odysseus' dog Argos makes his hed in the sun. A large p flared purch leads to the house, here the slaves sleep and often the visitors. Within, an antercom opens upon a central had supported by pallars, and sometimes I ghted not only by the opening in the roof, but by a narrow elerestory or open space between the architrave and the eaves. At night beariers burning on tal, stands give an unsteady illumination. In the center of the hab is the hearth, around whose sacred fire the family gathers in the evening for warmits and good cheer, and debates the ways of neighbors, the waltulness of children, and the vacasitudes of states.

5. The State

How are these passionate and vigorous Achaeans ruled? In peace by the family, in crisis by the clan. The clan is a group (genot, literally a genus) of persons acknowledging a common ancestor and a common chieftain. The citadel of the chieftain is the origin and center of the city, there, as his force subsides into usage and law, clan after clan gathers, and makes a political as well as a kinshap community. When the chieftain desires some united action from his clan or city, he summons its free males to a public assembly, and submits to them a proposal which they may accept or reject, but which only the most important members of the group may propose to change. In this village assembly, the one democratic element in an essentially feudal and anistocratic society—skilled speakers who can sway the people are valuable to the state, already, in old Nestor, whose voice "flows sweeter than honey from his tongue," and in wily Odysseus, whose words fall "like snowlakes upon the people," we have the beginnings of

Argor das of joy on recognizing his matter after twenty years' separation.

that stream of eloquence which will reach greater heights in Greece than in any other civilization, and will finally submerge it in ruin.

When all the class must act at once the chiefrains follow the lead of the strongest of their number as king, and report to him with their armies of freemen and attendant slaves. Those chieframs who are nearest to the king in residence and respect are called the King's Companions, they will be called that again in Philip's Macedonia and in Alexander's camp. In their boule, or council, the nobles exercise full freedom of speech, and address the king as merely and temporarily first among equals. Out of these institutions—public assembly, council of nobles, and king—will come, in a hundred varieties and under a thousand shibboleths and phrases, the constitutions of the modern Western world.

The powers of the king are narrowly limited and very wide. They are limited in space, for his kingdom is small. They are limited in time, for he may be deposed by the Council, or by a right which the Achaeans readily recognize the right of the stronger. Otherwise his rule is hereditary, and has only the vaguest boundaries. He is above all a military commander, solicitous for his army, without which he might be found in the wrong, He sees to it that it is well equipped, well fed, well trained, that it has porsoned arrows," lances, helmets, greaves, spears, breastplates, shields, and chariots. So long as the army defends him he is the government legislature, executive, judiciary. He is the high priest of the state religion, and secrifices for the people. His decrees are the laws, and his decisions are final, there is as yet no word for law " Below him the Council may sit occasionally to judge grave disputes, then, as if to set a precedent for all courts, it asks for precedents, and decides accordingly. Precedent dominates law because precedent is custom, and custom is the realous older brother of law. Trials of any kind, however, are rare in Homene society, there are hardly any public agencies of justice, each family must defend and revenge itself. Violence abounds.

To support his establishment the king does not levy taxes, he receives, now and then, "gifts" from his subjects. But he would be a poor king if he depended upon such presents. His chief income is derived, presumably, from tolls on the plunder that his soldiers and his ships gather on land or sea. Perhaps that is why, late in the thateenth century, the Achaeans are found in Egypt and Crete, in Egypt as unsuccessful buccaneers, in Crete as passing conquerors. Then, suddenly, we hear of them inflaming their people with a tale of humiliating rape, collecting all the forces of all the tribes, equipping a hundred thousand men, and sailing in a vast and un-

paralleled armada of a thousand ships to try their fortunes against the spearhead of Asia on the plains and hill of Troy.

IV. THE SIEGE OF TROY

Was there such a siege? We only know that every Greek historian, and every Greek poet, and almost every temple record or legend in Greece, took it for granted, that archeology has placed the runned city, generously multiplied, before our eyes, and that today, as until the last century, the story and its heroes are accepted as in essence real." An Fgyptian insurption of Rameses III reports that "the isles were restless" toward 1196 B.C.," and Puny aliudes to a Rameses "in whose time Troy fell "The great Alexandrian scholar Fratosthenes, on the basis of traditional genealogies collated late in the sixth century before Christ by the geographer-historian Hecataeus, calculated the date of the siege as 1194 B.C.

The ancient Persians and Phoenicians igreed with the Greeks in tracing the great war to four abductions of beautiful women. The Egyptians, they said, stole to from Argos, the Greeks stole Europa from Phoenicia, and Medea from Colebis, did not a pist balancing of the scales require that Paris should abduct Helen?** Stesichorys in his penitent years, and after him Herodotes and Europides, refused to admit that Helen had gone to Troy, she had only gone to Egypt, under constraint, and had merely wanted there a dozen years for Menclaus to come and find her, besides, asked Herodotus, who could believe that the Trojans would fight ten years for one woman? Europides attributed the expedition to excess population in Greece, and the consequent urge to expansion," so old are the youngest excuses of the will to power.

Nevertheless it is possible that some such story was used to make the adventure digestible for the common Greek, men must have phrases if they are to give their lives. Whatever may have been the face and shibboleth of the war, its cause and essence lay, almost beyond doubt, in the struggle of two groups of powers for possession of the Hellespont and the rich lands lying about the Black Sea. All Greece and all western Asia saw it as a decisive conflict, the lattle nations of Greece came to the aid of Agameinnon, and the peoples of Asia Minor sent repeated reinforcements to Troy. It was the beginning of a struggle that would be renewed at Marathon and

^{*} Heien, it need hardly be said was the daughter of Zeus, who, in the form of a swan, beduced Leda, wide of Sparia's King Tyndareus.

Salamis, at Issus and Arbela, at Tours and Granada, at Lepanto and Vienna, . . .

Of the events and aftermath of the war we can relate only what the poets and dramatists of Greece have told us, we accept this as rather literature than history, but an the more for that reason a part of the story of civilization, we know that war is ugly, and that the *lhad* is beautiful. Art (to vary Aristotle) may make even terror beautiful—and so purify it—by giving it significance and form. Not that the form of the *lhad* is perfect, the structure is loose, the narrative is sometimes contradictory or obscure, the conclusion does not conclude; nevertheless the perfection of the parts atones for the disorder of the whole, and with all its minor faults the story becomes one of the great dramas of literature, perhaps of history.

- (t) At the opening of the poem the Greeks have already besieged Troy for nine years in yair, they are despondent, homes ek, and decimated with disease. They had been delayed at Aulis by sixtness and a windless sea, and Agamemnon had enduttered Cytaerinestra, and prepared his own fate, by sacrificing their daughter lplugen a for a breeze. On the way up the coast the Greeks had stupped here and there to replenish their supplies of tood and concultures, Agamemnon had taken the tair Chryseis. Ach les the fair Briseis. A soothsayer now declares that Apollo is withholding success from the Greeks because Agamemnon has violated the daughter of Apod is priest. Chryses. The king testores Chryses to her father, but, to console he self and point a tale, he compels Briseis to leave Achi les and take Chryseis' place in the royal tent. Achilles convokes a general assembly, and denoting theme of the Bad. He yown that neither he nor has a liders with any longer star a hand to help the Greeks.
- (it) We pass in review the ships and tribes of the assembled force, and (in) see blad Meneraus engliging Paris in single combat to decide the war. The two armies sit down in expired truce, Prizer comes Agamembon in solemn sacrificate the gods. Menelaus exerciones Paris, but Aphre lite struckes the lad safely away in a cloud and deposits him, intraculously powdered and perfamed, upon his marriage bed. If elen bids han return to the fight, but he counterproposes that they "give the hour to dallance." The lady, flattered by desire, yields (iv) Agamembon decisies Menelaus victor, and the war is apparently ended, but the gods, in anitative council on Olympus, demand more labed. Zeus votes for pence, but withdraws his vote in terrified refreat when Hera, his spouse, directs her speech upon hom. She suggests that if Zeus will agree to the destruction of Troy she will allow him to raze Myceuse, Argos, and Sparta to the

^{*} Parenthetical numbers indicate books of the listd.

ground. The war is renewed; many a man falls pierced by arrow, lance, or sword, and "darkness enfolds his eyes."

(v) The gods join in the merry saiding game, Ares, the awful god of war, is hurr by Diomed's spear, 'utters a cry as of nine thousand men," and runs off to complain to Zeus. (vi) In a pretty interlude the Trojan leader Hector, before rejoining the bartle, bals good-by to his wife Andromache. "Love," she whispers to him, "thy stout heart will be thy death, nor hast thou pity of thy child or me, who shall soon be a willow. My father and my mother and my brothers all are slain, but, Hector, thou art father to me and mother, and thou are the husband of my youth. Have pity, then, and stay here in the tower." "Full well I know," he answers, "that Truy will fall, and I foresee the sorrow of my brothren and the King, for them I grieve not, but to think of thee a slave in Argos unmans me almost. Yet, even so, I will not shirk the fight 'm. His infant son Astyonax, destined shortly to be flung over the walls to death by the victorinas Greeks, screams in fright at Hector's waving plantes, and the hero removes his helmet that he may laugh, weep, and pray over the wondering child. Then he strides down the causeway to the battle, and (vtt) engages Ajax, King of Salamis, in single combat. They fight bravely, and separate at nightfall with exchange of prase and gifts-a flower of courtesy floating on a sea of blood. (viii) After a day of Trojan victories Hector bals his warmors rest

Thus made harangue to them Hector, and toaring the Trojans ap-

Then from the yoke loosed their war-steeds sweating, and each by his chariot

Tethered his horses with thongs. And then they brought from the city,

Hastily, oxen and goodly sheep, and wine honey-hearted

Gave them, ... and com from the houses.

Farewood they gathered withal, and then from the plain to the heavens

Rose on the winds the sweet savor. And these by the highways of battle

Hopeful sat through the night, and many their watchfires burning.

Even as when in the sky the stars shine out round the night-orb, Wondrous to see, and the winds are laid, and the peaks and the headlands

Tower to the view, and the glades come out, and the glorious heaven Stretches itself to its widest, and sparkle the stars multitudinous, Gladdening the heart of the toil-wearied shepherd—even as count-

Twirt the black ships and the river of Xanthus glittered the watchfires

Built by the horse taining Trojans by Ihum.

Meanwhile the war-wearied horses, champing spelt and white barley, Close by their chariots, waited the coming of lair-throned Dawn?

- (ix) Nestor, King of Flan Pylus, advises Agamemnon to restore Briseis to Achilles, he agrees, and promises Achilles haif of Greece if he will rejoin the siege, but Achines committee to pour x. Odviscus and Dionied make a two-man saily upon the Trojan carry at night, and slay a dozen chieftains. (xi) Agamemnon leads his army valiantly, is wounded, and retires. Odysseus, surtounded fights like a min, A ix and Menchaus cleave a path to him, and save him for a lotter life xit xiii) When the Trojans advance to the walls that the Greeks have his feabout their camp (xix) Hera is so disturbed that she resolves to rescue the Greeks. Ohed, pertuned, ravishingly gowned, and bound with Aphrodite's aphrodisiae gate e, she seduces Zear to a divine shanber while Poseidin helps the Greeks to drive the Trojans back (xv. Advantage fluctuates; the Trojans reach the Greek ships, and the poet rises to a height of fervid narrative as the Greeks fight desperately in a retreat that must mean death.
- (xvi) Patroclus, beloved of Achilles, wint his permission to lead Achilles' troops against Tree, Hector slavs him, and (xxii) hights Ajax fiercely over the body of the vonth (xxxii) Hearing of Patroclus death, Achalles at last resolves to fight. His guadess-mother Thetis persuades the divine suithy, Hephaestus, to forge for hou new arms and a mights shield (xix) Achilles is reconciled with Agamention, (xx) engages Acreas, and is about to his him when Poseidon resears his for Virgil's purposes. (2011 Achines slaughters a host of Trojans, and sends them to Hides with long genealogical speeches. The gods take up the fight. Athena lays Ares low with a stroc, and when Aphrodite, going for a soldier, tries to save han. Athena knocks her down with a blow upon her fair breast. Hera cutts the ears of Arrem's Posci lon and Apoll i content themselves with words. (XXII) All Troians but Hector fly from Achilles, Priam and Hecuba coursel Hector to stay beland the walls, but he refuses. Then suddenly, as Achines advances upon him, Hector takes to his heels. Achilles pursues hun three times around the walls of Troy, Hector makes a stand, and is billed
- (xxm) In the subsiding finale of the drama Patroclus is cremated with ornate ritual. Achines sacrifices to him many cattle, twelve captured Trojans, and his own long hair. The Greeks honor Patroclus with games, and (xxiv) Achilles drags the corpse of Hector behind his charies three times around the pyre. Pram comes in state and sorrow to beg for the remains of his son. Achilles

relents, grants a truce of twelve days, and allows the aged king to take the cleansed and anomited body back to Troy.

V. THE HOME-COMING

Here the great poem suddenly ends, as if the poet had used up his share of a common story, and must cave the rest to another in nstrel's lay. We are told by the later literature how Paris, standing beside the battle, slew Achilles with an arrow that pierced his valuerable heel, and how Troy fell

at last through the stratagem of the wooden horse

The victors themselves were vanquished by their victory, and returned in weary sadness to their longed for homes. Many of them were ship-wrecked, and some of these, stranded on alien shores, founded Greek colonies in Asia, the Aegean, and Italy "Menelaus, who had vowed that he would kill Helen, tell in leve with her anew when the "goddess among women" came to him in the cann majusty of her loverness, gladly he took her back to be his queen again in Sparra. When Agamemon reached Mycenie he "clasped his land and sossed it, and many were the hot tears that streamed from his eyes "Bar during his long absence Clytaemnestra had taken his cousin Aegisthus for husband and king, and when Agamemon entered the palace they slew ham.

Sadder still was the home-coming of Odysseus, and here probably another Homer has told the tale in a poem less powerful and beroic, gent er and pleasanter, than the *lltad*. Odysseus, says the *Odyssev*, is shipwrecked on the island of Ogygia, a faryland Tahin, whose goddess-queen Calypso holds him as her lover for eight years while secretly he pines for his wife

Penelope and his son Telemachus, who pane for ham at Ithaca.

(1) Athera persuades Zeus to 111 Calypso let Odysseus depart. The goddess flies to Telemachus, and hears with sympathy the youth's sample tale how the princes of Ithaea and its vascal isles are paying court to Perelope, seeking through her the throne, and how meanwhile they live gaily in Odysseus' palace, and consume his substance. (1), I elemachus hads the suitors of sperse, but they augh at his youth. Secretly he embarks upon the sea in search of his father, while Penelope, mourning now for both husband and son, holds off the suitors.

[&]quot;Very probably the narra eve in this instance has less has a a history than the final. The egend of the long-wattoring manner or warrant, whose wife cannot recognize him on his return, is appearedly like to the story of Froy, and appears in almost every provider." Odvisseus is the Sir the Sir has the Sirbad, the Robinson Crossoc, the Eroch Arden of the Greeks. The geography of the poem is a dispersy that simil exercises lessurely minds.

by promising to wed one of them when she has completed her web—of which she unweaves at night as much as she has woven by day. (iii) Telemachus visits Nestor at Pylus and (iv) Menelaus at Sparta, but neither can tell him where to find his father. The poet paints an artifactive picture of Helen settled and subdued, but stu, divinely beautiful, she has long since been forgiven her sms, and remarks that when Troy fell she had grown used of the city anyway.*

- (v) Now for the first time Odysseus enters the tale. "Sitting on the shore" of Calypso's ide, "his eyes were dry of tears, and his sweet life ebbed away, as he longed mournfully for his return. By hight indeed he would sleep by Calypso's side perforce in the hollow caves, unwilling beside the willing nymph, but by day he would sit on the rocks and the sands, rocking his soul with tears and grouns, and looking over the unresting sea." Calypso, having detained him one right more, bids him make a raft and set out alone.
- (vi) After many struggles with the ocean, Odysseus lands in the mythical country of Phaeacia (possibly Coreyra-Corfu), and is found by the maiden Nausicia, who leads him to the palace of her father, king Alcinous. The lass falls in love with the strong-limbed, strong-licated hero, and confides to her companions. "Laten, my white-armed maidens, . . . Erewhile this man seemed to me uncomely, but now he is like the gods that keep wide heaven. Would that such a one night be called my busband, dwelling here, and that it might please him here to abide." (vn-viii) Odysseus makes so good an impression that Alemous offers him Nausicia's hand. Odysseus excuses himself, but is glad to tell the story of his return from Troy.
- (ix) His shops the tells the King) were borne off their course to the land of the Lond-haters, who gave his men such honey-sweet locus fruit that many forgot their homes and their longing, and Odysseus had to force them lack to their ships. There they sailed to the land of the Cyclopes, one-eyed giants who hved without law or labor on an island abounding in wild grain and fruit. Caught in a cave by the Cyclop Polyphenius, who are several of his men. Odysseus saved the remnant by lulling the monster to sleep with wine, and then Luring out his single eye. (x) The wanderers took again to the sea, and came to the land of the lacstragonians, but these, too, were cambbals, and only Odysseus ship escaped them. He and his mates reached next the isle of Aenea, where the lovely and treacherous goddess Curee lured most of them into her cave with song, drugged them, and turned them into swine. Odysseus was about to slay her when he changed his mind and accepted her love. He and his contrades, now restored to human form, remained with Circe a full year.

After her death, and Greek tradition, she was worthpord as a goddess. It was a common belief in Greece that those who speke ill of her were punished by the gods even Hamer's blindness, it was hinted, came upon him because he had lent his sorig to the caminations notion that Helen had cloped to Troy, instead of being snatched off to Egypt against her will."

(xi) Setting sail again, they came to a land perpetually dark, which proved to be the entrance to Hades, there Odyssens talked with the shades of Agamemnon, Achilles, and his mother (xii) Resuming their voyage, they passed the island of the Sirens, against whose seductive strains Odysseus protected his men by putting wax into their ears. In the strains (Messina?) of Sevilla and Charybdis his ship was wrecked, and he aline survived, to live for eight long years on Calypso's isle.

(xm) Alcinous is so moved with sympathy by Odysseus' tale that he hids his men row Odysseus to Ithaca, but to hundfold him lest he learn and reveal the location of their happy land. On Ithaca the goddess Athena guides the wanderer to the but of his old swineherd Funaeus, who (xiv), though not recognizing him, receives him with Gargantian hispitality (xv) When Telemachus is led by the goddess to the same but Odysseus (xvi) makes himself known to his son, and both "wail aloud vehemently." He unfolds to Telemachus a plan for slaving all the suitors. (xvii-xviit) In the guise of a heggar he enters his palace, sees the woodrs feasting at his expense, and rages inwaruly when he hears that they he will his madservants at night even while courting Penelope by day. (xix-xx) He is insulted and inpured by the surrors, but he defends himself with vigor and patience. (xxi) By this time the wooers have discovered the trick of Penelope's web, and have forced her to finish it. She agrees to marry whichever of them can string Odviseus' great how which hangs on the wall-and shoot an arrow through the openings of twelve axes ranged in line. They all try, and all fail. Odysseus asks for a chance, and succeeds. (xxii) Then with a wrath that frightens everyone, he easts off his disguise, turns his arrows upon the suitors, and, with the help of Telemachus, Eumaeus, and Athena, slavs them all. (xxiii) He finds it hard to convince Penelope that he is Odysseus, it is difficult to surrender twenty suitors for one husband. (xxiv) He meets the attack of the suctors' sons, pacifies them, and re-escablishes his kingdom.

Meanwhile in Argos the greatest tragedy in Greek legend was pursuing its course. Orestes, son of Agamemnon, grown to manhood and aroused by his bitter sister Electra, avenged their father by murdering their mother and her paramour. After many years of madness and wandering Orestes ascended the throne of Argos-Mycenae (ca. 1176 B.C.) and later added Sparta to his kingdom.* But from his accession the house of Pelops began to decline. Perhaps the decline had begun with Agamemnon, and that

^{*}Sir Arthur Fvans has found, in a Mycenaeon tomb in Bocotta, engravings representing a young man attacking a sphina, and a youth kalling an older man and a wimman. He believes that these refer to Octop is and Orestes, and as he ascribes these engravings to ca. 1410 nc., he argues for a date for Octopus and Orestes some two contains earlier than the opoch tenta-tively uniqued to these characters in the text.*

vacillating chieftain had used war as a means of uniting a reaim that was already falling to pieces. But his victory completed his run. For few of his chieftains ever remimed, and the languous of many others had lost all loyalty to them. By the end of the age that had opened with the siege of Troy the Achaean power was spent, the blood of Pelops was exhausted. The people waited patiently for a saner dynasty.

VI. THE DORIAN CONQUEST

About the year 1104 B.C. a new wave of management or invasion came down upon Greece from the restlessly expanding north. Through lily tia and Thessaly, across the Corminan Gulf at Naupactus, and over the Isthaus at Corinth, a warlike people, tall, roundheaded, letterless, slipped or marched or poured into the Peloponnesus, mastered it, and almost completely destroyed Mycenaean civilization. We guess at their origin and their route, but we know their character and their effect. They were still in the herding and hunt ng stage, now and then they stopped to till the soil, but their it mit rel ance was upon their cattle, whose need for new pasturage kept the trabes ever on the move. One thing they had in unheard-of quantity from They were the conssuraes of the Hallstatt* culture to Greece, and the hard metal of their swords and sonls gave them a merciless supremacy over Achaems and Cretans who still used bronze to kill Probably from both west and east, from I lis and Megara, they came down upon the separate little kingdents of the Peloponnesus, put the ruling classes to the sword, and turned the My censeau reinmant into heart serfs My ceone and Tirvus went up in flames, and for some conturies Argos becan earlie capital of Pelops isle. On the Isthmus the invaders seized a commanding peak the Acroe irinthus- and built around it the Doman city of Cormta " The surviving Achaeans fled, some of them into the mountains of the perthern Pelopennesus, some into Artica, some overseas to the islands and coasts of Asia. The conquerors followed them into Artica, but were repulsed, they followed them to Crere," and made final the destruction of Chossus, they captured and colonized Melos, Thera, Cos, Crudus, and Rhodes. Throughout the Peloponnesus and Crete, where the Mycengean culture had most flourished, the devastation was most complete

This territoral catastrophe in the prelistory of Aegean environtion is what modern historians know as the Doman concuest, and what Greek trade-

^{*}A town in Austria whose iron tenuans have given its name to the first period of the Iron Age in Europe.

tion called the Return of the Heracleidae. For the victors were not content to record their triumph as a conquest of a civilized people by barbarians, they protested that what had really happened was that the descendants of Heracles, resisted in their just re-entry into the Peloponnesus, had taken it by her no force. We do not know now much of this is history, and how much is diplomatic mythology designed to transform a bloody conquest into a divine right. It is difficult to believe that the Dorians were such excellent bars in the very youth of the world. Perhaps, as disputants will never allow, both stories were true, the Dorians were conquerors from the north, led by the scious of Heracles.

Whatever the form of the conquest, its result was a long and bitter interruption in the development of Greece. Political order was disturbed for
centuries, every man, teching unsafe, carried arms, increasing violence disrupted agriculture and trade on land, and confinerce on the seas. War
flourished poverty deepened and spread. Life became unsettled as families
wandered from country to country seeking security and peace." Hesiod
called this the Age of Iron, and material its debisement from the finer
ages that hall preceded it, many Greeks believed toat "the discovery of
iron had been to the burt of man." The arts languished, painting was
neglected, statuary contented itself with figurines, and pottery, forgetting
the lively naturalism of Mycenae and Greek ceranics for centuries.
"Geometrical Style" that dominated Greek ceranics for centuries.

But not all was lost. Despite the resolution of the invading Domans to keep their blood free from admixture with that of the subject populations despite the racial antipathies between Doman and Jonan that were to incarnadine all Greece, there went on, rap oly outside of Luconia, slowly within, a imaging of the new stocks with the old, and perhaps the addition of the vigorous seed of Achae ins and Domans with that of the more ancient and velatile peoples of southern Greece served as a powerful biological stimulant. The final result, after conturies of imaging, was a new and diverse people in whose blood. Mediterraneau," "Alpine," "Nordic," and Astatic elements were distortingly tosed.

Nor was Weenaean culture entirely destroyed. Certain elements of the Aegean heritage instrumentalnes of social order and government, elements of craftsmanship and tee an logy, modes and routes of trade, forms and objects of worship," ceramic and toreittie skills, the art of fresco painting, decorative motives and architectural forms, maintained a hir fatified existence through centuries of violence and chaos. Cretan institutions, the Greeks believed, passed down into Sparta," and the Achaean assembly

remained the essential structure of even democratic Greece. The Mycenaean megaron probably provided the ground plan of the Doric temple," to which the Dorian spirit would add freedom, symmetry, and strength. The artistic tradition, slowly reviving, lifted Corinth, Sicyon, and Argos to an early Remaissance, and made even dour Sparta, for a while, smale with art and song, it nourished lyric poetry through all this historyless Dark Age; it followed Pelasgian, Achaean, Ioman, Minyan exiles in their flight-migration to the Aegean and Asia, and helped the colonial cities to leap ahead of their mother states in literature and art. And when the exiles came to the islands and Ionia they found the remains of Aegean civilization ready to their hands. There, in old towns a little less disordered than on the Continent, the Age of Bronze had kept something of its ancient craft and brilliance, and there on Anatic soil would come the first reawakening of Greece.

In the end the contact of five cultures—Cretan, Mycenaean, Achaean, Donan, Oriental—brought new youth to a civilization that had begun to die, that had grown coarse on the mainland through war and plunder, and efferminate in Crete through the luxury of its genius. The multure of races and ways took centuries to win even a moderate stability, but it contributed to produce the unparalleled variety, flexibility, and subtlety of Greek thought and life. Instead of thinking of Greek culture as a flame that shone suddenly and maraculously aimid a dark sea of barbarism, we must conceive of it as the slow and turbid creation of a people almost too richty endowed in blood and memories, and surrounded, challenged, and instructed by war-like hordes, powerful empires, and ancient civilizations.

CHAPTER IV

Sparta

I. THE ENVIRONMENT OF GREECE

ET us take an atlas of the classic world* and find our way among the neighbors of ancient Circuic. By Citaria, or Hedar, we shall mean ail lands occupied, in antiquity, by peoples speaking Greek.

We begin where many invaders entered over the fulls and through the vallevs of I pirus. Here the ancistors of the Greeks must have narried many a year, for taey set up at Dodona a shrine to their thundering sky-god Zeas, as late as the little century the Greeks consumed the oracle there, and read the divine will in the clangor of caldrons or the rust ing leaves of the sacred oak.³ Through southern I pirus flowed the river Velicron, must raynes so dark and deep that Greek poets spoke of it as the portal or very scene of Hell In Homer's day the Epirots were largely Greek in speech and ways, but then new waves in Larbarism came down upon them from the north, and dissuaded them from civilization.

Farther up the Adrianc lay Illy ria, sparsely sertled with untained herdsmen who sold cattle and daves for salt. On this coast, at Epidamnus (the Roman Dyrraen.un, now Durazzo), Caesar disendurked his troops in pursual of Poinpey. Across the Adriana the extending Circles snatened the lower coasts from the native tribes, and gave civilization to leave (In the end those native tribes would sweep back upon them, at I one tribe, almost barbari us till Alexander's time, would swammy their up, along with their mother und, in an unprecedented empire) Bey and the Alps ranged the Cauls, who were to prove very friendly to the Greek cary of Massana (Marsendes), and at the western end of the Mediterrapean las Spain, already half civilized and tilly exponted by the Phoenicians and Carrhaginians when about 600, the Greeks established their timid colony at Emporous (Ampurias). On the coast of Africa, menacingly opposite Sicily, was imperial Carriage, founded by Dido and the Phoenicians, tradition said, in \$13, no mere visities, but a city of 100,000 population, monopolizing the commerce of the western Mediterranean, dominating Utica, Happo, and three hundred other towns in Africa, and controlling prosperous lands, manes, and cotonies in Sicks, Sardinia, and Spain. This fabulously wealthy metropolis was fated to lead the Oriental thrust against Greece in the west, at Persia would lead it in the cast.

Or the maps inside the covers of this book.

Farther east on the African coast lay the prosperous Greek city of Cyrene, against a dark Libyan hinter and. Then Egypt. It was the belief of most Greeks that many elements of their civilization had come to them from Egypt, their legends ascribed the foundation of several Greek cities to men who, like Cadmus and Danais, had come from Egypt, or had brought Egyptian culture to Greece by way of Phoenicm or Crete. Under the Saire kings (663-525) Egyptian commerce and are revived, and the ports of the Nile were for the first time opened to Greek trade. From the seventh century onward many famous Greeks -Thales, Pythagoras, Solon, Plato, and Democratus may serve as examplesvisited Egypt, and were much impressed by the fullness and antiquity of its culture. Here were no barbarians, but men who had a mature civilization, and highly developed arts, two thousand years before the fall of Troy. "You Greeks, 'said an Egyptian priest to Solon, 'are mere children, talkative and vain, and knowing nothing of the past." When Hecatacus of Miletus boasted to the Egyptian priests that he could trace his ancestry through fifteen generations to a god, they quietly showed him, in their sancruaries, the statues of 345 high priests, each the son of the preceding, making 345 generations since the gods had reigned on earth.' From the Egyptian cults of Isis and Osins, ie the brasef of Greek scholars like Herodotus and Plutarch, came the Orphic doctrine of a judgment after death, and the resurrection ritual of Demeter and Persephone at Eleusis. Probably in Egypt, Thales of Miletus learned geometry, and Rhoecus and Theodorus of Samos picked up the art of behow casting in branze, in Egypt the Greeks acquired new skills in puttery, textiles, metalworking, and ivory, there, as well as from the Assyrians, Phornicians, and Hattites, Greek sculptors took the style of their earth statues-flat faced, slant eyed, closefisted, straight-himbed, stiff," in the colonnades of Sakkara and Beni-Hasan, as well as in the remains of Mycengean Greece, Greek architects found part of their inspiration for the fluted column and the Doric style. And as Greece in its youth learned humbly from Egypt, so, when it was exhausted, it died, one niight say, in the arms of Egypt, at Alexandria it merged its philosophies, its rifes, and its gods with those of Egypt and Judea, in order that they might find a resurrected life in Rome and Christianity.

Second only to Egypt's was the influence of Phoenicia. The enterprising merchants of Tyre and Sidon acted like a circulating medium in the transmission of culture, and summlated every Mediterranean region with the sciences, techniques, arts, and cults of Egypt and the Near East. They excelled and perhaps instructed the Greeks in the building of ships, they taught them hetter methods in metalworking, textiles, and dyes,' they played a part, with Grete and Asia Minor, in passing on to Greece the Semire form of the alphabet that had been developed in Egypt, Crete, and Syria. Farther east, Babylonia gave

^{*} Of the seated Chares from Milerus in the British Museum, or the Head of Cleable by Polymedes in the museum at Delphi.

to the Greeks its system of weights and measures," its water clock and sundal," its monetary units of obot, nana, and talent," its astronomical principles, instruments, records, and calculations, its sexagesimal system of dividing the year, the circle, and the four right angles that are subtended by a circle at its center, into 360 parts, each of the 360 degrees into 60 numbers, and each of the minutes into 60 seconds, it was presumable his acquaintance with Egyptian and Babylonian astronomy that enabled Thales to predict an eclipse of the sun." Probably from Babylonia came Hesiod's notion of Chaos as the origin of all things; and the story of Ishtar and Tammuz is suspiciously like those of Aphrodite and Adons, Demeter and Persephone.

Near the eastern end of the commercial complex that united the classic world lay the final enemy of Greece. In some ways-though few, the civilization of Persua was superior to that of contemporary Heilas, it produced a type of gentleman finer than the Greek in every respect except that of intellectual keenness and education, and a system of imperial administration that easily excelled the clamsy begenomies of Athens and Sparta, and lacked only the Greek passion for aberry.- From Assyria the Ionian Greeks took a measure of skill in animal statuary, a certain thickness of figure and flamess of dropery in their early sculpture, many decorative motives in triezes and moldings, and occasionally a style of relief, as in the lovely stell of Aristion "-Lydia maintained intimate relations with Ionia, and its tiralliam capital, Sards, was a clearinghouse for the traffic in goods and ideas between Mesopotaina and the Greek cities on the coast. The necessities of an extensive trade stimulated banking, and caused the Lydian government, about 680, to issue a state-guaranteed coinage. This boon to trade was soon imitated and improved by the Greeks, and had effects as momentous and interminable as those that came from the introduction of the alphabet. The influence of Phrygia was older and subtler. Its mother goddess, Cybele, entered directly and deviously into Greek religion, and its orginstic flute music became that "Phrygian mode" so popular among the populace, and so disturbing to the murausts, of Greece From Phrygia this wild music crossed the Hellespont into Thrace, and served the rites of Dionysus. The god of wine was the chief gift of Thrace to Greece but one Thracian city, Hellenized Abdera, sought to even the halance by giving Greece three philosophers-Leucippus, Democritus and Protagoras. It was train Thrace that the cure of the Muses passed down into Helas, and the half legendary founders of Greek music-Orphens, Musaeus, and Thamy ris-were Thracian singers and bards.

From Thrace we move southward into Macedonia, and our cultural circumvallation of Greece is complete. It is a picturesque land, with a soil once rich in minerals, plants fertile in grain and fruit, and mountained disciplining a hardy stock that was destined to conquer Greece. The mountaineers and peasants were of mixed race, predominantly Llyman and Thracian; perhaps they were akin to the Dorians who conquered the Petoponnesus. The ruling aristocracy claimed Helleme lineage (from Heracles himself), and spoke a dialect of Greek. The earlier capital, Edessa, stood on a vast plateau between the plans that stretched to F pirus and the ranges that reached to the Aegean. Farther east lay Pella, capital-to-be of Philip and Alexander, and near the sea was Pydna, where the Romans would con pier the conquering Macedonians, and win the right to transmit Greek civilization to the Western world.

This, then, was the environment of Greece civilizations like Egypt, Crete, and Mesopotanna that gave it those elements of technology, science, and art which it would transform into the brightest picture in history, empires like Persia and Carthage that would feel the challenge of Greek commerce, and would unite in a war to crush Greece between them into a harmless vassalage, and, in the north, warlike hordes recklessly breeding, restiessly marching, who would sooner or later pour down over the mountain barriers and do what the Derians had done-break through what Cicero was to call the Greek border woven on the barbarian robe," and destroy a civilization that they could not understand. Hardly any of these surrounding nations cared for what to the Greeks was the very essence of life liberty to be, to think, to speak, and to do. Every one of these peoples except the Phoemicians lived under Jespots, surrendered their souls to superstition, and had small experience of the stirr alus of freedom or the life of reason. That was why the Greeks called them all, too aidiscram nately, barbaroi, barl arians, a barbarian was a min content to beheve without reason and to live without I berry. In the end the two conceptions of life the mysticism of the East and the rationalism of the West-would fight for the body and soul of Greece. Rationalism would win under Pericies, as under Caesar, Leo X, and Frederick, but mysticism would always return The alternate victories of these complementary philosopiles in the vast pendulum of history constitute the essential biography of Western civilization.

II. ARGOS

Within this circle of nations little Greece expanded until its progeny peopled nearly every Mediterranean shore. For the gount hand that stretened its skeletal fingers southward into the sea was but a small part of the Greece whose history concerns us. In the course of their development the irrepressible Hellenes spread into every isle of the Aegean, into Grete, Rhodes, and Cyprus, into Egypt, Palestine, Syria, Mesopotamia, and Asia Minor, into the Sea of Marmora and the Black Sea, into the shores and

peninsulas of the north Aegean, into Italy, Gaul, Spain, Sicily, and northern Africa. In all these regions they built city states, independent and diverse, and yet Greek, they spoke the Greek tongue, worshiped Greek gods, read and wrote Greek interature, contributed to Greek science and philosophy, and practiced democracy in the Greek aristocratic way. They did not leave Greece behind them when they migrated from their motherland, they carried it with them, even the very soil of it, wherever they went. For nearly a thousand years they made the Mediterranean a Greek loke, and the center of the world.

The most discouraging task faced by the historian of classic civilization is that of weaving into one pattern and story these scattered members of the body of Greece * We shall attempt at by the pleasant method of a tourwith a map at our elbow and no expenditure but of the imagination, we shall pass from city to cav of the Greek world, and observe in each center the life of the people before the Persian war -the modes of economy and government, the activities of scientists and philosophers, the achievements of poetry, and the creat one of art. I The plan has many faults, the gengraphical sequence will not quite agree with the historical, we shall be leaping from century to century as well as from isle to isle, and we shall find ourselves talking with Thales and Ansymmeter before listening to Flomer and Hesiod. But it will do us no harm to see the irreverent load. against its actual background of lonian skepticism, or to hear Hesiod's domplaints after visiting the Acolian colonies from which his barassed father came. When at last we reach Athens we shall know in some measure the rich variety of the civilization that it inherited, and which it preserved so bravely at Marathon.

If we begin at Argos, where the victorious Dorans established their government, we find ourselves in a scene characteristically Greek a not too fertile plain, a small and huddled city of lattle brick-and plaster houses, a temp e on the acropous an open-air theater on the slope of the hill, a modest palace here and there, narrow allers and enpayed streets, and in the distance the myring and merciless sea. For Helias is composed of mountains and ocean, majestic scenery is so usual there that the Greeks, though moved and inspired by it, seldom mention it in their books. The winter is wet and cold, the summer hot and dry, sowing is in our autualn, reaping is in our spring, rain is a heavenly

* To avoid returning too often to the tame scene the architectural bistory of minor vites will be carried in these chapters (Book ii) down to the death of A examer (121).

[&]quot;To write the history of Greece or almost any period without dissipating the interest is a task of numerous difficulty. Occasise there is no constant unity or fixed course to which the actions and aims of the numerous states can be subordinated or related." Bury, Analesis Greek Historians, p. 12-

blessing, and Zeus the Rain Maker is god of gods. The rivers are short and shadow, torrents for a winter spell, dry smooth pelibles in the summer heat. There were a hundred cities like Argos in the gamut of Greece, a thousand like it but smaller, each of them jeulously sovereign, separated from the rest by Greek pugnacity, or dangerous waters, or roadless hills.

The Argives ascribed the foundation of their city to Pelasgic Argus, the hero with a hundred eyes, and its first flourishing to an I gyptian, Danaus, who came at the head of a band of 'Danzae' and taught the natives to arrigate their fields with wells. Such eponyms are not to be scorned, the Greeks preferred to end with myth that infinite regress which we mast end with mystery. Under Temenus, one of the returning Heracleidae, Argos grew into the most powerful city of Greece, bringing Leyns, Mycenae, and all Argolis under its sway Towards 680 the government was seized by one of those everanno, or dictators, who for the next two centuries I coame the fash on in the larger cities of Greece Presumably Phenlon, I'ke his fellow dictators, led the rising merchant classalked in a passing marrage of convenience with the commoners-against a landowning aristocracy. When Aegona was threatened by I pidaurus and Athens Pheidon went to its rescue and took it for himself. He adopted probably from the Phoenicians-the Bal-ylonian system of weights and occasires, and the Lydian plan of a currency guaranteed by the state, he established his mint on Acgina, and the Acginetan tortoxes" (coops marked with the island's symbol) became the first others, comage in continental Greece "

Pheidon's enlightened despotism opened a period of prosperity that brought many arts to Argols. In the sixth century, the musicians of Argos were the most famous in Hedas," Lasas of Hermione won high place among the lyric poets of his time, and raught his skill to Phidar, the foundations were laid of that Argive school of scripture which was to give Polyelemis and its canon to Greece, drama found a hime here, in a theater with twenty thousand seats, and architects raised a majestic ter ple to Hera, beloved and especially worth ped by Argos as the goddess-bride who renewed her virginity every year." But the degeneration of Pheidon's descendants—the nemesis of monarchy—and a long series of wars with Sparta weakened Argos, and forced it at last to yield to the Lacedaemonians the leadership of the Pelopounesus. Today it is a quiet town, lost ained its surrounding fields, remembering vaguely the glories of its past, and proud that in all its long history it has never been abandoned.

III. LACONIA

South of Argos, and away from the sea, rise the peaks of the Parnon range. They are beautiful, but still more pleasing to the eye is the Eurotas River that runs between them and the taller, darker, so w topped range of Taygetus on the west. In that seasone valley lay Homer's "hollow

Lacedaemon," a plain so guarded by mountains that Sparta, its capital, needed no walls. At its zenith Sparta ("The Scattered") was a union of five villages, totaling some seventy thousand population. Today it is a hamlet of four thousand souls, and hardly anything remains, even in the modest museum, of the city that once ruled and ruined Greece.

1. The Expansion of Sparta

From that natural citadel the Dorians dominated and enslaved the southem Peloponnesus. To these long-haired northerners, hardened by mountains and habituated to war, there seemed no alternative in life but conquest or slavery, war was their business, by which they made what seemed to them an honest living, the non-Dorian natives, weakened by agriculture and peace, were in obvious need of masters. So the kings of Sparta, who clauned a continuous lineage from the Heracleidae of 1104, first subjected the indigenous pepulation of Laconia, and then attacked Messenia. That land, in the southwestern corner of the Peloponnesus, was relatively level and fertile, and was tilled by pacific tribes. We may read in Pausanias how the Messeman king, Aristodennis, consulted the oracle at Delphi for ways to deteat the Spartans, how Apollo bade him offer in sacrifice to the gods a virgin of his own royal race, how he put to death his own daughter, and lost the war." (Perhaps he had been mustaken about his daughter.) Two generations later the brave Aristomenes led the Messenians in heroic revolt For nine years their cities here up under attack and siege, but in the end the Spartans had their way. The Messenians were subjected to an annual tax of half their crops, and thousands of them were led away to join the Helot serfs.

The picture that we are to form of Lacoman society before Lycurgus has, like some ancient paintings, three levels. Above is a master class of Dorians, living for the most part in Sparta on the produce of fields owned by them in the country and tilied for them by Helots. Socially between, geographically surrounding, the masters and the Helots were the Periocci ("Dweders Around") freemen living in a hundred vidages in the mountains or on the outskirts of Lacoma, or engaged in trade or industry in the towns; subject to taxation and military service, but having no share in the government, and no right of intermarriage with the ruling class. Lowest and most numerous of all were the Helots, so named, according to Strabo, from the town of Helus, whose people had been among the first to be enslaved by the Spartans." By simple conquest of the non-Dorian population or by importing prisoners of war, Sparta had made Lacoma a

land of some 224,000 Helots, 120,000 Perioeci, and 32,000 men, women, and children of the citizen class. etc.

The Helot had all the liberties of a medieval serf. He could marry as he pleased, breed withour forethought, work the land in his own way, and live in a village with his neighbors, undisturbed by the absence owner of his lot, so long as he remitted regularly to this owner the remainfixed by the government. He was bound to the soil, but neither he nor the land could be sold. In some cases he was a domestic servant in the town. He was expected to attend his master in war, and, when called upon, to fight for the state, if he fought well he might receive his freedom. His economic condition was not normally worse than that of the village peasantry in the rest of Greece outside of Attica, or the unskilled laborer in a modern city. He had the consolations of his own dwelling, varied work, and the quiet friendliness of trees and fields. But he was continually subject to martial law, and to secret supervision by a secret palice, by whom he might at any moment be killed without cause or trial."

In Laconia, as elsewhere, the sample paid tribute to the elever; this is a custom with a venerable past and a promising future. In most cavilizations this distribution of the goods of life is brought about by the normally peaceful operation of the price system, the elever persuade us to pay more for the less readily duplicable luxuries and services that they offer us than the sample can manage to secure for the more easily replaceable necessaries that they produce. But in Laconia the concentration of wealth was effected by irritaringly visible means, and left among the Helots a volcanic discontent that in almost every year of Spartan history threatened to upset the state with revolution.

2. Sparta's Golden Age

In that dim past before Lycurgus came, Sparta was a Greek city like the rest, and blossomed out in song and art as it would never do after him. Music above all was popular there, and rivaled man's antiquity; for as far back as we can delve we find the Greeks singing. In Sparta, so frequently at war, music took a martial turn, the strong and sample "Doric mode"; and not only were other styles discouraged, but any deviation from this Doric style was punishable by law. I ven Terpander, though he had quelled a sed tion by his songs, was fined by the ephors, and his lyre nailed mute to the wall, because to suit his voice, he had dared to add another string

^{*}These figures, of course, are conjectural, being based upon a few hints and many assump-

to the instrument; and in a later generation Timotheus, who had expanded Terpander's seven strings to eleven, was not allowed to compete at Sparia until the ephors had removed from his lyre the scandalously extra strings."

Sparta, like I ngland, had great composers when she imported them-Towards 670, supposedly at the behest of the Delphic oracle, Terpander was brought in from Leshos to prepare a contest in choral singing at the festival of the Carneia. Likewise I haleras was summoned from Crete about 620, and soon after came Tyrtaeus, Aleman, and Polymmestus. Their labors went mostly to composing patriotic misic and training choruses to sing it. Music was soldom taught to individual Sportons;" as in revolutionary Russia, the communal spirit was so strong that music took a corporate form, and group competed with group in magnificent festivals of song and dance. Such choral singing gave the Spartans another opportunity for discipline and mass formations, for every voice was subject to the leader. At the feast of the Hyacinthia King Agestians sang obediently in the place and time assigned to him by the choral master, and at the festival of the Gymnopedia the whole body of Spartans, of every age and sex, joined in massive exercises of harmonious dance and antistrophal song. Such oceasions must have provided a powerful stimulus and outset to the patrione sentiment.

Terpander (i.e., "Delighter of Men") was one of those brilliant poet-musicians who mangutated the great age of Lesbos in the generation before Sappho. Tradition ascribed to him the invention of scalar or drinling songs, and the expans on of the lyre from four to seven strings, but the heptachord, as we have seen, was as old as Minos, and presumably men had sung the glories of wine in the forgotten adolescence of the world. Certainly ne made a name for himself at lesbos as a hatharoedos—i.e., a composer and singer of musical lyrics. Having koled a man in a brawl, he was exiled, and found it convenient to accept an invintion from Sparta. There, it seems, he lived the remainder of his days, teaching music and training choruses. We are told that he ended his life at a drinking party, while he was singing—perhaps that extra note which he had added at the top of the scale—one of his auditors threw a fig at him, which, entering his mouth and his windpipe, choked him to death in the very cestasy of song."

Tyrtaeus continued f'erpander's work at Sparta during the Second Messenian War. He came from Aphidna possibly in Lacedaemon, probably in Attica, certainty the Athenians had an old joke about the Spartans, that when the latter were losing the Second War they were saved by a lame Atric schoolmaster, whose songs of battle woke up the dull Spartans, and sturred them to victory." Apparently he sang his own songs to the flute

in public assembly, seeking to transform martial death into enviable glory. "It is a fine thing," says one of his surviving fragments, "for a brave man to die in the front tank of those who fight for their country.... Let each one, standing squarely on his feet, rooted to the ground and bring his lips, keep firm.... Foot to foot, shield to shield, waving plumes mingling and beliners clashing, let the warriors press breast to breast, each sword and spear-point meeting in the shock of battle." Tyrmeus, said the Spartan King Leonidas, "was an adept in tickling the souls of youth."

Aleman sang in the same generation, as friend and rival of Tyrtaeus, but in a more varied and earthly strain. He came from far-off Lydia, and some said that he was a slave, nevertheless the Lacedaemonians welcomed him, not having yet learned the xenelasia, or hatred of foreigners, which was to become part of the Lycurgean code. The later Spattans would have been seandalized at his eulogies of love and food, and his roster of Laconia's noble wines. Tradition ranked him as the grossest eater of antiquity, and as an insatiable pursuer of women. One of I is songs told how fortunate he was that he had not remained in Sardis, where he might have become an emasculate priest of Cybele, but had come to Sparta, where he could love in freedom his golden-haired mastress Megalostrata." He begins for us that dynasty of amorous poets which cummates in Anacreon, and he heads the list of the "Nine Lyric Poets" chosen by Alexandrian critics as the best of ancient Greece." He could write hypers and paeans as well as songs of wine and love, and the Spartans liked especially the parthenia, or maiden songs, which he composed for choruses of girls. A fragment now and then reveals that power of imaginative feeling which is the heart of poetry

Asleep lie mountain-top and mountain-guily, shoulder also and ravine, the creeping things that come from the dark earth, the heasts that he upon the houside, the generation of the bees, the monsters in the depths of the purple sea, all he asleep, and with them the tribes of the winging birds. †**

Aleman, Alexans, Sapplio Stesichorus, Rayeus, Anaeseen, Smionides, Puider, Racchyhiles, † How strangely so i far this is as if one feeling united two poets across twenty five centuries—to Goethe's "Wanderer's Night-Song"

Über allen Gipfeln Ist Rult, In aden Wipfeln Spurest du Kaum einer Hanch,

Die vogelein schweigen im Walde. Warte nac, bolde

Ruhest du auch."

O'er all the hill-tops is quet now,

In all the tree-tops
Hearest thou

Hardly a breath,

The birds are alleep in the trees.

Thou, too, shalt rest."

We may judge from these poets that the Spartans were not always Spartans, and that in the century before Lycurgus they relished poetry and the arts as keenly as any of the Greeks. The choral ode became so closely associated with them that when the Athenian dramatists wrote choral lynes for their plays they used the Doric dialect, though they wrote the dialogue in the Attic speech. It is hard to say what other arts flourished in Lacedaemon in those haleyon days, for even the Spartans neglected to preserve or record them. Laconian portery and bronze were famous in the seventh century, and the minor arts produced many refinements for the life of the fortunate few. But this little Renassance was ended by the Messenian Wars. The conquered land was divided among the Spartans, and the number of serfs was almost doubled. How could thirty thousand cruzens keep in lasting subjection four times their number of Perioces, and seven times their number of Helots? It could be done only by abandoning the pursuit and patronage of the arts, and turning every Spartan into a soldier ready at any moment to suppress rebeason or wage war. The constitution of Lyeurgus achieved this end, but at the cost of withdrawing Sparra, in every sense but the political, from the history of civilization,

3. Lycurgus

Greek historians from Herodotus onward took it for granted that Lycurgus was the author of the Spartan code, just as they accepted as historical the siege of Troy and the murder of Agamemnon. And as modern scholarship for a century demed the existence of Troy and Agamemnon, so today it hesitates to admit the reality of Lyeurgus. The dates assigned to him vary from 900 to 600 BC, and now could one man take out of his head the most unpleasant and astonishing body of legislation in all history, and unpose it in a few years not only upon a subject population but even upon a self-willed and warake tuling class?" Nevertheless it would be presumptuous to reject on such theoretical grounds a tradition accepted by all Greek historians. The seventh century was peculiarly an age of personal legislators-Zaleucus at Locris (ca. 660). Draco at Athens (620). and Charondas at Sicilian Catana (ea. 610) not to speak of Josiah's discovery of the Mosaic code in the Temple at Jerusalem (ca. 621). Probably we have in tacse instances not so much a body of personal legislation as a set of customs harmonized and clarified into specific laws, and named, for convenience's sake, from the man who codified them and in most cases

gave them a written form.* We shall record the tradition, while remembering that it has in ad likelihood personified and foreshortened a process of change, from custom to law, that required many authors and many

years.

According to Herodoms," Lyenrgus, uncle and guardian of the Spartan Kong Charding, received from the aracle at Delphi certain rhetra, or edicts, which were described by some as the laws of Lyenrgus themselves, or by others as a divine sanction for the laws that he proposed. Apparently the legislators felt that to after certain customs, or to establish new ones, the safest procedure would be to present their proposais as commands of the god, it was not the first time that a state had had its foundations in the sky. Tradition further relates that Lyenrgus traveled in Crete admired its institutions, and resolved to introduce some of them into Lace ma. The longs and most of the nobles gradgingly accepted his reforms as indispensable to their own security, but a voting aristocrat. Alcander, resisted violently, and struck out one of the legislator's eyes. Plutarch tells the story with his usual simplicity and charm:

Lycurgus, so far from being daunted of discouraged by this accident, stopped short, and showed his distingued face, and eve beaten out, to his countrymen. They, dishaved and ashamed at the sight, delivered Alcander into his hands to be punished. The englis, laving ranked them, dishassed them all, excepting only Alcander, and taking him with boil into his house, neither did nor said anything severely to him, but—, bast Alcander to wait upon boil at table. The young man, who was of an ingentious temper, without marmuring did as he was commanded, and neighbors thus adoutted to live with Lycurgus, he had an exportantly to observe it into besiles his gentleness and estimates of temper, an extraord nary sourcety and an indefatigable industry, and so, from being an enemy, because one of his most realous admirers, and told his friends and relations that he was not that morose and observed man they had taken him for, but the one mild and gentle character of the world."

Having completed his legislation, Lyeurgus (says a probably legendary coda to his story) pledged the catizens not to change the laws till his return. Then he went to Delphi, ret red into seekissen, and starved lumself to death, "thinking it a statesman's duty to make his very death, if possible, an act of service to the state."

Lyenrgus, however, was believed to have furbidden the writing of his laws.

4. The Lacedaemonian Constitution

When we attempt to specify the reforms of Lycurgus the tradition becomes contradictory and confused. It is difficult to say which elements of the Spartan code preceded Lycurgus, which were created by him or his generation, and which were added after him. Plutarch and Polybius" assure us that Ly curgus redistributed the land of Laconia into thirty thousand equal shares among the citizens, Thucydides" implies that there was no such distribution. Perhaps old properties were left untouched, while the newly conquered land was equally divided. Like Cleisthenes of Sievon and Cleisthenes of Athens, Lycurgus (212, the authors of the Lycurgean constitution) abolished the kinship organization of Laconian society, and replaced it with geographical divisions, in this way the power of the old families was broken, and a wider aristoctacy was formed. To prevent the displacement of this landowning objarchy by such mercancile classes as were gaining leadership in Argos, Sievon, Corinth, Megara, and Athens, Lycurgus forbade the citizens to engage in industry or trade, probibited the use or importation of silver or gold, and decreed that only from should be used as currency. He was resolved that the Spartans (i.e., the landowning citizens) should be left free for government and war.

It was a boast of ancient conservatives" that the Lycurgean constitution enduted so long because the three forms of government imonarchy, aristocracy, and democracy were united in it, and in such proportions that each element neutralized the others against excess. Sparta's monarchy was really a duarchy, since it had concurrently two kings, descending from the invading Herachids. Possibly this strange institution was a compromise between two related and therefore rival houses, or a device to secure without absolution the psychological uses of royalty in maintaining social order and national pressing. Their powers were limited they performed the sacrifices of the state religion, headed the judiciary, and commanded the army in war. In all matters they were subordinate to the Senate, and after Plataes they lost more and more of their authority to the ephors.

The aristocratic and predominant element of the constitution resided in the Senate, or gerousa, literally and actually a group of old men; normally citizens under sixty were considered too immature for its deliberations. Plutarch gives their number as twenty-eight, and tells an incredible story of their election. When a vacancy occurred candidates were required to pass silently and in turn before the Assembly, and he who was greeted with the loudest and longest shouts was pronounced elected.* Perhaps this

was thought to be a realistic and economical abbreviation of the fuller democratic process. We do not know which of the citizens were eligible to such election, presumably they were the *bomotol*, or equals, who owned the soil of Laconia, had served in the army, and brought their quota of food to the public mess. The Senate originated legislation, acted as a supreme court in capital crimes, and formulated public policy.

The Assembly, or apella, was Sparta's concession to democracy. Apparently all male citizens were admitted to it upon reaching the age of thirty, some eight thousand males were eligible in a population of 376,000. It met on each day of the full moon. All matters of great public moment were submitted to it, nor could any law be passed without its consent. Few laws, however, were ever added to the Lycurgean constitution, and these the Assembly might accept or reject, but not discuss or aniend. It was essentially the old Homeric public meeting, listening in awe to the council of chiefs and elders, or to the army-commanding kings. Theoretically sovereignty resided in the apella, but an amendment made to the constitution after Lycurgus empowered the Senate, if it judged that the Assembly had decided "crookedly," to reverse the decision. When an advanced thinker asked Lycurgus to establish a democracy Lycurgus replied, "Begin, my friend, by setting it up in your own family."

Cicero compared the tive ephors (i.e., overseers) to the Roman tribunes, more they were chosen annually by the Assembly, but they corresponded more to the Roman consuls, as wielding an administrative power checked only by the protests of the Senate. The ephorate existed before Lycurgus, and yet is not mentioned in such reports of his legislation as have reached us. By the middle of the sixth century the ephors had become equal in authority to the kings, after the Persian War they were practically supreme. They received embassies, decided disputes at law, commanded the armies, and directed, absolved, or punished the kings.

The enforcement of the government's decrees was entrusted to the army and the police. It was the custom of the ephors to arm certain of the younger Spartans as a special and secret police (the krypteta), with the right to spy upon the people, and, in the case of Helots, to kill at their discretion." This institution was used at unexpected times, even to do away with Heloti who, though they had served the state bravely in war, were feared by the masters as able and therefore dangerous men. After eight years of the Peloporinesian War, says the impartial Thucy dides,

the Helots were invited by a proclamation to pick out those of their number who claimed to have most distinguished themselves against the enemy, in order that they might receive their freedom, the object being to test them, as it was thought that the first to claim their freedom would be the most high spritted and the most apt to rebel. As many as two thousand were selected accordingly, who crowned themselves and went round the temples, repoking in their new freedom. The Spartans, however, soon afterwards did away with them, and no one ever knew how each of them perished."

The power and pride of Sparra was above all in its army, for in the courage, discipline, and skill of these troops it found its security and its ideal. Every citizen was trained for war, and was hable to military service from his twentieth to his sixtieth year. Out of this severe training came the hopkies of Sparta—those close-set companies of heavy-armed, spear-hurling citizen infantry that were the terror even of the Athenians, and remained practically undefeated until Epantinonidas overcame them at Leuctra. Around this army Sparta formed its moral code to be good was to be strong and brave, to die in battle was the highest honor and happiness, to survive defeat was a disgrace that even the soldier's mother could hardly forgive. "Return with your shield or on it," was the Spartan mother's farewell to her soldier son. Fight with the heavy shield was impossible.

5. The Spartan Code

To train men to an ideal so unwelcome to the flesh it was necessary to take them at birth and form them by the most rigorous discipline. The first step was a ruthless eugenics not only must every child face the father's right to infanticide, but it must also be brought before a state conneil of inspectors, and any child that appeared defective was thrown from a cliff of Mt. Taygetus, to die on the jagged rocks below." A further chamination probably resulted from the Spartan habit of muring their infants to discomfort and exposure." Men and women were warned to consider the health and character of those whom they thought of marrying; even a king. Archidamus, was fined for marrying a diminutive wife." Husbands were encouraged to lend their wives to exceptional men, so that fine chadren night be multiplied; husbands disabled by age or illness were expected to invite young men to help them breed a vigorous family. Lycurgus, says Plutarch, ridiculed jealousy and sexual monopoly, and called it "absurd that people should be so solicitous for their dogs and horses as to exert interest and pay money to procure fine breeding, and yet keep

their wives shirt up, to be made mothers only by themselves, who might be foolish, infirm, or diseased." In the general opinion of antiquity the Spartan males were stronger and handsomer, their women healthier and lovelier, than the other Greeks."

Probably more of this result was due to training than to eugenic birth. Thurs dides makes King Archidamus say "There is little difference" (at birth, presumably) "between man and man, but the superiority lies with him who is reared in the severest school." At the age of seven the Spartan boy was taken from his family and brought up by the state, he was enrolled in what was at once a military regiment and a scholastic class, under a paidonomos, or manager of boys. In each class the ablest and bravest boy was made captain, the rest were instructed to obey him, to submit to the purishments he might impose upon them, and to strive to match or better him in achieven ent and discipline. The aim was not, as at Athens, athletic form and skill, but martial courage and worth. Games were played in the nude, under the eyes of eiders and lovers of either sex. The older men made it their concern to provoke quarrels among the boys, individually and in groups, so that vigor and fortitude might be tested and trained; and any moment of cowardice brought many days of disgrace. To bear pain, hardship, and misfortune silently was required of all. I very year, at the altar of Artems Orthia, some chosen youths were scourged till their blood stained the stones." At twelve the boy was deprived of underclothmg, and was allowed but one garment throughout the year. He did not bathe frequently. Like the lads of Athens, for water and unquents made the body soft, while cold air and clean soil made it hard and resistant. Winter and summer he slept in the open, on a hed of rushes broken from the Euroras' banks. Until he was thirty he hied with his company in barracks, and knew none of the comforts of home.

He was taught reading and writing but barely enough to make him literate, books found few buyers in Sparta," and it was easy to keep up with the publishers. Ly curgus, said Plutarch, wished children to learn his laws not by writing but by oral transmission and vouthful practice under careful guidance and example, it was safer, he thought, to make men good by inconscious habituation than to rely upon theoretical persuasion, a proper education would be the best government. But such education would have to be moral rather than mental, character was more important than intellect. The young Spartan was trained to sobnery, and some Helots were compelled to drink to excess in order that the youth might see how foolish drunkenness can be." He was raught, in preparation for war, to forage

in the fields and find his own food, or starve, to sreal in such cases was permissible, but to be detected was a crime punishable by flogging. If he behaved well he was allowed to attend the public mess of the citizens, and was expected to listen carefully there so that he might become acquainted with the problems of the state, and learn the art of genial conversation. At the age of thirty, if he had survived with honor the hardships of youth, he was admitted to the full rights and responsibilities of a citizen, and sat down to dine with his elders.

The girl, though left to be brought up at home, was also subject to regulation by the state. She was to engage in vigorous games, running, wrestling, throwing the quoit, casting the dart—in order that she might become strong and healthy for easy and perfect motherhood. She should go naked in public dances and processions, even in the presence of young men, so that she might be stimulated to proper care of her body, and her defects might be discovered and temoved. "Nor was there anything shaneful in the nakedness of the young women," says the highly moral Plutarch, "modesty attended them, and all wantonness was excluded." While they danced they sang songs of praise for those that had been brave in war, and heaped contumely upon those that had given way. Mental education was not wasted upon the Spartan girl.

As to love, the young man was permitted to include in it without prejudice of gender. Nearly every lad had a lover among the older men, from this lover he expected further education, and in return he offered affection and obedience. Often this exchange grew into a passionate friendship that stimulated both youth and man to bravery in war." Young men were allowed considerable freedom before marriage, so that prostitution was rare, and hetairal here found no encouragement." In all of Lacedaemon we hear of only one tempte to Aphrodite and there the goddess was represented as veited, armed with a sword, and bearing fetters on her feet, as if to symbolize the foolishness of marrying for love, the subordination of love to war, and the strict control of marriage by the state

The state specified the best age of marriage as thirty for men and twenty for women. Cenhacy in Sparta was a crime, bachelors were excluded from the franchise, and from the sight of puboc processions in which voting men and women danced in the nude. According to Plutarch the bachelors them selves were compelled to march in public, naked even in winter, singing a song to the effect that they were justly suffering this punishment for having disobeyed the laws. Persistent avoiders of marriage might be set upon at any time in the streets by groups of women, and be severely handled

Those who married and had no children were only less completely disgraced, and it was understood that men who were not fathers were not entitled to the respect that the youth of Sparta religiously paid to their elders."

Marriages were usually arranged by the parents, without purchase, but after this agreement the bridegroom was expected to carry off the bride by force, and she was expected to resist; the word for marriage was harpadzeni, to seize." If such arrangements left some adults still unmarried, several men might be pushed into a dark room with an equal number of girls, and be left to pick their life mates in the darkness," the Spartans thought that such choosing would not be blinder than love. It was usual for the bride to stay with her parents for a while, the bridegroom remained in his barracks, and visited his wife only clandestinely; "in this relation," says Plutarch, "they lived a long time, insomuch that they sometimes had eludren by their wives before even they saw their faces by day light." When they were ready for parentage custom allowed them to set up a home. Love came after marriage rather than before, and marital affection appears to have been as strong in Sparta as in any other civilization." The Spartans boasted that there was no adultery among them, and they may have been right, for there was much freedom before marriage, and many husbands could be persuaded to share their wives, especially with brothers." Divorce was rare. The Spartan general Lysander was punished because he left his wife and wished to marry a prettier one."

All in all, the position of woman was better in Sparta than in any other Greek community. There more than elsewhere she preserved her high Homeric status, and the privileges that survived from an early matrilinear society. Spartan women, says Plutarch," "were bold and masculine, overbearing to their husbands... and speaking openly even on the most important subjects." They could inherit and bequeath property, and in the course of time, so great was their influence over mennearly half the real wealth of Sparta was in their hands." They lived a life of luxury and liberty at home while the men bore the brunt of frequent war, or direct on simple fare in the public mess.

For every Spartan male, by a characteristic ordinance of the constitution, was required from his thirtieth to his sixtieth year to eat his main meal daily in a public disting hall, where the food was simple in quality and slightly but denberately inadequate in amount. In this way, says Plutarch,

the legislator thought to harden them to the privations of war, and to keep them from the degeneration of peace; they "should not spend their lives at home, laid on costsy couches at splendid tables, delivering themselves up to the hands of their tradesmen and cooks, to fatten them in corners like greedy brutes, and to rum not their minds only but their very bodies, which, enfectiled by indulgence and excess, would stand in need of long sleep, warm bathing, freedom from work, and, in a word, of as much care and attendance as if they were continually sick." To supply the food for this public meal each citizen was required to contribute to his dining club, periodically, stated quantities of corn and other provisions, if he failed in this his emzenship was forfeited.

Normally, in the earlier centuries of the code, the simplicity and asceticism to which Spartan youth was trained persisted into later years. Fat men were a rarity in Lacedaemon, there was no law regulating the size of the stomach, but if a man's believ swelled indecently he might be publicly reproved by the government, or banished from Luconia." There was little of the drinking and the revelry that flourished in Athens. Differences of wealth were real, but hidden, rich and poor wore the same simple dressa woolen peplos, or shirt, that hung straight from the shoulders without pretense to beauty or form. The accumulation of movable riches was difficult, to lay up a hundred dollars' worth of iron currency required a large closer, and to remove it, nothing less than a yoke of oxen." Human greed remained, however, and found an outlet in official corruption. Senitors, ephors, envoys, generals, and kings were abke purchasable, at prices befitting their dignity." When an ambassador from Samos displayed his gold plate at Sparta, King Cleomenes I had him recalled lest the citizens be spoiled by alien example."

The Spartan system, fearful of such contamination, was inhospitable beyond precedent. Foreigners were rare, v welcomed. Usually they were made to understand that their visits must be brief, if they stayed too long they were escorted to the frontier by the police. The Spartans themselves were forbidden to go abroad without permission of the government, and to dull their curiosity they were trained to a haughty exclusiveness that would not dream that other pations could teach them anything." The system had to be ungracious in order to protect itself a breath from that excluded world of freedom, luxury, letters, and arts might topple over this strange and artificial society, in which two thirds of the people were

serfs, and all the masters were slaves.

6. An Estimate of Sparta

What type of man, and what kind of civilization, did this code produce? First of all, a man of strong body, at home with hardship and privation. A luxury-loving Sybarite remarked of the Sparrans that "it was no commendable thing in them to be so ready to die in the wars, since by that they were freed from much hard labor and miserable living." Health was one of the cardinal vortues in Sparta, and sickness was a crime, Plato's heart must have been gladdened to find a land so free from medicine and democtacy. And here was courage, only the Roman would equal the Spartan's record for fearlessness and victory. When the Spartans surrendered at Sphacteria, Greece could hardly believe it, it was unlicard of that Spartans should not fight to the last man, even their common soldiers, on many occasions, killed themselves rather than survive defeat." When the news of the Sparran disaster at Leuctra so overwhelming that in effect it put an end to Sparta's bistory was brought to the ephors as they presided over the Gymnopedia games, the magistrates said nothing, but merely added, to the roster of the holy dead whom the games honored, the names of the newly slain. Self-control, moderation, equanimity in fortune and adverpry-qualities that the Athenians wrote about but seldom showed-were taken for granted in every Spartan curren-

If it be a virtue to obey the raws, the Spartan was virtuous beyond most men 'Though the Lacedaemonians are tree,' the ex king Demaratus told Xerxes, "yet they are not free in all things, for over them is set law as a master, whom they fear much more than thy people fear thee " Seldom-probably never again except in Rome and niedieval Jewry has a people been so strengthened by reverence for its laws. Under the Lyeurgean constitution Sparta, for at least two centuries, became always stronger. Though it failed to conquer Argos or Arcadia, it persuaded all the Peloponnesus except Argos and Achaea to accept its leadership in a Peloponnesian League that for almost two hundred years ((60-380) kept the peace in Pelops' isle. All Greece admired Sparta's army and government, and looked to it for aid in deposing burdensome tyrannies. Xenophon tells of "the astorushment with which I first noted the unique position of Sparta among the states of Hellas, the relatively sparse population, and at the same time the extraordinary power and prestige of the community. I was puzzled to account for the fact. It was only when I came to consider the peculiar institutions of the Spartans that my wonderment ceased " Like Plato and Plutarch, Xenophon was never tired of praising Spartan ways.

Here it was, of course, that Plato found the outlines of his utopia, a little blurred by a strange indifference to Ideas. Weary and fearful of the vulgarity and chaos of democracy, many Greek thinkers took refuge in an idolatry of Spartan order and law.

They could afford to praise Sparta, since they did not have to live in it They did not feel at close range the selfishness, coldness, and emelty of the Spartan character, they could not see from the select gentlemen whom they met, or the heroes whom they commemorated from afar, that the Spartan code produced good soldiers and nothing more, that it made vig it of body a graceless brutality because it killed nearly all capacity for the things of the mind. With the triumph of the code the arts that had flourished before its establishment it ed a sudden death, we hear of no more poets, se alptors, or builders in Sparta after 660.8. Only choral dance and music remained for there Sparcan discipline could shine, and the individnal could be lost in the mass. I schided from commerce with the world, barred from travel, ignorant of the science, the hierature, and the plulosophy of exuberantly growing Greece, the Spartans became a narion of excellent hophies, with the mentality of a lifelong infantryman. Greek travelers marveled at a life so simple and imadomed, a franchise so jealously confined, a conservatism so renactions of every custom and superstition, a courage and discipline so exalted and limited, so noble in character, so base in purpose, and so barren in result, while, hardly a day's ride away, the Athemans were building, out of a thousand injustices and errors, a cavitzation broad in scope and yet intense in action, open to every new idea and eager for intercourse with the world, tolerant, varied, complex, luxurious, innovating, skeptical, imaginative, poetical, turbulent, free. It was a contrast that would color and almost delineate Greek history.

In the end Sparra's narrowness of spirit betrayed even her strength of soul. She descended to the sanctioning of any means to gain a Spartan am; at last she stooped so far to conquer as to sell to Persia the liberties that Athens had won for Greece at Marathon. Militarism absorbed her, and made her, once so honored, the hated terror of her neighbors. When she fell, all the nations marveled, but none mourned. Today, among the scanty ruins of that ancient capital, hardly a torso or a failen pillar survives to declare that here there once lived Greeks.

Girades a formed a recopic of Arbens with excellently wrought bronze plates. Bathveles of Magnesia bo it the starely theme of Apollo at Armyone and Precedents of Samos built for Sparta a famous fown half. After that Spartan art, even by imported artists, is furtly heard of any more.

IV. FORGOTTEN STATES

Northward from Sparta the valley of the Eurotas reaches across the frontier of Lacoma into the massed mountains of Arcada. They would be more beautiful if they were not so dangerous. They have not welcomed the narrow roads cut out of their rock slopes, and seem to threaten glooming all disturbers of these Arcadian retreats. No wonder the conquering Donans and Spartans were both baffled here, and left Arcadia, like Elis and Achaea, to the Achaean and Pelasgian stocks. Now and then the traveler comes upon a plain or a plateau, and finds flourishing new towns like Tripolis, or the remains of ancient cities like Orchomenos, Megalupolis, Tegea, and Mantinea, where I parminondas won both victory and death. But for the most part it is a land of scattered peasants and shepherds, living precariously with their flocks in these grudging hals, and though after Marathon the cities awoke to civilization and art, they hardly enter the story before the Persian War. Here in these perpendicular forests once roamed the great god Pan.

In southern Arcadia the Eurotas almost meets a yet more famous river. Swiftly the Alpheus wears its way through the Parthasian range, meanders lessurely into the plains of Elis, and leads the traveler to Olympia. The Ehans, Pausanias tells us," were of Acohe or Pelasgic origin, and came from Actoba across the bay. Their first king, Aethlius, was father of that Endymion whose beauty so allured the moon that she closed his eyes in a perpetual sleep, sinned at leisure, and had by him half a hundred daughters. Here, where the Alpheus joins the Cladeus flowing from the north. was the holy city of the Greek world, so sacred that war seldom disturbed it, and the Elians had the boon of a history in which battles were replaced by games. In the angle of the merging streams was the Alus, or hallowed precinct, of Olympian Zeus. Wave after wave of invaders stopped here to worship him, periodically, in later days, their delegates returned to beseech his help and entich his fane, from generation to generation the temples of Zeus and Hera grew in wealth and renown, until the greatest architects and sculptors of Greece were brought together, after the tnumph over Persia, to restore and adorn them in lavish gratitude. The shrine of Hera went back to 1000 B.C., its ruins are the oldest temple remains in Greece. Fragments of thirty-six columns and twenty Done capitals survive to show how often and how variously the pillars were replaced. Originally, no doubt, they were of wood, and one shaft of oak still stood when Pausanias came there, notebook in hand, in the days of the Antonines.

From Olympia one passes by the site of the ancient capital, Elis, into Achaea. Hither some of the Achaeans fled when the Domans took Argos and Mycenze. Like Arcadia it is a land of mountains, along whose slopes patient shepherds drive their flocks up or down as the seasons change. On the western coast is the still-thriving port of Patras, of whose women Pausanias said that they were "twice as numerous as the men, and devoted to Aphrodite if any women are." Other cities huddled against the hills along the Cormitian Gulf Acgain, Helice, Acgara, Pelicne—now almost forgotten, but once alive with men, women, and children, every one of whom was the center of the world.

V. CORENTH

A few more mountains, and the traveler re-enters, in Sicyon, the area of Dorian settlement. Here, in 676, one Orthagoras taught the world a track of politics that aftercenturies would use. He explained to the peasants that they were of Pelasgic or Achaean stock, while the landowing aristocracy that explained them was descended from Dorian invaders, he appealed to the racial pride of the dispossessed, led them in a successful revolution, made himself dictator, and established the manufacturing and trading classes in power. Under his able successors, Myron and Cleisthenes, these classes made Sicyon a semi-industrial city, famous for its shoes and its pottery, though still named from the cucumbers that it grew.

Farther east is the city that should have been, by all geographic and economic omens, the richest and most cultured center in Greece. For Corinth, on the isthmus, had an enviable position. It could lock the land door to or upon the Peloponnesus, it could serve and mulet the overland trade between northern and southern Greece, and it had harbors and shipping on both the Saronic and the Corinthian Gulf. Between these seas it huilt a lucrative Dioleos ("a slipping through")—a wooden trainway along which ships were drawn on rollers over four miles of land.† Its fortress was the impregnable Acrocomithus, a mountain peak two thousand feet high, watered by its own mexhaustible spring. Strabo has described for us the stirring sight from the citadel, with the city spread out on two bright

* So in 1989 Camille Desmoulius, from his café roura, urged the Gauls to overthrow their German (Frankish) aristocracy.

t The Dioleos was a grateful alternative to merchants who distributed the rough waters off Cape Males on the sea route to the western Mediterranean. The transvay was stardy enough to carry the usual grading vessel of Greek times; indeed. Augustus transported his fleet over the Dioleos in pursuit of Antony and Cleopairs after the battle of Actoum, and a Greek squadron was similarly carried over as lare as A.D. 883. Periander planned in his day to cut the canal that now joins the two galfs, but his engineers found it too great a task.

retraces below, the open-air theater, the great public baths, the colonnaded market place, the gleaming temples, and the protective walls that reached to the port of Lechaeum on the northern guif. At the very summit of the mount, as if to symbolize a major industry of the city, was a temple to Aphrodite."

Commit had a history stretching back to Mycenaean times, even in Homer's day it was famous for its wearth." After the Doman conquest kings ruled it, then an aristocracy dominated by the family of the Bacchiadae. But here, too, as in Argos, Sieyon, Megara, Athens, Lesbos, Miletus, Sannis, Sieily, and wherever Greek trade fleurished, the business class, by revolution or intrigue, captured political power, this is the real meaning of the outbreak of 'tyrannises' or dictatorships in seventh-century Greece. About 655 Cypselus seized the government. Has ng promised Zeus the entire wealth of Corinth if he succeeded, he laid a ten per cent tax on all property each year, and gave the proceeds to the temple, until, after a decade, he has fulfilled his yow, while leaving the caty as rich as before." His popular and intelligent rule, through thirty years, laid the basis of

Corinthian prosperity."

His ruthless son, Periander, in one of the longest dictatorships in Greek history (625-583), established order and discipline, checked exploitation, encouraged business, patronized literature and art, and made Corunth for a time the foremost city in Greece. He stimulated trade by establishing a state contage," and promoted industry by lowering taxes. He solved a erisis of unemployment by undertaking great public warks, and establishing colonies alifoad. He protected small businessmen from the competition of large tirms by limiting the number of slaves that might be employed by one man, and forbidding their further importation." He relieved the wealthy of their surplus gold by compelling them to contribute to a colossal golden statue as an ornament for the city, he invited the rich women of Cornth to a festival, str pped them of their costly robes and jewels, and sent them home with half their beauty nationalized. His enemies were numerous and powerful, he dared not go out without a heavy guard, and his fear and seclusion made him morose and cruel. To protect himself against revolt he acted on the cryptic advice of his fellow dictator Thrasybulus of Videtus, that he should periodically cut down the tallest ears of corn in the field ** His concubines preyed upon him with accusations of his wife, until in a temper he threw her downstairs, she was pregnant, and died of the shock. He hurnt the conculutes alive, and hanished to Corevra

[&]quot;Cf the periodical "purges" in Communite Russia, 1935 3%.

his son Lycophron, who so grieved for his mother that he would not speak to his father. When the Coreyreans put Lycophron to death Pertander seized three hundred youths of their noblest families and sent them to King Alyartes of Lydia, that they might be made eutrichs, but the ships that bore them touched at Samos, and the Samians, braving Periander's anger, freed them. The dictator lived to a ripe old age, and after his death was numbered by some among the Seven Wise Men of ancient Greece."

A generation after him the Spartans overthrew the dictatorship at Corinth and set up an aristocracy-not because Sparta loved liberty, but because she favored landowners against the husiness classes. Nevertheless it was upon trade that the wealth of Corinta was based, helped now and then by the devotees of Aphrodite, and the Panhelleme Isthman games. Courtesans were so numerous in the city that the Greeks often used cormibiazoniai as signifying harletry." It was a common matter in Corinth to dedicate to Aparodite's temple women who served her as prostitutes, and brought their fees to the priests. One Xenophon (not the leader of the I'en I housand) promises the goddess fifty hetairai, or courtesans, if she will help him to victory in the Olympic games, and the pious Pindar, celebrating this tramph, refers to the vow without fluching " "The Temple of Aphrodite," says Strabo," "was so each that it owned more than a thousand temple slaves, courtesans whom both men and women had dedicated to the goddess. And therefore it was also on account of these women that the city was crowded with people and grew rich, for instance, the slup captains freely squandered their money here." The city was grateful, and looked upon these "hospitable ladies" as public benefactors, "It is an ancient custom at Corinth," says an early author quoted by Athenacus," "whenever the city addresses any supplication to Aphrodite . . employ as many courtesans as possible to join in the supplication." The courtesans had a religious festival of their own, the Aphrodisia, which they celebrated with picty and pomp." St. Paul, in his Eirst Epistle to the Coranthians," denounced these women, who still in his time plied there their ancient trade.

In 480 Corunth had a population of fifry thousand citizens and sixty thousand slaves—an unusually high proportion of freemen to slaves." The puest for pleasure and gold absorbed all classes, and left little energy for literature and art. We hear of a poet Fumelus in the eighth century, but Corinthian names seldom grace Greek letters. Periander welcomed poets at his court, and brought Arion from Lesbos to organize music in Corinth. In the eighth century the pottery and bronzes of Corunth were famous,

In the sixth her vase pointers were at the top of their profession in Greece. Pausamas tells of a great cedar chest, in which Cypsenis hid from the Bacchindae, and upon which artists carved elegant reacts, with inlays of twory and gold. Probably it was in the age of Periander that Cornith rused to Apollo a Doric temple famous for its seven monolithic columns, five of which still stand to suggest that Cornith may have loved beauty in more forms than one. Perhaps time and chance were ungrateful to the city, and her annals fell to be written by men of other loyalties. The past would be startled if it could see itself in the pages of historians.

VI, MEGARA

Megara loved gold as much as Corinth did, and like her thrived on commerce, it had, however, a great poet, in whose verses the ancient city lives as if its revolutions were one with our own. Standing at the very emrance to the Peloponnesus, with a port on either gulf, it was in a position to bargain with armaes and levy tolls upon trade, to which it added a busy textile industry manned with men and women who, in the honest phraseology of the day, were called slaves. The env flourished best in the seventh and sixth centuries, when it disputed the commerce of the istimus with Cormth, it was then that it sent out, as trading posts, colonies as fac-flung as Byzantium on the Bosporus and Megara Hyblaea in Sicily Wealth mounted, but the clever gathered it so narrowly into their hands that the mass of the people, destitute serfs aimd plenty," listened readily to menwho promised them a better life. About 630 Theagenes, having decided to become dietator, praised the poor and denounced the rich, led a starying mob into the pastures of the wealthy breeders, had himself voted a bodyguard, increased it, and with it overthrew the government." For a generation Theagenes ruled Megara, freed the serfs, humbled the mighty. and patronized the arts. Towards 600 the rich deposed him in turn, but a third revolution restored the democracy, which confiscated the property of leading aristocrats, commandeered rich homes, abolished debts, and passed a decree requiring the wealthy to refund the interest that had been paid them by their debtors."

Theognis hved through these revolutions, and described them in bitter poems that might be the voice of our class war today. He was, he tells us (for he is our sole authority on this subject), a member of an ancient and noble family. He must have grown up in comfortable circumstances, for he was guide, philosopher, and lover to a youth named Cyrnus, who be-

came one of the leaders of the aristocratic party. He gives Cyrnus much advice, and asks merely love in return. Like all lovers he complains of short measure, and his finest extant poem reminds Cyrnus that he will achieve immortality only through Theogras' poetry.

Lo, I have given thee wings wherewith to fly Over the boundless ocean and the earth, Yea, on the lips of many shalt thou he, The contrade of their Lanquet and their mirth. Youths in their loveliness shal, hid thee sound Upon the silver flate's melodious breath; And when thou goest darkling underground Down to the lamentable house of death, Oh, yet not then from honor shalt thou cease, But wender, an imperishable name, Cyrnus, about the seas and shores of Greece, Crossing from isle to isle the barren main. Horses thou shalt not need, but lightly ride, Sped by the Muses of the violet crown, And men to come, while earth and sin abide, Who cherish song shall cherish thy renown. Yea, I have given thee wings, and in return Thou givest me the scorn with which I burn."

He warns Cyrnus that the injustices of the aristocracy may provoke a revolution;

Our state is pregnant, shortly to produce A rude avenger of prolonged abuse. The commons hitherto seem suber-minded, But their superiors are corrupt and blinded. The rule of noble spirits, brave and high, Never endangered peace and harmony. The supercisious, arrogant pretense. Of feeble minds, weakness and disolence, Justice and truth and law wrested aside. By crafty shifts of avarice and pride; These are our ruin, Cymus!—never dream (Tranqual and undisturbed as it may seem). Of future peace or safets to the state, Bloodshed and strife will follow soon or late.

The ascription of this poem, and of those quoted below, to certain periods in Theographic is hypothetical.

The revolution came; Theognis was among the men exiled by the triumphant democracy, and his property was confiscated. He left his wife and children with friends, and wandered from state to state Euboea, Thebes, Sparta, Sicily, at first welcomed and fed for his poetry, then lapsing into a bitter and unaccustomed poverty. Our of his resentment he addresses to Zeus the questions which Job would ask of Yahweh

Blessed, alm ghty Jove¹ with deep amaze. I view the world, and marvel at thy ways... How can you reconcile it to your sense. Of right and wrong, thus loosely to dispense. Your binings on the wicked and the good². How can your laws be known or understood^{2,20}.

He becomes bitter against the leaders of the democracy, and prays to this discrintable Zeus for the boon of drinking their blood. In the first known use of this metaphor he likens the state of Megara to a ship whose pilot has been replaced by disorderly and unskilled mariners. He argues that some men are by nature abler than others, and that therefore anstoctacy in some form is inevitable, already men had discovered that majorities never rule. He uses bot agathor, the good, as synonymous with the aristocrats, and bot kakor, the had, base, worthless, as signifying the common people. These native differences, he thinks, are incradicable, "no amount of teaching will make a bad man good," though he may merely mean here that no training can turn a commoner into an anstocrat. Like all good conservatives he is strong for eigenies—the evils of the world are due not to the greed of the "good" but to their misalliances and their infertabity."

He plots with Cyrnus another counterrevolution, he argues that even if one has taken a vow of lovalty to the new government it is permissible to assassnate a tyrant, and he pledges himself to work with his friends until they have taken full vengeance upon their foes. Nevertheless, after many years of exile and loneliness, he bribes an official to let him return to Megara. The is revolted at his own duplicity, and writes lines of despair

that hundreds of Greeks would quote

Not to be born, never to see the sun— No workely blessing is a greater one! And the next best is speedily to die, And lapt beneath a load of earth to be."

In the end we find him back in Megara, old and broken, and promising, for safety's sake, never again to write of politics. He consoles himself with

wine and a loyal wife, and does his best to learn at last the lesson that everything natural is forgivable.

Learn, Cyrnus, learn to bear an easy mand;
Accommodate your humor to mankind
And human nature, take it as you find.
A mixture of ingredients good and had—
Such are we all, the best that can be had.
The best are found defective, and the rest,
For common use, are equal to the best.
Suppose it had been otherwise decreed.
How could the business of the world proceed?

VII. AEGINA AND PPIDAURUS

Across the bay from Megara and Cornich earthquake had raised, or left, one of their earliest rivals in industry and trade—the island of Aegina. There, in Mycenaean times, a prosperous city developed, whose graves gave up much gold. The conquering Domains found the land too barren for tillage, but admirably placed for commerce. When the Persons came the island knew only an aristocracy of tradesimen, eager to sell the excellent vases and bronzes produced in their shops for the slaves whom they imported in great number to work in their factories, or for said to the cities of Circece. Aristotle, about 350, calculated that Aegina had a population of half a million, of whom 470,000 were slaves. Here the first Circek coins were made, and the Aeginetan weights and measures remained standard in Greece till its conquest by Rome.

That such a commercial community could graduate from wealth to are was revealed when, in 1811, a traveler discovered in a heap of rubbish the vigorous and finely carved figures that once adorned the pediment of the temple of Aphaea. Of the temple itself twenty-two Doric columns stand, still bearing their architeave. Probably the Aeginetans but it shortly before the Persian War, for though its architecture is class to its statuary shows many traces of the archaec, senn-Oriental style. Possibly, however, it was rused after Salamis, for the statuary, which represents Aeginetans overconing Trojans, may symbolize the perennial or inhet between Greece and the Orient, and the recent victory won by the Greek fleet under the very brows of Aegina at Salamis. To that fleet the little island contributed thirty ships, and one of these, after the victory, was awarded by the Greeks the first prize for bravery.

A pleasant boat ride takes the traveler from Aegma to Epidaurus, now a village of five hundred souls, but once among the most famous cities of

Greece. For here—or rather ten miles out in a narrow gorge among the loftiest mountains of the Argolic peninsula-was the chief home of Asclepius, the hero god of healing "O Asclepius" Apolio himself had said through his oracle at Delphi, "thou who art born a great joy to all moreals, whom levely Coroms bare to me, the child of love, at rocky Fpidaurus." Asclepius cured so many people even raising a man from the dead that Pluto, god of Hades, complained to Zeus that hardly anyone was dving any more, and Zeus, who would hardly know what to do with the human race if it were not for death, destroyed Asclepius with a thunderbolt " But the people, first in Thessaly, then in Greece, worshiped him as a savior god. At I palaurus they raised to him the greatest of his temples, and there the physician-priests who from him were called Asclemads established a sanitarium known throughout Hellas for its success in treating disease. I pidaurus became a Greek Lourdes, pilgrims flocked to it from every part of the Mediterranean world, seeking what to the Greeks seemed the greatest boon of all health. They slept in the temple, substitted hopefully to the regimen prescribed, and recorded their cures, which they believed to be miraculous, on stone tablets that still he here and there among the rums of the sacred grove. It was out of the fees and gifts of these patients that Epidaurus built its theater, and the stadium whose seats and goals still lie in the lap of the neighboring hills, and the lovely tholos-a circular, colonnaded building whose surviving fragments, preserved in the little museum, are among the most exquisitely carved marbles in Greece. Today such patients go to Tenos in the Cyclades, where the priests of the Greek Church heal them" as those of Asclepius healed their forerunners two thousand five hundred years ago. And the gloomy peak where once the people of Epidaurus saenficed to Zeus and Hera is now the sacred mount of St. Elias. The gods are mortal, but piety is everlasting.

What the student looks for most eagerly at Epidaurus is not the leveled runs of the Asciepium. The land is well wooded here, and he does not see the perfect theater that he is seeking until a turn in the road spreads it out against the mountainside in a gigantic fan of stone. Polycleitiis the Younger built it in the fourth century before our era, but even to this day it is almost completely preserved. As the traveler stands in the center of the orchetter, or dancing place a spacious circle paved with stone—and sees before him fourteen thousand scats in rising tiers, so admirably designed that every test directly faces him, as his glance follows the radiating assless that rise in swift straight lines from the stage to the trees of the mountain slope above, as he speaks quietly to his friends on the farthest, highest seam, two hun-

dred feet away, and perceives that his every word is understood, then he visions Epidairus in the days of its prosperity, sees in his mind's eye the crowds coming our in gay freedom from shrine and city to hear Euripides, and feels, more than he can ever express, the vibrant, plem-air life of ancient Greece.

Athens

1. HESIOD'S BOEOTIA

EAST of Megara the road divides—south to Athens, north to Thebes. Northward the route is mountainous, and draws the traveler up to the heights of Mt. Cathaeran I are to the west Parnassus is visible. Ahead, across lesser heights and far below, is the fertile Bocotian plain. At the foot of the hall bes Partaea, where 100,000 Greeks annihilated 300,000 Persians. A little to the west is Leuetra, where I paininondas won his first great victory over the Spartans. Again a aftle west rises Mt. Heacon, home of the Muses and Kears's "bloshful Hippocrene" that famous fountain, the Horse's Spring, which, we are assured, gested forth when the hoof of the winged steed Pegasiis struck the earth as he leaped toward heaven. Directly north is Thespiae, always at odds with Thebes, and close by is the fountain in whose waters. Narcissus contemplated his shadow—or, another story said, that of the dead sister whom he loved.

In the little town of Asera, near Thespiae, lived and toiled the poet Hesiod, second only to Homer in the affection of the classic Greeks. Tradition gave 846 and 222 as the dates of his birth and death, some modern scholars bring him down to 650, probably he lived a century earner than that 'He was born at Acohan Cyme in Asia Minor, but his father, fired of poverty there, inigrated to Asera, which Hesiod describes as "miserable in winter, insufferable in summer and never good"—like most of the places in which men live. As Hesiod, farm hand and shepherd boy, followed his flocks up and down the slopes of Helicon he dreamed that the Muses breathed into his body the soul of poetry. So he wrote and sang, and won prizes in musical contests, even, some said, from Homer himself."

Loving like any young Greek the marvels of mythology, he composed a Theogony, or Genealogy of the Gods, of which we have a thousand halting lines, giving those dynasties and families of deities which are as vital to religion as the pedigrees of kings are to listory. First he sang of the

^{*}So all classical antiquity believed except some Bocottan laterate of the second century

Muses themselves, because they were, so to speak, his neighbors on Helicon, and in his youthful imagination he could almost see them "dancing with delicate feet' on the mountainside, and "bathing their soft skins" in the Hippocrene. Then he described not so much the creation as the procreation of the world-how god begot god until Olympus overflowed. In the beginning was Chaos, "and next broad-bosomed Earth, ever secure seat of all the immortals', in Greek religion the gods live on the earth or within it, and are always close to men Next came Tartarus, god of the nether world, and after him Fros, or Love, "fairest of the gods" Chaos begot Darkness and Night, which begot I ther and Day, Farth begot Mountains and Heaven, and Heaven and Larth, mating, begot Oceanis, the Sea. We capitalize these names, but in Hesiod's Greek there were no capitals, and for all we know he meant merely that in the beginning was chaos, and then the earth, and the inners of the earth, and night and day and the sea, and desire begetting all things, perhaps Hesiod was a philosopher touched by the Muses and personafying abstractions into poetry, Empedocles would use the same tricks a century or two later in Sieny." From such a theology it would be but a step to the nat tral philosophy of the Ionians.

Hestod's mythology revels in monsters and blood, and is not averse to theological pornography. Out of the mating of Heaven (Uramis) and Earth (Ge of Gaea) came a race of I itans, some with lifty heads and a hundred hands. Uranus liked them not, and condemned them to gloomy Tarrarus. But I arth resenting this, proposed to their that they should kill their father. One of the Titans, Cromos, undertook the task. Then "huge Ge reposed, and had him in ambush, in his hand she placed a sickle with jagged teetls, and suggested to him all the stratagem. Then came vast Heaven, bringing Night Trebus, with him, and, eager for love, brooded around Farth, and lay stretched on all sides." Thereupon Cromos murilated his father, and threw the flesh into the sea. From the drops of blood that fell upon the earth came the Furies, from the foam that formed around the flesh as it floated on the waters rose Aphrodite 4th The Litans captured Olympus, deposed Heaven Uranos, and raised Cronus to the throne. Cronus married his sister Rhes, but Farth and Heaven, his parents, having predicted that he would be deposed by one of his sons, Cromes swallowed them all except Zeus, whom Rhea bore secretly in Crete. When Zeus grew up he deposed Cronus in turn, forced him to disgorge his children, and plunged the Litans back into the bowels of the earth "

Such, according to Hesiod, were the births and ways of the gods. Here,

^{*} From aphror, foam. The final sydable is of uncertain derivation.

abundance, are some of the divine adulteries that enabled so many Greeks, like May flower Americans, to trace their pedigrees to the gods—one would never have guessed that adultery could be so duil. We do not know how far these myths were the popular outgrowth of a primitive and almost savage culture, and how far they are due to Hesiod, few of them are mentioned in the healthy pages of Homer. It is possible that some measure of the disrepute into which these tales brought the Olympians in days of philosophical criticism and moral development is to be ascribed to the

gloomy fancy of Ascra's bard.

In the only poem universally conceded to Hesiod he descends from Olympus to the plains, and writes a vigorous georgic of the farmer's life. The Works and Days takes the form of a long reproof and counsel to the poet's brother Perseus, who is so strangely pictured that he may be only a literary device "Now will I speak to thee with good intent, thou exceeding foolish Perseus." This Perseus, we are told, has cheated Hesiod of Hestod's inheritance, and now the poet, in the first of known sermons on the dignity of labor, tells him how much wiser honesty and toil are than vice and luxurious ease. "Behold, thou mayest choose vice easily, even in heaps, for the path is plain, and she dwells very near. But before excellence the immortal gods have placed the swear of tool, long and steep is the road that leads to her, and rough it is at first, but when you reach the height then truly is it easy, though so hard before." So the poet lays down rules for diligent husbandry, and the proper days for plowing, planting, and reaping, in rough saws that Virgil would polish into perfect verse. He warns Perseus against drinking heavily in summer, or dressing lightly in winter. He draws a chilly picture of winter in Bocotia, the "keenly piereing air that flays the steers," the seas and rivers tossed about by the northern wind, the moaning forests and crashing pines, the beasts "shinning the white snow" and huddling fearfully in their folds and stalls." How cozy then is a well built corrage, the lasting reward of courageous and prudent toil There the domestic tasks go on despite the storm, then a wife is a helpmate indeed, and repays a man for the many tribulations she has

Hesiod cannot quite make up his mind about helpmates. He must have been a bachelor of a widower, for no man with a living wife would have spoken so actidly of woman. It is true that at the end of our fragment of the Theogony the poet begins a chivairous Catalogue of Women, recounting the legends of those days when heroines were as numerous as men, and

most of the gods were goddesses. But in both of his major works he tells with hitter reash how all human ills were brought to man by the beautiful Pandora. Angered by Prometheus' theft of fire from Heaven, Zeus bids the gods mold woman as a Greek gift for man. He

bade Hephaestus with all speed mix earth with water, and endue it with man's voice and strength, and to liken in countenance to immortal goddesses the fair, lovely beauty of a moder. Then he bade Athena teach her how to weave the highly wrought web, and golden Aphrodite to shed around her head grace, and painful desire, and cares that waste the limbs, but to endue her with a dog-like mind and tricky manners he charged the messenger Hermes. . . They obeyed Zens . . and the herald of the gods placed within her a winning voice, and this woman he called Pandora, because all who dwelt in Olympian mansions bestowed on her a gift, a mischief to inventive men.

Zeus presents Pandora to Epimetheus, who, though he has been warned by his brother Prometheus not to accept gifts from the gods, feels that he may yield to beauty this once. Now Prometheus has left with Epimetheus a mysterious box, with instructions that it should under no circumstances be opened. Pandora, overcome with curiosity, opens the box, whereupon ten thousand evils fly out of it and begin to plague the life of man, while Hope alone remains. From Pandora, says Hesiod, "is the race of tender women; from her is a permeious race; and tribes of women, a great hurt, dwell with men, helpmates not of consuming poverty but of surfeit. So to mortal men Zeus gave women as an evil."

But alas, says our vacillating poet, celibacy is as bad as marriage, a lonely old age is a miscrable thing, and the property of a childless man reverts at his death to the clan. So, after all, a man had better marry though not before thirty; and he had better have children—though not more than one,

lest the property be divided.

When full matureness crowns thy manhood's pride, Lead to thy mansion the consenting bride. Thrice ten thy sum of years the nuptial prime, Nor full far short, nor far exceed the time... A virgin choose, that morals chaste imprest By this wise love may stamp ber yielding breast Some known and neighboring damsel be thy prize; And wary bend around thy cautious eyes, Lest by a choice imprudent thou be found

The merry mack of all the dwellers round. No better lot has Providence assigned. Than a tair woman with a virtuals mind, Not can a worse befull than when thy fate. Allots a worthess, feast-continuing mate. She with no touch of mere material flame. She I burn to finder thy care-wasted frame, Shall send a fire thy vigorous hones within And age unitipe in bloculously vears begin."

Before this Fall of Man, says Hesiod, the human race lived through many happy centuries on the earth. Liest the gods, in the days of Cronus (Virgal's Saturnia regula), bad made a Golden Race of men, who were therweives is gods, by ng withour toil or care, of its own accord the earth hore ample food for them, and nourished their rich flocks, they spent many a day in joyous festival, and never aged, and when at last death came to them, it was like a painless and dreamless sleep. That then the gods, with divine whomsicality, made a Silver Race, far interior to the first, these individuals took a century to grow up, lived through a brief maturity of suffering, and died. Zeus made then a Brazen Race, men with huibs and weapons and houses of brass, who fought so many wars with one another that "black Death seized them and they quitted the bright sunlight." Zeus tried again and made the Heroic Race, which fought at Thebes and Troy, when these men died "they dwerr with carefree spirit in the Isles of the Blest," Last and worst come the Iron Race, mean and corrupt, poor and disorderly, toning by day and wretched by riight, sons dishonoring parents. impious and storgy to the gods, lary and factious, warrang among them selves, taking and giving bribes, districting and maligning one another, and granding the faces of the poor, "Would," cries Hesiod, "that I had not been born in this age, but either before or after it" Soon, he hepes, Zeus will bury this Iron Race under the earth

Such is the theology of history with which Hesi al explains the poverty and mustice of his time. These ills he knew by sight and touch, but the past, which the poets had filled with heroes and gods, must have been nobler and lovelier than this, surely men had not always been as poor and harassed and petry as the peasants whom he knew in Bocona. He does not realize how deeply the faults of his class enter into his own outlook, how narrow and earthly, almost commercial, are his views of life and labor, women and men. What a fall this is from the picture of human

affairs in Homer, as a scene of crime and terror, but also of grandeur and nobility! Homer was a poet, and knew that one touch of beauty redeems a multitude of sins; Hesiod was a peasant who grudged the cost of a wife, and grumbled at the impudence of women who dared to sit at the same table with their husbands. Hesiod, with rough candor, shows us the ugly basement of early Greek society the hard poverty of serfs and small farmers upon whose toil rested all the splendor and war sport of the aristoeracy and the longs. Homer sang of heroes and princes for lords and ladies, Hesiod knew no princes, but sang his lays of common men, and pitched his tune accordingly. In his verses we hear the rumblings of those peasant revolts that would produce in Attied the reforms of Solon and the dictatorship of Peisistratus.*

In Bocotta, as in the Peloponnese, the land was owned by absentice nobles who dwelt in or near the towns. The most prosperous of the cities were built around Lake Copais, now dry but once supplying a complex system of irrigation runnels and canals. Late in the Homeric Age this tempring region was invaded by peoples who took their name from that Mt. Bocon, in Epirus, near which they had had their home. I hey captured Chaeronea (near which Philip was to put an end to Greek liberty), Thebes, their future capital, and forally the old Minyan capital, Orchomenos. These and other towns, in classic days, joined under the leadership of Thebes in a Bocottan Confederacy, whose common affairs were managed by annually chosen bocotarchs, and whose peoples celebrated together at Coronea the festival of Panbocotia.

It was the custom of the Atheroans to laugh at the Bocotians as dull-witted, and to attribute this obtuseness to heavy eating and a moist and foggy climate—very much as the French used to diagnose the English. There may have been some truth in this, for the Bocotians play an unprepossessing part in Greek history. Thereis, for example, aided the Persian invaders, and was a thorn in the side of Athers for centuries. But in the other side of the scales we place the brave and local Piatacans, plodding Hesiod and soaring Pindar, the noble Fparamonidas and the completely lovable Plutarch. We must beware of seeing Athers' rivals only through Athers' eyes.

^{*} Henory knows unthing of Hesioti's death. Legend tells how, at the age of rights, he seduced the ma den Clymene, how her brother killed him and threw his body into the sea; and how Clymene here as his son the lyne poet Steachorus, who, however, was born in Stedy.

IL DELPHI

From Plutarch's city, Chaeronea, one passes at the continuous risk of his life over a dozen mountains into Phoeis, to reach, on the very slope of Parmassus, the sacred city of Delphi. A thousand feet below is the Crisaean plain, bright with the silver leaves of ten thousand olive trees, five hundred feet fartner down is an injet of the Corinthian Gulf, ships move with the stately, silent slowness of distance over waters deceptively motionless. Beyoud are other ranges, clothed for a moment in royal purple by the setting sun. At a turn in the road is the Castalian Spring, framed in a gorge of perpendicular chifs, from the heights, legend said (adding another fable to his own), the citizens of Delphi hurled the wandering Aesop, over them, says history, Philometus the Phoeian drove the defeated Locrians in the Second Sacred War ** Above are the twin peaks of Parnassas, where the Muses dwelt when they tired of Helicon. Greeks who clumbed a hundred tortuous miles to stand on this mountainside-poised on a ledge between mist-shrounled heights and a sunfit sea, and surrounded on every side with beauty or terror, could hardly doubt that beneath these rocks lived some awful god. I me and again earthquake had rumbled here, frightening away the plundering Persians, and a century later the plundering Procians, and a century later the plundering Gauls, it was the god protecting his shrine, As far back as Greek tradition could reach, worshipers had gathered here to find in the winds among the gorges, or the gases escaping from the earth, the voice and will of deity. The great stone that nearly closed the cleft from which the gases came was, to the Greeks, the center of Greece, and therefore the omphatos, as they called at, the umbilious of very navel of the world.

Over that navel they built their altars, in older days to Ge, Mother Farth, later to her bright conqueror Apollo. Once a terrible serpent had guarded the gorge, holding it against men. Phoebus had sain him with an arrow, and, as the Pythian Aponio, had become the idol of the shrine. There, when an earlier temple was destroyed by fire (448), the rich Alemaeonids, aristocrats exiled from Athens, rebuilt it with funds subscribed by all Greece and augmented by their own, they gave it a façade of marble, sur-

Twice the Greeks wage I bacted Wart over the perceitant of April 1 temple once in per Sc when the sombern Greeks put an end to the exacting of greeds ands his the people of neighboring Little from a greens passing to Delphi through their port and again in 206.46, when an a and Greek arms inner Ph I p of Macedon oursed the Phoesian who had captured Delphi, and appropriated the temple funds. The first war led to the neighboring of Delphi and the establishment of the Pythian games, the second led to the Macedonian conquest of Greece.

rounded it with a Doric peristyle, and supported it with Ionic colonnades within, seldom had Greece seen so magnificent a shrine. A Sacred Way wound up the slope to the sanctuary, adorned at every step with statues, porticoes, and 'measures' miniature temples built in the sacred precincts (at Olympia, Delphi, or Delos) by Greek cities as repositories for their funds, or as their individual tributes to the god. A hundred years before the battle of Marathon, Corinth and Sievon rused such treasures at Delphi, later, Athens, Thebes, and Cyrene rivaled them, Cindus and Siplinos surpassed them. Amid them all, as a reminder that Greek drama was a part of Greek religion, a theater was built into the face of Parnassus. Far above all the rest was a stadium, where Greece practiced its favorite worship of health, courage, beauty, and youth

Imagination pictures the scene in the days of Apollo's festival—fervent pilgrams crowding the road to the sacred city, filling noisily the inns and tents thrown up to shelter them, passing curiously and skeptically among the booths where subtle traders displayed their wares, mounting in rengious procession or hopeful pilgramage to Apollo's temple, laying before it their offering or sacrifice, chanting their hymns or saving their prayers, sitting awed in the theater, and plodding up half a thousand trying steps to witness the Pythian guiles or gaze in wonder at mountains and sea. Life once passed this way in all its eagerness.

III. THE LESSER STATES

In the western mainlands of Greece life was content to be rural and subdued throughout Greek history—and is so today. In Locris, Actoba, Acarroma, and Acmania men were too close to primitive realities, too far from the quickening currents of communication and trade, to have time or skill for literature, philosophy, or art, even the gyinnasion and the theater, so dear to Attica, found no home here, and the temples were arriess vullage shrines stirring no national sentiment. At long intervals modest towns urose, like Amphissa in Locris, or Actoban Naupactus, or little Calydon, where once Meleager had hunted the boar with Atalanta. On the west coast near Calydon is the modern Mesolungion, or Alessolonghi, where Marco Bozzaris fought and Byron died.

[&]quot;A wild hear having devastated the fields of Candon, Meleager son of Candon's King Oeneus, organized a control of the with such anies as Theseus. Canton and Pollax. Nestor Jason, and the fair faced, fleet footed Arabana. Several heroes were such by the hour but Atalanta that it and Meseager killed it. Atalanta, sought by many woosts in her Arcadan home, agreed to marry any one of them that could outron her but those who lost were to be put to death. Hippomenes won by dropping as he can the three golden apples of the Uesperides given libit by Aphrofite; Atalanta stooped to pick them, and lost the race. Of Meleager's secret love for Arabana, and his tragic death, the reader may learn in Swinburne's Atalanta in Calydon.

Between Acarnama and Actolia runs the greatest river of Hellas-the Achelous, which the imaginative Greeks worshiped as a god, and appeased with prayer and sacrifice. Near its sources in Epirus rises the Spercheus, along whose banks in the little state of Acmania once lived the pre-Homeric Achaeans, and a small tribe called Hellenes, whose name, by the whois of usage, was adopted by the Greeks. Towards the east lay Thermopylae cased "Hor Greeks because of its warm sulphur springs and its narrow strategic pass, from north to sourt, between mountains and the Make Gulf. Then over Mr. Othrys and through Achaea Phthiotis one descends into the great plants of Thessaly.

Here at Pharsalis Caesar's weary troops wiped out the forces of Pompey Nowhere ede in Greece were the crops so rich as in Thessaly, or the horses so spirited, or the arts so poor. Rivers ran from all directions into the Peneus, naking a fertile adustal soil from the southern boundary of the state to the foot of the northern ranges. Through these mountains the Peneus slashes its way across Thessaly to the Thracian Sea. Between the peaks of Ossa and Olympis it carves the Vale of Tempe one, a cutting), where for four miles the angrytiver is home acid in by precipitous colls range a thousand feet above the stream. Along the great tivers were many cities Pherae, Cramon, Tricca, Larisa, Gyrton, Flarea roled by fendal battony living on the toil of serfs. Here, in the extreme north, is Mr. Olympis, talest of Greek peaks, and home of the Olympias gods. On its northern and eastern slopes lay Pierra, where the Muses had dwild before they moved to Heacon. Southward, and along the gulf, ran Maguesia, piling up it ountains from Ossa to Penon.

Beginning a few miles across the strair from Magnesia, the great island of I abuca stretches its length along the shores of the maintaind between inner gulfs and outer Aegean, and pivots itself on a penansila at Chalcis that almost brids it to Bocoria. The island's backhooe is a range that continues Olympus, Ossa, Pelion, and Orlivys, and ends in the Cyclades. Its coastal plants were rich emough to lure formans from Attica in the days of the Dorian invasion, and to lead to its conquest by Athens in 606 on the plea that Athens, if hockaded at the Picacus, wound starve without huboran grain. Neighboring deposits of copper and iron and banks of mutex shelp gave Chalcis its wealth and its name, for a time it was the conet center of the metanurgical industry in Greece, making unrivaled swords and excellent vases of bringe. The trade of the island, hoped by one of the hist Greek comages, passed out from Chalcis, enriched its Givens, and led them to found it in creat colonies in Thrace, Italy, and Sie ly. The huboran system of weights and measures became abnost universal in Greece, and the a phabet of Chalcis, given to Rome by the habocan colony

[•] Hence the wave consist of A counder Pope's philosophical doggered A cole tearning is a dangerous thing.
Deink deep or easte not the Pierian spring.

of Italian Cumae, became through Latin the alphabet of modern Europe. A few miles to the south of Chacus was its ancient rival, Eretina. There Menedemus, a pupil of Plato, established a school of philosophy, but for the rest neither Eretria nor Chalcis wrote its name very distinctly into the record of Greek thought or art.

From Chalcis a bridge, lineal descendant of the wooden span built in 411 u.c., leads the traveler across the Furipus strait back into Bocotia. A few miles south on the Bocotian coast lay the little town of Auis, where Agamemnon sacrificed his daughter to the gods. In this region once lived an insignificant tribe, the Gran, who joined the Full beans in sending a colony to Cumae, near Naples; from them the Remains gave to all the He lenes whom they encountered the name Granei, Greeks, and from that c reasonance all the world came to know Helias Ly a term which its own which tants never applied to themselves." Farther south is Tanagra, whose poetess Comma won the prize from Pindar about 500 n.c., and whose potters, in the fifth and foarth centuries, would make the most famous statuettes in listory. Five miles south again and we are in Atrica. I rom the peaks of the Parnes range we can make out the fulls of Athens.

IV. ATTICA

1. The Background of Athens

The very atmosphere seems different—clean, sharp, and bright, each year here has three hundred sunny days. We are at once remanded of Cicero's comment on "Athens' clear air, which is said to have contributed to the keenness of the Atuc maid." Ram falls in Atuca in autumn and winter, but seldom in summer. Fog and mist are rare. Show falls about once a year in Athens, four or live times a year on the surrounding mountaintops." The summers are hot, though dry and tolerable, and in the low-lands, in ancient days, malarial swamps detracted from the healthness of the air." The soil of Atuca is poor, nearly everywhere the basic rock lies close to the surface, and makes agriculture a heartbreaking struggle for the samplest goods of life." Only adventurous trade, and the patient culture of the olive and the grape, made envilozation possible in Atuca.

It is all the more surprising that on this and peninsula so many towns should have appeared. They are everywhere, at every harbor along the coast, in every valley among the bills. An active and enterprising people

[&]quot;Action," says The evolutes a "because of the powerty of its soil, enjoyed from a very remote period freedom from faction [1] and invasion."

had settled Atrica in or before neolithic days, and had hospitably received and intermarried with Ionians—a mixture of Pelasgo-Mycenaeans and Achaeans—fleeing from Boeotia and the Peloponnesus in the face of the northern migrations and invasions. Here was no conquering alien race exploiting a native population, but a complex Mediterranean stock, of medium stature and dark features, directly inheriting the blood and culture of the old Helladic civilization, proudly conscious of its indigenous quality," and excluding from its national sanctuary, the Acropolis, those half-barbarian upstarts, the Dorians."

Relationships of blood gave them their social organization. Each family belonged to a tribe, whose members claimed the same divine heroic ancestor, worshiped the same deity, joined in the same religious ceremony, had a common archon (governor) and treasurer, owned together certain communal lands, enjoyed among themselves the rights of intermarriage and bequest, accepted obligations of mutual aid, vengeance, and defense, and slept at last in the tribal burial place. Each of the four tribes of Atrica was composed of three phratries or brotherhoods, each phratry of thirty claus or genter (gene), and each clau, as nearly as possible, of thirty heads of families." This kiniship classification of Atric society lent uself not only to military organization and mobilization, but to so claims an aristocracy of old families that Cleisthenes had to redistribute the tribes before he could

establish democracy.

Each town or village was probably in origin the home of a clan, and sometimes took its name from the clan, or from the god or hero whom it worshiped, as in the case of Athens. The traveler entering Athea from eastern Boeotia would come first to Oropus, and receive no very favorable impression, for Oropus was a frontier town, as terrifying to the tourist as any such today "Oropus," says Dieacarchus (3) about 300 B.C., "it a nest of hucksters. The greed of the customhouse officials here is unsurpassed, their roguery inveterate and bred in the bone. Most of the people are coarse and truculent in their manners, for they have knocked the decent members of the community on the head." From Oropus southward one moved through a close succession of towns: Rhamnus, Aphidna, Deceleia (a strategic point in the Peloponnesian War), Acharnae (home of Aristophanes' pagnacious pacifist Dicaeopolis), Marathon, and Brauton-in whose great temple stood that starue of Asternis which Orestes and Iphigenia had brought from the Taune Chersonese, and where, every four years, as much of Attica as could come joined in the piety and debauchery of the Brauronia, or feast of Arternis." Then Prasine and Thoricus, then the silver-mining region of Laurium, so vital in the economic and military history of Athens.

then, at the very point of the pennisula, Sumum, on whose cliffs a lovely temple rose as a guide to mariners and their hopeful offering to the incalculable Poseidon. Then up the western coast (for Attica is half coast, and its very name is from aktike, coastland) past Anaplaystus to the isle of Salamis,* home of Ajax and Euripides, then to Eleusis, sacred to Demeter and her mysteries; and then back to the Piracus. Into this sheltered port, neglected before Themistocles revealed its possibilities, ships were to bring the goods of all the Mediterranean world for the use and pleasure of Athens. The barrenness of the soil, the nearness of the coast, the abundance of harbors lured the people of Attica into trade, their courage and inventiveness won for them the markets of the Aegean, and out of that commercial empire earne the wealth, the power, and the culture of Athens in the Periclean age.

2. Athens under the Oligarchs

These towns of Attica were not only the background but the members of Athens. We have seen how, according to Greek belief, Theseus with a benevolent "synogoism" had brought the people of Attica into one political organization, with one capital, t live miles from the Piracus, and in a nest of hills-Hymerrus, Pentelicus, and Parnes-Athens grew around the old Mycenzean aeropolis, and all the landowners of Artica were its entizens. The oldest families, and those with the largest holdings, wielded the balance of power, they had tolerated the kingship when disorder threatened, but when quiet and stability returned they reasserted their feudal domination of the central government. After King Codrus had died in heroic self-sacrifice against the invading Domans, they announced (so the story went) that no one was good enough to succeed hun, and replaced the king with an archon chosen for life. In 752 they limited the tenure of the archonship to ten years, and in 683 to one. On the latter occasion they divided the powers of the office among nine archons: an archon eponymos, Who gave his name to the year as a means of dating events, an archon basileus, who bore the name of king but was merely head of the state religion, a polemarchos, or military commander, and six thesmothetan, or lawmakers. As in Sparts and Rome, so in Athens the overthrow of the monarchy represented not a victory for the commons, or any intentional advance towards

^{*} Probably named by the Phoen cans from shalam peace, of Salem."

[†] Tradeton placed this event in the thirteenth century a.c., but the union of Artics under Arthers could barily have been compacted before 700, nince the "Flomeric" Hymn to Demister, composed about that date, speaks of Elemis as still having its own king."

‡ A possibly legendary event attributed by tradmon to 1008 as

democracy, but a recapture of mastery by a feudal aristocracy one more swing of the pendulum in the historical alternation between localized and centralized authority. By this piecemeal revolution the royal office was shorn of all its powers, and its holder was confined to the functions of a priest. The word king remained in the Athenian constitution to the end of its ancient history, but the reality was never restored. Institutions may with impunity be altered or destroyed from above if their names are left

unchanged.

The Euparrid oligarchs i.e., the well-born ruling few-continued to govern Attica for almost five centuries. Under their rule the population was divided into three political ranks the hippes, or knights, who owned horses" and could serve as cavalry, the zeuguai, who owned a yoke of oxen and could of up themselves to fight as hoplites or heavy-armed troops; and the theter, bared laborers who foug it as light-armed infantry. Only the first two were accounted correns, and only the knights could serve as archons, judges, or priests. After completing their term of office the archons, if no scandal had tarnished them, became automatically and for lite it enders of the bante or Conneil that met in the cool of the evening on the Areopagus, or Ares' hill, chose the archons, and ruled the state. Even under the monarchy this Senate of the Areopagus had limited the authority of the king, now, under the obgatchy, it was as supreme as its counterpart in Rome."

Economically the population fell again into three groups. At the top were the I upartids who lived in relative luxury in the towns while slaves and birted men tilled their holdings in the country, or increhams made profits for them on then I sans Next in wealth were the dema urgot, or pubhe workmen he, professional men, craftsmen, traders, and free aborers As colonization opened up new markets, and comage liberated trade, the rising power of this class became the explosive force that under Solon and Possiratus won for it a share in the government, and under Cleisthenes and Pericles raised it to the zenith of its influence. Most of the laborers were freemen, slaves were as yet in the numerity, even in the lower classes."- Poorest of all were the georgos, literally land workers, sir all peasants struggling against the struginess of the soil and the greed of moneylenders and baronial lords, and consoled only with the pride of owning a

bit of the earth.

Some of these peasants had once held extensive tracts, but their wives had been more fertile than their land, and in the course of generations their

^{*} The mark of a gentleman then, as in the days of Roman equater, French chepatiers, and English cavaliers.

holdings had been divided and redivided among their sons. The collective ownership of property by clain or patriarchai family was rapidly passing away, and tences, ditches, and hedges marked the rise of jealously individual property. As plots became smaller and fural life more precurious, many peasants soid their lands-despite the fine and disfranchisement that punished such sales, and went to Athens or lesser towns to become traders or craftsmen or laborers. Others, unable to meet the obligations of ownership, became renant tillers of Eupatrid estates, hectemoral, or "share-croppers" who kept a part of the produce as their pay." Stall others struggled on, borrowed money by mortgaging their land at high rates of interest, were unable to pay, and found themselves attached to the soil by their creditors, and working for them as serfs. The holder of the mortgage was considered to be the hypothetical owner of the property until the mortgage was satisfied, and placed upon the mortgaged land a stone slab announcing this ownership." Small holdings became smaller, free peasants fewer, great holdings greater. "A few proprietors, says Aristotle, "owned all the soil, and the cultivators with their wives and children were liable to be sold as slaves," even into foreign parts, "on failure to pay their rent" or their debrs." he reign trade, and the replacement of barter with coinage, hurt the peasant further, for the competition of imported food kept the prices of his products low, while the prices of the manufactured articles that he had to buy were determined by forces beyond his control, and rose mexplicably with every decade. A bad year maned many farmers, and starved some of them to death. Rural poverty in Attica became so great that war was welcomed as a blessing more land inight be won, and fewer mouths would have to be fed."

Meanwhile, in the towns, the middle classes, unhindered by law, were teducing the free laborers to destitution, and gradually replacing them with slaves." Muscle became so cheap that no one who could afford to buy it deigned any longer to work with his hands, manual labor became a sign of bondage, an occupation inworthy of freemen. The tandowners, jealous of the growing wealth of the merchant class, sold abroad the corn that their tenants needed for food, and at last, under the law of debt, sold the Athenians themselves."

For a time men hoped that the legislation of Druco would remedy these evils. About 620 this thesmothete, or sawmaker, was commissioned to codify, and for the first time to put into writing, a system of laws that would restore order in Atrica. So far as we know, the essential advances of his code were a moderate extension, among the newly rich, of eligibility to the archorship, and the replacement of feud vengeance with law here

after the Senate of the Areopagus was to try all eases of homicide. The last was a basic and progressive change, but to enforce it, indeed to persuade vengeful men to accept it as more certain and severe than their own revenge, he attached to his laws penalties so drashe that after most of his legislation had been superseded by Solon's he was remembered for his punishments rather than for his laws. Draco's code congealed the cruel customs of an integulated feudalism, it did nothing to relieve debtors of slavery, or to integrate the exploitation of the weak by the strong, and though it slightly extended the franchise it left to the Fupatrid class full control of the courts, and the power to interpret in their own way all laws and issues alfecting their interests." The owners of property were protected more zealously than ever before, petty theft, even idleness, was punished in the case of citizens with disfranchisement, in the case of others with death.**

As the seventh century drew to a close the bitterness of the helpless poor against the legally entrenched rich had brought Athens to the edge of revolution. Equality is unnatural, and where ability and subtlety are free, inequality must grow until it destroys itself in the indiscriminate poverty of social war, liberty and equality are not associates but enemies. The concentration of wealth begins by being inevitable, and ends by being faral. "The disparity of fortune between the rich and the poor," says Plutarch, "had reached its height, so that the city seemed to be in a truly dangerous condition, and no other means for freeing it from disturbances . . . seemed possible but a despotte power." The poor, finding their situation worse with each year-the government and the army in the hands of their masters, and the corrupt courts deciding every issue against them" began to talk of a violent revolt, and a thoroughgoing redistribution of wealth " The nch, unable any longer to collect the debts legally due them, and angry ar the chailenge to their savings and their property, invoked ancient laws." and prepared to defend themselves by force against a mob that seemed to threaten not only property but all established order, all religion, and all civilization.

3. The Solonian Revolution

It seems incredible that at this juncture in Athenian affairs, so often repeated in the history of nations, a man should have been found who, without any act of violence or any bitterness of speech, was able to persuade the rich and the poor to a compromise that not only averted social chaos

[&]quot;Those that stole a cabbage or an apple were to suffer even as villams that commuted merdege or murder,"-Plutarch, Solom.

but established a new and more generous political and economic order for the entire remainder of Athens' independent career. Solon's peaceful revo-

lution is one of the encouraging imracles of history.

His father was a Euparral of purest blood, related to the descendants of King Codrus and, indeed, tracing his origin to Poseidon himself. His mother was cousin to the mother of Peisistratus, the dictator who would first violate and then consolidate the So onun constitution. In his youth Solon participated lust by in the life of his time, he wrote pactry, sang the poys of "Greek friendship." and, like another I yrtaeus, stirred the people with his verses to conquer Saamis." In middle age his morals improved in inverse ratio to his poetry, his stanzas became dull, and his counsel excellent. "Many undeserving men are rich," he tells us, "while their betters are poor. But we will not exchange what we are for what they have, since the one gift abides while the other passes from man to man." The riches of the rich "are no greater than lus whose only possessions are stornach, lungs and feet that bring him joy, not pain, the bioorning charms of lad or maid, and an existence ever in harmony with the changing seasons of afe." Once, when a sedition occurred in Athens, he remained neutral, luckily before his own reputed legislation making such caution a crime "But he did not bestrate to denounce the methods by which the wealthy had reduced the masses to a desperate penury "

If we may believe Plutarch, Solon's father "rumed his estate in doing benefits and kindnesses to other men." Solon took to trade, and became a successful merchant with far flung interests that gave him wide expensive and travel. His practice was as good as his preaching, for he acquired among all classes an exceptional reputation for integrity. He was still relatively young—forty-four or torty-five—when, in 594, representatives of the middle classes asked him to accept election normally as archon eponymos, but with dictatorial powers to soothe the social war, establish a new constitution, and restore stability to the state. The upper classes, trusting to the conservatism of a moneyed man, reluctantly consented

His first measures were simple but drastic economic reforms. He disappointed the extreme radicals by making no move to redivide the land, such an attempt would have meant civil war, chaos for a generation, and the rapid return of inequality. But by his famous Senachtheia, or Removal of Burdens, Solon canceled, says Aristotle, "all existing debts, whether owing to private persons or to the state", "and at one blow cleared Atticlands of all mortgages. All persons enslaved or attached for debt were

^{*} Probably this did not apply to cummercial debts in which personal servitude was not involved.**

released, those sold into servicide abroad were reclaimed and freed, and such enslavement was forbidden for the future. It was characteristic of humanity that certain of Solon's triends, getting wind of his intention to cancel debts, bought on mortgage large tracts of land, and later retained these without paying the mortgages, this, Aristotic tells us with a rare twinkle in his style, was the origin of many fortunes, that were later "supposed to be of immemorial antiquity." Solon was under suspection of having commised at this and of having profited by it, until it was discovered that as a heavy creditor he lumself had lost by his law. The rich profested unanswerably that such legislation was confiscation; but within a decade opinion became almost unanimous that the act had saved Attica from revolution."

Of another Solonian reform it is difficult to speak with clearness or certainty. Solon, says Aristotle, "superseded the Pheidonian measures"—that is, the Aeginetan comage theretofore used in Arisea—' by the Fulioic system on a larger scale, and made the mina," which had contained seventy drachmas, now contain a hundred "". According to Plutarch's fuller account, Solon "made the mina, which before passed for seventy-three drachmas, go for a hundred, so that, though the number of pieces in a payment was equal, the value was less, which proved a considerable benefit to those that were to discharge great debts, and no loss to the creditors." Only the genial and generous Plutarch could devise a form of inflation that would relieve debtors without hurring creditors—except that doubtless in some cases half a loaf is better than mone.†

More lasting than these economic reforms were those historic decrees that created the Schonan constitution. Solon prefaced them with an act of amnesty freeing or restoring all persons who had been juiled or ban-tshed for political offenses short of trying to usurp the government. He went on to repeal, directly or by implication, most of Draco's legislation; the law concerning murder remained. It was in itself a revolution that the laws of Soion were applied without distinction to all freemen, rich and

^{*} For the value of Athenian coms, see be ow. Chap. XII, seet. Dr.

t Grote and many others energies of Phrasch's water, our in mean that Solno had depreented the currency to recent seven per cent and had thereby given renof to landlords who, the usel as decitors to others, were deproved of the moragage returns upon which they had depended for neeting their obligations. Such inflation, however would have fallen as a second blow upon those landlords who had lent sums to merchants, if it helped any class, it helped these merchants rather than the landlords or the peasures whose moragages land alreads been torgonen. Possel ly Solan had no thought of debaung the currency, I it wished merely to substitute for a monetary standard that had been found convenient in trading with the Peapurinesus, an other that would facilitate trade with the rich and growing markets of longs, where the Eulius, standard was in common me.

poor were now subject to the same restraints and the same penalties. Recognizing that his reforms had been made possible by the support of the mercantile and industrial classes and signified their accession to a substantial share in the government, Solon divided the free population of Attica into four groups according to their wealth first, the pentaconomedianm, or five-hundred-bust el men, whose annual income reached five hundred measures of produce, or the equivalent thereof," second, the hippes, whose meome was between three and five hundred measures, third, the zengital, with incomes between two and three hundred measures, and fourth, the theres, all other freemen. Honors and tuxes were determined by the same rating, and the one could not be enjoyed without paying the other, furthermore, the first class was taxed on twelve times, the second class on ten times, the taird class on only five times, the amount of its annual income; the property tax was in effect a graduated income tax." The fourth class was evenipt from direct taxation. Only the first class was eligible to the archorship or to industry economists, the second class was eligible to lower offices and to the cavalry, the third was privileged to join the heavyarmed infantry, the fourth was expected to provide the common soldiers of the state. This peculiar classification weakened the kinship organization upon which the obgarchy had rested its power, and established the new principle of "tin occacy" government by honor or prestige as frankly determined by taxable wealth. A similar "platocracy" prevailed, throughout the sixth and part of the lifth century, in most of the Greek colonies,

At the head of the new government Solon's code left the old Senate of the Areopagus, a little short of its exclusiveness and powers, open now to all members of the first class, but still with supreme authority over the conduct of the people and the officers of the state." Next below it he created a new boure, a Council of Four Hundred, to which each of the four tribes elected a hundred members, two Council selected, censored, and prepared all business that could be brought before the Assembly. Beneath this objective superstructure, ingratiating to the strong, Solon, perhaps with good will aforethought, placed fundamentally democratic institutions. The old ekkteria of Homer's day was brought back to life, and all entizers were invited to join in its deliberations. This Assembly annually elected, from among the five-hundred-hushel men, the archons who heretofore had been appointed by the Areopagus, it could at any time question these officers, impeach them, punish them, and when their terms expired it seturi-

[&]quot; A medimus-about one and a half bushels-was considered equivalent to one draches to measy.

nized their official conduct during the year, and could debar them, if it chose, from their usual graduation into the Senate. More important still, though it did not seem so, was the admission of the lowest class of the curzens to full parity with the higher classes in being eligible to selection by lot to the beliaca a body of six thousand juriors that formed the various courts before which all matters except murder and treason were tried, and to which appeal could be made from any action of the magistrates. "Some believe," says Aristotle, "that Solon intentionally introduced obscurity into his laws, to enable the commons to use their judicial power for their own political aggrandizement", for since, as Plutarch adds, "their differences could not be adjusted by the letter, they would have to bring all their causes to the judges, who were in a manner masters of the laws." This power of appeal to popular courts was to prove the wedge and citadel of Athenian democracy.

To this basic legislation, the most important in Athenian history, Solon added a miscellary of laws aimed at the less fundamental problems of the time. First he legalized that individualization of property which custom had already decreed. If a man had sons he was to divide his property among them at his death, if he died childless he might bequeath to anyone the property that in such cases had heretofore reverted automatically to the clan." With Solon begins, in Athens, the right and law of wills. Himself a businessman, Solon sought to stimulate commerce and industry by opening emzenship to all aliens who had a skilled trade and came with their families to reside permanently at Athens. He forbade the export of any produce of the soil except obve oil, hoping to turn men from growing surplus crops to practicing an industry. He enacted a law that no son should be obliged to support a father who had not taught him some specific trade." To Solon—not to the later Athenians—the crafts had their own rich honor and dignity.

Even into the dangerous realm of morals and manners Solon offered laws. Persistent idleness was made a crime, and no man who lived a life of debauchery was permitted to address the Assembly." He legalized and taxed prostitution, established public brothels heensed and supervised by the state, and erected a temple to Aphrodite Pandemos from the revenues "Had to you, Solon'" sang a contemporary Lecky. "You bought public women for the benefit of the city, for the benefit of the morality of a city that is full of vigorous young men who, in the absence of your wise institution, would give themselves over to the disturbing annoyance of the better women." He enacted the un-Draconian penalty of a hundred drachmas

for the violation of a free woman, but anyone who caught an adulterer in the act was allowed to kill him there and then. He limited the size of dowries, wishing that marriages should be contracted by the affection of mates and for the rearing of children, and with childlike trustfulness he forbade women to extend their wardrobes beyond three suits. He was asked to legislate against bachelors, but refused, saying that, after all, "a wife is a heavy load to carry." He made it a crime to speak evil of the dead, or to speak evil of the living in temples, courts, or public offices, or at the games, but even he could not tie the busy tongue of Athens, in which, as with us, gossip and slander seemed essential to democracy. He laid it down that those who remained neutral in seditions should lose their citizenship, for he felt that the indifference of the public is the ruin of the state. He condemned pompous ceremonies, expensive sacrifices, or lengthy lamentations at funerals, and limited the goods that might be buried with the dead. He established the wholesome law-a source of Athenian bravery for generations—that the sons of those who died in war should be brought up and educated at the expense of the government.

To all of his laws Solon attached penalties, milder than Draco's but still severe, and he empowered any entiren to bring action against any person whom he might consider guilty of crone. That his laws might be the better known and obeyed he wrote them down in the court of the arch in basileus upon wooden rollers or prisms that could be turned and read. Unlike Lyeurgus, Minos, Hammurahi, and Numa, he made no claim that a god had given him these laws, this circumstance, too, revealed the temper of the age, the exty, and the man. Invited to make himself a permanent dictator he refused, saying that dictatorship was "a very fair spot, but there was no way down from it " Radicals enticized him for failing to establish equality of possessions and power; conservatives denounced him for admitting the commons to the franchise and the courts, even his friend Anacharsis, the whansical Scythian sage, loughed at the new constitution, saying that now the wise would plead and the tools would decide. Besides, added Anacharsis, no listing justice can be established for men, since the strong or clever will twist to their advantage any laws that are made, the law is a spider's web that catches the little flies and lets the big bugs escape. Solon accepted all this criticism genially, acknowledging the imperfections of his code, asked had he given the Athenians the best laws, he answered, "No, but the best that they could receive" - the best that the conflicting groups and interests of Athens could at that time be persuaded conjointly to accept. He followed the mean and preserved the state; he was a good

pupil of Aristotle before the Stagistic was born. Tradition attributed to him the motto that was inscribed upon the temple of Apollo at Delphi-meden again, nothing in excess," and all Greeks agreed in placing him among the Seven Wise Men.

The best proof of his wisdom was the lasting effect of his legislation. Despite a thousand changes and developments, despite intervening dictatorships and superficial revolutions, Cicero could say, five centuries later, that the laws of Solon were still in force at Athens," Legally his work marks the end of government by mealculable and changeatile decrees, and the beginning of government by written and permanent law. Asked what made an orderly and web-constituted state, he replied, "When the people obey the rulers, and the rulers obey the laws." To his legislation Artica owed the liberation of its farmers from serfdom, and the establishment of a peasant proprietor class whose ownership of the soil made the little armies of Athens suffice to preserve her liberties for many generations. When, at the close of the Peloponnesian War, it was proposed to limit the fruncluse to freeholders, only five thousand adult freemen in ad Attica failed to sonsfy this requirement." At the same time trade and industry were freed from polytical disabilities and financial inconveniences, and began that vigorous development which was to make Athens the commercial leader of the Mediterranean. The new aristocracy of wealth put a premium upon intelligence rather than birth, stimulated science and education, and prepared, materially and mentally, for the cultural achievements of the Golden Age.

In \$72, at the age of sixty-six, and after serving as archon for twenty-two years. Solon retired from office into private life, and having bound Athens, through the oath of its officials, to obey his laws unchanged for ten years," he set out to observe the endizations of Fgypt and the East. It was now, apparently, that he made his famous remark—"I grow old while always learning "" At Heliopolis, says Plutarch, he studied Egyptian history and thought under the tittelage of the priests, from them, it is said, he heard of the sunken continent Arlanus, whose tale he told in an unfinished epic which two centuries later would tascinate the imaginative Plato. From Tgypt he sailed to Cyptis and made laws for the city that in his honor changed its name to Soli." Herodotus" and Plutarch describe with miraculous memory his chat at Sardis with Croesus, the Lydian long-how this

^{*} Diogenes Lacrous tells this story rather of Sou in Calicia, the town whose preservation of old Greek speech into Alexander's day led to the word roscourse.

paragon of wealth, having arrayed himself in all his paraphernalia, asked Soion did he not account him, Croesus, a nappy man, and how Solon, with Greek audacity, replied:

The gods, O King, have given the Greeks all other gifts in moderate degree, and so our wisdom, too, is a cheerful and a homely, not a noble and kingst, wisdom, and this, observing the numerous mistortunes that attend all conditions, forbids us to grow insolent upon our present enjoyment, or to admire any man's happiness that may yet, in course of time, suffer change from the uncertain future has yet to come, with every passible variety of fortune, and him only to whom the divinity has continued happiness unto the end do we call happy, to saidle as happy one that is still in the midst of life and hazard we think as little safe and conclusive as to crown and proclaim as victorious the wrestler that is yet in the ring.

This admirable exposition of what the Greek dramatists mean by hybris—insolent prosperity—has the ring of Plurarch's celectic wisdom, we can only say that it is better phrased than Herodotus report, and that both accounts belong, presumably, to the ream of unaginary conversations. Certainly both Solon and Croesus, in the manner of their deaths, justified the skepticism of this homely. Croesus was dethroned by Cyrus in 646, and (if we may rephrase Herodotus with Danie) knew the butterness of remembering, in his misery, the happy time of his splendor, and the stern warning of the Greek. And Solon, returning to Athens to die, saw in his last years the overthrow of his constitution, the establishment of a dictator-ship, and the apparent frustration of all his work.

4. The Dictatorship of Peisistratus

The conflicting groups which he had dominated for a generation had resumed, upon his departure from Athens, the natural play of politics and intrigue. As in the passionate days of the French Revolution, three parties struggled for power: the "Shore," led by the merchants of the ports, who favored Solon, the "Plain," led by the rich landowners, who hated Solon, and the "Mountain," a combination of peasants and town laborers who still fought for a redistribution of the land. Like Pencles a century later, Peisistratus, though an aristocrar by firth and fortune, manners and tastes, accepted the leadership of the commons. At a meeting of the Assembly he displayed a wound, claiming that it had been inflicted upon lum by

the enemies of the people, and asked for a bodygnard. Solon protested; knowing the subtlery of his cousin, he suspected that the wound had been self-inflicted, and that the bodygnard would open the way to a dictator-ship. "Ye men of Athens," he warned them, "I am wiser than some of you, and braver than others: wiser than those of you who do not perceive the treachery of Peisistratus, and braver than those who are sware of it, but out of fear hold their peace "Nevertheless the Assembly voted that Peisistratus should be allowed a force of fifty men. Peisistratus collected four hundred men instead of fifty, seized the Actopolis, and declared a dictatorship. Solon, having published to the Athenians his opinion that "each man of you, individually, walketh with the tread of a fox, but collectively ye are goese," placed his arms and shield outside his door as a symbol of resigning his interest in politics, and devoted his last days to poetry.

The wealthy forces of the Shore and the Plain united for a moment and expelled the dictator (556). But Peisistratus secretly made his peace with the Shore, and, probably with their connivance, re-entered Athens under circumstances that seemed to corroborate Solon's judgment of the collective intelligence. A tall and beautiful woman, arrayed in the armor and costume of the city's goddess Athena, and stated proudly in a chariot, led the forces of Peisistratus into the city, while heralds announced that the patron deity of Athens was herself restoring him to power (550). "The people of the city, fully persuaded," says Herodotus, "that the woman was the veritable goddess, prostrated themselves before her, and received Peisistratus back." The leaders of the Shore turned against him again and drave him into a second exile (549), but in 546 Peisistratus once more returned, defeated the troops sent out against him, and this time maintained his dictatorship for nineteen years, during which the wisdom of his policies almost redeemed the picturesque unscrupulousness of his means.

The character of Pessstratus was a rare umon of culture and intellect, administrative vigor and personal charm. He could fight ruthlessly, and readily forgive, he could move in the foremost currents of the thought of his time, and govern without the intellectual's vaculation of purpose and titudity of execution. He was raid of manner, humane in his decisions, and generous to all. "His administration," says Aristotle, "was temperate, and showed the statesman rather than the tyrant." He made few reprisals upon regenerate enemies, but he banished irreconcilable opponents, and distributed their estates among the poor. He improved the army and built up the fleet as security against external attack, but he kept Athens our of war, and maintained at home, in a city so recently disturbed by class hos-

tility, such order and content that it was common to say that he had brought back the Golden Age of Cronus' reign.

He surprised everyone by making attle change of detail in the Soloman constitution. Like Augustus he knew how to adorn and support dictatorship with democratic concessions and forms. Archons were elected as usual, and the Assembly and the popular coarts, the Council of Four Hondred and the Senate of the Arcopagus met and functioned as before, except that the suggestions of Peisistratus found a very favorable hearing. When a citizen accused him of murder he appeared before the Senate and offered to submit to trial, but the complainant decided not to press the charge. Year by year the people, in inverse proportion to their wealth, became reconciled to his rule, soon they were proud of him, at last fond of him. Probably Athens had needed, after Solon, just such a man as Peisistratus: one with sufficient iron in his blood to heat the disorder of Atheman life into a strong and steady form, and to establish by initial compulsion those habits of order and law which are to a society what the bony structure is to an animal-its shape and strength, though not its creative life. When, after a generation, the dictatorship was removed, these habits of order and the framework of Solon's constitution remained as a heritage for democracy. Peisistratus, perhaps not knowing it, had come not to destroy the law but to fulfill it.

His economic policies carried on that emancipation of the people which Solon had begun. He settled the agrarian question by dividing among the poor the lands that belonged to the state, as well as those of banished aristocrats, thousands of dangerously (ale Athenians were settled upon the roil; and for centuries afterward we hear of no serious agrarian discontent in Attica." He gave employment to the needy by undertaking extensive public works, building a system of aqueducts and roads, and rusing great temples to the gods. He encouraged the mining of silver at Laurium, and issued a new and independent comage. To finance these undertakings he laid a ten per cent tax upon al. agricultural products; later he seems to have reduced this to 5 per cent." He planted strategie colonies on the Dardanelles, and made commercial treaties with many states. Under his rule trade flourished, and wealth grew not among a few only, but in the commuraty as a whole. The poor were made less poor, the rich not less rich. That concentration of wealth which had nearly torn the city into civil war was brought under control, and the spread of comfort and opportunity laid the economic bases of Athenian democracy.

Under Peisistratus and his sons Athens was physically and mentally trans-

formed. Till their time it had been a second-rate city in the Greek world, lagging behind Miletus, Ephesus, Mytilene, and Syracuse in wealth and culture, in virality of life and mind. Now new buildings of stone and marble reflected the radiance of the day, the old ten ple of Athena on the Acropolis was beautified with a Doric peristyle, and work was begun on that temple of Olympian Zeus whose stately Connthian columns, even in their rums, brighten the road from Athens to her port. By establishing the Panathenaic games and giving them a Panhellenic character, Peisistratus brought to his city not honor only, but the stimulus of foreign faces, competition, and ways, under his rule the Panathenses became the great national festival, whose impressive ceremonial still moves on the frieze of the Parthenon. To his court, by public works and private beneficence, Peisistratus attracted sculptors, architects, and poets, in his palace was collected one of the earliest libraries of Greece. A committee appointed by lum gave to the luad and the Odvstev the form in which we know them. Under his administration and encouragement. Thespis and others lifted drama from a munimers' numery to a form of art ready to be filled out by the great triumvirate of the Athenian stage.

The "tyrinny" of Peisistratos was part of a general movement in the commercially active cities of sixth-century Greece, to replace the feudal rule of a landowning aristocracy with the polatical dominance of the middle class in temporary aliance with the pior." Such dictatorships were brought on by the pathological concentration of wealth, and the mabilmy of the wealthy to agree on a compromise. Forced to choose, the poor, like the rich, love money more than political liberty, and the only political freedom capable of enduring is one that is so pruned as to keep the rich from denuding the poor by abdity or subtlety and the poor from robbing the rich by violence or votes. Hence the road to power in Greek commercial cines was simple to attack the anstocraey, defend the poor, and come to an understanding with the middle classes." Arrived at power, the dictator abolished debts, or confiscated large estates, taxed the rich to finance public works, or otherwise redistributed the overconcentrated wealth, and while attaching the masses to himself through such measures, he secured the support of the business community by promoting trade with state comage and commercial treaties, and by raising the social prestige of the bourgeoisie. Forced to depend upon popularity instead of hereditary

[•] The word system had come from Lydia, perhaps from the sown of Tyrrha, meaning a formes, probably it is a distant course to our word tower (Gk. tyrris). Apparently it was appared from to Gyges, the Lydian king.

power, the dictatorships for the most part kept out of war, supported religion, maintained order, promoted morality, tayored the higher status of women, encouraged the arts, and layished revenues upon the beautification of their cities. And they did all these things, in many cases, while preserving the forms and procedures of popular government, so that even under despotism the people learned the ways of aberry. When the dictatorship had served to destroy the aristocracy the people destroyed the dictatorship, and only a few changes were needed to make the democracy of freemen a reality as well as a form.

5. The Enablishment of Democracy

When Pesistratus died, in 517, he left his power to his sons, his wisdom had survived every test except that of parental love. I hippias gave promise of being a wise ruler, and for thirteen years continued the policies of his father. Hippiarchus, his younger brother, was harmlessly, though expensively, devoted to love and poetry, it was at his invitation that Anaereon and Simonides came to Athens. The Athenians were not quite pleased to see the leadership of the state pass down without their consent to the young Pesistratids, and began to realize that the dictatorship had given them everything but the stimulus of freedom. Nevertheless Athens was prosperous, and the quiet reign of Happias might have gone on to a peaceful close had it not been for the unsmooth course of true Greek love.

Atistogeiton, a man of middle age, had won the love of the young Harmodius, then, says Thurvelides," "in the flower of youthful beauty" But Hipparchus, equally caretess of gender, also solicited the lad's love When Aristogeiton heard of this he resolved to kill Hipparchus and at the same time, in senf-protection, to overthrow the tyranny. Harmodius and others joined him in the conspiracy (314). They murdered Hipparchus as he was arranging the Panathenaic procession, but Hippars cluded them and had them slain. To complicate the tale a courtesan Leaena, mistress of Harmodius, died bravely under torture, having refused to betray the surviving conspirators; if we may believe Greek tradition, she bit off her tongue and spat it in the face of her torturers to make sure that she would not answer their questions."

Though the people lent no visible support to this revolt, Hippias was frightened by it into replacing his hisherto mild rule with a regime of suppression, espionage, and terror. The Athenians, strengthened by a generation of prosperity, could afford now to demand the luxury of liberty;

gradually, as the dictatorship grew harsher, the cry for freedom grew louder, and Harmodius and Aristogeiton, who had conspired for love and passion rather than for democracy," were transformed by popular imagination into the martyrs of liberty. Off in Delphi the Alemaeonids, who had been re-exiled by Pesistratus, saw their opportunity, raised an army, and marched upon Athens with the announced intention of deposing Hippias. At the same time they bribed the Pythian oracle to tell all Spartans who consulted her that Sparta must overthrow the tyranny at Athens. Hippias successfully resisted the forces of the Alemaeonids, but when a Lacedae-manian army joined them he withdrew to the Areopagus. Seeking the security of his children in the event of his own death, he sent them secretly out of Athens, but they were captured by the invaders, and Hippias, as the price of their safety, consented to abdication and exite (510). The Alemaeonids, led by the courageous Cleisthenes,† entered Athens in triumph, and on their beels came the banished aristocrats, prepared to celebrate the return of their property and their power.

In the election that ensued, Isagoras, representing the aristocracy, was chosen to be chief archon. Cleisthenes, one of the defeated candidates, aroused the people to revolt, overthrew Isagoras, and set up a popular dictatorship. The Spartans again invaded Athens, seeking to restore Isagoras, but the Athensans resisted so tenaciously that the Spartans retired, and Cleisthenes, the Alematorial aristocrat, proceeded to establish democracy (507).

His first reform struck at the very framework of Attic aristocracy—those four tribes and 160 clans whose leadership, by centuries of tradition, was in the hands of the oldest and richest families. Cleisthenes abolished this kinship classification, and replaced it with a territorial division into ten tribes, each composed of a (varying) number of demes. To prevent the formation of geographical or occupational blocs, such as the old parties of Mountain. Shore, and Plain, each tribe was to be composed of an equal number of demes, or districts, from the city, from the coast, and from the interior. To offset the sanctity that religion had given to the old division, religious ceremonies were instituted for each new tribe or deme, and a famous ancient hero of the locality was made its deity or patron saint. Freemen of fireign origin, who had rare y been admitted to the franchise under the aristocratic determination of entrenship by descent, now auto-

One would not be supprised to fearn that they represented a resentful anstocracy, like Brunus and Cassous in Rome Brunus, too, because the hero of a revolution, after eighteen contuines had obscured his history.

⁺ Grandson of Cleathenes, dictator of Sicyon.

matically became citizens of the demes in which they lived. At one stroke the roll of voters was almost doubled, and democracy secured a new support and a broader base.

Each of the new tribes was entitled to name one of the ten triategot, or generals, who now joined the polemarch in command of the army; and each tribe elected lifty members of the new Council of you which now replaced Solon's Council of Four Hundred and assumed the most vital powers of the Arcopagus. These councilors were chosen for a year's term, not by election but by lot, from the list of all citizens who had reached the age of thirty and had not already served two terms. In this strange inauguration of representative government both the aristocratic principle of birth and the plutocratic principle of wealth were overridden by the new device of the lot, which gave every citizen an equal chance not only to vote, but to hold office in the most differential branch of the government. For the Council so elected determined all matters and proposals to be submitted for approval or rejection to the Assembly, reserved to itself various judicial powers, exercised wide administrative functions, and supervised all officials of the state.

The Assembly was enlarged by the access of new estizens, so that a full meeting of its membership would have meant an attendance of approximately therey thousand men. All these were eligible for service in the helinea, or courts, but the fourth class, or theres, were still, as under Solun, ineligible to individual office. The powers of the Assembly were enlarged by the institution of ostracism, which Cleisthenes seems to have added as a protection for the young democracy. At any time, by a majority of votes written secretly upon potsberds (ostraka), the Assembly, in a quorum of six thousand members, might send into exile for ten years any man who in its judgment had become a danger to the state. In this way ambitious leaders would be stimulated to conduct themselves with circumspection and moderation, and men suspected of conspiracy could be disposed of without the law's delay. The procedure required that the Assembly should be asked, "Is there any man among you whom you think vitally dangerous to the stare? If so, whom?" The Assembly might then vote to ostracize any one citizen-not excepting the mover of the motion.* Such exile involved no confiscation of property, and no disgrace, it was merely democracy's way of cutting off the "tailest ears of corn " Nor did the Assembly abuse its power. In the ninery years between the introduction of ostracism and its disuse at Athens, only ten persons were banished by at from Attica

A similar institution was used at Argon, Megara, and Syracuse.

One of these, we are told, was Cleisthenes himself. But in truth we do not know his later history, it was absorbed and lost in the brilliance of his work. Beginning with a thoroughly unconstitutional revolt, he had established, in the face of the most powerful families in Atrica, a democratic constitution that continued in operation, with only minor changes, to the end of Athenian liberry. The democracy was not complete, it applied only to freemen, and still placed a modest property limitation upon enginhity to individual office. But it gave all legislative, executive, and judicial power to an Assembly and a Court composed of the entitiens, to magistrates appointed by and responsible to the Assembly, and to a Council for whose members all citizens might vote, and in whose supreme authority, by the operation of the lot, at least one third of them actually shared for at least a year of their lives. Never before had the world seen so liberal a franchise, or so wide a spread of political power.

The Athenians themselves were exhibitated by this adventure into sovereignty. They realized that they had undertaken a difficult enterprise, but they advanced to it with courage and pride, and, for a time, with unwoined self-restrant. From that moment they knew the zest of freedom in action, speech, and thought; and from that moment they began to lead all Greece in literature and art, even in statesmanship and war. They learned to respect anew a law that was their own considered will, and to love with unprecedented passion a state that was their unity, their power, and their fulfillment. When the greatest empire of the age decided to destroy these scattered cities called Greece, or to lay them under tribute to the Great King, it forgot that in Atrica it would be opposed by men who owned the soil that they tilled, and who ruled the state that governed them. It was fortunate for Greece, and for Europe, that Cleisthenes completed his work, and Solon's, twelve years before Marithon.

^{*} A property quantication was placed upon the franchise in the earlier suges of American and French democracy.

The Great Migration

L. CAUSES AND WAYS

IN carrying the story of Sparta and Athens down to the eve of Marathon we have sacrificed the unity of tane to the unity of place. It is true that the cities of the mainland were older than the Greek settlements in the Aegean and Ionia, and that these cities, in many cases, sent out the colonies whose life we must now describe. But, by a confusing inversion of normal sequences, several of those colonies became greater than their mother cities, and preceded them in the development of wealth and art. The real creators of Greek colonies were not the Greeks of what we now call Greece, but mose who fled before the conquering Domans, fought desperately for a foothold on foreign shores, and there, out of their Mycenaean memories and their amazing energy, made the art and science, the philosophy and poetry that, long before Marathon, placed them in the forefront of the Western world. Greek civilization was inherited by the parent cities from their children.

There is nothing more vital in the history of the Greeks than their rapid spread throughout the Mediterranean.* They had been nomadic before Homer, and all the Balkan penansula had seemed fluid with this movement, but the successive Greek waves that broke upon the Aegean isles and the western coasts of Asia were stirred up above all by the Dorian invasion. From every part of Hellas men went out in search of hisnes and liberty beyond the grasp of the enslaving conquerors. Political faction and family feud in the older states contributed to the migration, the defeated sometimes chose exile, and the victors gave every encouragement to their exodus. Some of the Greek survivors of the Trojan War staved in Asia, others, through shipwreck or adventure, settled in the islands of the Aegean, some, reaching home after a perilous journey, found their thrones or their wives occupied, and returned to their ships to build new homes and fortunes abroad. In mainland Greece, as in modern Furope, colonization proved a blessing in varied ways: at provided outlets for surplus population and

^{*} Cf. Pater "Perhaps the most brillians and assimiting episode in the entire history of Greece—its early colombation."

adventurous spirits, and safety valves against agrarian discontent; it established foreign markets for domestic products, and strategic depots for the import of food and minerals. In the end it created a commercial empire whose thriving interchange of goods, arts, ways, and thoughts made pos-

sible the complex culture of Greece.

The migration followed five main lines-Aeolian, Ionian, Donan, Euxine, Italian. The earliest began in the northern states of the mainland, which were the first to feel the brunt of the invasions from the north and the west. From Thessaly, Phthions, Boeona, and Actoba, throughout the twelfth and eleventh centuries, a stream of immigrants moved slowly across the Aggean to the region about Troy, and founded there the twelve cities of the Acolian League. The second line took its start in the Pelaponnesus, whence thousands of Mycenaeans and Achaeons fled on the "Return of the Herachds," Some of them settled in Artica, some in I aboea; many of them moved out into the Cyclades, ventured across the Aegean, and established in western Asia Minor the twelve cities of the Ionian Dodecapolis. The third line was followed by Dorians who overflowed the Peloponnesus into the Cyclades, conquered Crete and Cyrene, and set up a Dorian Hexapolis around the island of Rhodes. The fourth line, starting any where in Greece, settled the coast of Thrace, and built a hundred cities on the shores of the Hellespont, the Propontis, and the Fuxine Sea. The fifth line moved westward to what the Greeks caked the Ionian Isles, thence across to Italy and Siedy, and finally to Gaul and Spatn.

Only a sympathetic anagmation of a keen recollection of our own colonial history can visualize the difficulties that were surmounted in this century-long migration. It was an adventure of high moment to leave the land consecrated by the graves of one's ancestors and guarded by one's hereditary deities, and go forth into strange regions unprotected, presumably, by the gods of Greece. Therefore the colomsts took with them a handful of earth from their native state to strew upon the alien soil, and solemnly carried fire from the public altar of their mother city to aght the civic fire at the hearth of their new settlement. The chosen site was on or near a shore, where ships—the second home of half the Greeks—might serve as a refuge from artack by land, better still if it were a coastal plain protected by mountains that provided a barrier in the rear, an acropolis for defense in the town, and a promontory-sheltered harbor in the sea, best of all if such a haven could be found on some commercial route, or by a river mouth that received the products of the interior for export or exchange, then prospersty was only a matter of time. Good sites were nearly

always occupied, and had to be conquered by stratagem or force; the Greeks, in such matters, recognized no morals loftier than our own. In some cases the conquerors reduced the prior inhabitants to slavery, with all the irony of pilgrims seeking freedom, more often they made friends of the natives by oringing them Greek gifts, charming them with a superior culture, courting their women, and adopting their gods, the colonial Greeks did not bother about purity of race,' and could always find in their teening pantheon some deity sufficiently like the local divinity to facilitate a religious entente. Above all, the colonists offered the products of the Greek handicrafts to the natives, scelled grain, cattle, or nunerous in return, and exported these throughout the Mediterranean—preferably to the metropolis, or mother city, from which the settlers had come, and to which they retained for centuries a certain filial picty.

One by one these colonies took form, until Greece was no longer the narrow pennsula of Homeric days, but a strangely loose association of independent cities scattered from Africa to Thrace and from Gibraltar to the eastern end of the Black Sea. It was an epochal performance for the women of Greece, we shall not always find them so ready to have children. Through these bissy centers of vitality and intelligence the Greeks spread into all of southern Europe the seeds of that subtle and precarious fuxury called civilization, without which life would have no beauty, and history

no meaning.

II. THE IONIAN CYCLADES

Sailing south from the Piracus along the Artic coast, and bearing east around Sunium's temp ed promontory, the traveler reaches the little isle of Ceos, where, if we may believe the incredible on the authority of Strabo and Plutareb, "there was once a law that appears to have commanded those who were sixty years of age to drink bemlock, in order that the food might be sufficient for the rest," and "there was no memory of a case of adultery or seduction over a period of seven fundeed years."

Perhaps that is why her greatest poet exiled himself from Ceos after reaching middle age, he might have found it difficult to attain, at home, the eighty-seven years that Greek tradition gives him. All the Hellenic world knew Simonides at thirry, and when he died, in 469, he was by common consent the most brilliant writer of his time. His fame as poet and sanger won him an invitation from Hipparchus, codictator of Athens,

Anacreon. He survived the war with Persia, and was chosen again and again to write emisphs for memorials of the honored dead. In his old age he lived at the court of Hieron I, dictator of Syracuse, and his repute was then so high that in 475 he made peace in the field between Hieron and Theron, dictator of Acragas, as hostilities were about to begin. Plutarch, in his perennially pertinent essay on "Should Old Men Govern?" tells us that Simonides continued to win the prize for lyric poetry and choral song into very old age. When finally he consented to die he was buried

at Aeragas with the honors of a king

He was a personality as well as a poet, and the Greeks denounced and loved him for his vices and eccentricities. He had a passion for money, and his muse was dumb in the absence of gold. He was the first to write poetry for pay, on the ground that poets had as much right to eat as anyone else, but the practice was new to Greece and Aristophianes echoed the resentment of the public when he said that Simonides "would go to sea on a hurdle to earn a grout." He prided himself on having invented a system of mnemonics, which Cicero adopted gratefully," its essential principle lay in arranging the things to be remembered into some logical classification and sequence, so that each item would naturally lead to the next. He was a wit, and his sharp repartees passed like a mental currency among the cities of Greece, but in his old age he remarked that he had often repented of speaking, but never of holding his tongue."

We are surprised to find, in the extant fragments of a poet so widely acclaimed and so liberally rewarded, that indispersible gloom which broods over so much of Greek literature after Homer—in whose days men were

too active to be pessimists, and too violent to be bored

Few and evil are the days of our life, but everlasting will be our sleep beneath the earth. . . . Small is the strength of man, and invincible are his errors, grief treads upon the heels of grief through his short life and death, whom no man escapes, hangs over him at last, to this come good and bad alike . No thing human is everlasting. Well said the Lard of Chios that the life of man is even as that of a green leaf, yet few who hear this bear it in mind, for hope is strong in the breast of the young. When youth is in flower, and the heart of man is light, he nurses idle thought, hoping he win never grow old or die, nor does he think of sickness in good health. Fools are they who dream thus, nor know how short are the days of our youth and our life."

No hope of Blessed Isles comforts Simonides, and the divinines of Olympus, like those of Christianity in some modern verse, have become instruments of poetry rather than consolations of the soul. When Hieron challenged him to define the nature and attributes of God he asked for a day's time to prepare his answer, and the next day begged for two days more, and on each occasion doubled the period that he required for thought. When at last Hieron demanded an explanation, Simonides replied that the longer he pondered the marter the more obscure it became."

Out of Ceos came not only Simonides, but his nephew and lyne successsor Bacchylides, and, in Aiexandrian days, the great anatomist Erasistratus. We cannot say so much for Serophos, or Andros, or Tenos, or Myconos, or Siemos, or los. On Syros lived Pherecydes (ca. 650), who was reputed to have raught Pythagoris, and to have been the first philosopher to write in prose. On Deios, said Greek story, Apollo himself had been born. So sacred was the island as his sanctitury that both death and birth were forbuilden within its borders, those about to give birth of to die were hurriedly conveyed from its shores, and all known graves were empired that the island might be purified. There, after the repulse of the Persians, Athens and her Ionian alaes would keep the treasure of the Delait Confederacy; there, every fourth year, the longins met in pious but convival assemblage to celebrate the festival of the handsome god. A seventh-century hymn describes the "women with fine girthes,"" the eager merchants busy at their booths, the crowds lanng the road to watch the sacred procession, the tense ritual and solemn sacrifice in the temple, the joyous dances and choral hymns of Delun and Atheman maidens chosen for their cemeliness as well as their song, the athletic and musical contests, and the piavs in the theater under the open sky. Annuany the Athenians sent an embassy to Delos to celebrate Apollo's birthday, and no criminal might be executed in Athens until this embassy's return. Hence the long interval so fortunate for oterature and philosophy, between the conviction of Socrates and his execution.

Naxos is the largest, as Delos is almost the smallest, of the Cyclades. It was famous for its wine and its marble, and became rich enough, in the sixth century, to have its own navy and its own school of sculpture. Southeast of Naxos lies Amorgos, home of the unamfible Semonides, whose ungailant sature on women has been carefully preserved by man written history.* To the west hes Paros, almost composed of marble, its citizens

^{*} Semondes computes women now to foxes, axes, page, and the changeful sea, and swears that no husband has ever passed through a day without some word of censure from his wife,"

made their homes of it, and Praxiteles found there the translucent stone which he would carve and polish into the warmth and texture of human flesh. On this island, about the end of the eighth century, Archilochus was born, son of a slave woman, but one of the greatest tyric singers of Greece. A soldier's fortune led him north to Thasos where, in a battle with the natives, he found his heels more valuable than his shield, he took to the one and abandoned the other, and lived to turn many a merry quip about his flight. Back in Paros he fell in love with Neobule, daughter of the rich Lycambes. He describes her as a modest lass with tresses falling over her shoulders, and aighs, as so many centuries have sighed, "only to touch her hand." But Lycambes, admiring the poet's verses more than his income, put an end to the affair, whereupon Archilochus aimed at him and Neobuse and her sister such barbs of satiric verse that all three of them, legend assures us, hanged themselves. Archalochus turned his back sourly upon the "figs and fishes" of Paros, and became again a soldier of fortune. Finally, his heels having failed him, he was killed in hartle against the Naxians.

We learn from his poems that he was a man of rough speech to both friends and foes, with a disappointed lover's penchant for adultery." We picture him as an inspired pirate, a includious buccancer coarse in prose and polished in verse taking the tamble meter already popular in folk songs and fashioning it into short and stinging lines of six feet, this was the "iamble trimeter" that would become the classic medium of Greek tragedy. He experimented gaily with daety he hexameters, trochaic tetrameters, and a dozen other meters, and gave to Greek poetry the metrical forms that it would keep to the end. Only a few broken lines survive, and we must accept the word of the ancients that he was the most popular of all Greek poets after Homer. Horace loved to imitate his technical diversities, and the great Hellemstie critic, Aristophanes of Byzantium, when asked which of Architochus' poems he liked best, voiced in two words the feeling of Greece when he answered, "The longest"

A morning's sail west of Paros is Siphnos, famous for its mines of silver and gold. These were owned by the per ple through their government. The yield was so rich that the island could set up at Delphi the Siphnian Treasury with its placid carvarides, erect many another monument, and yet

distribute a substantial balance among the citizens at the end of every

^{*}Longton with Flangeline his blancarea, and the final line of each warms in Childs Harold's Pagermage by Byton, or a serve as examples respectively of dactivite hexameter, trochate terrameter, and sample transfer.

year." In 524 a band of freebooters from Samos landed on the island and exacted a tribute of a hundred talents: the equivalent of \$600,000 today. The rest of Greece accepted this heroic robbery with the equaminity and fortitude with which ruch are accustomed to bear the misfortunes of their friends.

III. THE DORIAN OVERFLOW

The Dorinns, too, colonized the Cyclades, and tamed their warbke spirits to terrace the mountain slopes patiently, that the parsimomous rain reight be held and coaxed to nourish their crops and vines. In Melos they took over from their Bronze Age predecessors the quarrying of obsidian, and made the island so prosperous that the Athemans, as we shall see, spared no pains to Melos to win its support in the struggle with Sparta. Here, it is now that Aphrodite of Melos? which is now the most futuous statue in the Western world.

Moving east and then south, the Dorians conquered There and Crete, and from There sent a turther colony to Cyrene. A few of them settled in Cyprus, where, from the eleventh century, a small colony of Areasan Greeks had struggled for mastery against the old Phoenician dynastics. It was one of these Phoenician longiets, Pagmanian, of who magged told how he so admired an wory Aphrodite carved by his hands that he fell in love with it, begged the goddess to give it life, and married his creation when the goddess complied. The coming of tron probably lossened the dominat for Cyprum copper, and left the island off the main the of Greek economic advance. The curring of the tumber by the natives to burn the copper are, by the Phoenicians for ships and by the Greeks for agricultural clearings, slowly transformed Cyprus into the hot and half-barren dere let that it is roday. The art of the island, like its population, was in the Greek period a medley of Egyptian, Phoenician, and Hellenic influences, and never attained a homogeneous character of its own.

The Donains were but a immorty of the Greek population in Cyprus, but in Rhodes and the southern Sporades and on the ad oning mainland they became the ruling class. Rhodes prospered in the centuries between Homer and Marathon, though its zenith would not come till the Hellenstie age. On a promontory patting out from Asia, Donain settlers developed the city of Chidus,

^{*} Or as we know it, from the Roo an name of the goddess and the Italian name of the Bland, the Ventu de Mile.

⁺ Of Case XIII of the Cestrala Collection of Cyprian Autiquities in the Meteopolitan Museum of Art, New York N. S. to ingual tablet uncerthed by British scholars in 1868 enabled their to decipher Cypri its writing as a dialect of Greek expressed by syllalae signs, but the cosults have not added anything of interest to iniversal history.

well situated to be a port of the coastal trade. Here the astronomer Fudorus would be born, and the historian (or fabulist) Cresias, and that Sostratus who was to build the Pharos at Alexandria. Here, among the ruins of ancient temples, would be found the sad and matronly Demeter of the British Museum.

Opposite Cridus tay the island of Cos, home of Hippocrates and rival of Cridus as a center of Greek medical science. Apelies the partier would be born here, and Theoritus the poet. A little to the north, on the coast, was Halicarnissus, birthplace of Herodotus and royal scat, in Flellenistic days, of the Carian King Mausotus and bis fond Artemisia. This city, with Cos and Cridus and the chief towns of Rhodes (Lindus, Camirus, and lalvsus, formed the Durian Flexapelis, or Six Cities, of Asia Minor-weak rivals, for a time, of the Twelve Cities of Ionia.

IV. THE IONIAN DODECAPOLIS

1. Milerus and the Birth of Greek Philosophy

Running northwest of Cara for some ninety miles was the strip of mountainous coastland, twenty to thirry inles wide, anciently known as long. Here, said Herodotus, "the air and clanate are the most beautaul in the whole world," Its cities lay for the most part at the mouths of rivers, or at the ends of roads, that carried the goods of the limterland down to

the Mediterranean for shipment everywhere.

Mi erus, southernmost of the Ioman I welve, was in the sixth century the mehest city of the Greek world. The site had been inhabited by Carians from Minoan days, and when, about 1000 B.C., the lomans came if ere from Artica, they found the old Aegean culture, though in a decadent form, waiting to serve as the advanced starting point of their endization. They brought no women with them to Maetus, but merely killed the native males and married the widows," the fasion of cultures began with a fusion of blood. Like most of the Ionian cities, Miletis submitted at first to kings who led them in war, then to aristocrats who owned the land, then to "tyrants" representing the middle class. Under the dictator Thrasybulus, at the beginning of the sixth century, industry and trade reached their peak, and the growing wealth of Miletus flowered forth in literature, philosophy, and are. Wool was brought down from the rich pasture lands of the interior, and turned into clothing in the textile mills of the city. Taking a lesson from the Phoenicians and gradually bettering their instruction, Ionian merchants established colonies as trading posts in Egypt, Italy, the

Propontis, and the Euxine. Miletus alone had eighty such colonies, sixty of them in the north. From Abydos, Cyzicos, Sinope, Olbia, Trapezus, and Dioscarias, Miletus drew flax, timber, fruit, and metals, and paid for these with the products of her handicrafts. The wealth and luxury of the city became a proverb and a scandal throughout Greece. Milesian merchants, overflowing with profits, lent money to enterprises far and wide, and to the municipality itself. They were the Medici of the Ionian Renaissance.

le was in this standaring environment that Greece first developed two of its most characteristic gifts to the world -science and philosophy. The crossroads of trade are the meeting place of ideas, the attrition ground of rival customs and beliefs, diversities beget conflict, comparison, rhought, superstitions cancel one another, and reason begins. Here in Miletus, as later in Athens, were men from a hundred scattered states, mentally active through compensive commerce, and freed from the bondage of tradition by long absences from their native altars and homes. Milesians themselves traveled to distant cities, and lead their eyes opened by the civilizations of Lydia, Bahylonia, Phoenicia, and I gypt, in this way, among others, Fgyption geometry and Babyloman astronomy entered the Greek mind. Trade and mathematics, foreign commerce and geography, navigation and astronomy, developed hand in hand. Aleanwhile wealth had created leisure, an aristocracy of culture was growing up in which freedom of thought was tolerated because only a small instority could read. No powerful priesthood, no ancient and inspired text limited men's thinking, even the Iomeric poems, which were to become in some sense the Bible of the Greeks, had hardly taken yet a definite form, and in that final form their mythology was to bear the auprint of I man skepticism and scandalous merriment. Here for the first time thought became secular, and sought rational and consistent answers to the problems of the world and man.

Nevertheless the new plant, mutation though it was, had its roots and oncestry. The hoary wisdom of Lgyptian priests and Persian Magi, perhaps even of Hindu seers, the sacerdotal science of the Chaldeans, the poetically personified cosmogony of Hesiod, were mingled with the natural realism of Phoenician and Greek merchants to produce Ionian philosophy. Greek religion itself had paved the way by talking of Moira, or Fate, as ruler of both gods and men here was that idea of law, as superior to incalculable personal decree, which would mark the essential difference between science and mythology, as well as between despotism and democ-

[&]quot;Similar movements, however, appeared in India and Clima in this with century B.c.

racy. Man became free when he recognized that he was subject to law. That the Greeks, so far as our knowledge goes, were the first to achieve this recognition and this freedom in both philosophy and government is the secret of their accomplishment, and of their importance in history.

Since life proceeds by heredity as well as by variation, by stabilizing custom as well as by experimental innovation, it was to be expected that the religious roots of philosophy would form as well as feed it, and there should remain in it, to the very end, a vigorous element of theology. Two curtents run side by side in the history of Greek philosophy one naturalistic, the other mystical. The latter stemmed from Pythagoras, and ran through Parmenides, Heracleitus, Plato, and Cleanthes to Plotinus and St. Paul, the other had its first world figure in Thales, and passed down through Anaximander, Xenophanes, Protagoras, Hippocrates, and Democratus to Epicurus and Lucretius. Now and then some great spirit -Socrates, Aristotle, Marcus Aurelius-merged the two currents in an attempt to do justice to the unformulable complexity of life. But even in these men the dominant strain, characteristic of Greek thought, was the love and pursuit of reason.

Thates was born about 640, probably at Miletus, reputedly of Phoenician parentage," and derived much of his education from Egypt and the Near East, here, as if personified, we see the transit of culture from East to West. He appears to have engaged in business only so far as to provide hunself with the ordinary goods of life, every one knows the story of his successful speculation in oil presses." For the test he gave himself to study, with the absorbed devotion suggested by the tale of his falling into a ditch while watching the stars. Despite his solitude, he interested himself in the affairs of his city, knew the dictator Thrasybulus intimately, and advocated the federation of the loman states for united defense against Lydia and Persia."

To him tradition unanimously ascribed the introduction of mathematical and astronomical science into Greece. Antiquity told how, in I gypt, he calculated the heights of the pyramids by measuring their shadows when a man's shadow equaled his height. Returning to lonia, Thales pursued the fascinatingly logical study of geometry as a deductive science, and demon-

^{*}Let Arostote tell the story. "They say that Thales, perceiving by his skill in astrology (astronomy) that there was 3 be great plenty of layer than year waite it was yet wanter hard et a low price all the oil presses in Martin and Choose there being no one to bid against him. But when the season came for making oil, many persons waiting them, he all at once let them upon what terms he pleased, and raising a large so. I of money by that means, conveniend them that it was easy for philosophers to be such if they choose it."

strated several of the theorems later collected by Fuelid. As these theorems founded Greek geometry, so has studies of astronomy established that science for Western civalization, and disentanced it from its Oriental associations with astronomy. He made several minor observations, and started all lonia by successfully predicting an eclipse of the sun for May 28, 585 m.c., probably on the lasts of Lgypnan records and Babylonian calculations. For the rest his theory of the universe was not appreciably superior to the current cosmology of the Lgypnans and the Jews. The world, he thought, was a hemisphere resting on an end on expanse of water, and the earth was a flat disk floating on the flat side of the interior of this hemisphere. We are remanded of Goethe's remark that a man's vices (or errors) are common to ham with his epoch, but his virtues (or insights) are his own.

As some Greek myths made Oceanus the father of all creation," so Phaces made water the first principle of all flungs, their original form and their final destiny. Perhaps, says Aristorle, he had come to this opinion from observing that the nutrament of everything is most, and that . . . the seeds of everything have a most nature, and that from which everything is generated is asways its first principle." Or perhaps he believed that water was the most pranative or fundamental of the three forms gas, liqual, solid into which, theoretically, all substances may be changed. The significance of his thought lay not in reducing all though to water, but in reducing all things to one, here was the first monism in recorded history Aristotle describes Thates' view as materialistic, but Thales adds that every particle of the world is at ve, that matter and afe are inseparable and one, that there is an inimortal soul in plants and metals as well as in animals and men, the vital power changes form, but never 3.65" Thales was want to say that there is no essential difference between lying and dead. When someone sought to nettle him by asking why then he chose life instead of Jeath, he answered, Because there is no difference "

In his old age he received by contanon consent the title of topicos or sage, and when Greece came to name its Seven Wise Men it placed. I hales first Being asked what was very distrible, he answered, in a famous apophthegin, "To know theself." Asked what was very casy, he answered, "To give advice." To the question, what is God? he replied, "That which has neither beginning nor end." Asked how men might live most virtuously.

That a core is bisected by its a interest that the angles at the base of any nosceles transgle are so lar or or is that the angle in a series fair is a right angle that the opposite angles I mind by two orders ting straight into are or is that two triangles having two stigles and one side respectively equal are themselves equal.

and justly, he answered, "If we never do ourselves what we blame in others." He died, says Diogenes Lacrons," "while present as a spectator at a gymnastic contest, being worn our with heat and thirst and weakness, for he was very old."

Thales, says Strabo," was the first of those who wrote on physiologiai.e., on the science of nature (physis), or on the principle of being and development in things. His work was vigorously advanced by his pupil Anaximander, who, though he lived from 611 to 540 B.C., expounded a philosophy surprisingly like that which Herbert Spencer, trembling before his own originality, published in A.D. 1860. The first principle, says Anarumander, was a vast Indefinite-Infinite (aperron), a boundless mass possessing no specific qualities, but developing, by its inherent forces, into alothe varied realities of the universe.* This animate and eternal Lur impersonal and unmoral Infinite is the only God in Anaximander's system, it is the unvarying and everlasting One, as distinguished from the mutable evanescent Many of the world of things. (Here stems the metaphysics of the Eleane School -that only the eternal One is real.) From this characteriess Infinite are born new worlds in endiess succession, and to it in endless succession they return as they evolve and die. In the primord al Infinite all opposites are contained-hot and cold, moist and dry, hould and soud and gas . . . , in development these potential qualities become actual, and make diverse and definite things, in dissolution these opposed qualities are again resolved into the Infinite (A source for Heraelestus as well as for Spencer) In this rise and fall of worlds the various elements struggle with one another, and encroach upon each other is hostile opposites. For this opposition they pay with dissolution, "Things perish into those from which they have been born."

Anaximander, though he too can be gudty of astronomic bizarreries forgivable in an age without instruments, advanced on I hales by conceiving the earth as a cylinder freely suspended in the center of the universe, and sustained only by being equidistant from all things." The sun, moon, and stars, he thought, moved in circles around the earth. To illustrate all this Anaximander, probably on Babylonian models, constructed at Sparta a guaman, or sundial, on which he showed the movement of the planets, the

^{*} Cf. Spencer's definition of evolution as substant ally a change from "indefinite, incoherent homogeneity to a definite, coherent heterogeneity."

obliquity of the echpite,* and the succession of solstices, equinoxes, and seasons,* With the collaboration of his fellow Milesian, Hecatacus, he established geography as a science by drawing—apparently upon a tablet of brass, the first known map of the inhabited world f

In its earliest form, said Anasimander, the earth was in a fluid state, external heat dried some of it into land, and evaporated some of it into clouds, while the variations of heat in the atmosphere so formed caused the motions of the winds. Living organisms arose by gradual stages from the original mosture, land animals were at first fishes, and only with the drying of the earth did they acquire their present shape. Man too was once a fish, he could not at his earliest appearance have been born as now, for he would have been too helpless to secure his food, and would have been destroyed.*

A slighter figure is Anaximander's pupil Anaximenes, whose first principle was air. All other elements are produced from air by rarefaction, which gives fire, or by condensation, which forms progressively wind, cloud, water, earth, and stone. As the soul, which is air, holds us together, so the air, or pneuma, of the world is its pervasive spirit, breath, or God." Here was an idea that would ride out all the storms of Greek philosophy, and find a haven in Stoicism and Christianity.

This heyday of Miletus produced not only the earliest philosophy, but the earliest prose, and the first historiography, in Greece 1. Poetry seems natural to a nation's adolescence, when unagination is greater than knowledge, and a strong faith gives personality to the forces of nature in field, wood, sea, and sky, it is hard for poetry to avoid animism, or for animism to avoid poetry. Prose is the voice of knowledge freeing itself from imagination and faith, it is the language of secular, mundanc, "prosaic" affairs, it is the emblem of a nation's maturity, and the epitaph of its youth. Up to this time (600) nearly all Greek literature had taken a poetic form, education had transmitted in verse the lore and morals of the race, even early philosophers, like Xenophanes, Parmithides, and Empedocles, gave their

The ecuptic iso called because eclipses of the sun and moon take place in it) is the great carele made by the apparent annual path of the sun tenugh the maveus. ^{*} The I gypmans had drawn maps, but of I n ned districts.

The wise reader wal always supply the word known after such words as earliest and first

systems a poetic dress. Just as science was at first a form of philosophy, struggling to free itself from the general, the speculative, the unvertiable, so philosophy was at first a form of poetry, striving to free itself from mythology, animasm, and metaphor.

It was therefore an event when Pherecydes and Anaximander expounded their documes in prose. Other men of the age, whom the Greeks called logographor-reason writers, prose writers began to chronicle in the new medium the annals of their states, so Cadmus (550) wrote a chronicle of Miletus, Fugaeon wrote of Samus, Xaurhas wrote of Lydia. Towards the end of the century Hecataeus of Miletus advanced both history and geography in epochal works-the Historia, or Inquiries, and the Ges periodus, or Circuit of the Farth. The latter divided the known planet into two continents, Europe and Asia, and included Egypt in Asia if (as many doubt) the existing fragments are genuine, it was especially informative about I gypt, and provided a rich field for unacknowledged posclong by Herodottas. The Histories began with a skeptical blast. I write what I consider to be the truth, for the traditions of the Greeks seem to me many and ridicamas." Hecataens accepted Homer as history, and swamiwed some tales with his eyes shur, nevertheless he made an hunest effert to distinguish face from much, to trace real geneal igies, and to arrive at a credible history of the Greeks. Greek historiography was old when the "Father of History" was born.

To Hecataeus and the other logographot who appeared in this age in most of the cities and colonies of Hellas, historias incant any incurry into the facts of any matter, and was applied to science and philosophy as well as to historiography in the modern sense. The term had a skeptical connotation in long, it signified that the intracle stories of gods and denigod heroes were to be replaced with secular records of events, and rational interpretations of causes and effects. In Hecataeus the process begins, in Herodotus it advances; in Thueydides it is complete.

The poverty of Greek prose before Herodotus is bound up with the conquest and impoverishment of Miletus in the very generation in which prose literature began. Internal decay followed the custom of history in smoothing the path of the conqueror. The growth of wealth and luxury made epicureanism fashionable, while stoicism and patriotism seemed antiquated and absurd; it became a by word among the Greeks that "once upon a time the Milesians were brave." Competition for the goods of the earth

^{*}From birtor or uter knowing a cophorism for if the from the root id in eidense, to know, of our cut and workers. Story is a shortened form of buttery

became keener as the old faith lost its power to mingate class strife by giving scruples to the strong and consolations to the weak. The rich, supporting an oligarchic dictatorship, became a united party against the poor, who wanted a democracy. The poor secured control of the government, expelled the rich, collected the remaining children of the rich on threshing floors, set oxen upon them, and had them trainpled to death. The rich returned, recaptured power, coated the leaders of the democracy with pitch, and then burnt them alive.* De nobis fabula narrabitur. When, about 560, Groesus began to subject to Lydian ride the Greek coast of Asia from Chidus to the Hellespont, Miletus saved its independence by refusing to help her sister states. But in 546 Cyrus conquered Lydia, and without much difficulty absorbed the faction-torn cities of Ionia into the Persian Empire. The great age of Miletus was over. Science and philosophy, in the history of states, reach their height after decadence has set in, wisdom is a harbinger of death.

2. Polycrates of Samos

Across the bay from Miletus, near the outlets of the Macander, stood the modest town of Myos, and the more famous city of Priene. There, in the sixth century, lived Bus, one of the Seven Wise Men. As Hermappus said, the Seven Wise Men were seventeen, for different Greeks made different lists of them, most frequently agreeing upon Thaies, Solon, Bus. Pittacus of Mytilene, Periander of Corinth, Chilon of Sparta, and Cleobolus of Lindus in Rhodes. Greece respected wisdom as India respected holiness, as Renaissance Italy respected artistic genius, as young America naturally respects economic enterprise. The heries of Greece were not soints, or artists, or millionaires, but sages; and her most honored sages were not theorists but men who had made their wisdom function actively in the world. The sayings of these men became proverbial among the Greeks, and were in some cases inscribed in the temple of Apollo at Delphi. People liked to quote, for example, the remarks of Bias-that the most unfortunate of men is he who has not learned how to bear misfortune; that men ought to order their lives as if they were fated to live both a long and a short time, and that "wisdom should be cherished as a means of traveling from youth to old age, for it is more lasting than any other possession."

West of Priene lay Samos, second largest of Ioma's isles. The capital stood on the southeastern shore, and is one entered the well-protected har-

bor, passing the famous red ships of the Samian fleet, the city rose as if in tiers on the hill first the wharves and shops, then the homes, then the fortress-acropolis and the great temple of Hera, and behind these a succession of ranges and peaks rising to a height of five thousand feet. It was a

sight to stir the parriotism of every Samian soul.

The zenith of Samos came in the third quarter of the sixth century, under Polyerites. The revenues from the busy port enabled the dictator to end a dangerous period of unemployment by a program of public works that called forth the admiration of Herodorus. The greatest of these undertakings was a tunnel that carried the city's water supply 4500 feet through a mountain, we catch some idea of Greek ability in mathematics and engineering when we learn that the two bores, begun at opposite ends, met in the center with an error of eighteen feet in direction and time in beight.

Samos had been a cultured center long before Polyerates. Here, about 590, the fabulous Aese p had been the Porvigian slave of the Greek ladmon. An unconfirmed tradition tells now Jadmon freed him, how Aesop traveled widely, met Schat, lived at the court of Croesus, en bezzled the money that Croesus had commissioned him to distribute at Delphi, and met a violent death at the hands of the outraged Delphinus." His fabies, largely taken from Lastern sources, were well known at Athens in the classic age, Socrates, says Plutarch, part them into verse. I hough their form was Oriental, their philosophy was characteristically Greek. "Sweet are the beauties of Nature, the earth and sea, the stars, and the orbs of sun and moon. But all the rest is fear and pain." especially if one embezzles. We can still meet him in the Vaciean, where a cup from the Periclean age represents him with half-bald head and Vandyke beard, listening profitably to a merry fox."

The great Pythagoras was born in Samos, but left it in 519 to live at Crotona in Italy. Anacreon came from Tuos to sing Polycrates' charms and to turor his son. The greatest figure at the court was the arrist Theodorus, the Letinardo of Samos, Jack-of-all-trades and master of most. The Greeks ascribed to him, perhaps as a cloture on research, the invention of the level, the square, and the lathe," he was a skilled engraver of gems, a metalworker, stoneworker, woodworker, sculptor, and architect. He took part in designing the second temple of Arremis at Ephesas, built a vast shias, or pavilion, for Sparta's public assemblies, helped to introduce elay modeling

[&]quot;Similar enterprises today make both ends meet with an error of only a few inches, or none.

into Greece, and shared with Rhoecus the honor of bringing from Egypt or Assyria to Samos the hollow easting of bronze." Before Theodorus the Greeks had made crude bronze stantes by riveting plates of the metal to a "bridge" of wood;" now they were prepared to produce such masterpieces in bronze as the Charioteer of Delphi and the Discus Thrower of Myron. Samos was famous also for its pottery, Pliny recommends it to us by telling us that the priests of Cybele would use nothing but Samian potsherds in depriving themselves of their manhood."

3. Heracleitus of Ephesus

Across the Caystrian Guif from Samos stood Ionia's most famous city—Ephesus. Founded about 1000 by colonists from Athens, it prospered by tapping the trade of both the Cayster and the Maeander. Its population, its religion, and its art contained a strong Eastern element, the Artemis worshiped there began and ended as an Orantal goddess of motherhood and fertility. Her renowned temple had many deaths, and almost as many resurrections. On the site of an ancient altar twice built and twice destroyed, the first temple was erected about 600, and was probably the earliest important editice in the Ionic style. The second temple was raised about 540, partly through the generosity of Croesus, Paconius of Liphesus, Theodorus of Samos, and Demetrius, a priest of the shrine, shared in designing it. It was the largest Greek temple that had yet been built, and was ranked without dispute among the Seven Wonders of the World.*

The city was known not only for its temple but for its poets, its philosophers, and its expensively gowned women." Here, as early as 690 B.C., lived Callinus, the earliest known elegate poet of Greece. Far greater and ugher was Hopponax, who, towards 550, composed poems so coarse in subject, obscure in language, pointed in wit, and refined in metrical style, that all Greece began to take about him, and all I phesus to hate him. He was short and thin, laine and deformed, and completely disagreeable. Woman, he tells us, in one of his surviving fragments, brings two days of happiness to a man—"one when he marries her, the other when he buries her." He was a ruthless saturist, and lampooned every notable in Ephesus from the

^{*} The other six were the Hanging Gardens of Babelon, the Pharos at Alexandria, the Colorsus of Rhodes, the Pheidian Zeus at Civilipia the tomb of Manaolis at Halicarnassus, and the Pertands. Phay describes the second temple as 413 feet long by 214 feet wide, with 137 columns saxly feet in beight several of them admined or dafigured with rehefs.** Completed in 410 no. after more than a century of labor, it was described by fire in 336.

lowest ermunal to the highest priest of the temple. When two sculptors, Bupalus and Atheno, exhibited an elegant caricature of him he attacked them with such corrosive verse that some of it has proved more durable than their stone, and sharper than the teeth of time. "Hold my coat," says a typically polished morsel, "I shall hit Bupalus in the eye. I am ambidextrous, and I never miss my aim." Tradition said that Hipponax died by

Buiende, but perhaps this was only a universal wish.

The most clustrious son of Ephesis was Heraclettus the Obscure. Born about \$70, he belonged to a noble family, and thought that democracy was a mistake. "There are many had but few good," he said (111°), and "one man to me is as ten thousand if he be the best" (113). But even aristocrats did not please him, nor women, nor scholars. "Abundant learning," he wrote with genial particularity, "does not form the mind, if it did it would have instructed Hesiod, Pythagoras, Xenophanes and Hecataeus" (16). "For the only real wisdom is to know that idea which by itself will govern everything on every occasion" (19). So he went off, like a Chinese sage, to live in the mountains and broad over the one idea that would explain all things. Disdaining to expound his conclusions in words interagible to common men, and seeking in obscurity of life and speech some safety from individuality-destroying parties and mobs, he expressed his views in pathy and enignatical apophthicgms On Nature, which he deposited in the temple of Artenus for the n visitio ition of posterity.

Heracleitus has been represented in mostern literature as building his philosophy around the notion of change, but the extant fragments hardly support this interpretation. Take most philosophers he longed to find the One behind the Many, some mind-steadying unity and order amid the chaotic flux and multiplicity of the world. "All things are one," he said, as passionately as Parmenides (1), the problem of philosophy was, what is this one? Heracleitus answered, hire. Perhaps he was influenced by the Persian worship of fire, probably, as we may judge from his identification of hire with Soul and God, he used the term symbolically as well as literally, to mean energy as well as fire, the fragments permit no certainty. "This world... was made neither by a god nor by man, but it ever was, and is, and shall be, ever-himp here, in measures being kindled and in measures going out" (20). I verything is a form of hire, either in hire's "downward path" through progressive condensation into moisture, water, "downward path" through progressive condensation into moisture, water,

^{*} The parameterical mumbers refer to the fragments of Heracleirus as numbered by Bywarer.

and earth, or in its "upward path" from earth to water to moisture to

Though he finds a consoling constancy in the Freinal Fire, Heraeleitus is troubled by its endless transformations, and the second nucleus of his thought is the eternity and ubiquity of change. He finds nothing static in the universe, the mind, or the soul. Nothing is, everything becomes, no condition persists unaltered, even for the smallest moment, everything is ceasing to be what it was, and is becoming what it will be. Here is a new emphasis in philosophy. Heracleitus does not merely ask, like Thaies, what things are, but, like Anaximander, Lucretius, and Spencer, how they became what they are, and he suggests, like Anstotic, that a study of the second question is the best approach to the first. I ne extant apophthegms do not contain the famous formula, panta ret, ouden mener "ail things flow, nothing abides", but antiquity is unanimous in attributing it to Heracleitus." "You cannot step twice into the same river, is r other waters are ever flowing on to you" (41), "we are and we are not" (81), here, as in Hegel, the universe is a vast Becoming Multiplicity, variety, change are as real as unity, identity, being, the Many are as real as the One." The Many are the One, every change is a passage of things towards or from the condition of Fire The One is the Many, in the very heart of Fire flickers resiless change,

Hence Heraelettus passes to the third element in his philosophy—the unity of opposites, the interdependence of contraries, the harmony of serile. "God is day and right, wanter and summer, war and peace, surfeit and hunger" (36). 'Good and bad are the same, goodness and badness are one" (57-8), "life and death are the same, so are waking and sleeping, youth and age" (78). All these contraries are stages in a fluctuating movement, moments of the ever-changing hire, each member in an opposing pair is necessary to the meaning and existence of the other, reality is the tension and interplay, the alternation and exchange, the unity and har-

^{*}Possibly Heracic test had at mored a rich that hypothesis, the world begins as fire (or heat of energy or becomes gas or moretaire which is presented as water whose electival residue, after evaporation, forms the south of the earth. Water and earth capital including are two stages of one process, two forms of one to the south of the earth. Water and earth capital including and for Fore, and Fore fort all things are All charge in a "pathway horn or up," a possage from one to another forth now more now less condenses of energy or Fire. "The path upwards and downwards in the at done as a forth and entered in the domination are movements in an eternal oscillation of change. If the new rich time for the downward and condensing or on the upward and rarefulng pathway of ceasing from hore and back to be early from an onder if one underlying energy. It Spinorals capitage here or energy in the cremal and omnumers of the stage of this topin. It could be a more from the downward and upward pathway of the world.

mony, of opposites, "They understand not how that which is at variance with itself agrees with itself. There sits attunement of opposite tensions, like that of the bow and the harp" (45). As the tension of the string, loosened or drawn taut, creates the harmony of vintations called music or a note, so the alternation and strife of opposites creates the essence and meaning and harmony of life and change. In the struggle of organism with organism, of man with man, of man with woman, of generation with generation, of class with class, of nation with nation, of idea with idea, of creed with creed, the warring opposites are the warp and woof on the loom of life, working at cross-purposes to produce the unseen unity and hidden concord of the whole. "From things that differ comes the fairest attunement" (46), any lover will understand.

All three of these principles-fire, change, and the tension unity of contraries-enter into Heracleitus' conception of soul and God. He smiles at men who "seek in vain to purify themselves from blood guiltiness by defiling themselves with blood" (130), or who "offer prayers to these statues here—as if one should try to converse with houses, such men know nothing of the real nature of gods' (126). Nor will be admit personal immortality, man too, like everything else, is a changeful and fitful flame, "kindled and put out like a light in the night" (7") I ven so, man is hire, the soul or vital principle is part of the eternal energy in all things, and as such it never dies. Death and birth are arbitrary points taken in the current of things by the human analyzing hund, but from the imparnal standpoint of the universe they are merely phases in the endless change of forms. At every instant some part of us dies while the whole lives, at every second one of us dies while Life lives. Death is a beginning as well as an ending, birth is an ending as well as a beginning. Our words, our thoughts, even our morals, are prejudices, and represent our interests as parts or groups, philosophy must see things in the light of the whole. "To God all things are beautiful and good and right, men deem some things wrong and some right" (6t).

As the soul is a passing tongue of the endlessly changing flame of life, so God is the everlasting Fire, the indestructible energy of the world. He is the unity binding all opposites, the harmony of all tensions, the sum and meaning of all strife. This Divine Fire, like life (for the two are everywhere and one), is always altering its form, always passing upward or downward on the ladder of change, always consuming and remaking things, indeed, some distant day, "Fire will judge and convict all things" (16), destroy them, and make way for new forms, in a Last Judgment

or cosmic catastrophe. Nevertheless, the operations of the Undying Fire are not without sense and order, if we could understand the world as a whole we should see in it 2 vast impersonal wisdom, a Logos or Reason or Word (65), and we should try to mold our lives into accord with this way of Nature, this law of the universe, this wisdom or orderly energy which is God (91) "It is wise to hearken not to me, but to the Word" (1), to seek and follow the infinite reason of the whole.

When Heracleitus applies to ethics these four basic concepts of his thought-energy, change, the unity of opposites, and the reason of the whole he illuminates all life and conduct. Energy harnessed to reason, wedded to order, is the greatest good. Change is not an evil but a boon; "in change one finds rest, it is weariness to be always tolling at the same things and always beginning afresh" (71-3). The matual necessary of contractes makes intelligible and therefore forgivable the stafe and suffering of life. "For men to get all they wish is not the better thing, it is disease that makes health pleasant, evil, good, honger, surfest, toil, rest" (104) He relaikes those who desire an end of strife in the world (43), without this tension of opposites there would be no "attunement," no weaving of the living web, no development. Harmony is not an ending of conflict, it is a tension in which neither element definitely wins, but both function indispensably (like the radicalism of youth and the conservatism of old age) The struggle for existence is necessary in order that the beiter may be separated from the worse, and may generate the highest. "Strife is the father of ad and the king of all, some he has marked out to be gods, and some to be men; some he has made slaves, and some free" (44) In the end, "strife is justice" (61), the compension of individuals, groups, species, institutions, and empires constitutes nature's supreme court, from whose verdict there is no appeal.

All in all, the philosophy of Heracleirus, concentrated for us now in 130 fragments, is among the major products of the Greek mind. The theory of the Divine bire passed down into Stoicism, the notion of a final conflagration was transmitted through Stoicism to Christianity, the Logos, or reason in nature, become in Philo and Christian theology the Divine Word, the person field wisdom with which or through whom God creates and governs all things, in some measure it prepared for the early modern view of natural law. Virtue as obedience to nature became a carchword of Stoicism, the unity of opposites revived vigorously in Hegel, the idea of change came back into its own with Bergson. The conception of strife and struggle as determining all things reappears in Darwin, Spencer, and

Nietzsche-who carries on, after twenty-four centuries, the war of Hera-

claims against democracy.

We know atmost nothing of Heraeleitus' life; and of his death we have only an unsupported story in Diogenes Laertius, which may illustrate the prosaic ends to which our poetry may return:

And at last becoming a complete misanthrope, he used to spend his time walking about the mountains, feeding on grasses and plants, and in consequence of these habits he was attacked by the dropsy, and so he returned to the city, and asked the physicians, in a riddle, whether they were able to produce a drought after wet weather. And as they did not understand him, he shut himself up in a stable for oxen, and covered himself with row dung, hoping to cause the wet to evaporate from him by the warnth that this produced. And as he did himself no good in this way, he died, having lived seventy years.

4. Anacreon of Teos

Colophon, a few miles north of Ephesus, derived its name, presumably, from the hill on whose slope it rose. Xenophanes the anticierical, born among them about 176, described the Colophonians as "richly clothed in purple gameents, proud of their luxumously dressed hair wet with costly and sweet-smelling oils", vanity has a long history. Here, and perhaps at Smyrna, the poet Minnermus (610) sang, for a people already infected with the languid pessition of the East, his melancholy odes of fleeting youth and love. He lost his heart to Nanno, the girl who accompanied his songs with the plaintive obbligato of the flute; and when she rejected his love (perhaps on the ground that a poet married is a poet dead), he immortalized her with a sheaf of delicate elegiac verse.

We blossom like the leaves that come in Spring,
What time the sun begins to flame and glow,
And in the brief span of youth's gladdening
Nor good nor evil from the gods we know,
But always at the goal dark spirits stand
Holding, one grievous Age, one Death, within her hand.

^{*} Gk. kolopbon, hill, cf. Lann collin, Fing. bill. Because the cavality of the cuty was famous for giving the "finishing touch" to a defeated force, the word kolopbon became in Greek a synonym for the him, stroke, and passed into our language as a publisher's symbol, originally placed at the end of a book.**

A more famous poet lived a century later in the near-by town of Teos. Anacreon wandered much, but in Teos he was born (563) and died (478). Many a court sought him, for among his contemporaries only Simonides rivaled him in fame. We find him joining a band of emigrants to Thracian Abdera, serving as soldier for a campaign or two, abandoning his shield in the poetic fashion of the time, and thereafter content to brandish a pen, spending some years at the court of Polyerates in Samos, brought thence in official state, on a fifty-pared galley, to grace the palace of Hipparchus in Athens, and at last, after the Persian War, returning to Teos to ease his declining years with song and drink. He paid for his excesses by bying to a great age, and died at eighty five, we are told, of a grape pit sticking in his throat.

Alexandria knew five books of Anacreon, but only disordered couplets remain. His subjects were wine, women, and boys, his manner was one of polished banter in tripping lambics. No topic seemed impure in his impeccable diction, or gross in his delicate verse. Instead of the vulgar virulence of Hipponax, or the trembling intensity of Sappho, Anacreon offered the urbane charter of a court poet who would play Horace to any Augustus that pleased his fancy and paid for his wine. Athenseus thinks that his tipsy songs and changeful loves were a pose," perhaps Anacreon hid his fidelities that he might be interesting to women, and concealed his sobriety to augment his fame. A choice legend tells how, in his cups, he stumbled against a child and abused it with harsh words, and how, in his age, he fell in love with this lad and did penance with doting praise." His Eros was ambidextrous, and reached impartially for either sex, but in his later years he gallantly gave the preference to women. "Lo, now," says a pretty fragment, 'golden-haired Love strikes me with his purple ball, and calls me forth to play with a motley-shippered maid. But she hails from lofty Lesbos, and so finds fault with my white hair, and goes a-searching for other prev." A wit of a later age wrote for Anacron's grave a revealing epimph:

All-enchanting trurse of the wine. O Vine, grow lush and long above the tomb of Anaereon. So shall the tippling friend of nest liquor, who thrummed in night-long revel the lute of a lover of lads, yet sport above his Luried head the glorious cluster of some teeming bough, and he wet evermore with the dew whose deheious scent was the breath of his mild old mouth.

5. Chios, Smyrna, Phocaea

From Teos the mainland staggers westward in vacillating bays and promontories until, across ten miles of sea, the traveler reaches Chos. Here, amid groves of figs and ulives, and Anacreonia, vines, Homer may have spent his youth. Wate making was a major moustry in Chair, and used many slaves, in 431 the is and had 16,000 freemen, 100,000 slaves." Chios became a clearinghouse for seaves, slave dealers bought the fanalies of insolvent debtors from their creditors, and purchased boys to make conuchs of them for the palaces of Lydia and Persia. In the sixth century Drimachus led bis fellow slaves in revoit, defeated all armies sent against him, established lunisetf in a mountain fastness, levied toll upon the richer citizens by discriminating robbert, offered them 'protection' for a consideration after our own faso in, terrified them into dealing more pastly with their slaves, gave his voiuntariay severed head to his friends so that they in ghe claim the reward that had been primised for a, and was worshiped for custures afterware as the patron deay of slaves " here is an excellent epic for some Spartacus of the pen. Art and literature flourished amid the wealth and bondage of Chais, here the Hamer dae, a guad and sveression of bards, had their seat, here Ion the dramatist and Theopempus the historign would be born, here (Janesis (tradition said) discovered, about 560, the tecanique of welding from here Archerius and his so is, Bupans and Athenis, made the finest statuary in sixth-century Greece

Returning to the mainland, the traveler passes by the sites of Frythme and Clazomenae-hirthplace of Perictes teacher and friend, Amiragoras, Fatther east, on a well-sheltered inlet, is 5 by roa. Settled by Acolums as far back as 1025° it was changed by monegration and concluest into an longing east. Already famous in the days of Achilles, sacked by Alvaties of by dia about 600 a.c., destroyed again and again, and recently by the Greeks in i.i. 1024. Sinvina, treating Daniascus in age, has known all the vicioscudes of history. The temains of the ancient town suggest its rich and varied life, a gyrmasium, an acropolis, a stadium, and a theater have been dup out of the earth. The avenues were broad and well paved, temples and pasters addraged them, the main street, called Golden, was famous throughout Greece.

The morthermost of Ionia's cities was Photaca, still functioning as Fokia. The river Hermis connected it almost with Sarchs use, f, and gave it a merative advantage in the commerce of the Greeks with 1 vd. Photacan merchants undertook astant voyages in the search for markets, it was they who brought Greek culture to Cornea, and founded Marsedles.

Today under the name of funit (this and Smyrna are probably connected with the encient trade in myrth), it is the second city of Turkey in population, and the largest in Aug Minut.

Such were the Twelve Cities of Ionia, seen superficially as if in an hour's flight through space and time. Though they were too competitive and jealous to form a union for murual detense, their citizens acknowledged some solidarity of background and interest, and met periodically on the promontory of Mycale near Priene, in the great festival of the Panionauti. Thales begged them to form a sympolity in which every adult male would be a citizen both of his city and of a Panioman union, but commercial rivalnes were too strong, and led rather to interneeine wars than to political unity. Hence, when the Persian attack came (546-5), the alliance improvised for defense proved rootiessly weak, and the lonian cities came under the power of the Great King. Nevertheless this spirit of independence and rivalry gave to the Ionian communities the sumulus of compention and the zest of liberty. It was under these conditions that form developed science, pislosophy, history, and the lonic capital, while at the same time it produced so many poets that the sixth century in Hellas seems almost as ferrile as the fifth. When Ionia fell her cities bequeathed their culture to the Athens that had fought to save them, and transmitted to it the intellectual leadership of Greece.

V. SAPPHO OF LESBOS

Above the Ionian Dodecapulis lay the twelve eities of mainland Acolis, settled by Acolians and Achaeans from northern Greece so in after the fall of Troy had opened Asia Minor to Greek immigration. Most of these cities were small, and played a modest role in listory, but the Acolian isle of Lesbos rivaled the Ionian centers in wealth, refinement, and literary genius. Its volcanic soil made the island a very garden of orchards and vines. Of its five enties Mythene was the greatest, almost as rich, through its commerce, as Miletas, Samas, and Ephesias. Towards the end of the seventh century a coal tion of the increantile classes with the pooter citizens overthrew the landed aristocraey, and made the brave, rough Pintaeus dictator for ten years, with powers like those of his friend and fellow Wise Man, Solon. The aristocraey conspared to recapture power, but Pittaeus foiled them and exiled their leaders, including Aleaeus and Sappho, first from Mythene and then from Lesbos itself.

Aleaeus was a roistering firel rand who mingled polities with poetry and made every other lyne raise the toesin of revolt. Of aristocratic birth, he attacked Pitracus with a lusty scurrility that mented the crown of bantihment. He molded his own poetic forms, to which posterity gave the

name "aleaies"; and every stanza, we are told, had melody and charm. For a while he sang of war, and descrated his home as hing with martial trophies and accounterments,' however, when his own chance for heroism came he threw away his shield, fled like Archdoch, s, and complimented himself lynically on the vaior of his discretion. Occasionally he sang of love, but desirest to his pen was the wine for which Leshos was as famous as for its poetry. Nun chre methisthem, he advises as mine bibannus, let us drink deeply; in summer to cool our thirst, in autumn to put a bright color upon death, in waiter to warm our blood, in spring to celebrate nature's resurrection.

The run of Zeus descends, and from high licaven A storm is driven. And on the minning water-brooks the cold Lays key hold. Then up best down the winter, make the fire Bloze higher and higher; Mix wine as sweet as honey of the bee Abundandy: Then drink, with comfortable woul around Your temples bound. We must not yield our hearrs to woe, or wear With wasting care, For grief will profit us in whit, my friend, Nor nothing mend: But this is our liest medicine, with wine fraught To cast out thought."

It was his misfortune—though he bore it with lighthearted unconsciousness—to have among his contemporaries the most famous of Greek women. I ven in her lifetime all Greece honored Sappho. "One evening over the wine," says 5to bacus, "Execestides, the nej bew of bolon, sing a song of Sappho's which his uncle liked so much that he bade the boy teach it to lam, and when one of the company asked, 'What for?' he answered, 'I want to learn it and die'' "Socrates, perhaps hoping for similar lenience, called her "The Beautiful," and Plato wrote about her an cestatic epigram-

Some say there are Nine Muses. How cateless they are! Behold, Sappho of Lesbos is the Tenth!"

"Sappho was a marvelous woman," said Strabo, "for in all the time of which we have record I do not know of any woman who could rival her even

in a slight degree in the matter of poetry." As the ancients meant Homer when they said "the Poet," so all the Greek world knew whom men signified when they spoke of the Poetess."

Psappha, as she called herself in her soft Acobe dialect, was born at Fresus, on Leslan, about 612, but her family moved to Mytilene when she was still a child. In coa she was among the conspiring aristocrars whom Pitracus banished to the rown of Pverha, already at mineteen she was playing a part in public life through politics or poetry. She was not known for beauty ber figure was small and frail, her hair and eyes and skin were darker than the Greeks desired," but she had the charm of daintiness, delieacy, refinement, and a brilliant mind that was not too sophisticated to conceal her tenderness. "Wy heart," she says, "is like that of a child "" We know from her verses that she was of a passionate nature, one whose words, says Platarch, "were morgled with flames '," a certain sensious quality gave body to the enthusasms of her mind. Atthis, her favorite pund, spoke of her as dressed in saffron and purple, and garlanded with flowers. She must have been attractive in her monuscule way, for Alcheus, exiled with her to Pyrrha, soon sent her an invitation to romance. "Violet-crowned, pure, sweet snuling Sappho, I want to say something to you, but shame prevents me." Her answer was less ambiguous than his proposal. "If thy wishes were fair and noble, and thy tongue designed not to after what is base. shape would not cloud thine eyes, but thou wouldst speak thy just desires." The poet sang her praises in odes and screnades, but we hear of no further inturacy between them

Perhaps they were separated by Sappho's second exire. Pirtaeus, fearing her maturing pen, battashed her now to Sieity, probably in the year 191, when one would have thought her still a harmless girl. About this time she married a rich merchant of Andros, some years later she writes. "I have a little daughter, like a golden flower, my darling Cleis, for whom I would not take all Lydia, nor lovely Leshos." She could afford to reject the wealth of Lydia, having inherited that of her husband on his early death. After five years of exile she returned to Leshos, and became a leader of the island's society and intellect. We eatch the glamour of luxury in one of her surviving fragments: "But I, he it known, love soft living, and for me brightness and beauty belong to the desire of the sun." She became deeply attached to her young brother Charaxus, and was vexed to her finger tips when, on one of his mercantile journeys to Egypt, he fell in love with the courtesan Doricha, and, ignoring his sister's entreaties, married her."

Meanwhile Sappho too had felt the fire. Lager for an active life, she

had opened a school for young women, to whom she raught poetry, music, and dancing, it was the first 'finishing school" in history. She called her students not pupils but hetairal companions; the word had not yet acquired a promiscuous connotation. Husbandless, Sappho fell in love with one after another of these girls. "Love," says one fragment, "has shaken my mind as a down-rushing wind that falls upon the oak-trees." "I loved you. Atthis, long ago," says another fragment, "when my own girlhood was still all flowers, and you seemed to me an awkward little child." But then Atthis accepted the attentions of a youth from Mytilene, and Sappho expressed her jealousy with unmeasured passion in a poem preserved by Longinus and translated haltingly into "sapplite" meter by John Addington Symonds:

Peer of gods he seemeth to me, the blissful Man who sits and gazes at thee before him, Close hest le theo sits, and in silence hears thee Silverly apeaking, Laughing ove's low laughter. Oh, this, this only Stars the troubled heart in my breast to tremble! For should I but see thee a little moment, Straight is my voice hushed, Yea, my tongue is broken, and through and through me, Neath the flesh, impainable fire runs tingling Nothing see mine eyes, and a voice of roaring Waves in my ear sounds, Sweat runs down in rivers, a tremor seizes All my lambs, and paler than grass in autumn, Caught by pains of menacing death, I falter, Lost in the love-trance.

Atthis' parents removed her from the school, and a letter ascribed to Sappho gives what may be her account of the parting

She (Atthis?) wept full sore to leave me behind, and said "Alas, how sad our lot! Sappho, I swear 'tes against my will I feave you." And I answered her: "Go your way rejoicing, but remember me, for you know how I doted upon you. And if you remember not, oh, then I will remand you of what you forget, how dear and beautiful was the life we led together. For with many a garland of violets

Swinthurne has given us a better example of the meter, and described Supplie's love, in a profoundly beautoful poem caded "Supplies" ("All the night came not upon my syclids"), in Poems and Baltada.

and sweet roses mingled you have decked your flowing locks by my side, and with many a woven necklet, made of a hundred blossoms, your dainty throat, and with unquent in plenty, both precious and roval, have you anomated your fair young skin in my bosom. And no hill was there, nor holy place, nor water brook, whither we did not go, nor ever did the teening noises of the early spring fill any wood with the medley song of the nightingales but you wandered thither with me.

After which, in the same manuscript, comes the bitter cry, "I shall never see Atths again, and indeed I might as well be dead." This surely is the authentic voice of love, rising to a height of sincertry and beauty beyond

good and evil.

The later scholars of antiquity debated whether these poems were expressions of "Lesbian love," or merely exercises of poetic fancy and inpersonation. It is enough for us that they are poetry of the first order, tense with feeling, vivid with imagery, and perfect in speech and form. A fragment speaks of "the footfall of the flowering spring", another of "Love the lund-loosener, the batter sweet torment", another compares the unartainable love to "the sweet apple that reddens on the end of the bough, the very end of the bough, which the gatherers missed, nay missed not, but could not reach so far." Sappho wrote of other topics than love, and used, even for our extant remains, half a hundred meters, and she herself set her poems to music for the harp. Her verse was codected into nine books, of some twelve thousand lines, six hundred lines survive, seldom continuous. In the year 1073 of our era the poetry of Sapplio and Aleaeus was publicly burned by ecclesiastical authorities in Constantinople and Rome." Then, in 189+, Grenfell and Hunt discovered, at Oxyrhynchus in the Fayum, coffins of papier-mache, in whose making certain scraps of old books had been used, and on these scraps were some poems of Sappho."

Male posterity avenged itself upon her by handing down or inventing the tale of how she died of unrequited love for a man. A passage in Suidas' tells how "the courtesan Sappho usually identified with the poetess-leaped to death from a cliff on the island of Leucas because Phaon the sailor would not return her love. Menander, Strabo, and others refer to the story, and Ovid recounts it in loving detail," but it has many earmarks of legend, and must be reft hovering nebulously between fiction and fact. In her later years, tradition said, Sappho had releatned the love of men. Among the Egyptian morsels is her touching reply to a proposal of mar-

mage: "If my breasts were still capable of giving suck, and my womb were able to bear children, then to another marriage-bed not with trembling feet would I come. But now on my skin age has brought many lines, and Love hastens not to me with his gift of pain"—and she advises her suitor to seek a younger wife." In truth we do not know when she died, or how; we know only that she left behind her a vivid memory of passion, poetry, and grace, and that she shone even above Alcaeus as the most mel dious singer of her time. Gently, in a final frigment, she reproves those who would not adout that her song was finished

You dishonor the good gifts of the Moses, my children, when you say, "We will crown you, dear Sappho, best player of the clear, sweet lyre." Know you not that my skin is all wrinkled with age, and my hair is turned from black to white? . . . Surely as starry Night follows rose-armed Dawn and brings darkness to the ends of the earth, so Death tracketh everything living, and catcheth it in the end."

VI. THE NORTHERN EMPIRE

North of Lesbos is little Tenedos, whose women were accounted by some ancient traveiers to be the most beautiful in Greece." Then one follows the adventurous Helienes into the northern Spotades: to Imbros, and Lemnos, and Samothrace. The Milesians, seeking to control the Hellespont, founded, about 660, the sull-living town of Ahydos on its south shore," here Leander and Byron swam the straits, and Xerxes' army crossed to Lutope on a bridge of boars. Farther eastward the Phocaeans settled Lampsacus, buthplace of Epicurus. Within the Propontis lay two groups of islands it is Proconnesus, rich in the marble that gave the Propontis its current name, the Sea of Marmora; and the Arctonnesus, on whose southernmost tip the Aldesians established in 757 the great port of Cyzicus. Along the coast rose one Greek city after another Panoricus, Dascyaum, Apameia, Class, Astacus, Chalcedon, Up through the Bosporus the Greeks advanced, lungry for metals, gram, and trade, founding Chrysopolis (now Scutari) and Nicopolis-"city of victory." Then they made their way along the southern shore of the Black Sea, depositing towns at Heracleia, Pontica, Tieum, and Smope-a city splendidly adorned, says Strabo," with gymnasium, agora, and shady colonnades, Diegenes the Cyme was not above heing born bere. Then Amsus, Oenoe, Tupoda, and Trapezus (Trebizond, Trabizon)-where Xenophon's Ten Thousand sounted with joy at the sight of the longed-for sea. The opening up of this region to Greek

^{*} Nearly all the cities mentioned in this chapter are still in existence, though under altered

colonization, perhaps by Jason, later by the Ionians, gave the mother cities the same outlet for surplus population and trade, the same resources in food, silver, and gold, that the discovery of America gave to hurope at the beginning of modern times."

Following the eastern sources of the Euxine northward into Medea's Colclus, the Greeks founded Phasis and Diosentias, and Theodosia and Panticapaeum in the Grimea. Near the mouths of the Bog and the Dineper they established the city of Olo a (Nikolaev), at the mouth of the Dinester, the town of Tyras, and on the Danibe, Trocsinis. Then, moving southward along the west shore of the Back Sen, they built the cities of Isruis (Constanta, Kustenje). Tona (where Ovid died), Odessus (Varna), and Apollonia (Burgus). The fustorically sensitive traveler stands appalled at the antiquity of these bying towns, but tuday's residents, engrossed in the tasks of their own generation, are undisturbed by the dipth of the centuries that he silent beneath them.

Then again at the Bosporus the Megarians, about 660, built Byzantium*—yesterday Constantinople, now Istanbul. Even before Pericles this strategic port was becoming what Napoleon would call it at the Peace of Tilsit—the key to Europe, in the third century a.c. Polybius described its maritime position as "more favorable to security and prosperity than that of any other city in the world known to us." Byzantium grew rich by exacting tolls from passing vessels, and exporting to the Greek world the grain of southern Russia ("Scythia") and the Balkans, and the fish that were netted with shameful case as they crowded through the narrow straits. It was its curving form, and the wealth derived from this fishing industry, that gave the city its later name, the "Golden Horn." Under Pericles Athens Johnnated Byzantine pointes, levied tolis there to fill her treasury in time of emergency, and regulated the export of grain from the Black Sea as a contraband of war."

Along the northern or Thracian short of the Propontis the Greeks built towns at Selymbria, Perinthus (1-reg 1). Beanthe, Callipous (Gallipoli), and Sestus. Later settlements were established on the southwestern coast of Thrace at Aphrodisias, Acaus, and Al dera-where Leucippus and Democritus would propound the philosophy of atomistic material an. Off the coast of Thrace lay the island of Thissos, "have and ugly as a denkey's back in the sea, "Archi ochus described it," but so rich in gold mines that their proceeds paid all the expenses of the government. On or near the eastern coast of Macedonia Greek gold-seekers, chiefly Athenians, founded Neapolis and Amphipolis—whose capture by Philip would lead to the war in which Athens was to lose her Eberty. Other Greeks, mostly from Chalcis and Freezia, conquerted and named the Euree-fingered permisula of Chalcidice, and by 700 had established thirty towns there,

The name was probably taken from Ryzas, a native king."

several of them destined to play a role in Greek history. Stageirus (birthplace of Aristotle), Seione, Mende, Poridaea, Acanthus, Cleunae, Torone, and Olynthus-captured by Philip in 348 and known to us now through the oratory of Demosthenes. Recent excavations at Olynthus have uncorrided a town of considerable extent, with many houses of two stories and some of twenty-five rooms. In the time of Philip Olynthus appears to have had 60,000 inhabitants; we may judge from this figure for a minor city the abounding ferrility and energetic expansion of the pre-Periclean Greeks.

Finally, between Chalcidice and Euboca, Ionian migrants peopled the Eubocan Isles—Gerontia, Polyaegos, Icos, Peparethos, Scandile, Seyros. The orbit of empire in east and north had come full turn, the circuit was complete. Greek enterprise had transformed the islands of the Aegean and the coasts of Asia Almor, the Hellespont, the Black Sea, Macedonia, and Thrace into a Lusy network of Hellemzed titles, throlling with agriculture, industry, trade, politics, literature, religion, philosophy, science, 2rt, el quence, chicanery, and yenery, It only remained to conquer another Greece in the West, and build a bridge between ancient Hellas and the modern world.

CHAPTER VII

The Greeks in the West

L THE SYBARITES

CKIRTING Sumum again, our ship of fancy, sailing westward, finds Ocythera, island haunt of Aphrodite, and therefore the goal of Watteau's Embarkation. There, about a o. 160, Pausamas saw "the most holy and ancient of all the remples that the Greeks have built to Aphrodite", and there, in 1887, Schnemann dug its ruins out of the earth. Cythera was the southernmost of the Ionian Islands that bordered the west coast of Greece, and so ramed because Ionian immigrants settled them, Zacynthus, Capitallema, Ithaca, Leucas, Paxos, and Corey ra made the rest. Schl emann thought that Ithaca was the island of Odvisens, and vainly sought under its soil some confirmation of Homer's rale, but Dorpfeld believed that Odysseus' home was on rocky Leweas. From the chifs of Leweas, as an annual sacrifice to Apollo, the apcient Leucadians, says Strabo, were in the babit of horbeg a human victim, but he ng men as well as the alogians, they mercifully attached to min powerful birds whose wings might break his fall " probably the story of Sappho's leap is bound up with memories of this rite. Corinthian columns occupied Corevea (Corfu) about 734 n.C., and soon became so strong that they defeated Cornith's navy and established their independence. From Corevra some Greek adventurers sailed up the Admente as far as Venice, some made small settlements on the Dahmanan coast and in the valley of the Po,' others crossed at last through fifty miles of storms water to the beel of Italy

They found a magnificent share line, curved into natural harbors and backed by a fertile initiarized that had been almost neglected by the aborigines. The Greek invaders took possession of this coastal region by the ruthless law of colonial expansion, that natural resources unexploited by the native population will draw in, by a kind of chemical attraction, some other people to exploit them and pour them into the commerce and usage of the world. From Brentesium (Brindisi) the newcomers, thirdly Dorian, traversed the heal of the pennisula to establish a major city.

Watter is painting. Embarkation for Cythera symbolized the spirit of the tipper clauses in eighteenth-century France, which had shed ust enough themogy to be epicurean.

at Taras—the Roman Tarentum (Taranto)." There they grew olives, raised horses, manufactured pottery, built ships, netted fish, and gathered mussels to make a purple dye more highly valued than the Phoenican." As in most of the Greek colonies, the government began as an oligareny of landowners, passed under dictators financed by the middle class, and enjoyed vigorous and turbulent intervals of democracy. Here the romantic Pyrthus would land, in 281 n.C., and undertake to play Alexander to the West.

Across the Tarent ne Colf a new wave of immigrants, mostly Achaeans, founded the esties of Sybaris and Crotona. The murderous jealousy of these kindred states illustrates the creative energy and destructive passions of the Greeks. Trade between eastern Greece and western Italy had a choice of two routes, one by water, the other in part by land. Ships following the water route touched at Crotona, and exchanged many goods there, thence they passed to Rhegium, paid tolls, and moved eautously through parate-ridden seas and the swiring corrents of the Messina Strats to Lea and Cumae, the northernmost Greek settlement in Italy. To avoid these tolls and perils, and a nondred extra index of rowing and sading, increhants who chose the other route imboaded their cargoes at Sybaris, carried them overland some thirty index to the western coast at Laus, and reshipped them to Poseidonia, whence they were marketed into the interior of Italy.

Strategically situated on this line of trade, Sybaris prospered until it had (if we may beneve Dindorus Siculus') 100,000 population and such wealth as few Circuk emes could match. Sybariae became a symonym for epicarian All physical labor was performed by slaves or serts with the citizens, dressed in costly robes, took their ease in historious homes and consumed exone delicates t. Men whose work was noisy, such its earpenters and smiths, were formeden to practice their citits within the confines of the city. Some of the roads in the richer districts were covered with awnings as a protection against heat and rain." Alcisthenes of Sybaris, says Aristotle, had a robe of such precious stuffs that Dionysius I of Syracuse later sold it for 120 talents (\$120,000). Smyndyrides of Sybaris, visiting Sicyon to sue for the hand of Cleathenes' daughter, brought with him a thousand

servants."

t Cooks or confectioners who invested new Johns or tweets. Athenae is renorm were allowed to patent them for a year." Perhaps Athenaeus riastion caricature for history.

The trades and dates for the founding of the Greek cities of the West are given in the Chromological Table. These dates were taken by Thick does to so the did byographer Antondors of Sychological table, are highly takentain and Maharly believed that the Social and foundations came later than those on Italy. Thuck dides obtainingly, however, has stall many supporters.

All went well with Sybaris until it slipped into war with its neighbor Crotona (5 to). We are unreliably informed that the Sybarites marched out to battle with an army of 300,000 men." The Crotoniates, we are further assured, threw this force into confusion by playing the times to which the Sybarites had taught their horses to dance." The horses danced, the Sybarites were slaughtered, and their city was so conscientiously sacked and burned that it disappeared from lustory in a day. When, sixty-five years later, Herodorus and other Atheniana established near the site the new colony of Thursi, they found hardly a trace of what had been the proudest community in Greece.

II. PYTHAGORAS OF CROTONA

Crotona lasted longer, founded about 710 B.C., it is, as Crotone, still noisy with industry and trade. It had the only natural harbor between Taras and Sicily, and could not forgive those ships that discharged their cargoes at Sybaris. Finough trade remained to give the extitens a comfortable prosperity, while a wholesome defeat in war, a long economic depression, a brisk chinare, and a certain Dorico-Puritan mood in the population conspired to keep them vigorous despute their wealth. Here grew famous athletes like Milo, and the greatest selic. I of medicine in Magna Grecia.

Perhaps it was its reputation as a health resort that drew Pythagoras to Crotona. The name means "mouthpiece of the Pyto an" oracle at Delphi; many of his followers considered him to be Apollo himself, and some laid claim to having cought a flash of his golden thigh." I radiate a ssigned his birth to hamos and it 580, spoke of his stadious youth, and gave him thirty years of travel. "Of all men," says Heracie this, who praised parsimoniously, "Pythagoras was the most assiduous inquirer." He visited, we are told, Arabia, Syria, Poocine a, Cha dea, India, and Gail, and came back with an admirable motto for tourists. "When you are traveling abroad look not back at your own borders"," prejudices should be checked at every port of entry. More surely he visited Egypt, where he studied with the priests and learned much astronomy and geometry, and perhaps a little nonsense." Returning to Samos and finding that the dictatorship of Polycrates interfered with his own, he ingrated to Crotona, being now over fifty years of age."

There he set up as a teacher, and his imposing presence, his varied learning, and his willingness to receive women as well as men into his school,

[&]quot;The name given by the Romans to the Greek cases in southern Italy.

soon brought him several hundred students. Two centuries before Plato ne laid down the principle of equal opportunity for both sexes, and did not merely preach it but practiced it. Neverthe ess he recognized natural differences of function, he gave his women pupils considerable training in poalosophy and literature, but he had them instructed as well in maternal and domestic arts, so that the "Pythagorean women" were honored by antiquity as the highest feminine type that Greece ever produced."

For the students in general Pytiagoras established rules that almost turned the school into a monastery. The members bound themselves by a vow of localty, both to the Master and to one another. Ancient tradition is unanamous that they practiced a communistic sharing of goods while they lived in the Pythagorean community." They were not to eat flesh, or eggs, or beans. Wine was not forlidden, but water was recommendeda dangerous prescription in lower Italy today. Possibly the probabition of flesh food was a religious taboo bound up with the bel of in the transm gration of souls men must beware of eating their ancestors. Probably there were dispensations, now and then, from the letter of these rules, English historians in particular find it incredible that the wrestler Milo. who was a Pythagorean, had become the strengest man in Greece without the help of beef" though the calf that became a bull in his arms" managed well enough on grass. The members were forbidden to kill any animal that does not injure man, or to destroy a cultivated tree. They were to dress simply and lichave modest v. "never vielding to laughter, and ver not looking stern." They were not to swear by the gods, for "every man might so to live as to be worthy of benef with nit an oath." They were not to offer victims in sacratice, but they might worship at alters that were unstained with blood. At the close of each day they were to ask themselves what wrongs they had committed, what duties they had neglected, what good they had done."

Pythagoras himself, unless he was an excellent actor, followed these rules more rigorously than any student. Certainly his mode of life won for him such respect and ambority among his pupils that no one grambled at his pedagogical dectarorship, and autos ephas specific "he himself has said it"s became their formula for a final decision in almost any field of conduct or theory. We are tild, with rouching reverence, that the Master never drank wine by day, and aved for the most part on bread and honey, with vegetables as dessert, that his robe was always white and spotless,

[·] Cf, Chap. IX, sect. IV, below.

that he was never known to eat too much, or to make love, that he never indulged in laughter, or jests, or stories, that he never chastised any one, not even a slave." I mon of Athens thought him "a juggler of solemn speech, engaged in fishing for men", "but among his most devoted followers were his wife Theano and his caughter Dinio, who had facilities for comparing his philosophy with his life. To Damo, says Diogenes Laertius, "he entrusted his Commentaries, and charged her to divulge them to no person out of the house. And she, though she might have sold his discourses for much money, would not abandon them, for she thought obedience to her father's injunctions more valuable than gold, and that, too, though she was a woman."

Instation into the Pythagorean society required, in addition to purification of the body by abstinence and self-control, a purification of the mind by scientific study. The new pupil was expected to preserve for five years the 'Pythagorean silence" (e., presumably, to accept instruction without questions or argument-before being accounted a full member, or being permitted to "see" (study under2) Pythagoras." The scholars were accordingly divided into existerics, or outer students, and esoterics, or inner members, who were entitled to the secret wisdom of the Master himself. Four subjects composed the curriculum geometry, arithmetic, astronomy, and music. Mathematics come first,* not as the practical science that the Figs prians had made it, but as an abstract theory of quantities, and an ideal logical training in which thinking would be compelled to order and elarity by the test of rigorous deduction and visible proof. Geometry now defirately received the form of axiom, theorem, and demonstration, each step in the sequence of propositions raised the student to a new platform, as the Pythagoreans put it, from which he might view more widely the secret structure of the world " Pythagoras hunself, according to Greek tradition, discovered many theorems above all, that the sam of the angles within any triangle equals two right angles, and that the square of the hypotenuse of a right-angled triangle equals the sum of the squares of the other two sides. Apollodorus teils us that when the Master discovered this theorem he sacrificed a hecatomb-a hundred animals-in thanksgiving," but this would have been scandalously un Pythagorean.

From geometry, inverting the modern order, Pythagoras passed to arith-

The Pythagoreans appear to have been the first to me the word mathematike with the meaning of mathematics, before their it had been applied to the fearting (mathemat) of anything."

metic not as a practical art of reckoning, but as the abstract theory of numbers. The school seems to have made the first classification of numbers into odd or even, prime or factorable," it formulated the theory of proportion, and through this and the "application of areas" created a geometrical algebra." Perhaps it was the study of proportion that led Pythagoras to reduce music to number. One day, as he passed a baseksmith a shop, his car was attracted by the apparently regular musical intervals of the sounds that came from the anvil - Finding that the harnmers were of different weights, he concluded that tones depend a pon numerical ratios. In one of the few experiments which we hear of in classical science, he took two strings of equal thickness and equal tension, and discovered that if one was twice as long as the other they sounded an octave when he phicked them, if one was half again the length of the other they gave a fifth (do, sol), if one was a third longer than the other they gave a fourth (do, fa)," in this way every musical interval could be it athematically calculated and expressed. Since ad hodies moving in space produce sounds, whose pirch depends upon the size and speed of the body, then each planet in its orbit about the earth (argued Pythagoras) makes a sound proportioned to its rapidity of translation, which in turn rises with its distance from the earth, and these diverse notes constitute a harmony of "music of the spheres," which we never hear because we bear it all the time."

The universe, said Pythagoras, is a living sphere, whose center is the earth. The earth too is a sphere, revolving, like the planets, from west to east. The earth, indeed the whole universe, is divided into five zones—arche, antarche, summer, winter, and equatorial. More of less of the moon is visible to us according to the degree in which that half of it which is facing the sun is also turned toward the earth. Eclipses of the moon are easied by the interposition of the earth, or some other body, between the moon and the sun." Pythagoras, says Diogenes Lacrius, "was the first person to call the earth round, and to give the name of kosmos to the world."

Having with these contributions to mathematics and astronomy done more than any other man to establish science in Europe. Pythagoras proceeded to philosophy. The very word is apparently one of his creations. He rejected the term tophia, or wisdom, as pretentious, and described his own pursuit of understanding as philosophia, the love of wisdom. In the sixth century philosopher and Pythagorean were symonyms. Whereas Thales and the other Milesians had sought the first principle of all things.

in matter. Pythagoras sought it in form. Having discovered numerically regular relations and sequences in music, and having postulated them in the planets, he made the philosopher's leap at unity by announcing that such numerically regular relations and sequences existed everywhere, and that the essential factor in everything was number. Just as Spinoza would argue. that there were two worlds one the people's world of things perceived by sense, the other the ph. osopher's world of laws and constancies perceived by reason and that only the second world was permanently real, so Pythagoras felt that the only basic and lasting aspects of anything were the numerical relationships of its pairs † Perhaps health was a proper mathematical relationship, or proportion, in the parts or elements of the body.

Perhaps even the soul was number.

At this point the mysticism in Pythagoras, nurtured in Egypt and the Near East, disported uself freely. The soul, he believed, is divided into three parts: feering, intuition, and reason. Feeling is centered in the heart, ntuation and reason to the brain. Feeling and intuition belong to animals as well as men, I reason belongs to man alone, and is manortal." After death the soul undergoes a period of purgation in Hades, then it returns to earth and enters a new body in a chain of transmigration that can be ended only by a completely virtuous life. Pythag iris aimised, or perhaps edified, his followers by teiling them that he had been in one incarnation a courtesan, in another the hero I upporties, he could remember quite distinctly his adventures at the siege of Troy, and recognized, in a temple at Argos, the armor that he had worn in that ancient are " I learning the velp of a beaten dog, he went at once to the rescue of the animal, saying that he distinguished in its cries the voice of a dead friend." We carch again a grampse of the trade in ideas that bound sixth-century Greece, Africa, and Asia when we reflect that this idea of metempss chosis was at one and the same time capturing the imagination of India, of the Orphic cult in Greece, and of a philosophical school in Italy.

We feel the hot breath of Hindu pessions mingling, in the ethics of

We should note in passing that Pethagoras o girlly strictparing Passeur denied spontencous generation, and taught that all anumais are born from other animals through "seeds."

[&]quot; In the fragment "On the In processoral of the lotesleet."

^{*} Science tries to reduce ad phenomica in countain in mathematical, verifiable statements. chemistry describes an energy of errors are away and and against area gas the elements trackematically in a periodic to an interest of the transfer of electrons, astronomy becomes celested in other of extra and process such a man constitute formula to cover the phenomena of electricity, " ago, (*), as I gra taken, some thankers of our time have tried to express pulse uply uses in a feet of district.

Pythagoras, with the clear, bright air of Plato. The purpose of life in the Pythagorean system is to gain release from reincarnation, the method is through virtue, and virtue is a harmony of the soul within uself and with God. Sometimes this harmony can be artificially induced, and the Pythagoreans, like Greek priests and doctors, used music to heal nervous disorders. More often harmony comes to the soul through wisdom, a quiet understanding of underlying truths, for such wisdom teaches a man modesty, measure, and the golden mean. The opposite way, the way of discord, excess, and san leads by inevitable fate to tragedy and punishment, justice is a "square number," and sooner or later every wrong will be "squared" with an equivalent penalty." Here in germ are the moral philosophies of Plato and Aristotle.

Pythagorean politics is Plato's philosophy realized before its conception. According to the common tradition of antiquity the school of Pythagoras was a communistic aristocracy—men and women pooling their goods, educated rogether, trained to virtue and high thinking by mathematics, music, and planosophy, and offering themselves as the guardian rulers of the state. Indeed it was Pythagoras' effort to make his society the actual government of his city that brought rum upon himse f and his followers. The initiares entered so actively into politics, and took so decadedly the aristocratic side, that the democratic or popular party of Cautona, in an ecstasy of rage, burned down the house in which the Pythagoreans were gathered, killed several of them, and drove the rest out of the city—Pythagoras himself, in one account, was captured and slain when, in his fight, he refused to tread upon a head of beans, another story lets him escape to Metapontum, where he abstained from food for forty days and—perhaps feeling that eighty years were enough—starved himself to death."

His influence was lasting, even today he is a potent name. His society survived for three centuries in scattered groups throughout Greece, producing secontaits like Philolaus of Thebes and statesmen like Archytas, dictator of Taras and friend of Plato. Wordsworth, in his most famous ode, was an unconscious Pythagorean. Plato hunself was enthralled by the vague figure of Pythagoreas. At every turn he takes from him. in his scorn of democracy, his yearning for a communistic aristocracy of philosophermilers, his conception of virtue as harmony, his theories of the nature and destiny of the soul, his love of geometry, and his addiction to the mysticism of number. All in all, Pythagoras was the founder, so far as we know them, of both science and philosophy in Europe. an achievement sufficient for any

man.

III. KENOPHANES OF ELEA

West of Crotona lies the site of ancient Locit. The colony was founded, says Aristotle, by runaway slaves, adulterers, and thieves from Lociis in mainland Greece, but perhaps Aristotle had an Old World disdain for the New. Suffering disorder from the defects of their qualities, the colonists applied to the oracle at Delphi for advice, and were told to get thenselves laws. Possibly Zaleucus had instructed the oracle, for about 664 he gave to Locif ordinances which, as he said, Athena had dietated to him in a dream. This was the first written code of laws in the history of Greece, though not the first to be hunded down by the gods. The Locitans liked it so well that they required any man who wished to propose a new law to speak with a minimum of public inconvenience.

Rounding the toe of Italy northward, the traveler reaches flourishing Reggio, founded by the Messenans about 7 to under the name of Rhegion, and known to the Romans as Rhegium. Supping through the Straits of Messana—probably the "Seylia and Charybdis" of the Odymy—one comes to where Laus stood, and then to ancient Hyele, the Roman Velia, known to history as Elea because Plato wrote it so, and because only its philosophers are remembered. There Xenophanes of Colophon came about 5 to, and founded the Eleane School.

He was a personality as unique as his favorite foe, Pythagoras. A man of damitless energy and reckless initiative, he wandered for sixty-seven years, he tells us," "up and down the land of Hellas," making observations and enemies everywhere. He wrote and recited philosophical poems, denounced Homer for his imploits ribaldry, laughed at superstition, found a port in Flea, and obstinately completed a century before he died." Homer and Hesiod, sang Xenophanes, "have ascribed to the gods all deeds that are a shame and a disgrace among men thieving, adultery, and fraud." But he himself was not a pillar of orthodoxy.

There never was, nor ever will be, any man who knows with certainty the things about the gods, ... Morials fancy that gods are born, and wear clothes, and have voice and form like themselves. Yer if owen and hous had hands, and could point and fashion images as men do, they would make the pictures and images of their gods in their own likeness; horses would make them like horses, ozen like oxen. Ethiopians make their gods black and snub-nosed. Thracians give

The Greeks were so fond of this fable that they told it also of the laws of Catana and Thurr. The plan was especially pleasing to Michel do Montaigne, and may not have outlived its utility.

theirs blue eyes and red hair. There is one god, supreme among gods and men, resembling murtals neither in form not in mind. The whole of him sees, the whole of him thinks, the whole of him hears. Without toil he rules all things by the power of his mind."

This god, says Diogenes Lacrius," was identified by Xenophanes with the universe. All things, even men, taught the philosopher, are derived from earth and water by natural laws." Water once covered nearly all the earth, for marine fossils are found far intend and on mountaintups, and at some future time water will probably cover the whole earth again." Nevertheless all change in history, and all separateness in things, are superficial phenomena, beneath the flux and variety of forms is an unchanging unity, which is the innermost reality of God.

From this starting point Xenophanes' disciple, Parmenides of Elea, proceeded to that idealistic philosophy which was in turn to mold the the ight of Plato and Platonists throughout antiquity, and of Europe even to our day.

IV. FROM ITALY TO SPAIN

Twenty miles north of Flea lay the city of Poseudonia-the Roman Paestum -founded by colonists from Sybaris as the main Italian terminus of Milesian trade. Loday one reaches it by a pleasant ride from Naples through Salerno. Suddenly, by the roadside, and a deserted field, three temples appear, majestic even in their desolution. For the river, by blocking its own mouth here with centuries of sile, has long since turned this once healthy valey into a swamp, and even the reckless race that tills the slopes of Vesus us has fled in despair from these malarial plans. Fragments of the ancient walls remain. but better preserved, as if by solitude, are the shrines that the Greeks raised. in modest limestone but almost perfect form, to the gods of the corn and the sea. The oldest of the buildings, lately called the "Basslica," was more likely a temple to Poseulon, men who owed their living to the fruit and commerce of the Mediterranean dedicated it to him towards the middle of this amazing auth century a.c., which created great art, literature, and philosophy from Italy to Shantung. The inner as well as the outer commades remain, and attest the columnar passion of the Greeks. The following generation built a smaller temple, also Dorico ly simple and strong, we call it the 'temple of Ceres," but we do not know what god smiffed the savor of its offerings. A yet later generation, just before or after the Persian War," erected the greatest and best-proportioned of the three temples, probably also to Poscidon-fitting y enough, since from ets porticoes one gazes into the inviting face of the treacherous sea. Again almost everything is columns a powerful and complete Doric penstyle without, and, within, a two-stoned colonnade that once upheld a roof. Here is one of the most impressive sights in Italy, it seems incredible that this temple, better preserved than anything built by the Romans, was the work of Greeks almost five centuries before Christ. We can imagine something of the beauty and vitality of a community that had both the resources and the raste to raise such centers for its religious life, and then we can con ure up less inadequately the splendor of richer and vaster cities like Miletus, Samos, Ephesus, Crotona, Sybaris, and Syracuse.

Slightly north of where Naples stands today adventurers from Chalcis, Eretria, Lubocan Cyme, and Grata founded, about 750, the great port of Cumae, oldest of Greek towns in the West. Taking the products of eastern Greece and selling them in central Italy, Cumae rapidly acquired wealth, colonized and controlled Rhegium, obtained command of the Straits of Messina, and excluded from them, or subjected to heavy tolis, the vessels of cities not leagued with it in trade." Spreading southward, the Cumaeans founded Dicaearchia—which became the Roman port of Putcola (Pozzuoa)—and Neapolis, or New City, our Naples. From these colonies Greek ideas as well as goods passed into the crude young city of Rome, and northward into Friend. At Camae the Romans picked up several Greek gods—Apollo and Heracles especially—and bought for more than they were worth the scrods in which the Cumaean Sibyl—the aged priestess of Apolio—had foretold the future of Rome.

Near the beginning of the aith century the Phocaeans of Ionia landed on the southern shore of France, founded Massatia (Massatia), and carried Greek products up the Rhone and its branches as far as Arles and Nimes. They made friends and wives of the natives, introduced the olive and the vine as gifts to France, and so familiarized southern Good with Greek civilization that Rome found it easy to spread its kindred culture there in Caesar's time. Ranging along the coast to the east, the Phocaeans established Antipolis (Antibes), Nicaea (Nice), and Monoecus (Minaeo). Westward they ventured into Spain and built the towns of Rhodae (Rosas), Emporium (Ampurias), Hemeroscopium, and Maenaca (near Alalaga). The Greeks in Spain flourished for a while by exploiting the silver names of Tartessus, but in 535 the Carthaginans and Etruscans combined their forces to destroy the Phocaean fleet, and from that time Greek power in the western Mediterranean waned.

V. SICILY

We have left not quite to the last the richest of all the regions colonized by the Greeks. To Sicily nature had given what she had withheld from continental Greece—an apparently inexhaustible soil fertilized by rain and lava, and producing so much wheat and corn that Siedy was thought to be if nor the birthplace at least a favorite haunt of Demeter herself. Here were orchards, vinevards, ohive groves, heavy with fruit, honey as succulent as Hymettus', and flowers thooming in their turn from the beginning to the end of the year. Grassy plains pastured sheep and cattle, endless timber grew in the hills, and the fish in the surrounding waters reproduced faster than Siedy could ear them.

A neolatic culture had flourished here in the third millennium before Christ, a bronze culture in the second, even in Minoan days trade had bound the island with Crete and Creece " Towards the end of the second millenmain three waves of managration broke upon Suchan shares, the Sicans came from Spain, the Flyin Trom Asia Minor, the Sicels from Italy * About 800 the Phoenicians established themselves at Motva and Panorinus (Palermo) in the west. From 734 on* the Greeks poured in, and in quick succession founded Naxos, Syracuse, Leontini, Messana (Messina), Catana, Gela, Hinnera, Selmus, and Aeragas. In all these cases the natives were driven from the coast by force of arms. Most of them retired to tal the mountainous interior, some became slaves to the invaders, so many others intermarried with the conquerors that Greek blood, character, and morals in Stelly took on a perceptible native tint of passion and sensuality." The Hellenes never quite conquered the island, the Phoenicians and Carthaginsans remained predominant on the west coast, and for five hundred years periodic war marked the struggle of Greek and Senute, I urope and Africa, for the possession of Sucily. After thirteen centuries of domainment by Rome that contest would be resumed, in the Middle Ages, between Norman and Saracen.

Catana was distinguished for its laws, the Lipari Islands for their communism, Himera for its poet, Segesta, Schmis, and Acragas for their temples, Syracuse for its power and wealth. The laws that Charondas gave to Catana, a full generation before Solon, became a model for many cities in Siciss and Italy, and served to create public order and sexual metants in communities improtected by ancient mores and sacred precedents. A man inight divorce his wife, or a wife her husband, said Charondas, but then be or she must not marry anyone younger than the divorced mate. Charondas, according to a typically Greek tale, forbade the citizens to enter the assembly while armed. One day, however, he himself came to the public meeting forgetfully wearing his sword. When a voter reproached him for breaking his own law he answered, "I will tother confirm it," and slew himself."

^{*} Or perhaps a generation later, of note to p. 160 above.

If we wish to visualize the difficulties of life in colonies carved out by violent conquest we need only contemplate the currons communism of the Lipaniee, the Glorious-Islands, which he to the north of eastern Sicily. Here, about 580, some adventurers from Chidus organized a pirate's paradise. Preving upon the commerce about the Straits, they brought the booty to their island lines and shared it with exemplary equality. The land was owned by the community, a part of the population was assigned to train, and the products were distributed in like shares to all the citizens. In time, however, individualism reasserted itself, the land was divided into plots individually owned, and life resumed the uneven tenor of its competitive way.

On the northern coast of Sicily lay Himera, destined to be the Plataca of the West, There Stesichorus, "Maker of Choruses," at a time when the Greeks were tiping of epics, recast into the form of choral lyrics the legends of the race, and gave even to Helen and Achilles the passing novelty of "modern dress." As if to landge the gap between the dving epic and the future novel, Steachords composed love stories in verse, in one of these a pure and field lass dies of unrequited love, in the style of Provencial madrigals or Victorian fiction. At the same time he opened a pathway for Theorems by writing a pastoral poem on the death of the shepherd Daphins, whose love for Chiloe was to be the main hasiness of the Greek pove, in the Reman age. Stesichorus had his own romance, and with no ess a lady than Helen herself. Having lost his sight, he attributed this calamity to his having handed down the tale of Helen's infidelity, to atone to her (for she was now a goddess, he cor posed a 'pulmode, or second song, assuring the world that Helen had been kalnaped by force, had never yielded to Paris, had never gone to Troy, hat had waited intact in Lgupt until Menelous came to rescue her. In his old age the poet warned Himser against giving dictatorial power to Phalaris of Acragas. Being unheeded, he moved to Catana, where his monumental tomb was one of the sights of Roman Sicily.

West of Himera has Segesta, of which nothing remains but a peristyle of unfinished Doric columns weirdly rising amid surrounding weeds. To find Sicilian architecture at its best we must cross the is and southward to the once great cities of Selmas and Acrayas. During its tragic tenure of life from its establishment in 601 to its destruction by Carthaginians in 400, Selmas raised to the silent gods seven Doric temples, immense in size but of imperfect workmanship, covered with painted paster and decorated with crude reaefs. The demon of earthquake destroyed these temples at a date unknown, and little survives of them but broken columns and capitals sprawling on the ground.

^{*} He case his warming into the form of a fabre. A horse annoyed by the invasion of a stag into its pastitude asked a man to help a punish the possible. The man procused to no this if the horse would allow him to bester le it averto in hand. The horse agreed, the stag was frightened away, and the horse found that he was now a slave to the man.

Acragas, the Roman Agrigentum, was in the sixth century the largest and richest city in Sicily. We picture it rising from its busy wharves through a noisy market place to the homes on the slope of the hill, and the stately acropolis whose shrines almost litted their worshipers to the sky. Here, as in most of the Greek colonies, the landowning aristocras visited power to a dictatorship representing chiefly the middle class. In 570 Physics seized the government, and secured immortality by roasting his encoures in a brazen bull, he was particularly pleased by a contrivance that made the agonized eries of his victima sound through a mechanism of pipes like the believing of the animal." Nevertheless it was to him and a later dictator. Theron, that the city owed the political order and stability that permitted its economic development. The merchants of Acragas, like those of Schnus, Crotona, and Sybaris, became the American radionaires of their time, upon whom the æsser phitocrats of older Greece looked with secret entry and compensatory so irn, the new wired, said the old, was interested in size and show, but had no toste or artistry. The remple of Zeas at Acragas uncorsto nably sought size, for Polyb as describes it as "second to none in Greece in dimensions and design"," we cannot directly judge its beauty, for wars and earthenakes destroyed it. A generation later, in the age of Pericles, Acragas raised more modest structures. One of them, the temple of Concord, survives almost completely, and of the temple of Hera there remains an impressive colouriale, enough in either case to show that Greek raste was not confined to Athens, and that even the commercial west had learned that "size is not development "-In Acragas the great Empedocles would be born, and perhaps it was there, and not in Fina's crater, that he would die.

Syracuse began as it is today -a viliage huddled on the promontory of Ortygia. As far back as the eighth century Corinth had sent colonists, ittiled with righteousness and superior weapons, to seize the little peninsula, which was then perhaps an island. They built or widened the connection with the mainland of Sicily, and drove most of the Sicis into the interior. They multiplied with alithe rapidity of a vigorous people on a resource-full soil, in time their city became the largest in Greece, with a circumference of fourteen miles and a population of half a milion souls. An aristocracy of landholders was overthrown about 49s by a revolt of the unfranchised plebs in alliance with the enslaved Sicels. The new democracy, if we may believe Aristotle," proved incapable of establishing an orderly society, and in 485 Gelon of Gela, by a program of enlightened treathery, set up a dictatorship. Like many of his kind he was as able as he was unscrupolous. Scorning all moral codes and political restraints, he transformed Ortygia into an impregnable fortress for his government, conquered Naxos, Leontini, and

Messana, and taxed all eastern Sicily to make Syracuse the most beautiful of Greek capitals. "In this way," says Herodotus, sadky, "Gelon became a

great king."

He redeemed himself, and became the idolized Napoleon of Sicily when, as Xerxes' fleet moved upon Athens, the Carthaginians sent an armada only less numerous than the Persian to wrest the island paradise from the Greeks. The fate of Sicily was joined with that of Greece when in the same month a tradition said on the same day—Gelon faced Hamilear at Himera, and Themistocles confronted Xerxes at Salamis.

VI. THE GREEKS IN AFRICA

The Carthagnians had reason to be disturbed, for even on the north coast of Africa the Greeks had establisted cities and were capturing trade. As early as 630 the Dorians of Thera had sent a numerous colony to Cyrene, includy between Carthage and I gypt. There, on the desert's edge, they found good soil, with roin so abandant that the natives spoke of the site as the place where there was a hole in the sky. The Greeks used part of the land for pasturage, and exported wool and hidrs, they grew from the silphium plant a spice that all Greece was eager to buy, they sold Greek products to Africa, and developed their own handicrafts to such a point that Gyrenac vases ranked among the best. The city used its wealth intelligently, and adorned itself with great gardens, temples, statuary, and gyrinasii out. Here the first famous epicurean photosopher, Aristappus, was born, and here, after much wandering, he returned to found the Cyrenaic School.

Within Egypt itself, normally hostile to any foreign settlement, the Greeks gained a foothold, at last an empire. About 650 the Misesians opened a "factory," or trading post, at Naucrata on the Canopie branch of the Nide. Pharaoh Psantik I tolerated them because they made good mercenaries, while their commerce provided rich prey for his collectors of customs revenues." Ahmose II gave them a large measure of self-government. Naucratis became almost an industrial city, with manufactures of portery, terra cotta, and faience, still more it became an emportum of trade, bringing in Greek oil and wine, and sending out Egyptian wheat, linen, and wool, Atrican ivory, frankincense, and gold. Gradually, amid these exchanges, Egyptian love and techniques in religion,

[&]quot;"Gelon of Syracuse" says Lucian, "had disagreeable breath but did not find it out himself for a long time, no one venturing to mention such a circumstance to a tyrait. At last a foreign without had a connect in with out dated to tell but, whereupon he went to him wafe and scolded her for never having, with all her opportunities of knowing, warned him of it, she put in the defense that as she had never been fait if at or at cause quarters with any other mun she had say posed all men were like that." He was disastined.

architecture, sculpture, and science flowed into Greece, while in return Greek words and ways entered Lgypt, and paved the way for Greek domination in the Alexandrian age.

If in imagination we take a merchant vessel from Naucratis to Athens, our tour of the Greek world will be complete. It was necessary that we should make this long circuit in order that we might see and feel the extent and variety of Helleric civilization. Aristotle described the constitutional history of 158 Greek city states, but there were a thousand more. Fach contributed in commerce, industry, and thought to what we mean by Greece. In the colonies, rather than on the mainland, were born Greek poetry and prose, mathematics and metaphysics, oratory and history. Without them, and the thousand absorbing tentacles which they stretched out into the old world, Greek civilization, the most precious product in history, might never have been. Through them the cultures of Egypt and the Orient passed into Greece, and Greek culture spread slowly into Asia, Africa, and Europe.

CHAPTER VIII

The Gods of Greece

I. THE SOURCES OF POLYTHEISM

WHEN we look for unifying elements in the civilization of these scattered cities we find essentially five a common language, with local dialects, a common intellectual life, in which only major figures in literature, philosophy, and science are known for beyond their pelit cal frontiers, a common passion for athletics, finding outlet in municipal and interstate games, a love of beauty locally expressed in forms of art common to all the Greek communities, and a partly common religious ritial and belief

Reaga is divided the cutes as much as it united them. Under the polite and general worship of the remote Olympians lay the intenser cults of local denies and powers who served no vassalage to Zeus. Tribal and political separatism nourished polythesin, and made monothesim impossible. In the early days every family had its own god, to him the divine fire burned unextinguished at the hearth, and to him offerings of food and wine were made before every meal. This holy communion, or sharing of food with the god, was the basic and primary act of rengion in the home. Birth, marriage, and death were sanctified into sacraments by ancient ritual before the sacred fire, and in this way religion suffused a mystic poetry and a stabilizing solemmity over the elemental events of human life. In ake manner the gene, the plintry, the tribe, and the city had each its special god. Athens worshiped Athena, Elcusis Demeter, Samos Hera, Ephesus Artenus, Poseidonia Posendon. The center and samuel of the city was the shrine of the city god. participation in the worship of the god was the sign, the privilege, and the requisite of citizenship. When the city marched out to war it carried the form and emblem of its god in the forefront of the troops, and no unportant step was taken without consulting lum through divination. In return he fought for the city, and sometimes seemed to appear at the head or above the spears of the soldiers, victory was the conquest not only of a city by a city but of a god by a god. The city, like the family or the tribe, kept always burning, at a public altar in the prytaneum or town hall, a sacred fire symbolizing the mystically potent and persistent life of the city's founders

and heroes; and periodically the entizens partook of a common meal before this fire. Just as in the family the father was also the priest, so in the Greek city the chief magistrate or archon was the high priest of the state teligion, and all his powers and actions were sanctified by the god. By this conscription of the supernatural, man was tained from a hunter into a citizen.

Liberated by local independence, the religious imagination of Greece produced a luxurant mythology and a populous pantheon. Every object or force of earth or sky, every blessing and every terror, every qualityeven the vices-of mankind was personified as a deity, usually in human form; no other religion has ever been so anthropomorphic as the Greek Every craft, profession, and art had its divinity, or, as we should say, its patron saint; and in addition there were demons, harpies, furies, fairies, gorgons, sirens, nymphs, almost as numerous as the mortals of the earth. The old question-is religion created by priests: -is here settled, it is incredible that any conspiracy of prinative theologians should have begotten such a plethora of gods. It must have been a boon to have so many deities, 50 many fascinating legends, sacred shrines, and solemn or joyous festivals. Polytheism is as natural as polygamy, and survives as long, suring well all the contradictory currents of the world. Even today, in Mediterranean Christianity, it is not God who is worshiped, so much as the saints; it is polytheism that sheds over the simple life the inspiring poetry of consolatory myth, and gives to the humble soul the aid and comfort that it would not venture to expect from a Supreme Being unapproachably awful and remoté.

Each of the gods had a mythos, or story, attached to him, which accounted for his place in the city's life, or for the ritual that honored him. These myths, rising spontaneously out of the lore of the place and the people, or out of the inventions and embellishments of rhapsodists, became at once the faith and the philosophy, the literature and the history of the early Greek, from them came the subjects that adorned Greek vases, and suggested to artists countless paintings, statues, and reliefs. Despite the achievements of philosophy and the attempts of a few to preach a monotheistic creed, the people continued to the end of Hellenic civilization to create myths, and even gods. Men like Heracleitus might allegorize the myths, or like Plato adapt them, or like Xenophanes denounce them, but when Pausamas toured Greece five centuries after Plato he found still alive among the people the legends that had warmed the heart of the Homeric age. The mythopoetic, theopoetic process is natural, and goes on today as

always, there is a birth rate as well as a death rate of the gods; deity is like energy, and its quantity remains, through all vicissitudes of form, approximately unchanged from generation to generation.

II. AN INVENTORY OF THE GODS

1. The Lesser Deities

We shall force some order and clarity upon this swarm of gods if we artificially divide them into seven groups: sky-gods, earth-gods, fertdity-gods, animal gods, subterranean gods, and estor or hero gods, and Olympians. 'The names of all of them,' as Hesiod said, "it were troublesome for a mortal man to tell."

- (1) Originally, so far as we can make out, the great god of the invading Greeks, as of the Vedic Flindas, was the noble and various sky uself, it was probably the sky-god who with progressing anthropomorphism became Uranus, or Heaven, and then the "cloud-compelling," rain-making, thunder-herding Zeus." In a land surfected with sunshine and hungry for rain, the sun, Helios, was only a minor deny. Agamemnon prayed to him, and the Spartans sucrified horses to him to draw his flaming chariot through the skies," the Rhodians, in Hellenistic days, honored Helios as their chief divinity, flung annually into the sea four horses and a chariot for his use, and dedicated to him the famious Colossus; and Anaxagoras almost lost his life, even in Periclean Athens, for saying that the san was not a god, but only a ball of fire. Generally, however, there was little worship of the sun in classic Greece, still less of the moon (Selene), least of all, of the planets or the stars.
- (2) The earth, not the heavens, was the home of most Greek gods. And first the earth itself was the goddess Ge or Gaea, patient and bountiful mother, pregnant through the embrace of raming Uranus, the sky. A thousand lesser demes dwelt on the earth, in its waters, or in its surrounding air: spirits of sacred trees, especially the oak, Nereals, Nacads, Oceanids, in rivers, lakes, or the sea, gods gushing forth as wells or springs, or flowing as stately streams like the Macander or the Spercheus; gods of the wind, like Boreas, Zephyr, Notus, and Earus, with their master Acolus, or the great god Pan, the horned, cloven-footed, sensual, smiling Nourisher, god of shepherds and flocks, of woods and the wild life lurking in them, he whose magic flute could be heard in every brook and dell, whose startling cry brought panie to any careless herd, and whose attendants were

^{*} Phaethon (the Brahant), son of Flelius, begged for the thrill of driving the sun's chartot scross the heavens. He drove it reckjessly, nearly set the world on fire, was struck by lightning, and fell into the sea. Perhaps the Greeks meant this tale, like that of Icarus, to serve as a section to youth.

merry founs and satyrs, and those old satyrs called silem, half goat and half Socrates. Everywhere in nature there were gods, the air was so crowded with spirits of good or evil that said an unknown poet, 'There is not one empty chark into which you could push the spike of a blade of corn."

(3) The most mysterious and potent force in nature being reproduction, it was natural that the Greeks, ake other ancient peoples, should worship the principle and emblems of fertility in man and woman along with their worship of fertility in the soil. The phallus, as symbol of reproduction, appears in the rites of Demeter, Dionysus, Flerines, even of the Chaste Artemis. In classical sculpture and painting this coolden recurs with scandalous frequency. Even the Great Dionysia, the religious festival at which the Greek drama was played, was introduced by phasic processions, to which Athenian colonies prously sent phasis. Doubtless such festivals lent themselves to much lusty linnor, as one may judge from Aristophanes, but all in all the humor was healthy, and perhaps served the purpose of stimulating Eros and promoting the birth rate.

The more vulgar side of this fertility cult was expressed in the Hellenistic and Roman periods by the worship of Priapus, born of an amour between Dionysus and Aphrodite, and popular with vase painters and the mural artists of Pompen. A lovelier variation of the reproductive theme was the veneration of goddesses representing motherhood. Arcadia, Argos, Ficusis, Athens, Ephesus, and other localities gave their greatest devotion to feminine deities, often nusbandless, such goddesses presumably reflect a prinutive matrilinear age before the coming of marriage," the enthronement of Zous as Father God over all gods represents the victory of the patriarchal principle. The probable priority of women in agriculture may have helped to give form to the greatest of these mother de ties, Demeter, goddess of the corn or the tilled earth. One of the most beautiful of Greek myths, skulfully narrated in the Hymn to Demeter once attributed to Homer, tells how Demeter's daughter Persephone, while gathering flowers, was kidnaped by Pluto, god of the underworld, and snatched down to Hades. The sorrowing mother searched for her every where, found her, and persunded Pluto to let Persephone live on the earth nine months in every year a pretty symbol for the annual death and rebuth of the soil. Because the people of Pleusis befriended the disguised Demeter as she 'sat by the way, grieved in her inmost heart," she taught them and Attiea the secret of agriculture, and sent Triptolemus, son of Fleusis' king, to spread the art among mankind. Essentially it was the same myth as that of Isis and Osiris in Egypt, Tanimuz and Islatar in Babylunia, Astarte and Adonis in Sveia, Cybele and Attis in Phrygia. The cut of motherhood survived through classical tunes to take new afe in the worship of Mary the Mother of God.

^{*} Note the absence of mother goddesses in such strongly patriarchal secretics as Judea, falan, and Protestant Christendom.

- (4) Certain animals, in early Greece, were honored as semidenties. Greek teligion was too anthropomorphic, in its sculptural age, to admit the divine menagenes that we find in Egypt and India, but a vestige of a less classical past appears in the frequent association of an animal with a god. The bull was sacred because of its strength and potency; it was often an associate, disguise, or symbol of Zens and Dienysus, and perhaps preceded them as a god * In like manner the "cow-eyed Hera" may once have been a sacred cow. The pig too was holy because of its fert lity, it was associated with the gentle Demeter, at one of her festivals, the Thesmophoria, the sacrifice was ostensibly of a pig, possibly to it.4 At the feast of the Diasa the sacrifice was nominary to Zens, really to a subterranean snake that was now digmited with his name." Whether the snake was holy as supposedly deathless, or as a symbol of reproductive power, we find it passing down as a deaty from the snake-goddess of Crete into fifth-century Athens, in the temple of Athena, on the Acropolis, a sacred serpent dwelt to whom, each month, a honey cake was offered in appeasing sacrifice. In Greek art a snake is often seen about the figures of Hermes, Apollo, and Asclepius," under the shield of Pheidias' Athene Parthenos was wreathed a mighty scrpent; the Farnese Athena is half covered with makes." The snake was often used as a symbol or form of the guard an desty of temple or home," perhaps because it prowled about tumbs it was believed to be the soul of the deal." The Pythan games are thought to have been celebrated, at first, in honor of the dead python of Delphi.
- (5) The most terrible of the gods were under the earth. In caves and clefts and ake nether chambers dwelt those chthonian or earthly deines whom the Greeks worshiped not by day with loving adoration, but at night with apotropase rites of riddance and fear. These vague nonhuman powers were the real autuchthonar of Greece, older than the Heltenes, older perhaps than the Mycenaegas, who probably transmitted them to Greece; if we could trace them to their origin we might find that they were the vengeful spirits of the animals that had been driven into the forests or under the soil by the advance and multiplication of men. The greatest of these sul terranean deities was called Zeus Chinomos, hat Zem here meant merely god." Or he was called Zeus Meilichios, the Benevolent God, I at here again the words were deceptive and propinatory, for this god was a fearful snake.- Brother to Zeus was Hades, lord of the underworld that took his name. To placate him the Greeks called him Pluto, the giver of abundance, for he had it in his power to bless or blight the roots of all things that grew in the soil * Still more ghostly and terrible was Hecate, an evil spirit that came up from the lower world and brought misfortune, through her evil

Plurus, god of wealth, was a form of Piuro. In early Greece wealth rook chiefly the form of coin either growing in the earth or stored in the earth in 1215, its either case under Pluto's procedum.

eye, to all whom she visited. The less learned Greeks sacrificed pupples to keep her away."

(6) Before the classical age the dead were regarded as spirits capable of good and evil to men, and were appeased with offerings and prayer. They were not quite gods, but the printrive Greek family, like the Chinese, honored as dead beyond any deaty." In classical Greece these vague ghosts were more dreaded than loved, and were proprieted with aversion arouls, as in the festival of Anthesteria. The worship of heroes was an extension of the cult of the dead. Great, noble, or beautiful men or women could be rased by the gods to immortal life and become minor deities. So the people of Olympia offered annual sacrifice to Hippodameia, Cassandra was worshiped at Lacoman Leuctra, Helen at Sparta, Oedipus at Colonus. Or a god might descend into the body of a mortal, and transform han with divinity, or the god might cohalit with a mortal and beget a hero-god, as Zeus with Alemena begot Heraeles. Many cities, groups, even professions, traced their origin to some god-horn hero, so the physicians of Greece looked back to Asciepius. The god was once a dead man, ancestor, or hero, the temple was originally a tomb, the church is still in most lands a shelter for relies of the sacred dead. In general the Greeks made less distinction between men and gods than we do, many of their gods were as human, except in birth, as our saints, and as close to their worsh, pers, and though they were called Immortals, some of them, like Dionysus, could die.

2. The Olympians

All these were the less famous, though not necessarily the less honored, gods of Greece. How is it that we hear so little of them in Homer, and so much of the Olympians? Probably because the gods of Olympus entered with the Achaeans and Domans, overlaid the Mycenaean and chrhoman derties, and conquered them as their worshipers were conquered. We see the change in action at Dodona and Delphi, where the older god of the earth, Gaea, was displaced in the one case by Zens, in the other by Apollo. The defeated gods were not wiped out; they remained, so to speak, as subject deities, hiding bitterly underground, but still revered by the common people, while the victorious Olympians received on their mountainton the worship of the anstocracy, hence Homer, who composed for the elite, says almost nothing of the nether gods. Homer, Hesiod, and the sculptors helped the political ascendancy of the conquerors to spread the cult of the Olympians. Sometimes the minor gods were combined or absorbed into the greater figures, or became their attendants or satellites, very much as minor states were now and then attached or subjected to greater ones; so the satyrs

and sileni were given to Dionysus, the sea nymphs to Poseidon, the mountain and forest sprites to Artemis. The more savage rites and myths faded out, the chaos of a demon-haunted earth yielded to a semiorderly divine government that teffected the growing political stability of the Greek world.

At the head of this new regime was the majestic and patriarchal Zeus. He was not first in time; Utanus and Cronus, as we have seen, preceded him; but they and the Titans, like Lucifer's hosts, were overthrown. Zeus and his brothers east lots to divide the world amongst them; Zeus won the sky, Poseidon the sea, Hades the howels of the earth. There is no creation in this mythology; the world existed before the gods, and the gods do not make man out of the sime but beget him by union among themselves, or with their mortal offspring; God is literally the Father in the theology of the Greeks. Nor are the Olympians omnipotent or omniscient; each limits the other, or even opposes the other; any one of them, especially Zeus, can be deceived. Nevertheless they acknowledge his suzerainry, and crowd his court like the retainers of a feudal lord, and though he consults them on occasion, and now and then yields his preference to theirs," he frequently puts them in their place." He begins as a sky-and-mountain-god, provider of the indispensable ram t Lake Yahweh he is, among his earlier forms, a god of war, he debates with himself whether to end the siege of Troy or "make the war more bloody," and decides for the latter course." Gradually he becomes the calm and mighty ruler of gods and men, bestriding Olympus in bearded dignity. He is the head and source of the moral order of the world, he punishes filial neglect, guards family property, sanctions oaths, pursues perjurers, and protects boundaries, hearths, suppliants, and guests, At last he is the serene dispenser of judgment whom Pheidias carves for Olympia.

His one failing is the youthful readiness with which he falls in love. Not having created women, he admires them as wonderful beings, bearing even to the gods the mestimable gifts of beauty and tenderness; and he finds it beyond him to resist them. Hesiod draws up a long list of the divine amours and their glorious offspring." His first mate is Dione, but he leaves her in

The struggle between Zeus and has aides against the Titans became for the Greeks a symbol of the conquest of barbarium and brute strength by civilization and reason, and offered a frequent subject for sit.

^{*}The name Zeus is probably along to the Latin dier, our day, and may come from an Indo-European root di, meaning to shore. Jupiter is Zeu-pater Zeus the father, hence the gentive Dior. Today the haunts and peaks more sucred to Zeus are named, or dedicated to, St. Fliss, the rum-giving saint of the Greek Church."

Epirus when he moves to Thessalian Olympus. There his first wife is Meris, goddess of measure, mind, wisdom. Gossip says that her children will dethrone him, therefore he swallows her, absorbs her qualities, and becomes himself the god of wisdom. Mens is delivered of Athena within him, and his head has to be cut open that Athena may be born. Lonely for lovelness, he takes Themas for his mate, and begets by her the twelve Hours, then he takes Eurynome, and begets the three Graces, then Mnemosyne, and engenders the nine Muses, then Leto, and fathers Apollo and Artemis, then his sister Demeter, and has Persephone, finally, having sown his wild oats, he weds his sister Hera, makes her Queen of Olympus, and receives from her Hebe, Ares, Hephaestus, and Edeithyra. But he does not get along well with Hera. She is as old a god as he, and more honored in many states, she is the patron deny of matrimony and motherhood, protectress of the marmage rie, she is prim and grave and virtuous, and frowns upon his escapades; moreover, she is an excellent shrew. He thinks of beating her," but finds it easier to console himself with new amours. His first mortal mate is Niobe, his last is Alemena, who is descended from Niobe in the sixteenth generation. He loves also, with Greek impartiality, the handsome Ganymede, and snatches him up to be his cupbearer on Olympus.

It was natural that so fertile a father should have some distinguished children. When Athena was born in full development and armament from the head of Zeus she provided the attenuire of the world with one of its most hackneved similes. She was an appropriate goddess for Athens, consoling its mails with her proud virginity, inspiring its men with martial ardor, and symbolizing for Pericles the wisdom that belonged to her as the daughter of Mens and Zeus. When Pallas the Titan tried to make love to her she slew him, and added his name to hers as a warning to other suitors. To her Athens dedicated its loveliest temple and its most splendid festival.

More widely worshiped than Athena was her comely brother Apollo, bright deaty of the sun, patron of music, poetry, and art, founder of entes, maker of laws, god of healing and father of Asclepius, "far-darting" archer and god of war, successor to Gaea and Phoebet at Delphi as the holiest oracle of Greece. As god of the growing crops he received tithe offerings at harvest time, and in return he radiated his golden warmth and light from Delos and Delphi to enrich the soil. Everywhere he was associated with order, measure, and beauty, and whereas in other cults there were strange

^{*}It should be added in praces to the dead, that these adventures were probably invented by the poets, or by tribes annous to trace their intege to the greatest of the gods.

†From Phoche he took the name Phochus, "inspired."

elements of fear and superstition, in the worship of Apollo, and in his great festivals at Delphi and Delos, the dominant note was the rejoicing of a brilliant people in a god of health and wisdom, reason and song.

Happy, too, was his sister Artems (Dana), maiden goddess of the chase, so absorbed in the ways of animals and the pleasures of the woods that she had no time for the love of men. She was the goddess of wild nature, of meadows, torests, hills, and the sacred bough. As Apollo was the ideas of Greek youth, so Artemis was the model of Greek girihood strong, athletic, graceful, chaste, and ver again she was the patroness of women in childbirth, who prayed to her to ease their pains. At I phesus she kept her Asiatic character as a goddess of motherhood and fertility. In this way the ideas of virgin and mother became confused in her worship, and the Christian Church found it wise, in the fifth century of our era, to attach the temtiants of this cult to Mary, and to transform the mid-August harvest festival of Artems into the feast of the Assumption." In such ways the old is preserved in the new, and everything changes except the essence. History, like life, must be continuous or die, character and institutions may be altered, but slowly, a serious interruption of their development throws them into national amnesia and insanity

A thoroughly human figure in this pantheon was the master craftsman of Olympus, that lame Hephaestus whom the Romans knew as Vulcan. Ar first he seems a pitiful and ridiculous figure, this insulted and injured Quasimodo of the skies, but in the end our sympathies are with him rather than with the clever and unscrupulous gods who maltreat him. Perhaps in early days, before he became so human, he had been the leaping spirit of the fire and the forge. In the Homeric theogony he is the son of Zeus and Hera; but other myths assure us that Hera, jealous of Zeus's unaided delivery of Athena, gave birth to Hephaestus without the aid of any male. Seeing him to be ugly and weak, she cast han down from Olympus. He found his way back, and built for the gods the many mansions in which they dwelt Though his mother had dealt so cruelly with him, he showed her all kindness and respect, and defended her so realously in one of her quarrels with Zeus that the great Olympian seized him by the leg and hurled him down to the earth. A whole day Hephaestus fell, at last he landed on the island of Lemnos, and hart his ankle, certainly thereafter (before that, says Homer). he was painfully lame. Again he found his way back to Olympus. In his resounding workshops he built a mighty anvil with twenty hoge bellows, made the shield and armor of Achalles, statues that moved of their own accord, and other very wonderful things. The Greeks worshiped him as

the god of all metal trades, then of all handicrafts, and pictured the volcanoes as the clumneys of lus subterranean forges. It was his misfortune that he married Aphrodite, for it is difficult for beauty to be virtuous. Learning of her affair with Ares, Hephaestus fashioned a trap that fell upon the lovers as they loved; and then the limping duity had his lame revenge by bringing his fellow gods to look in laughter upon the bound divinities of love and war. But to Hermes, Homer teils us, Apollo said

"Hermes, son of Zeus ... wouldst than in sooth he willing, even though ensured with strong bonds, to be on a couch by the side of golden Aphrodite?" Then the messenger answered him: "Would that this might befall, Lord Apollo, that thrice as many bonds mextreable might clasp me about, and that ye gods—aye, and all the goddesses, too—night be looking on, but that I might aleep by the side of golden Aphrodite."

Ares (Mars) was never distinguished for intelligence or subtlety, his business was war, and even the charms of Aphrodite could not give him the thrill that came to him from justy and natural killing. Homer calls him "the curse of men," and tells with pleasure how Athena laid him low with a stone, "he covered, as he lay, seven acres of the field " Hermes (Mercury) is more interesting. In origin he is a stone, and from the cult of sacred stones his worship is derived, the stages of his evolution are still visible. Then he is the tall stone placed upon graves, or he is the daimon, or spirit, in this stone. Then he is the boundary stone or its god, marking and guarding a field; and because his function there is also to promote fertility, the phallus becomes one of his symbols. Then he is the herm or pillar-with carved head, uncarved body, and prominent male member which was placed before all respectable houses in Athens," we shall see how the murilation of these bermae on the eve of the expedition against Syracuse provided the proximate cause for the rum of A.cibiades and Athens. Again he is the god of wayfarers and the protector of heralds, their characteristic staff, or caduceus, is one of his favorite insigma. As god of travelers he becomes a god of luck, trade, cunning, and gain, therefore an inventor and guarantor of measures and scales, a patron saint of perjurers, embezzlers, and thieves." He is himself a herald, bearing the billets and decrees of Olympus from god to god or man, and he moves on winged sandals with the speed of an angry wind. His running about gives him a lithe and graceful form, and prepares him for Pranteles. As a swift and vigorous youth he is the patron saint of athletes, and his shamelessly virile image has a place in every palaestra." As

herald he is the god of eloquence, as celestial interpreter he is the first of a long bermeneutical line. One of the "Homeric" Hymns tells how, in his youth, he stretched strings across a tortoise shell, and so invented the lyre. Finally it comes his turn to appease Aphrodite, and their offspring, we are told," is a delicate hermaphrodite, sharing their charms and named from their names.

It was characteristic of Greece that in addition to demes of chastity, virginity, and motherhood it should have a goddess of beauty and love. Doubtless in her Near-Eastern origins, and in Cyprus her half-Oriental home. Aphrodite was first of all a mother goddess, to the end of her tenure she remained associated with reproduction and fertility in the whole realin of plant, animal, and human life. But as civilization developed, and increasing security obviated the need for a high birth rate, the esthetic sense was lefe free to see other values in woman than those of multiplication, and to make Approduce not only the embodiment of the ideal of beauty, but the deity of al. heterosexual pleasure. The Greeks worshiped her in many forms: 28 Aphrodite Urania, the Heavenly, the goddess of chaste or sacred love; as Aphrodite Pandemos, the Popular, the goddess of profane love in all its modes, and even as Aphrodite Kalupugos, the Venus of the Lovely Nates." At Athens and Corinth the courtesans built temples to her as their parron samt. At the beginning of April various cities in Greece celebrated her great festival, the Aphrodisia, and on that occasion, for those who cared to take part, sexual freedom was the order of the day." She was the love goddess of the sensual and passionate south, ancient rival of Artems, the love goddess of the cold and hunting north. Mythology, almost as tronic as history, made her the wife of the empled Hephaestus, but she consoled herself with Ares, Hermes, Poseidon, Dionysus, and many a mortal like Ancheses and Adons.* To her, in competition with Hera and Athena, Paris awarded the golden apple as the prize of beauty. But perhaps she was never really beautiful until Praxiteles reconceived her, and gave her the loveliness for which Greece could forgive all her sins.

The myth of Adona is one more variation on the vegetation theres—the annual death and resurrection of the soil. This handsome youth was desired by both Aphrodice and Persephone, the goddesses of love and of death. Ares, jealous of Adona' success with Aphrodice, disguised howelf as a wild boar and kided bim. The amenone was born of Adona blood, and evers of poetrs from Aphrodice's greef. Teas persual fad the goddesses to divide Adona' time and attentions to leaving time for balf a year with Persephone in Hades, and restoring him for half a year to earthly ofe and love. In Phoenicia, Cyprus, and Athens the death of the box was commemorated in the featival of the Adona wener carried images of the Lord (for such was the meaning of his name), loudly bewarled his death, and triumphantly celebrated his resurrection.

To the legitimate or illegisimate children of Zeus we must add, as major Olympians, his sister Hestia, goddess of the hearth, and his unrally brother Poseidon. This Greek Neptune, secure in his watery realms, considered himself fully the equal of Zeus. Even landlocked nations worshiped him, for he commanded not only the sea but the rivers and the springs, it was he who guided the mysterious subterranean streams, and made earthquakes with tidal waves.* To him Greek mariners prayed, and mised appearing

temples on perdous promontories.

Subordinate deities were numerous even on Olympus, for there was no end to personifications. There was Hestia (the Roman Vesta), goddess of the hearth and its sacred fire. There was Iris, the rainhow, sometimes messenger for Zeus, Hebe, goddess of youth, Lilenhyia, who helped women in childbirth; Dike or Justice, Tyche, Chance, and Eros, Love, whom Hesiod made the creator of the world, whom Sappho called "a limb-dissolving, birter-sweet, impracticable wild beast." There was Hymeneus, the Marriage Song; Hypnos, Sleep, Oneiros, Dream, Geras, Old Age, Lethe, Oblivion; Thanatos, Death, and others beyond naming. There were nine Muses to inspire artists and poets: Cho for history, Euterpe for lyric poetry accompanied by the flute. Thalia for comic drama and idyllic poetry, Melpomene for tragedy, Terpsichore for choral dance and song, Erato for love verse and mimicry; Polynimia for hymns, Urania for astronomy, Calliope for epic poetry. There were three Graces, and their twelve attendants, the Hours. There was Nemesis, who meted out good and evil to men, and visited with disaster all who were guilty of by bris insolence in prosperity. There were the terrible Erinmes, the Furies who left no wrong unrevenged, the Greeks with deprecating euphemism called them Well-Wishers, Eumenides. And finally there were the Mourai, the Fates or Allotters who regulated mevitably the affairs of life, and ruled, some said, both gods and men. In that conception Greek religion found its limit, and flowed over into science and law.

We have left for the last the most troublesome, the most popular, the most difficult to classify, of all the Greek gods. Only late in his career was Dionysus received into Olympus. In Thrace, which gave him as a Greek gift to Greece, he was the god of higher brewed from barley, and was known as Sabazius, in Greece he became a god of wine, the nourisher and guardian of the vine; he began as a goddess of fertility, became a god of intoxication, and ended as a son of god dving to save mankind. Many figures and legends were thingled to make his myth. The Greeks thought of him as

Zagreus, "the horned child" borne to Zeus by his daughter Persephone. He was the best beloved of his father, and was seated beside him on the throne of heaven. When the jeatous Hera incited the Titans to kill him, Zeus, to disguise him, changed him into a goat, then a bull, in this form, nevertheless, the Titans captured him, cut his body into pieces, and boiled them in a caudron. Athena, like another Trelawney, saved the heart, and carried it to Zeus, Zeus gave it to Senicle, who, impregnated with it, gave to the god a second hirth under the name of Diony sus."

Mourning for Dionysus' death, and joyful celebration of his resurrection, formed the basis of a rimal extremely widespread among the Greeks. In springtime, when the vine was bursting into blossom, Greek women went up into the hills to meet the reborn god. For two Javs they drank without restraint, and like our less religious bacchanalians, considered him witless who would not lose his wits. They marched in wild procession, led by Machads, or mad women, devoted to Dionysus, they listened reusely to the story they knew so well, of the suffering death, and resurrection of their god, and as they drank and danced they fell into a frenzy in which all bonds were loosed. The height and center of their ceremony was to seize upon a goat, a bull, sometimes a man (seeing in them incarnations of the god), to tear the live victim to pieces in commemoration of Dionysus' distinguisherment, then to drink the blood and eat the flesh in a sacred communion whereby, as they thought, the god would enter them and possess their souls, In that divine enthusiasmy they were convinced that they and the god became one in a mystic and trumphant union, they took his name, called themselves, after one of his titles, Bacchor, and knew that now they would never die Or they termed their state an ecitaire, a going out of their souls to meet and be one with Drinysus, thus they felt freed from the burden of the flesh, they acquired divine insight, they were able to prophesy, they were gods. Such was the passionare cult that came down from Hurace into Greece like a medieval epidemic of religion, dragging one region after another from the cold and clear Olympians of the state worship into a faith and ritual that satisfied the craying for excitement and release, the longing for enthusiasm and possession, invisticism and mystery. The priests of

^{*} Dindorns Secules, as early as so not interpreted the tale as a vegetation much. Zagreus, the vine is a chail of the area the earth found on or Zean, the rain. The vine, like the gisl, is out optimed to give a new life, and the most of the give is boiled to make which had a cut optimed to give a new life, and the most of the give is boiled to make which had a cut optimed to give a new life, and the most of the give is boiled to make which had year under mornishing rains, the vine is reborn. Herodotus found so many resent blances between the most of them are and Osicis that he identified the two gods in one of the first custom parative religion.*

t From entheor, "a god within", "embasiosm" originally meant possession by a god.

Delphi and the rulers of Athens tried to keep the cult at a distance, but failed, all they could do was to adopt Dionysus into Olympus, Hellenize and humanize him, give him an official festival, and turn the revelty of his worshipers from the mad ecstasy of wine among the hills into the stately processions, the robust songs, and the noble drama of the Great Dionysia. For a while they won Dionysus over to Apollo, but in the end Apollo yielded to Dionysus' heir and conqueror, Christ.

III. MYSTERIES

There were essentially three elements and stages in Greek religion-chthonian, Olympian, and mystic. The first was probably of Pelasgo-My cenacan origin, the second probably Achaeo-Dorian, the third Egypto-Asiatic. The first worshiped subterranean, the second celestial, the third resurrected, gods. The first was most popular among the poor, the second among the well to do, the third in the lower middle class. The first predominated before the Homene age, the second in it, the third after it. By the time of the Periclean Enlightenment the most vigorous element in Greek religion was the mystery. In the Greek sense a mystery was a secret ceremony in which sacred symbols were revealed, symbolic rites were performed, and only initiates were the worshipers. Usually the rites represented or commemorated, in semidramatic form, the suffering, death, and resurrection of a god, pointed back to old vegetation themes and magic, and promised the initiate a personal immortality.

Many places in Greece celebrated such mystic rates, but no other place in this respect could rival Eleusis. The mysteries there were of pre-Achaean origin, and appear to have been originally an autumn festival of plowing and sowing." A myth explained how Demeter, rewarding the people of Attica for their kindness to her in her wanderings, established at Fleusis her greatest remple, which was destroyed and rebuilt many times during the history of Greece. Under Solon, Peisistratus, and Pericles the festival of Demeter at Eleusis was adopted by Athens, and raised to higher elaboration and pomp. In the Lesser Mysteries, held near Athens in the spring, candidates for initiation underwent a preliminary purification by self-immersion in the waters of the llissus. In September the candidates and others walked in grave but happy pilgrimage for fourteen miles along the Sacred Way to Eleusis, bearing at their head the image of the chthonian deity Jacehus. The procession arrived at Eleusis under torchlight, and solemnly placed the image in the temple, after which the day was ended with sacred dances and songs.

The Greater Mysteries lasted four days more. Those who had been purified with bathing and fasting were now admitted to the lesser rites, those who had

received such rites a year before were taken into the Hall of Initiation, where the secret ceremony was performed. The myrea, or matiates, broke their fast by participating in a holy communion in memory of Demeter, drinking a buly mixture of meal and water, and eating sacred cakes. What mystic ritual was then performed we do not know, the secret was wen kept throughout antiquity, under penalty of death, even the pious Aeschytus narrowly escaped condemnation for certain lines that might have given the secret away. The ceremony was in any case a symbolic play, and had a part in generating the Dinnysian drama. Very probably the theme was the tape of Persephone by Pluto, the sorrowful wandering of Demeter, the return of the Maulen to earth, and the revelation of agriculture to Attica. The summary of the ceremony was the mystic marriage of a priest representing Zeus with a priestess impersonating Demeter. These symbolic nuptials bore fruit with magic speed, for it was soon followed, we are told, by a solemn announcement that "Our Lady has borne a holy boy", and a reaped ear of corn was exhibited as symbolizing the fruit of Demeter's labor the bounty of the fields. The worshipers were then led by dun torchaght into dark subtertanean caverns symbolizing Hades, and, again, to an upper chamber brilliant with light, representing, it appears, the abode of the blessed; and they were now shown, in solemn exaltation, the holy objects, relics, or icons that till that moment had been concealed. In this ecstasy of revelation, we are assured, they felt the unity of God, and the oneness of God and the soul, they were lifted up out of the delusion of individuality, and knew the peace of absorption into deity."

In the age of Pesistratus the invisteries of Dionysus entered into the Eleusinian liturgy by a religious intection, the god facchus was identified with Dionysus as the son of Perseplu ne, and the legend of Dionysus Zagreus was superimposed upon the myth of Demeter. But through all forms the basic idea of the mysteries remained the same, as the seed is born again, so may the dead have renewed life, and not merely the dicary, shadows existence of Hades, but a life of happiness and peace. When almost everything else in Greek religion had passed away, this consoling hope, remitted in Alexandria with that Egyptian belief in immortality from which the Greek had been derived, gave to Christianity the weapon with which to conquer the Western world.

In the seventh century there came into Hellas, from Fgvpt, Thrace, and Thessaly, another mystic cult, even more important in Greek history than the mysteries of Eleusis. At its source we find, in the age of the Argonauts, the obscure but fascinating figure of Orpheus, a Thracian who "in culture, music, and poetry," says Diodorus, "far surpassed all men of whom we have a record "" Very probably he existed, though all that we now know of him bears the marks of myth. He is pictured as a gentle spirit, tender, medi-

tative, affectionate; sometimes a musician, sometimes a reforming ascene priest of Dionysos. He played the lyre so well, and sang to it so melodiously, that those who heard him almost began to worship him as a god, wild annuals became tame at his voice, and trees and rocks left their places to follow the sound of his harp. He married the fair Eurydice, and almost went mad when death took her. He plunged into Hades, charmed Persephone with his lyre, and was allowed to lead Eurydice up to life again on condition that he should not look back upon her until the surface of the earth was reached. At the last barrier anxiety overcame him lest she should no longer be following, he looked back, only to see her snatched down once more into the nether world. Thracian women, resenting his unwillingness to console himself with them, tore him to pieces in one of their Dionysian revels; Zeus atoned for them by placing the lyre of Orpheus as a constellation among the stars. The severed head, still singing, was buried at Lesbos in a eleft that became the site of a popular oracle, there, we are told, the nightingales sang with especial tenderness."

In later days it was claimed that he had left behind him many sacred songs, and perhaps it was so. At the behest of Hipparchus, says Greek tradition, a scholar named Onomacritus, about 510, edited these as the Homeric lays had been edited a generation before. In the sixth century, or earlier, these hymns had acquired a sacred character as divinely inspired, and formed the basis of a mystical cult related to that of Dumysus but far superior to it in doctrine, ritual, and moral influence. The creed was essentally an affirmation of the passion (suffering), death, and resurrection of the divine son Diphysis Zagreus, and the resurrection of all men into a future of reward and punishment. Since the Titans, who had slain Dionysus, were believed to have been the ancestors of man, a taint of original sin rested upon all husnamity, and in punishment for this the soul was enclosed in the body as in a prison or a tomb. But man might console himself by knowing that the Titans had eaten Dionysus, and that therefore every man harbored, in his soul, a particle of indestructible divinity. In a mystic sacrament of communion the Orphic worshipers are the raw flesh of a bull as a symbol of Dionysus to commemorate the slaying and eating of the god. and to absorb the divine essence anew."

After death, said Orphic theology, the soul goes down to Hades, and must face judgment by the gods of the underworld, the Orphic hymns and ritual, like the Egyptian Book of the Dead, instructed the fathful in the art of preparing for this comprehensive and final examination. If the verdict was guilty there would be severe pumsliment. One form of the doctrine

conceived this punishment as eternal," and transmitted to later theology the notion of hell. Another form adopted the idea of transmigration, the soul was reborn again and again into lives happier or bitterer than before according to the purity or impurity of its former existence, and this wheel of rebirth would turn until complete purity was achieved, and the soul was admitted to the Islands of the Biest." Another variant offered hope that the punishment in Hades might be ended through penances performed in advance by the individual, or, after his death, by his friends. In this way a doctrine of purgatory and indulgences arose, and Plato describes with almost the anger of a Luther the peddling of such indulgences in the Athens of the fourth century 8.0.:

Mendicant prophets go to rich men's doors and persuade them that they have a power committed to them of making atonement for their sins or those of their fathers by sacrifices or charms. . . And they produce a host of books written by Musaeus and Orpheus . . . according to which they perform their ritual, and persuade not only individuals but whole cines that expiations and atonements may be made by sacrifices and amusements [ceremonies] which fill a vacant hour, and are equally at the service of the living and the dead. The latter [ceremonies] they call invisenes, and these redeem us from the Pains of Hell, but it we neglect them no one knows what awaits us."

Nevertheless there were in Orphism idealistic trends that culminated in the morals and monasticism of Christianity. The reckless looseness of the Olympians was replaced by a strict code of conduct, and the mighty Zeus was slowly dethroned by the gentle figure of Orpheus, even as Yahweh was to be dethroned by Christ. A conception of sin and conscience, a dualistic view of the body as evil and of the soul as divine, entered into Greek thought, the subjugation of the flesh became a main purpose of religion, as a condition of the release for the soul. The brotherhood of Orphic minutes had no ecclesiastical organization and no separate life, but they were distinguished by the wearing of white garments, the avoidance of flesh food, and a degree of ascencism not usually associated with Hellenic ways. They represented, in several aspects, a Puritan Reformation in the history of Greece. Their rites encroached more and more upon the public worship of the Olympian gods.

The influence of the sect was extensive and enduring. Perhaps it was here that the Pythagoreans took their diet, their dress, and their theory of

transmigration; it is worthy of note that the oldest Orphic documents now extant were found in southern Italy." Plato, though he rejected much in Orphism, accepted its opposition of body and soul, its puritan tendency, its hope of immortality. Part of the pantheism and ascericism of Stoicism may be traced to an Orphic origin. The Neo-Platonists of Alexandria possessed a large collection of Orphic writings, and based upon them much of their theology and their mysticism. The doctrines of hell, purgatory, and heaven, of the body versus the soul, of the divine son slain and reborn, as well as the sucramental eating of the body and blood and divinity of the god, directly or deviously influenced Christianity, which was itself a mystery religion of atonement and hope, of mystic union and release. The basic ideas and ritual of the Orphic cult are alive and flourishing amongst us today.

IV. WORSHIP

Greek rimal was as varied as the kinds of deities that it honored. The chthoman gods received a gloomy ritual of appeasement and riddance, the Olympians a joyful ritual of welcome and praise. Neither form of ceremony required a clergyman, the father acted as priest for the family, the chief magistrate for the state. Life in Greece was not as secular as it has been described, religion played a major part in it everywhere, and each government protected the official cult as vital to social order and political stability But whereas in Egypt and the Near East the priesthood dominated the state, in Greece the state dominated the priesthood, took the leadership of religion, and reduced the clergy to minor functionaries in the temples. The property of the temples, in real estate, money, and slaves, was audited and administered by officials of the state." There were no seminaries for the training of priests; anyone could be quietly chosen or appointed priest if he knew the rites of the god; and in many places the office was let out to the highest bidder." There was no hierarchy of priestly caste; the prests of one temple or state had usually no association with those of another." There was no church, no orthodoxy, no rigid creed, religion consisted not in professing certain behefs, but in joining in the official ritual;" any man might have his own creed provided that he did not openly deny or blaspheme the city's gods. In Greece church and state were one.

The place of worship could be the domestic hearth, the minicipal hearth in the city hall, some cleft in the earth for a chthonizh denty, some temple for an Olympian god. The precincts of the temple were sacred and

inviolable, here the worshipers met, and here all pursued persons, even if tainted with serious crime, could find sanctuary. The temple was not for the congregation but for the god, there, in his home, his statue was erected, and a light burned before it which was not allowed to die. Often the people identified the god with the statue; they washed, dressed, and tended the image carefully, and sometimes scolded it for negligence; they told how, at various times, the statue had sweated, or wept, or closed its eyes. In the temple records a history was kept of the festivals of the god, and of the major events in the life of the city or group that worshiped him; this was the source and first form of Greek historiography.

The ceremony consisted of procession, chants, sacrifice, prayer, and sometimes a sacred meal. Magic and masquerade, tableaux and dramatic representations might be part of the procession. In most cases the basic ritual was prescribed by custom, and every movement of it, every word of the bymns and prayers, was preserved in a book kept sacred by the family or the state, rarely was any syllable or action altered, or any rhythm; the god might not like or comprehend the novelty. The living speech changed, the ratual speech remained as before, in time the worshipers ceased to understand the words they used." but the thrill of antiquity supplied the place of understanding. Often the ceremony outlasted even the memory of the cause that had prompted it then new myths were invented to explain its establishment: the myth or creed might change, but not the ritual. Music was essential to the whole process, for without music religion would be difficult; music generates religion as much as religion generates music. Our of the temple and processional chants came poetry and the meters that later adorned the robust profactive of Archilochus, the reckless passion of Sappho, and the scandalous delicacies of Anacreon

Having reached the altar—usually in front of the temple—the worshipers sought with sacrifice and prayer to aven the wrath or win the aid of their god. As individuals they might offer almost anything of value—statues, reliefs, furniture, weapons, caldrons, tripods, garments, pottery, when the gods could make no use of such articles the priests could. Armies might offer part of their spoils, as Xenophon's I en Thousand did in their retreat." Groups would offer the fruits of the field, the vines or the trees, more often an animal appetizing to the god, sometimes, on occasions of great need, a human being. Agamemnon offered Iphigenia for a wind, Achilles slaughtered twelve I tojan youths on the pyre of Patroclas," human victims were hurled from the cliffs of Cyprus and Leucis to sanate Apollo, others were presented to Dionyses in Chios and Tenedos, Themistocles is said to have

sacrificed Persian captives to Dionysus at the battle of Salamis;" the Spartans celebrated the festival of Artemis Orthia by flogging youths, sometimes to death, at her altar," in Arcadia Zeus received human sacrifice till the second century A.D.," at Massana, in time of pestilence, one of the poorer citizens was fed at public expense, clad in holy garments, decorated with sacred boughs, and cast over a chiff to death with prayers that he nught bear punishment for ail the sins of his people." In Athens it was the custom, in famine, plague, or other crisis, to offer to the gods, in ritual mimiery or in actual fact, one or more scapegoats for the purification of the city; and a similar rite, minuc or literal, was annually performed at the festival of the Thargelia.** In the course of time human sacrifice was mingated by restricting its victims to condemned criminals, and dulling their senses with wine, finally it was replaced by the sacrifice of an animal. When, on the night before the battle of Leuctra (371 B.C.), the Bocotian leader Pelopidas had a dream that seemed to demand a human sacrifice at the altar as the price of victory, some of his councilors advised it, but others protested against it, saying "that such a barbarous and impious obligation could not be pleasing to any Supreme Beings, that typhons and giants did not preside over the world, but the general father of gods and mortals, that it was absurd to imagine any divinities and powers desighting in slaughter and sacrifice of men."

Animal sacrifice, then, was a major step in the development of civilization. The beasts who bore the brunt of this advance in Greece were the bull, the sheep, and the pig. Before any battle the rival armies sent up sacrifices in proportion to their desired victory, before any assembly in Athens the meeting place was purified by the sacrifice of a pig. The piety of the people, however, broke down at the crucial point; only the bones and a little flesh, wrapped in fat, went to the god, the rest was kept for the priests and the worshipers. To excuse themselves the Greeks told how, in the days of the giants, Prometheus had wrapped the edible portions of the sacrificial animal in skin, and the bones in fat, and had asked Zeus to choose which he preferred. Zeus had "with both hands" chosen the fat. It was true that Zeus was enraged upon finding that he had been deceived, but he had made his choice, and must abide by it forever. Only it sacrifice to the chthoman gods was everything surrendered to the deity, and the entire animal burnt to ashes in a holocause, the divinities of the lower world were

These victims in Athens were called pharmakor, which meant originally magicians; pharmakon meant a magic spell or formula, then a healing drug." The question whether the pharmakor were really slain is in dispute, but there is little doubt that the sacrifice was originally literal."

more feared than those of Olympus. No common meal followed a chthonic sacrifice, for that might tempt the god to come and join the feast. But after sacrifice to the Olympians the worshipers, not in awed atonement to the god but in joyous communion with him, consumed the consecrated victim, the magic formulas pronounced over it had, they hoped, imbued it with the life and power of the god, which would now pass mystically into his communicants. In like manner wine was poured upon the sacrifice, and then into the cups of the worshipers, who drank, so to speak, with the gods." In the thiasai, or fraternines, into which so many trade and social groups in Athens were organized, this idea of divine communion in a common religious meal formed the binding tie."

Aramal sacrifice continued throughout Greece until ended by Christianery," which wisely substituted for it the speritual and symbolical sacrifice of the Mass. In some measure prayer too became a substitute for sacrifice, it was a clever amendment that commuted offerings of blood into litanies of pease. In this gentler way man, subject to chance and tragedy at every step, consoled and strengthened himself by calling to his aid the mysterious powers of the world.

V. SUPERSTITIONS

Between these upper and nether poles of Greek religion, the Olympian and the subterranean, surged an ocean of magic, superstition, and sorecty, behind and below the gennuses whom we shall celebrate were masses of people poor and simple, to whom religion was a mesh of fears ruther than a ladder of hope. It was not merely that the average Greek accepted miracle stones-of Theseus rising from the dead to fight at Marathon, or of Dionysus changing water into wine 3 such stories appear among every people, and are part of the forgivable poetry with which inagination brightens the common life. One could even pass over the anxiety of Athens to secure the bones of Theseus, and of Sparta to bring back from Teger the bones of Orestes," the miraculous power officially attributed to these relies may well have been part of the technique of rule What oppressed the pious Greek was the cloud of spirits that surrounded him, ready and able, he believed, to spy upon him, interfere with him, and do him evil. These demons were always seeking to enter into him, he had to be on his guard against them at all times, and to perform magical ceremonies to dis-

This superstition verged on science, and in some measure forecast our germ theory of disease. All sickness, to the Greek, meant possession by an alien

spirit; to touch a sick person was to contract his uncleanliness or "possession", our bacill, and bacteria are the currently fashionable forms of what the Greeks called kerer or lattle demons." So a dead person was "unclean", the keres had gotten han once for all. When the Greek left a house where a corpse lay, he sprinkled hanself with water, from a vessel placed for such purposes at the diar, to drive away from himself the spirit that had conquered the dead man." This conception was extended to many realins where even our bacteriophobia would hardly apply it. Sexual intercourse rendered a person unclean, so did birth, childbirth, and homicide (even if unintentional). Madness was possession by an alien spirit; the madman was "beside himself." In all these cases a ceremony of purification was considered necessary. Periodically homes, temples, camps, even whole cities were purified, and very much as we disinfect them by water, smoke, or fire." A bowl of clean water stood at the entrance to every temple, so that those who came to worship might cleanse themselves," perhaps by a suggestive symbolism. The priest was an expert in purification, he come exoresse spirits by striking bronze vessels, by incantations, magic, and prayer, even the intentions, homocide might, by adequate ritual, be purified." Repentance was not indispensable in such cases, all that was needed was to get rid of the evil possessive demons, religion was not so much a matter of morals as a technique of manipulating spirits. Nevertheless the multiplication of taboos and purificatory rates produced in the religious Greek a state of maid surprisingly akin to the Paritan sense of sin. The notion that the Greeks were immune to the ideas of conscience and sin will hardly survive a reading of Pindar and Aeschylus.

Out of this belief in an enveloping atmosphere of spirits came a thousand expersions, which Theophrastus, successor to Aristotle, summarized in one of his Characters:

Superstitiousness would seem to be a sort of cowardice with respect to the divine, . . . Your Superstitious Man will not sally forth for the day till he have washed his hands and sprinkled himself at the Nine Springs, and put a bit of bay-leaf from a temple in his mouth. And if a cat cross his path he will not proceed on his way till some one else be gone by, or he have cast three stones across the street. Should he espy a snake in his house, if it be one of the red sort he will call upon Diany sus, if it be a sacred snake he will build a shrine then and there. When he passes one of the smooth stones set up at crossroads he attoints it with oil from his flask, and will not go his ways till he have knelt down and worshiped it. If a mouse grow a bag of his ineal, he will off to the wexard and ask what he must do; and if the advice be, "Send the bag to the cobblers to be patched," he neglects the advice and frees himself of the ill by rites of aversion.

... If he eatches sight of a madenan or an epileptic, he shudders and spirs into his bosom."

The simpler Greeks believed, or taught their children to believe, in a great variety of bogies. Whole cines were disturbed, at short intervals, by "portents" or stringe occurrences, like deformed births of animals or men." The belief in unlucky days was so walespread that on such days no marriage might take place, no assembly might be held, no courts might meet, no enterprise might begin. A sneeze, a stumble, might be reason for abandoning a trip of an undertaking, a minor eclipse could stop or turn back armies, and bring great wars to a disastrous end. Again, there were persons guited with the power of effective cursings in angered parent, a neglected beggar might lay upon one a curse that would run one's life. Some persons possessed magic arts, they could mix love philters or aphrodisaes, and could by secret drugs reduce a than to impotence or a woman to steribty " Plato did not consider his Lands complete without an enactment against those who injure or slay by magic arts." Witches are not medieval inventions, note Euripides Medea, and Theocratus' Simaetha. Superstation is one of the most stable of social phenomena, it remains almost unchanged through centuries and civilizations, not only in its bases but even in its formulas.

VL ORACLES

In a world so crowded with supernatural powers, the events of life seemed to depend upon the will of demons and gods. To discover that will the curious Greeks consulted soothsayers and oracles, who divined the future by reading the stars, interpreting dreams, examining the entrails of animals, or observing the flight of birds. Professional soothsayers hired themselves out to families, armies, and states," Nicras, before setting out upon the expedition to Sicily, engaged a troop of sacrificers, augurs, diviners," and though not all generals were as pious as this great slaveowner, nearly all were as superstitious. Men and women appeared who claimed inspiration and clairvoyance, in Ionia particularly certain women called Sibyls (i.e., the Will of God) issued oracles beheved by millions of Greeks." From Erythrae the Sibyl Herophila was said to have wandered through Greece to Cumae in Italy, where she became the most famous of her kind, and lived, we are told, a thousand years. Athens, like Rome, had a collection of ancient oracles, and the government maintained in the prytaneum men skilled in their interpretation."

Public oracles were set up at many temples in all parts of Greece, but the most famous and honored were in early days the oracle of Zeus at Dodona, and in the historical period that of Apollo at Delphi. "Barbarians" as well as Greeks consulted this oracle, even Rome sent messengers to ask or suggest the will of the god. Since the power of divination was supposed to belong particularly to the intuitive sex, three priestesses, each at least half a century old, were trained to consult Apollo through the medium of a trance. From a hollow in the earth below the temple came a peculiar gas, ascribed to the eternal decomposition of the python that Apollo had slain there, the officiating priestess, called Pythia, took her seat on a high tripod over this cleft, inhaled the divine stench, chewed narcone laurel leaves, fell into delimim and convulsions, and, thus inspired, uttered incoherent words which the priests translated to the people. Very often the final reply admitted of diverse, even contrary, interpretations, so that the infallibility of the oracle was maintained whatever the event." Possibly the priests were no less puppers than the priestesses, sometimes they accepted bribes," and in most cases the voice of the oracle harmonized melodious.y with the dominant influence in Greece," Nevertheless, where external powers did not constrain them, the priests taught valuable lessons of moderation and political wisdom to the Greeks. Though they condoned human sacrafice even after the moral sense of Greece had begun to revolt against it, and made no protest against the immoralities of Olympus, they aided the establishment of law, encouraged the manumission of slaves, and bought many slaves in order to give them liberty." They were not in advance of Greek thought, but they did not hinder it by doctrinal intolerance. They gave a helpful supernatural sanction to necessary Greek policies, and provided some degree of international conscience and moral unity for the scattered cities of Greece.

Out of this unifying influence came the oldest known confederation of Greek states. The Amphictyonic League was originally the religious alliance of the peoples "dwelling around" the sanctuary of Demetes near Thermopylae. The chief constituent states were Thessaly, Magnesia, Phthiotis, Doris, Phocis, Bocotia, Euboca, and Achaea. They met semiannually, in spring at Delphi, in autimn at Thermopylae. They bound themselves never to destroy one another's cities, never to allow the water supply of any member city to be shut off, never to plunder—or permit to be plundered—the treasury of Apollo at Delphi, and to attack any nation that violated these pledges. Here was the outline of a League of Nations, an outline whose completion was prevented by the natural fluctuations of wealth and power among states, and the inherent rivalries of men and groups. Thessaly formed a bloc of vassal states, and permanently dominated the League."

Other amplicity onics were established. Athens, for example, belonged to the Amphicity only of Calaura, and the rival leagues, while promoting peace within their membership, became against other groups vast instruments of intrigue and war.

VII. FESTIVALS

If it could not end war Greek religion succeeded in alleviating the routine of economic life with numerous festivals. "How many victims offered to the gods" cined Aristophines, "how many temples, statues... sacred processions. At every moment of the year we see religious feasts and garlanded victims" of sacrifice." The rich paid the cost, the state provided the theorika, or divine funds, to pay to the populace the price of admission to the games or plays that distinguished the holyday.

The calendar at Athens was essentially a religious calendar, and many months were named from their reagious festivals. In the first month, Hecatombaion (July August), came the Co ma (corresponding to the Roman Saturnalia), when masters and slaves sat down together to a portul feast, in the same mouth, every fourth year, occurred the Panathenaea, when, after four days of vaned contests and games, the entire entirenship formed a solemn and colorful procession to carry to the priestess of Athena the sacred peplos, a gorgeously embroidered robe which was to be placed upon the image of the city's goddess, this, as all the world knows, was the theme that Pheidias chose for the frieze of the Parthenon. In the second month, Metagottsion, came the Metagentae, a minor festival in honor of Apollo. In the third month, Boedromion, Athens sallied forth to Fleusis for the Greater Mysteries. The fourth month, Pyanepsion, celebrated the Pyanepsia, the Oscophoria, and the Thesmophoria, in this the winner of Athens honored Denoter Thesmophoros (the Lawgiver) with a strange chthorian mual, parading phallie emblems, exchanging obsernties, and symbolically going down to Hades and returning, apparently as magical ceremomes to promote fertility in the soil and man." Only the month of Maungkrerion had no festival.

In the month of Poseidron Athens held the Italoa, a feast of first fruits, in Gamelion the Lenaea, in honor of Dionysus. In Anthesterion came three important celebrations: the Lesser or preparatory Mysteries, the Diasia, or sat rifice to Zeus Meilichios, and, above all, the Anthesteria, or Feast of Lowers In this three-day spring festival to Dionysus wine flowed freely, and everybody was more or less drunk, there was a competition in wine drinking, and the streets were alive with revelry. The king-archon's wife rode on a car be side the image of Dionysus, and was married to it in the temple as a symbol

of the union of the god with Athens. Beneath this jully ritual ran a somber undertone of fear and propination of the dead, the living are a solemn meal in commemoration of their ancestors, and left for them pots full of food and drink. At the end of the feast the people chased the spirits of the departed from the house with a formula of exorcism. "Our of the door with you, souls! Anthesteria is over" words that became a proverbial phrase for dismissing importunate beggars.

In the nmth month, Elaphebalion, came the Great Dionysia, established by Peisistratus in 534; in that year Thespis inaugurated the drama at Athens as part of the festival. It was the end of March, spring was in the air, the sea was navigable, merchants and visitors crowded the city and swelled the arrendance at the ceremonies and the plays. All business was suspended, all courts were closed, prisoners were released to let them share in the festivities. Athenians of every age and class, brilliantly attired, took part in the procession that brought the statue of Dionysus from Eleutherse and placed it in his theater. The rich drove chariots, the poor marched on foot, a long train of animals followed as destined guits for the gods. Choruses from the towns of Artica joined or competed in song and dance.-In the tenth month, Munychion, Athens relebrated the Munychia, and Arrica, every fifth year, celebrated the Brauronia m honor of Arterus. In Thargelion occurred the Thargelia, or feast of the grain harvest. In the twelfth month, Skirophorion, came the festivals of Skirophoria, Arretophoria, Dipolia, and Bouphonia. Not all these feasts were annual; but even for a four-year period they represented a grateful relief from daily toil.

Other states had similar holidays; and in the countryside every sowing and every harvest was greeted with festal conviviality. Greater than all these were the Panhelleme festivals, the panegyren, or universal gatherings. There were the Panionia on Mycale, the feast of Apollo at Delos, the Pythian festival at Delphi, the Isthman at Coranth, the Nemean near Argos, the Olympic in Elis. These were the occasions of interstate games, but basically they were holydays. It was the good fortune of Greece to have a reagion human enough—in later days humane enough—to associate itself joyfully and creatively with art, poetry, music, and games, even, at last, with morality.

VIII. RELIGION AND MORALS

At first sight Greek religion does not seem to have been a major influence for morality. It was in origin a system of magic rather than of ethics, and remained so, in large measure, to the end, correct ritual received more

^{*} In many parts of Europe the people still believe that the ghosts of the dead return to earth yearly, and must be entertained in a "Feast of A.I Souls."

emphasis than good conduct, and the gods themselves, on Olympus or on earth, had not been exemplars of honesty, chastity, or gentleness. Even the Eleusinian Mysteries, though they offered supernatural hopes, made salvation depend upon intual particultions rather than upon nobility of life. "Pataikion the thirf," said the sarcastic Diogenes, "will have a better fate after his death than Agesilaus or Epaminondas, for Pataikion has been initiated at Eleusis."

Nevertheless, in the more viral moral relations Greek religion came subtly to the aid of the race and the state. The punfication ritual, however external in form, served as a sumulating symbol of moral hygiene. The gods gave a general, if vague and inconstant, support to virtue; they frowned upon wickedness, revenged themselves upon pride, protected the stranger and the suppliant, and lent their terror to the sanctity of oaths. Dike, we are told, punished every wrong, and the awful Eumenides pursued the murderer, like Orestes, to madness or death. The central acts and institutions of human life-birth, marriage, the family, the clan, the statereceived a sacramental dignery from religion, and were rescued from the chaos of hasty desire. Through the worship or honoring of the dead, the generations were bound together in a stabilizing continuity of obligations, so that the family was not merely a couple and their children, or even a patriarchal assemblage of parents, children, and grandchildren, but a holy union and sequence of blood and fire stretching far into the past and the future, and holding the dead, the living, and the unborn in a sacred unity stronger than any state. Religion not only made the procreation of children a solemn dury to the dead, but encouraged it through the fear of the childless man that no posterity would inter him or tend his grave. So long as this religion kept its influence, the Greek people reproduced themselves vigorously, and as plentifully among the best as among the worst, and in this way, with the help of a merciless natural selection, the strength and quality of the race were maintained. Reagion and patriotism were bound together in a thousand impressive rizes, the god or goddess most revered in public ceremony represented the apocheosis of the city; every law, every meeting of the assembly or the courts, every major enterprise of the army or the government, every school and university, every economic or polincal association, was surrounded with religious ceremony and invocation. In all these ways Greek religion was used as a defense by the community and the race against the natural egoism of the individual man.

Art, literature, and philosophy first strengthened this influence, and then weakened it. Pindar, Aeschylus, and Sophocles poured their own ethical

fervor or insight into the Olympian creed, and Pheidias ennobled the gods with beauty and majesty; Pythagoras and Plato associated philosophy with religion, and supported the doctrine of immortality as a stimulus to morals. But Protagoras doubted, Socrates ignored, Democritis denied, Euripides tidiculed the gods, and in the end Greek philosophy, hardly willing it, destroyed the religion that had molded the moral life of Greece.

The Common Culture of Early Greece

1. THE INDIVIDUALISM OF THE STATE

THE two rival zeniths of European culture—ancient Helias and Renais-sance Italy—rested upon no larger political organization than the citystate. Geographical conditions presumably contributed to this result in Greece, Everywhere mountains or water intervened, bridges were rare and roads were poor, and though the sea was an open highway, it bound the city with its commercial associates rather than with its geographical neighbors. But geography does not altogether explain the city-state. There was as much separatism between Thebes and Plataca, on the same Bocotian plam, as between Thebes and Sparra; more between Sybans and Crorona on the same Italian shore than between Sybaris and Syracuse. Diversity of economic and postical interest kept the cities apart, they fought one another for distant markets or gram, or formed rival alliances for control of the sea. Distinctions of origin helped to divide them, the Greeks considered themselves to be all of one race, but their tribal divisions—Acolian, Ionian, Achaean, Dorian-were keenly felt, and Athens and Sparra disliked each other with an ethnological virulence worthy of our own age. Differences of religion strengthened, as they were strengthened by, polinical divisions. Our of the unique cults of locality and clan came distinct festivals and calendars, distinct customs and laws, distinct tribinals, even distinct frontiers, for the boundary stones lamited the realm of the god as well as of the community, cujus regio, ejus religio. These and many other factors united to produce the Greek city-state.

It was not a new administrative form we have seen that there were citystates in Sumeria, Babyloma, Phoenicia, and Crete hundreds or thousands of years before Homer or Pencles. Historically the city state was the village community in a higher stage of fusion or development a common market, meeting ground, and judgment seat for men filling the same hinterland, belonging to the same stock, and worshiping the same god. Polineally it was to the Greek the best available compromise between those two hostile and fluctuating components of human society—order and liberty, a smaller community would have been insecure, a larger one tyrannical. Ideally—in the aspirations of philosophers—Greece was to consist of sovereign city-states co-operating in a Pythagorean harmony. Aristotle conceived the state as an association of freemen acknowledging one government and capable of meeting in one assembly, a state with more than ten thousand citizens, he thought, would be impracticable. In the Greek

language one word-polis-sufficed for both city and state.

All the world knows that this political atomism brought to Hellas many a trugedy of fraternal strife. Because Ionia was unable to unite for defense it fell subject to Persia, because Greece, despite confederacies and leagues, was unable to stand together, the freedom which it idolized was in the end destroyed. And yet Greece would have been impossible without the city-state. Only through this sense of civic individuality, this exuberant assertion of independence, this diversity of institutions, customs, arts, and gods, was Greece stimulated, by competition and emulation, to live human life with a zest and fullness and creative originality that no other society had ever known. Even in our own times, with all our vitality and variety, our mechanisms and powers, is there any community of like population or extent that pours into the stream of civilization such a profusion of gifts as flowed from the chaotic liberty of the Greeks?

IL LETTERS

Nevertheless there were common factors in the life of these watchfully separatist states. As far back as the thirteenth century B.c. we find one language throughout the Greek peninsula. It belonged to the "Indo-Luropean" group, like Persian and Sanskrit, Slavonic and Latin, German and English, thousands of words denoting the primary relations or objects of life have common roots in these tongues, and suggest not only the predispersion antiquity of the things denoted, but the kinship or association of the peoples who used them in the dawn of history. It is true that the Greek language was diversified into dialects. Acolic, Doric, Ionic, Artic, but these were mutually intelligible, and yielded, in the fifth and fourth centuries, to a kome dialektor, or common dialect, which emanated principally from Athens, and was spoken by nearly all the educated classes of the Fiellenic world. Attic Greek was a noble tongue, vigorous, supple, melodious, as irregular as any vital speech, but lending itself readily to expressive combinations, delicate gradations and dis-

[•] Cf. in addition to numerals and family terms, such words as Sanskeit dam(a) (house), Greek domos. Latin domos. English tim ber, di aras, thyra, fores, door, venas, (f) omos, samm, mine, nams, nams, nams, nave; akibas, axon, axis, anle, mgam, vygon, ingum, yoke, etc.

tinctions of meaning, subtle philosophical conceptions, and every variety of literary exceedence from the "many-billowed surge" of Homee's verse to the placed flow of Plato's prose.

Greek tradition attributed the introduction of writing into Greece to Phoenicians in the fourteenth century & c., and we know nothing to the contrary The oldest Greek inscriptions, dating from the eighth and seventh centuries, show a close resemblance to the Senatic characters on the month-century Mogbite stone. These inscriptions were written, in Seminic fashion, from right to left, sixth-century inscriptions (e.g., at Gortyna) were made alternately from right to left and from left to right, later inscriptions are from left to right throughout, and certain letters are turned around accordingly, as & and H to B and E. The Semitic names for the letters were adopted with minor modifications, but the Greeks made several basic changes. Above all, they added vowels, which the Senutes had omitted, certain Senutic characters denoting consonants or breathings were used to represent a, e, t, o, and till Later the forigins added the long vowels eta (long e) and a-mega (long or double o). Len different Greek a phabets struggled for ascendancy as part of the war of the city-states; in Greece the loman form prevailed, and was transmitted to eastern humpe. where it survives today, in Rome the Chalcidian form was adopted from Cumae to become the Latin alphabet, and ours. The Chalcade alphabet lacked the long e and o, but, unlike the forum, retained the Phoenician war as a consonant (a v with approximately the sound of w), hence the Athenians called wine omus, the Chalcidians called it voings, the Romans called it vinion, we eall it wine. Chale is kept the Semitic kappa or q and passed it on to Rome and ourselves, Ionia abandoned it content with & Ionia represented L as A, Chalcis as t , Rume straightened up the latter form and gave it to Europe. The Ionians used P for R, but in Greek Italy the P sprouted a tail, and became R.

The earaest uses of writing in Greece were probably commercial or religious, apparently priestly charms and charits are the mother of poetry, and bills of lading are the father of prose. Writing split into two varieties, the formal for literary or epigraphic purposes, the cursive for ordinary use. There were no accents, no spaces between words, no punctuation points, but a change of tupic was marked off by a fortzontal dividing stroke cased the paragraphortics, a sign "written on the side." The materials used to receive writing were various, at first, if we may besieve Pliny, leaves or the bark of trees, for inscrip-

teading Greek potery.

† Cf. Greek alpha. Phoenician alehb (ball), beta beth (tent), genana, gimel (cainel), delta, dateth (door), e-puton, be (window), teta, sam (lance), beta, kiteth (puling), tota. you (hand), etc.

We do not know how ancient Greek was pronuncted. The accepts that trouble as so much were tell an used by the classical Greeks, but were inserted into ancient texts by Aristophanes of Byzantium in the third century are. These accents should be ignored in reading Greek poetry.

tions, stone, bronze, or lead, for ordinary writing, clay tablets as in Mesopotamia, then wooden tablets covered with wax, which were popular, in retrospect, with schoolbuys, for more permanent purposes papyrus, which the Phoenicians brought from Egypt, and (in the Hellenistic and Roman periods) parthment, made from the skins or membranes of goats or sheep. A metal stylos was used on wex rancels, on papyrus or parchment a reed dipped in ink. Wax writing was crased with the flat butt of the stylus, ink with a sponge; so the poet Martial sent a sponge with his poems to his friend, so that they might be wiped out with a stroke. Many a critic will mourn the passing of this courtesy.

In no field have the old words so regularly come down to us as in that of writing Paper, of course, is papyrus, and once again, in the excit of fashion, the substance is a compressed plant. A line of writing was a methor or row; the latins called it a cersis or verse-ie, a turning back. The text was written in columns upon a simp of papyrus or parchment from twenty to thirty feet long, wound about a stick. Such a roll was called a biblos, from the Phoenician eny, so named, whence paperus came to Greece. A smaller roll was called biblion, our Bible was or gens, a ta biblia, the rolls, t When a roll formed part of a larger work it was caded a tomos, or cauting. The first sacer of a rod was called the protokulan-se, the first sheet gladd to the stick. The edgest of the roll were smoothed with purities and sometimes colored, if the author could afford the expense, or the rool contained important matter, it mig it be wrapped in a diplothera (membrane), or, as the latias caded it, a a litem. Since a large roll would be inconvenient for handling or reference, literary works were usually divided into several rells, and the word lubbas, or basic, was applied not to each work as a whole, but to each roll or part. These divisions were seldom made by the author, later editors divided the Histories of Herodotus into mue books, the Pelopounctian II or of Thirey dides into eight, Plato's Republic into ten, the Had and the Odvisev into twenty-four. Since papy rus was costly, and each copy had to be written by hand, hooks were very lamited in the classic world, it was caster than now to be educated, though as hard as now to be interligent. Reading was not a universal accomplishment, must knowle edge was handed down by oral tradition from one generation or craftsman to the next, most literature was read aloud by trained reciters to persons who learned through the car § There was no reading public in Greece before the seventh century, there were no Greek abranes till those collected by Polycrates

[&]quot;Grap a, which we transacte to time originally meant to engrape,

and Pessstratus in the sixth.' In the fifth century we hear of the private libraries of Euripides and the archon Eucleides, in the fourth, of Anstotic s. We know of no public abrary before Asexandria's, none in Athens till Hadrian." Perhaps the Greeks of Pencies' day were so great because they did not have to read many books, or any long one.

III. LITERATURE

Literature, like religion, divided and united Greece. The poets sang in their local dialects, and often of their native scenes, but all Heilas listened to the more eloquent voices, and stirred them now and then to broader themes. Time and prejudice have destroyed too much of this early poetry to let us feel its wealth and scope, its reputed vigor of utterance and finish of form, but as we move through the isles or cities of sixth-century Greece our wonder rises at the aboundance and excellence of Greek literature before the Periclean age. The lyric poetry reflected an aristocratic society in which feeling, thought, and morals were free so long as they observed the amenities of breeding, this style of urbane and polished verse tended to disappear under the democracy. It had a rich variety of structure and meter, but seldom shackled itself with rhyme, poetry meant to the Greeks, feeling imaginatively and thythmically expressed.*

While the lyne singers tuned their lyres to love and war, the wandering bards, in great men's halls, recited in epic measures the heroic deeds of the race Coulds of "rhapsodes" t built up through generations a cycle of lays centering around the sieges of Thebes and Troy and the homing of the warriors. Song was socialized among these minstrels, each stitched his story together from earlier fragments, and none pretended to have composed a whole sequence of these tales. In Chios a clan of such rhapsodes called themselves Homeridae, and claimed descent from a poet Homer who, they said, was the author of the epies that they recited throughout castern Greece." Perhaps this blind hard was but an eponym, the imaginary ancestor of a tribe or group, like Hellen, Dorus, or Ion." The Greeks of the sixth century attributed to Homer not only the Hud and the Odyssey but all the other epics then existing. The Homeric poems are the oldest epics known to us, but their very excellence, as well as their many references to earlier hards, suggest that the surviving epics stand at the end of a long line of development from simple lays to lengthy "stitched" songs. In

Rhyme was mostly confined to oracles and religious prophecies.
 From raptein, to much together, and oide, a song.

sorth-century Athens—possibly under Solon," probably under Peinstratus—a governmental commission selected or cohated the *Itiad* and the *Odystey* from the epic literature of the preceding centuries, assigned them to Homer, and edited perhaps wove—them into substantially their present shape."

It is one of the miracles of literature that poems so complex in origin achieved in the end so attistic a result. It is quite true that both in language and in structure the load falis considerably this side of perfection, that Aeohan and lonic forms are mingled as if by some polyglot Smyrnan, and that the meter requires now one dialect and now the other, that the plot is marred by inconsistencies, changes of plan and emphasis, and contradictions of character, that the same heroes are killed two or three times over in the course of the tale, that the original theme the wrath of Achilles and its results—is interrupted and obscured by a hundred episodes apparently taken from other lays and sewn into the epic at every seam. Nevertheless, in its larger aspects the story is one, the language is powerful and vivid, the poem is ail in all "the greatest that ever sounded on the lips of men." Such an epic could have been begun only in the active and exuberant youth of the Greeks, and could have been completed only in their artistic maturity. Its characters are nearly all warmors or their women, even the philosophers, like Nestor, put up an envirbly good fight. These individuals are intimately and sympathetically conceived, and perhaps the finest thing in all Greek literature is the unbiased manner in which we are made to feel now with Hector and now with Achilles. In his tent Achilles is a thoroughly unheroic and unlikable figure, complaining to his mother that his luck does not befit his semidivinity, and that Agametimon has stolen his plum, the unhappy Briseis, letting the Greeks die by the thousands while he eats and pouts and sleeps in his ship or his tent, sending Patroclus unaided to death, and then rending the air with unmanly lamentations. When finally he goes into battle he is not stirred by patriotism but mad with grief over the loss of his friend. In his rage he loses all decency, and sinks to savage cruelty with both Lyeaon and Hector. In truth he is an undeveloped mind, unsettled and uncontrolaid, and overshadowed with prophecies of death. "Nay, friend," he says to the fallen Lycaon, who sues for mercy, "die like another! What wouldst thou vainly weeping? Patroclus died, who was far better than thou. Look upon me' Am I not beautiful and tall, and sprung of a good father, and a goddess the mother that bare me3 Yet, lo, Death is over me, and the mighty hand of Doom. There cometh a dawn of day, a noon or an evening, and a hand that I know not shall lay me dead." So he stabs the unresisting Lycaon through the neck, flings the body into the river, and makes one of those grandlose speeches that adorn the slaughter in the *lhad*, and laid the foundation for oratory among the Greeks. Half of Hellas worshiped Achides for centuries as a god," we accept him, and forgive him, as a child. At the worst he is one of the supreme creations of the poetic mind.

What carries us along through the lind when we do not have to study or translate it is not merely these characterizations, so numerous and diverse, nor merely the flow and turmoil of the tale, but the rusting splendor of the verse. It must be admitted that Homer repeats as well as nods, it is part of his plan to recall as in refrain certain epithets and lines, so he sings with fond repetition, of Emor d'erigeneia phane rhododoctylos Eos—"when appeared the morning's daughter, rosy-fingered Dawn," But if these are flaws they are lost in the brilliance of the language, and the wealth of similes that now and then, aimid the shock of war, calm us with the quiet beauty of peaceful fields. "As when these in swarming myriads haunt the herdsman's stalls in spring time, when new milk has filled the pails—in such vast multitudes mustered the long-haired Greeks upon the plan." Or

As when, among The deep delts of an and mountain side.

A great fire birms its way, and the thick wood Before it is consumed, and shifting winds. Hither and thither sweep the flames—so ranged Achilles in his fury through the field. From side to side, and every where o'ertook. His victims, and the earth ran dark with blood.**

The Odyssey is so different from all this that from the outset one suspects its separate authorship. Even some of the Alexandrian scholars suggested this, and all the critical authority of Aristarchiis was required to hash the dispute." The Odyssey agrees with the Iliad in certain standard phrases—"owl-eyed Athena," "long-haired Greeks," "wine-dark sea," "rosy-fingered Dawn"—which may have been taken from the same hoard and poetical tradition into which the authors of the Iliad had disped their pens. But the Odyssey contains an array of words apparently brought into use after the Iliad was composed." In the second epic we hear frequently of iron, where the earlier one spoke of broaze, we hear of writing, of private property in land, of freedmen and emancipation—none of which are mentioned in the Iliad; the very gods and their functions are different." The meter is the same dactylic hexameter, as in all the Greek epics, but the style and sparit

and substance are so far from the *lliad* that if one author wrote both poems he was a paragon of complexity and a master of all moods. The new poet is more literary and philosophical, less violent and warlike, than the old; more self-conscious and meditative, leisurely and civilized, so gentle, indeed, that Bentley thought the *Odyssey* had been composed for the special benefit of women."

Whether here too we have poets rather than a poet is harder to say than in the case of the *lliad*. There are signs of suture, but the statching seems more skillful than in the older epic, the plot, though devious, turns out in the end to be remarkably consistent, worthy almost of contemporary fictioneers. From the beginning the conclusion is foreshadowed, every episode advances it, and its coming binds all the books into a whole. Probably the epic was built upon pre-existing lays, as in the case of the *lliad*; but the work of unification is far more complete. We may conclude with a high degree of diffidence that the *Odvisey* is a century younger than the

Hiad, and is predominantly the work of one man.

The characters are less vigorously and vividly conceived than in the *lliad*. Penesope is shadowy, and never quite emerges from behind her loom except in the end, when a moment of doubt, perhaps of regret, fins through her mind at the return of her master. Helen is clearer, and unique, here the launcher of a thousand ships and the cause of ten thousand deaths is still "a goddess among women," maturely lovely in her middle age, gentler and quieter than befire, but as proud as ever, and taking gracefully for granted all the attentions that hedge in a queen." Nausicaa is a pretty essay in the male understanding of women, we hardly expected so delicate and romantic a picture from a Greek. Telemachus is uncertainly drawn, infected with hesitation as by some Hamlet touch, but Odysseos is the most complete and complex portrait in Greek poetry. All in all, the *Odyssey* is a fascinating novel in engaging verse, full of tender sentiment and adventurous surprise, more interesting, to an unwarlike and aging soul, than the majestic and bloody *lliad*.

These poems—sole survivors of a long succession of epics—became the most precious element in the literary henrage of Greece. "Homer" was the staple of Greek education, the repository of Greek myth, the source of a thousand dramas, the foundation of moral training, and—strangest of all the very Bible of orthodox theology. It was Homer and Hesiod, said Herodotus (probably with some hyperbole), who gave definite and human form to the Olympians, and order to the hierarchy of heaven." There is much that is magnificent in Homer's gods, and we come to like them for

their failings, but scholars have long since detected in the poets who pictured them a rollicking skepticism hardly befitting a national Bible. These deties quarrel like relatives, fortucate like fleas, and share with mankind what seemed to Alexander the stigmata of mortality—the need for love and sleep they do everything human but hunger and die. Not one of them could bear comparison with Odvisseus in intelligence, with Hector in heroism, with Andromache in tenderness, or with Nestor in dignity. Only a poet of the sixth century, versed in Ionian doubt, could have made such farcelings of the gods." It is one of the humors of history that these epics, in which the Olympians have essentially the function of comic relief, were reverenced throughout Hellas as props of respectable morality and belief. Eventually the anomaly proved explosive; the humor destroyed the belief, and the moral development of men rebelled against the superseded morals of the gods.

IV. GAMES

Rehgion failed to unify Greece, but athletics -periodically-succeeded Men went to Olympia, Delphi, Corinth, and Nemea not so much to honor the gods—for these could be honored anywhere—as to witness the heroic contests of chosen athletes, and the ecumenical assemblage of varied Greeks. Alexander, who could see Greece from without, considered Olympia the

capital of the Greek world.

Here under the rubric of athletics we find the real religion of the Greeks—the worship of health, beauty, and strength. "To be in health," said Simonides, "is the best thing for man, the next best, to be of form and nature beautiful, the third, to enjoy wealth gotten without fraud, and the fourth, to be in youth's bloom among friends." "There is no greater glory for a man as long as he lives," said the Odvisey," "than that which he wins by his own hands and feet." Perhaps it was necessary for an aristocratic people, living among slaves more numerous than themselves and frequently called upon to defend their soil against more populous nations, to keep in good condition. Ancient war depended upon physical vigor and skill, and these were the original aim of the contests that filled Hellas with the noise of their fame. We must not think of the average Greek as a student and lover of Aeschylus or Plato, rather, like the typical Briton or American, he was interested in sport, and his favored additions were his earthly gods.

Greek games were private, local, murucipal, and Panhellenic. Even the fragmentary remains of antiquity reveal an interesting range of sports.

A relief in the Athens Museum shows on one side a wrestling match, on another a hockey game." Swimming, bareback riding, throwing or dodging missiles while mounted, were not so much sports as general accomplishments of all cirizens. Hunting became a sport when it ceased to be a necessity. Ball games were as varied then as now, and as popular; at Sparts the terms ballplayer and youth were synonyms. Special rooms were built in the palaestra for games of ball, these rooms were called spharisteria, and the tenchers were sphainistai. On another relief we see men bouncing a ball against the floor or the wall, and striking it back with the flat of the hand;" we do not know whether the players did this in turn as in modern handball. One ball game resembled Canadian lacrosse, being a form of hockey played with racquets. Pollux, writing in the second century of our era, describes it in almost modern terms:

Certain youths, divided into two equal groups, leave in a level place—which they have prepared and measured—a bali made of leather, about the size of an apple. They rush at it, as if it were a prize lying between them, from their fixed starting-points. Each of them has in his right hand a racquer (rhahdon) . . . ending in a sort of flat bend whose center is woven with gut strings . planted like a net. Each side strives to be the first to drive the bail to the opposite end of the ground from that allotted to them.

The same author pictures a game in which one team tries to throw a bail over or through an opposed group, "until one side drives the other back over their goal line." Antiphanes, in an imperfect fragment from the fourth century n.c., describes a "star". "When he got the bail he delighted to give it to one player while dodging another; he knocked it away from one and urged on another with noisy cries. Outside, a long pass, be-

yond him, overhead, a short pass. ... ""

From these private sports came local and incidental games, as after the death of a hero like Patrocius, or the successful issue of some great enterprise, like the march of Xenophon's Ten Thousand to the sea. Then came municipal games, in which the contestants represented various localities and groups within one city-state. Almost but not quite international were the quadrennial Panathenaic games, established by Peisistratus in 566; here the entires were mostly from Attica, but outsiders were welcomed. Besides the usual athletic events there were chariot races, a torch race, a rowing race, musical competitions for voice, harp, lyre, and flute, dances, and recitations, chiefly from Homer. Each of the ten divisions of Attica was

represented by twenty-four men chosen for their health, vigor, and good looks; and a prize was awarded to the most impressive twenty-four for "fine manhood."

Since athletics were necessary for war, and yet would die without competitions, the cities of Greece, to provide the highest stimulus, arranged Panhellenic games. The oldest of these were organized as a regular quadrential event at Olympia in 716 B.C.—the first definite date in Greek history. Originally confined to I leans, within a century they were drawing entries from all Greece, by 476 the list of victors ranged from Smope to Marseilles. The feast of Zeus became an international holyday, a truce was proclaimed to all wars in Greece for the month of the festival, and fines were levied by the Eleans upon any Greek state in whose territory a traveler to the games suffered molestation. Philip of Macedon humbly paid a fine because some of his soldiers had robbed an Athenian en route to Olympia.

We picture the pagrins and athletes starting out from distant cities, a month ahead of time, to come together at the games. It was a fair as well as a festival, the plain was covered not only with the tents that sheltered the visitors from the July heat, but with the booths where a thousand concessionaires exposed for sale everything from wine and fruit to horses and statuary, while acrobats and conjurous performed their tricks for the crowd. Some juggled balls in the air, others performed marvels of agility and skill, others are fire or swallowed swords: modes of amusement, like forms of superstition, enjoy a reverend antiquity. Famous orators like Gorgias, famous sophists tike Hippias, perhaps famous writers like Herodotus, delivered addresses or recitations from the porticoes of the temple of Zeus. It was a special holiday for men, since married women were not allowed to attend the festival, these had their own games at the feast of Hera. Menander summed up such a scene in five words. "crowd, market, acrobats, amusements, thieves."

Only freehorn Greeks were allowed to compete in the Olympic games. The athletes (from athlete, a contest) were selected by local and municipal elimination trials, after which they submitted for ten months to rigorous training under professional pandorribai (literally, youth rubbers) and gymnastai. Arrived at Olympia, they were examined by the officials, and took an oath to observe all the rules. Irregularities were rare, we hear of I upolis bribing other boxers to lose to him," but the penalty and dishonor attached to such offenses were discouragingly great. When everything was ready the athletes were led into the stadium, as they entered, a herald announced their names and the cities that had entered them. All the con-

restants, whatever their age or rank, were naked, occasionally a girdle might be worn at the loins." Of the stadium itself nothing remains but the narrow stone slabs toed by the runners at the starting point. Lie 45,000 spectators kept their places in the stadium all day long, suffering from insects, heat, and thirst, hats were forbidden, the water was had, and thes and mosquitoes infested the place as they do today. Sacrifices were offered

at frequent intervals to Zens Averter of Facs."

The most important events were grouped together as the pentathlon, or five contests. To promote all-around development in the athlete each entry in any of these events was required to compete in all of them, to secure the victory it was necessary to win three contests our of the five. The first was a broad jump, the athlete held weights like dumbbells in his hands, and leaped from a standing start. Ancient writers assure us that some jumpers spanned fifty feet," but it is not necessary to beheve everything that we read. The second event was throwing the discus, a circular plate of metal or stone weighing about twelve pounds, the best throws are said to have covered a hundred feet." The third contest was in hurling the javelin or spear, with the aid of a leather thong attached to the center of the shaft. The fourth and principal event of the group was the stadium sprint -i.e., for the length of the stadium, usually some two hundred yards. The fifth contest was wresting. It was a highly popular form of competition in Greece, for the very name palaistra was taken from it, and many a story was told of its clumpions

Boxing was an ancient game, almost visibly handed down from Minoan Crete and Alycensean Greece. The boxers practiced with punching balls hung on a level with the head and filled with fig seeds, meal, or sand. In the classic age of Greece (i.e., the fifth and fourth centuries), they wore "soft gloves" of oxlude dressed with fat and reaching almost to the elbow. Blows were confined to the head, but there was no rule against bitting a man who was down. There were no rests or tounds, the boxers fought till one surrendered or succumbed. They were not classified by weight, any man of any weight might enter the lists. Hence weight was an asset, and boxing degenerated in Greece from a competition in skill into a contest in brawn.

In the course of time, as brutality increased, boxing and wrestling were combined into a new contest called the pankration, or game of all powers. In this everything but bining and eye-gouging was permitted, even to a kick in the stomach." Three heroes whose names have come down to us won by breaking the fingers of their opponents," another struck so fero-

ciously with straight extended fingers and strong sharp nails that he pierced the flesh of his adversary and dragged our his howels." Alilo of Crotona was a more annable pugaist. He had developed his strength, we are took by carrying a calf every day of its life unto it was a foll-grown bull. People loved him for his tricks: he would hold a pomegranate so fast in his fist that no one could get it from him, and yet the fruit was uninjured, he would stand on an oiled quoit and resist all efforts to dislodge him, he would be a cord around his forchead and burst the cord by holding his breath and so forcing blood to his head. In the end he was destroyed by his virtues. "For he chanced," says Pausanias, "on a withered tree, into which some wedges had been driven to separate the wood, and he took it into his head to keep the wood apart with his hands. But the wedges shipped out, he was imprisoned in the tree, and became a prey to the wolves."

In addition to the pentathlor sprint, there were other foot races at the games. One was for four hundred yards, another for twenty-four stadia, or 22, miles, a third was an armed race, in which each runner carried a heavy shield. We have no knowledge of the records made in these races, the stadiom differed in length in different cities, and the Greeks had no instruments for measuring small intervals of time. Stories tell of a Greek runner who could outdistance a hare, of another who raced a horse from Coronea to Thebes (some twenty nules) and beat it, and of how Pheidippides ran from Athens to Sparta—1 to mues—in two days" and, at the cost of his life, brought to Athens the news of the victory at Marathon, twenty-four nules away. But there were no "marathon races" in Greece,

In the plant below the stadium Olympia built a special happodrome for horse races. Women as well as men might enter their horses, and, as now, the prize went to the owner and not to the jockey, though the horse was sometimes rewarded with a statue." The culminating events of the games were the chariot races, with two or four horses running abreast. Often ten four-horse chariots competed together, and as each had to negotiate twenty-three turns around the posts at the ends of the course, accidents were the cluef thrul of the game, in one race with forty starters a single chariot finished. We may imagine the tense excitement of the spectators at these contests, their words arguments about their favorites, their emotional abandonment as the survivors rounded the last turn.

When the toils of five days were over the victors received their rewards. Each bound a woolen fillet about his head, and upon this the judges placed

a crown of wild olive, while a herald announced the name and city of the winner. This laurel wreath was the only prize given at the Olympic games, and yet it was the most eagerly contested distinction in Greece. So important were the games that not even the Persian invasion stopped them, and while a handful of Greeks withstood Xerxes' army at Thermopy lae the customary thousands warched Theagenes of Thasos, on the very day of the bettle, win the pancratiast's crown "Good heavens" exclaimed a Persian to his general, "what manner of men are these against whom you have brought us to hight?-men who contend with one another not for money but for homer " He, or the Greek inventor of the tale, did the Greeks too much credit, and not merely because the Greeks should on that day have been at I bermopy lae rather than at Olympia. I hough the direct prize at the games was little, the indirect rewards were great. Many cities voted substantial sums to the victors on their return from their triumphs, some cities made them generals, and the crowd idolized them so openly that jealous philosopaers complained." Poets like Simonides and Pindar were engaged by the victor or his patrons to write odes in his bonor, which were sung by choruses of boys in the procession that welcomed ham home, sculptors were paid to perpetuate him in bronze or stone, and sometimes he was given free sustenance in the city hall. We may midge the cost of this item when we learn, on questionable authorny, that Milo ate a fouryear-old heifer, and Theagenes an ox, in a day."

The sixth century saw the peak of the splendor and popularity of athlettes in Greece. In 182 the Amphieryonic League established the Pythian games in honor of Apollo at Delphi, in the same year the Isthman games were instituted at Corinth in honor of Posculon, six years later the Nemean games were mangurated to celebrate the Nemean Zeus, and all three occasions became Panhellenic festivals. Together with the Owinpic games they formed a periodos, or cycle, and the great ambition of a Greek athlete was to win the crown at all of them. In the Pythian games contests in music and poetry were added to the physical competitions, and indeed such musical tilts had been celebrated at Delphi long before the establishment of the athletic games. The original event was a hymn in honor of Apollo's victory over the Delphie python, in 582 contests were added in singing, and in playing the lyre and the flute. Similar musical contests were held at Coringh, Nemea, Delos, and elsewhere, for the Greeks believed that by frequent public competitions they could stimulate not only the ability of the performer but the taste of the public as well. The principle was applied to almost every art—to pottery, poetry, sculpture, painting, choral singing, oratory, and drama. In this way and others the games had a profound influence upon art and literature, and even upon the writing of history, for the chief method of reckoning time, in later Greek historiography, was by Olympiads, designated by the name of the victor in the one-stadium foot race. The physical perfection of the all around athlete in the sixth century generated that ideal of statuary which reached its fullness in Myton and Polycleiuis. The nude contests and games in the palaestra and at the festivals gave the sculptor unequaled opportunities to study the human body in every natural form and pose, the nation unwittingly became models to its artists, and Greek athletics united with Greek religion to generate Greek art.

V. ARTS

Now that we come at last to the most perfect products of Greek civilization we find ourselves tragically limited in the quantity of the remains. The devastation caused in Greek literature by time and bigotry and mental fashions is negligible compared with the destruction of Greek art. One classic bronze survives—the Charioteer of Delphi, one classic marble statue—the Hermer of Praxiteles, not one temple—not even the Theseum—has come down to us in the form and color that it had for ancient Greece Greek work in textiles, in wood, in every, silver, or gold, is nearly all gone; the material was too penishable or too precious to escape vandalism and time. We must reconstruct the ship from a few planks of the wreekage.

The sources of Greek are were the impulses to representation and decoration, the anthropomorphic quality of Greek religion, and the athletic character and ideal. The early Greek, like other primitives, when he outgrew the custom of sacrificing living beings to accompany and serve the dead, buried curved or painted figures as substitutes. Later he placed images of his ancestors in his home, or he dedicated in the temple likenesses of himself, or of those whom he loved, as vorive figurines that might magically win for their models the protection of the god. Vimoun religion, Mycenaean religion, even the chthomic cults of Greece, were too vague and impersonal, sometimes too horrible and grotesque, to lend themselves to esthetic form, but the frank humanity of the Olympian gods, and their need of temple homes for their earthly stays, opened a wide road for sculpture, architecture, and a hundred ancillary arts. No other religion—possibly excepting Catholicism—has so simulated and influenced literature and

art almost every book or play, statue or building or vase, that has come down to us from ancient Greece touches upon religion in subject, purpose,

or inspiration.

But inspiration alone would not have made Greek art great. There was needed a technical excellence rising out of cultural contacts and the transmission and development of crafts, indeed art to the Greek was a form of hundicraft, and the artist grew so naturally out of the artisan that Greece never quite distinguished them. There was needed a knowledge of the human body, as in its healthy development the norm of proportion, symmetry, and beauty, there was needed a sensuous, passionate love of beauty, that would hold no toil too great that might give to the living moment of loveliness a lasting form. The women of Sparta placed in their sleeping chair bers figures of Apollo, Narcissais, Hyacinthus, or some other handsome detty, in order that they might bear beautiful children." Cypselus established a heauty contest among we men far back in the seventh contury, and according to Athenaeus this periodical competition continued down to the Christian era " In some places, says Theophrastus, "there are contests between the women in respect of modesty and good management . . . , and also there are contests about beauty, as for instance . . . in Tenedos and Lesbos."

1. Vases

There was a pretty legend in Greece that the first cop was molded upon Helen's breast." It so, the mold was lost in the Dorien invasion, for what pottery has come down to us from early Greece does not remind us of Helen. The invasion must have profoundly disturbed the arts, impoverating craftsmen, scattering schools, and ending for a time the transmission of technology, for Greek vises after the invasion begin again with prantitive simplicity and crudity, as if Crete had never lifted pottery into an art.

Probably the rough mood of the Dorian conquerors, using what survived of Minoan-Niveensean techniques, produced that Geometric style which dominates the oldest Greek pottery after the Homeric age. Flowers, scenery, and plants, so hixuriant in Cretan ornament, were swept away, and the stern spirit that made the glory of the Dorie temple contrived the passing ruin of Greek pottery. The grantic jars that characterize this period made small pretense to heavily, they were designed to store wine or oil or grain rather than to interest a ceramic commission. The decoration was almost al. by repeated triangles, eiteles, chains, checkers, lozenges, swastikas, or simple parallel horizontal lines, even the human figures that intervened were geometrical—torsos were triangles, thighs and legs were cones. This lazy style of ornament spread through Greece,

and determined the form of the Dipylon vases* at Athens, but on these enormous containers (usually made to receive the human dead) black silhouettes of mourners, chariots, and animals were drawn, however awkwardly, between the pattern's lines. Towards the end of the eighth century more life entered into the painting of Greek pottery, two colors were used for the ground, curves replaced straight lines, palinettes and lotuses, prancing horses and hunted hors took form upon the clay, and the ornate Oriental succeeded the bare Geometric style.

An age of busy experimentation followed. Miletus flooded the market with its red vases, Samos with its alabasters, I esbos with its black wares, Rhodes with its whites, Cazomenae with its grave, and Maucraris exported faience and translucent glass. Frythere was famous for the thinness of its vases, Chalcis for bridiance of firest, Sievon and Corinth for their debeate. Proto-Carint wan" scent hornes and elaborately painted jugs like the Clags vase in Rome. A kind of ceruing war engaged the potters of the rival cities one or another of them found purchasers in every pert of the Mediterranean, and in the interior of Russia, Itais, and Gaul. In the seventh century Corinth seemed to be winning, its wares were in every land and hand, its potters had found new techniques of incision and coloring, and had shown a fresh inventiveness in forms. But about 550 the masters of the Ceramicus-the potters quarter on the outskirts of Athens-came to the front, threw off Oriental influence, and captured with their Brack-Figure ware the markets of the Brack Sea, Cyprus, Figypt, Feruria, and Spain. From that time onward the best ceramic craftsmen migrated to Athens or were bern there, a great school and tradition formed as il rough many gengrations son succeeded tather in the art, and the making of fine pottery became one of the great industries, finally one of the conceded monopolies, of Att. 2.

The vases themselves, now and then, bear pictures of the potter's shop, the master working with his apprentices, or watchfully supervising the various processes mixing the picture, bring the cap, and feeling the happiness of those who see beauty taking form under their hands. More than a handred of these Artic porters are known to us, but time has broken up their masterpieces, and they are only names. Here on a drinking cup are the proud words, Nikorthenes me potesten—"Nicosthenes made the "". A greater than he was Execus, whose majestic amphora is in the Vanican, he was one of many arrests encouraged by patronage and peace under the Pesistratids. From the hands of Chias and Ergotimus came, about 560, the famous François vase, found in Erruria oy a Frenchman of that name, and now treasured in the Archeological Museum at Florence—a great mixing bowl covered with now upon row of figures and scenes for m Greek mythology." These men were the outstanding masters of the Black-

[&]quot;So called because they were found charfly near the Double Gate of the city at the Caramicus.

Figure style in south-century Attica. We need not exaggerate the excellence of their work, it cannot compare, either in conception of in execution, with the best Work of the Tang or Sung Clunese. But the Greek had a different aim from the Oriental he sought not color but line, not ornament but form. The figures on the Greek vases are conventional, smared, improbably magniticent in the shoulders and thus in the legs, and as this continued through the classic age, we must assume that the Greek potter never dreamed of realistic accuracy. He was writing poetry, not prose, speaking to the imagination rather than the eye. He launted lumself in materials and pagments he took the fine red clay of the Ceramicus, quieted as color with yellow, carefully engraved the figures, and filled our the silhouettes with brilliant black glaze. He transformed the earth into a profusion of vessels that wedded beauty and use hydria, amphora, ocnochoc, kylix, krater, lekythos-i.e., water jug, two-handled ar, wine bowl, dracking cup, mixing bowl, and unquent flask. He conceived the experiments, created the subjects, and devel ped the techniques that were taken up by bronzewickers, scalptors, and painters, he made the first essays in foreshortening, perspective, chiaroscuro, and modeling,* he paved the way for statuary by molding terra-cotta figures in a thousand themes and forms. He freed his own art from Dorian geometry and Oriental excess, and made the human figure the source and center of its life.

Towards the last quarter of the sixth century the Athenian potter tired of black figures on a red ground, inverted the formula, and created that Red-Figure style which ruled the markets of the Mediterranean for two hundred years. The figures were still stiff and angilar, the body in profile with the eyes in full view, but even within these limits there was a new freedom, a wider scope, of conception and execution. He sketched the figures upon the clay with a light point, drew them in greater detail with a pen, hacd at the background with black, and auded major touches with colored glaze. Here, too, some of the masters made lasting names. One amphora is signed. Painted by Euthymides, son of Polias, as never Euphronius" which was to challenge Luphromus to equal it. Nevertheless this Emphronrus is still rated as the greatest poster of his age, to him, some mank, belongs the great krater on which Heracles wrestles with Antaeus. To his contemporary Sosias is attributed one of the most famous of Greek vases, wheream Actuales bands the wounded arm of Patroclus, every detail is lovingly carried out, and the silent pain of the young warner has survived the centuries. To these men, and now nameless others, we owe such masterpieces as the cup in whose interior we see Dawn mourning over her dead son, and the hydria, in the Metropolitan Museum of Art at New York, that shows a Greek soldier, perhaps Achitles, plunging his lance into a fair and not breastiess Amazon. It was before such a vase as one of these that John Keats stood enthraced one day, uptil its "wild eostasy" and "mad pursuit" fired his brain with an ode greater than any Grecian urn.

2. Sculpture

The Greek sertlement of western Asia, and the opening of Egypt to Greek trade towards 660 B.C., allowed Near Eastern and Egyptian forms and methods of statuary to enter form and European Greece. About 580 two Gretan sculptors, Dipoenus and Scyllis, accepted commessions at Sievon and Argos, and left behind them there but only statues but pupils, from this period dates a vigorous school of sculpture in the Peloponnese. The art had many purposes it commemorated the dead first with simple pillars, then with herms whose head alone was carved, then with forms completely chiseled in the round, or with funeral stellar reliefs, it made statues of victorious athletes, first as types, later as individuals, and it was encouraged by the fively imagination of Greek faith to make counciess images of the gods.

Until the sixth century its material was most frequently wood. We hear a great deal of the chest of Cypsears, dictator of Cornub. According to Paasamas, it was made of cedar, in aid with every and gold, and adorned with compacated carvings. As wealth increased, wooden statues might be covered, in whose or part, by precious materials indeed it was thus that Pherbas made his chryselephantine (i.e., gold and ivory) statues of Athene Parthenox and the Olympian Zeus. Bronze rivaled stone as scraptural material to the end of classical art. Few ancient bronzes have survived the temptation to melt them down, but we may a dige from the perhaps too nunsterial Charioteer of the Delphi Museum (ca. 430) how near to perfection the art of hollow easting had been carried since Rhoccus and Theodorus of Samos had introduced it into Greece. The most famous group in Athenian statuary, the Terminicales (Harmodius and Aristogeston), was cast in bronze by Amenor at Athens shortly after the expulsion of Hipp as. Many forms of soft stone were used before the sculptors of Greece undertook to mold harder varieties with hammer and cheel, but once they had learned the art they all now denuded Navos and Paros of marble. In the archaic period (1100-400) the figures were often painted, but towards the end of that age it was found that a better effect could be secured, in representing the delicate skin of women, by leaving the poished marble without artificial tint.

The Greeks of longs were the first to discover the uses of drapery as a sculptural element. Egypt and the Near East had left the clothing rigid—a vast stone apron multiving the living form, but in sixth-century Greece the sculptors introduced foods into the drapery, and used the garment to reveal that ultimate source and norm of beauty, the healthy human body. Nevertheless the Egypto-Asiatic influence remained so strong that in most archaic Greek sculpture the figure is heavy, graceless, and stiff, the legs are strained even in repose; the arms hang heapless at the sides, the eyes have the almond form, and

occasionally an Oriental slant, the face is stereotyped, immobile, passionless, Greek statuary, in this period, accepted the Egyptian rule of frontality i.e., the figure was made to be seen only from the front, and so rigidly bisymmetrical that a vertical line would pass through the nose, mouth, navel, and genitals with never a right or left deviation, and no flexure of either motion or rest. Perhaps convention was responsible for this dull rigidity the law of the Greek games forbade a victor to set up a portrait statue of himself unless he had won all contests in the pentarblon, only then, the Greeks argued, would be achieve the harmonious physical development that would merit individual modeling For this reason, and perhaps because, as in Egypt, religious convention before the fitth century governed the representation of the gods, the Greek sculptor confined houself to a few poses and types, and devoted houself to their mistery

Two types above all won his study the youth, or kouros, nearly bude, slightly advancing the lett leg, with arms at the side or partly extended, fisrs closed, countenance quiet and stem, and the kore, or maden, carefuly confured, modesta posed and draped, one hand gathering up the robe, the other offering some gar to rac gods. Thereve till lately called the kouror "Apenas," but they were more prohably athletes or funerary monuments. The most famous of the type is the Apollo of Tenea, the largest, the Apollo of Sumum, the most pretentions, the Tirone of Aposto at Annyclae, near Sparta. One of the finest is the smar Strangt and Aponto in the British Maseum, finer still is the Choiseul-Couffier Apollo, a Roman copy of an early fifth-century original." To at least the male eye the korar are more pleasing their bodies are gracefully slender, their faces are softened with a Mona I is a simile, their drapery begins to escape the stiffness of convention, some of them, like those in the Athens Museum would be called reasterpieces in any other land," one of them, which we may cal the Kure of Chas, is a masterpiece even in Greece. In them the sensuous Ionian touch breaks through the Egyptian immobility and Dozian austerity of the "Apollos." Archermus of Chaos created another type, or followed lost models, in the Nike, or Victory, of Delos, out of this would come the lovely Nike of Paconsus at Olympia, the Winged Victory of Samothrace, and, in Christian art, the winged figures of cherubin " Near Viderus unknown sculptors carved a series of draped and seared females for the temple of the Branchidae, figures powerful but crude, dignified hat ponderous, protound but dead.

Scrappiure in relief was so old that a pretty legend could undertake to describe its origin. A lass of Corinth drew upon a wall the outline of the shadow that the lamplight east of her lover's head. Her father Butades, a potter, filled in the outline with clay, pressed the form to hardness, took it down, and baked

No 482 in the National Museum at Athens.

t Now in the Bruish Miseaux, there are copies in the Metropolitan Museum in New York. The Branchidae were the hereditary priests of the temple.

it, so, Pluny assures us, has-relief was born." The art became even more important than sculpture in the adornment of temples and graves. Already in 510 Aristocles made a tuneral relief of Ariston, which is one of the many treasures of the Athens Museum.

Since reliefs were nearly always painted, sculpture, relief, and painting were alsted arts, usually handmaids to architecture, and most artists were skilled in all four forms. Temple moldings, friezes, metopes, and pediment backgrounds were usually painted, while the main structure was ordinarily reft in the natural color of the stone. Of painting as a separate art we have only negligible remains from Greece, but we know through passages in the poets that panel painting, with colors mixed in melted wax, was already practiced in the days of Anacreon. Painting was the last great art to develop in Greece, and the last to die.

All in all, the sixth century failed to rise, in any Greek art except architecture, to the boldness of conception or the perfection of form ariained in the same age by Greek philosophy and poetry. Perhaps artistic patronage was slow to develop in an aristocracy still raral and poor, or in a lusiness class too young to have graduated from wealth to raste. Nevertheless the age of the dictators was a period of stimulation and improvement in every Greek art—above all, under Peisstratus and Hippias in Athens. Towards the end of this period the old rigidity of sculpture began to thaw, the rule of frontality was broken down, legs began to move, arms to leave the side, hands to open up, faces to take on feeling and character, bodies to bend in a variety of poses revealing new studies in anatomy and action. This revolution in sculpture, this animation of stone with life, because a major event in Greek history, the escape from frontality was one of the signal accomplishments of Greece. Tay plan and Oriental influences were set aside, and Greek art became Greek.

3. Architecture

The science of building recovered slowly from the Dorian invasion, and redeemed beyond its deserts the Dorian name. Across the Dark Age from Againstinant to Terpander, the Mycenaean megaron transmitted the essentials of its structure to Greece, the rectanguar shape of the building, the use of columns within and without, the circular shaft and simple square capital, the triglyphs and metopes of the entablature, were all preserved in the greatest achievement of Greek art, the Doric style. But whereas Mycenaean architecture was apparently secular, devoted to patient and homes, classical Greek architecture was almost entirely religious. The royal megaron was transformed into a civic temple as monarchy waned and religion and democracy united the affections of Greece in honoring the personafied city in its god.

The earliest Greek temples were of wood or brick, as befitted the poverty of the Dark Age. When stone became the urthodox material of temple building the architectural features remained as set by timber construction, the rectangular mass or temple proper, the circular shafts, the "master-beam architraves, the beam-end trigly phs, the gabled roof, confessed the wooden origin of their form, even the first lamic spiral was apparently a floral figure painted upon a black of wood." The use of stone increased as Greek wealth and travel grew, the transition was most rapid after the opening of Egypt to Greek trade about ofo i.e. Limestone was the favored material of the new styles before the sixth century, marble came in towards tho, at first for decorative portions, then for façades, finally for the entire temple from base to tiles.

Three "orders" of architecture were developed in Greece the Done, the Ionic, and, in the fourth century, the Cornethian. Since the interior of the temple was reserved for the god and his mansarants, and worship was he d outside, ad three orders devoted themselves to a sking the exterior impressively beautiful. They began at the ground, usually in some elevated place, with the stereobate, two or three avers of foun lation stone in receding steps. From the appermist layer, or sty obate, rose directly, without individual base, the Doric column-"flatted" with sha low, sharp-e lged grooves, and widering perceptably at the middle in what the Greeks cased entasis, or stretching Furthermore, the Durie column tapered slightly towards the top, thereby consisting the tree, and successfully contradicting the Minoan-Mycenaean style. (An undimmshed shaft-worse yet, one that tapers downward seems top-heavy and graceless to the eye, while the wider base heightens that sense of stability which all prehitecture should convey Perhaps, however, the Doric column is too heavy, too thick in proportion to its height, too stellally engrossed in sturdiness and strength.) I pointhe Dotic contrin sit its simple and powerful capital, a "necking or circular hand, a cusmonlike echinus, and, top nost, a square abacus to spread the supporting thrust of the pular beneath the architeave

While the Donars were developing this style from the megaron, modified probably by acquaintance with the Egyptian proto-Dorac coloniades of Derel-Bahri and Beni-Hasan, the Ionian Greeks were altering the same fundamental form under Asiatic influence. In the resultant look order a stender column rose upon an individual base, and began at the bottom, as it ended at the top, with a narrow fibet or band, its height was usually greater, and its diameter smaller, than in the Doric shaft, the upward tapering was scarcely perceptible, the flutings were deep, semicircular grooves separated by flar edges. The lonic capital was composed of a narrow echinus, a still narrower abacus, and between them almost concealing them—emerged the twin spirals of a volute, like an infolded scroll—a graceful element adapted from Hittite, Assyrian, and other Oriental forms." These characteristics, together with the elaborate adominent

of the entablature, described not only a style but a people, they represented in stone the Ionian expressiveness, supplieness, sentiment, clegance, and love of delicate detail, even as the Doric order conveyed the proud reserve, the massive strength, the severe simplicity of the Dorian, the sculpture, literature, music, manners, and dress of the rival groups differed in harmony with their architectural styles. Dorian architecture is mathematics, Ionian architecture is poetry, both seeking the direbility of stone, the one is "Nordic," the other Oriental, together they constitute the masculine and tenumne themes in a basically harmomous form.

Greek architecture distinguished itself by developing the column into an element of beauty as well as a structural support. The essential function of the external columnade was to uphold the caves, and to relieve the walls of the maos, or inner temple, from the outward thrust of the galded roof. Above the commis cose the entablature-i.e., the superstructure of the edifice. Here again, as in the supporting elements, Greek architecture sought a clear differentiation, and yet an articulated connection, of the members. The architrave the great stone that connected the capitals-was in the Doric order plain, or earned a simple painted molding, in long it was composed of three layers, each projecting below, and was topped with a marble cornice segmented with a confusing variety of ornamental details. Since the sloping beams that made the framework of the roof in the Done style came down, and were secured, between two horizontal beams at the cases, the united ends of the three beams formedat first in wood, then initiatively in stone-a trigly ph or triply divided surface Between each trigly ph and the next a space was left as an open window when the roof was of wood or of terra-cotta tiles, when translucent marble tiles were used these metopes, or seeing-between places, were filled in with marble slabs carved in low relief. In the Joine style a band or frieze of reliefs might run around the upper outer walls of the naos or cella, in the fitch century both forms of relief-metopes and trieze-were often used in the same building, as m the Parthenon. In the pediments-the triangles formed by the gatiled rouf in front and rear-the sculptor found his greatest opportunity, the figures here might be drawn out in high relief and enlarged for view from below, and the cramped corners, or tympana, tested the subtlest skill. Finally, the mof itself might be a work of art, with the antly colored files and decorative rain-disposing acrotems, or prinacle figures, rising from the angles of the pediments. All in all, there was probably a surplus of sculpture on the Greek temple between the columns, along the waits, or within the edifice. The painter also was involved the temple was colored in whole or in part, along with its statues, moldings, and reliefs. Perhaps we do the Greeks too much honor today, when time has worn the paint from their temples and divinities, and ferrous strains have lent to the marble natural and incalculable hoes that set off the brilliance

of the stone under the clear Greek sky. Some day even contemporary art may become beautiful.

The two rival styles achieved grandeut in the sixth century, and perfection in the fifth. Geographically they divided Greece unevenly Jonic prevailed in Asia and the Aegean, Doric on the mainland and in the west. The salient achievements of sixth-century Ionic were the temples of Artemis at Ephesus, of Hera at Samos, and of the Branchidae near M.feras, but only rums survive of long architecture before Marathon. The finest extant buildings from the sixth century are the older temples of Paestum and Stelly, all in the Doric style. The ground plan remains of the great temple built at Delphi, between \$48 and 512, from the designs of the Corintman Spintharus, it was destroyed by earthquake in 373, was rebuilt on the same plan, and in that form still stood when Pausamas made his tour of Greece. Atheman architecture of the period was almost wholly Doric in this style Penastratus began, about 530, the gigantic temple of the Olympian Zeus, on the plain at the foot of the Aeropolis. After the Persian conquest of Innia in 546, hundreds of Ionian artists migrated to Artica, and introduced or developed the lonic style in Athens. By the end of the century Athenian architects were using both orders, and had laid all the technical groundwork for the Periclean age,

4. Music and the Dance

The word mounke among the Greeks meant originally any devotion to nny Muse. Piato's Academy was called a Museron or Museum-i.e., a place dedicated to the Muses and the many cultural pursuits which they patronezed, the Museum at Alexandria was a university of literary and scientific activity, not a collection of museum pieces. In the narrower and modern sense music was at least as popular among the Greeks as it is among ourselves today. In Arcadia all freemen studied music to the age of thirty; everyone knew some instrument, and to be unable to sing was accounted a disgrace." Lyric poetry was so named because, in Greece, it was composed to be sung to the accompaniment of the lyre, the harp, or the flute. The poet usually wrote the music as well as the words, and sang his own songs, to be a lyric poet in ancient Greece was far more difficult than to compose, as poets do today, verses for silent and solvary reading. Before the sixth century there was hardly any Greek attenuate divorced from music. Education and letters, as well as religion and war, were bound up with music martial airs played an important part in military training, and nearly all instruction of the memory was through verse. By the eighth century Greek music was already old, with hundreds of varieties and forms. The instruments were simple, and were based, like our vaster armory of sound, upon percussion, wind, or strings. The first class were not popular. The flute was favored at Athens until Alcibiades, laughing at his music master's inflated cheeks, refused to play so ridiculous an instrument, and set a fashion against it among Athenian youth. (Besides, said the Athenians, the Bocomans surpassed them with the flute, which branded the art as a vulgar one ") The simple flute, or aulos, was a tube of cane or bored wood with a detachable mouthpiece and from two to seven finger holes into which movable stopples might be inserted to modify the pitch. Some players used the double flute a "masculine" or bass flute in the right hand and a "ferminine" or treble flute in the left, both held to the mouth by a strap around the cheeks, and played in simple harmony. By attaching the flute to a distensible bag the Greeks made a bagpape, by uniting several graduated thures they made a syrmx, or Pipe of Pan, by extending and opening the end, and closing the finger hoies, they made a salpinx, or trumpet." Hute music, says Pausanias," was usually gloomy, and was always used in dirges or elegies; but the auterradan-the flute-playing geisha girls of Greece-do not seem to have purveyed gloom String music was confined to plucking the strings with finger or plectrum, bowing was unknown." The lyre, phornunx, or kithara were essentially alike four or more strings of sheep gut stretched over a bridge across a resonant body of metal or tor-

The Greeks told many strange tales of how the gods—Hermes, Apollo, Athena had invented these instruments, how Apollo had pitted his lyre against the pipes and flutes of Marsyas (a priest of the Phrygian goddess Cybele), had won—unfairly, as Marsyas thought—by adding his voice to the instrument, and had topped the performance by having poor Marsyas flayed alive—so legend personified the conquest of the flute by the lyre. Prettier stories were told of ancient musicians who had established or developed the musical art—of Olympus, Marsyas' pupil, who, towards 730, invented the enharmonic scale," of Linus, Heracles' teacher, who invented Greek musical notation and established some of the "modes"," of Orpheus, Thracian priest of Dionysus, and of his pupil Musaeus, who said that "song

touse shell. The kithara was a small harp, used for accompanying narrative poetry, the lyre was like a guitar, and was chosen to accompany lyric

is a sweet thing to mortals." These tales reflect the probable fact that Greek music derived its forms from Lydia, Phrygia, and Thrace."

Song entered into almost every phase of Greek life. There were dithyrambs for Dionysus, pacars for Apollo, hyrins for any god, there were enkoma, or songs of praise, for rich men, and epinikia, or songs of victory, for athletes, there were symponaka, skona, crotika, hymenano, elegiat, and threnor for dining, drinking, loving, marrying, mourning, and burying, herdsmen had their bukolika, respects their httperses, vinedressers their epitema, spanners their toulot, weavers their cliniot." And then as now, presumably, the man in the market or the club, the lady in the home and the woman of the streets, sang songs not quite as fearned as Sononides', vulgar music and pointe music have come down distantly together through the centuries.

The highest form of music, in the helief and practice of the Greeks, was choral singing, to this they gave the philosophical depth, the structural complexity, the emotional range, which in modern music tend to find place in the concerto or the syn phony. Any festival a higyest, a victory, a marriage, a holyday might be celebrated with a chorus, and now and then cities and groups would organize great contests in choral song. The performance was in most cases prepared far in advance, a composer was appointed to write the words and music, a rich man was persuaded to pay the expense, professional singers

Greek misseal motal on used not ovals and stems on a staff of ones but the Jerrers of the alphabet, raised by inversion or transversion, augmented by loss and dashes to prage stary-four agos, and placed above the words of the seng. A few acraps of such motar in have come down to consider or for the loss of the test, they indicate includes akin rather to Oriental than to European strains, and would be more bearable to the Handus, the Chinese, or the Japanese than to out dual Occidental ears, unitrained to quarter topics.

were engaged, and the chorus was carefully trumed. All the singers sang the same note, as in the masic of the Greek Church today, there was no 'part song' except that in later centuries the accompanion was played a fifth above or below the voice, or ran counter to it; this is as near as the Greeks seem to have come to harmony and counterpoint."

The dance in its highest development was woven into one art with choral singing, just as many forms and terms of modern music were once associated with the dance;* and dancing rivaled music in age and populatity among the Greeks. Linear, unable to trace its earthly beginnings, sought the origins of the dance in the regular motions of the stars." Homer tells us not only of the dancing floor made by Daedalus for Ariadne, but of an expert dancer among the Greek warriors at Troy, Meriones, who, dancing while be fought, could never be found by any lance." Plato described orchems, or dancing, as "the instinctive desire to explain words by gestures of the entire body"—which is rather a description of certain modern languages; Aristotle better defined the dance as "an imitation of actions, characters, and passions by means of postures and thy thinical insvenients." Sociates himself danced, and praised the art as giving health to every part of the body, "he meant, of course, Greek dancing.

For the Greek dance was quite different from ours. Though in some of its forms it may have served as a sexual standard, it rarely brought men into physical contact with women. It was an arristic exercise rither than a walking embrace, and, like the Oriental dance, it used arms and hands as much as legs and feet." Its forms were as varied as the types of poetry and song, ancient authorities listed two hundred." There were religious dances, as among the Dunyshae devotees, there were at lene dances, like Sparta's Gymnopedia, or Festival of Naked Youth, there were martial dances, like the Pyrrhie, taught to children as part of military drill, there was the stately by porchema, a choral hymn or play performed by two choirs of which one alternately sang or danced while the other danced or sang, there were tolk dances for every major event of life and every season or festival of the year. And as for everything else, there were dance contests, usually involving choral song.

All these arts—lyric poetry, song, instrumental music, and the dance—were closely allied in early Greece, and formed in many ways one art. As time went on, and already in the seventh century, specialization and professionalism set in. The rhapsodes abandoned song for recitation, and separated narrative verse from music." Architochus sang his lyrics without accompaniment," and began that long degeneration which at last reduced

The word four, as meaning part of a verse, owes its origin to the dance that accompanied the song; or cherra, to the Greek, meant a dancing platform, usually in front of the stage.

poetry to a fallen angel silent and confined. The choral dance broke up anto singing without dancing, and dancing without singing, for, as Lucian put it, "The violent exercise caused shortness of breath, and the song suffered for it "In like manner there appeared musicians who played without singing, and won the applause of devotees by their precise and rapid execution of quarter tones." Some famous musicians, then as now, engrossed the receipts, Amoebeus, harpest and singer, received a talent (16000) each time that he performed." The common player, doubtless, lived from hand to mouth, for the musician, like other artists, belongs to a profession that has had the honor of starving in every generation.

The highest repute went to those who, like Terpander, Amon, Aleman, or Stesichorus, were skilled in all forms, and wove choral song, instrumental music, and the dance into a complex and harmomous whole probably more profoundly beautiful and satisfying than the operas and orchestras of today. The most fame us of these masters was Arma. About him the Greeks told the rale how, on a voyage from Taras to Corinth, the sailors stole his money, and then gave hun a choice between being stabled to death or drowned Having stang a final song, he dived into the sea, and was carried on the back of a dolphia (perhaps his harp) to the shore. It was he who, chiefly at Corneth and towards the close of the seventh century, transformed the inchriated singers of impromptu Dionysiae dithyrambs into a soher and trained "cycle" chorus of fifty viaces, singing in strophe and appstrophe, with arias and recitatives as in our oratorios. The theme was usually the suffering and death of Dionysis, and in honor of the god's traditional attendants the chorus was dressed in goatlike sarve guise. Out of this, in fact and name, came the tragic theater of the Greeks.

5. The Beginnings of the Drama

The sixth century, already distinguished in so many fields and lands, crowned its accompashments by laving the foundations of the drama. It was one of the creative moments in history, never before, so far as we know, had men passed from pantomime or ritial to the spoken and secular

play.

Comedy, says Aristotle," developed "out of those who led the phallic procession." A company of people carrying sacred phalli, and singing dithyrambs to Dionysus, or hymns to some other vegetation god, constituted, in Greek terminology, a komor, or revel. Sex was essential, for the culmination of the ritual was a symbolic marriage aimed at the magic stimulation of the soil," hence in early Greek comedy, as in most modern com-

edies and novels, marriage and presumptive procreation form the proper ending of the tale. The comic drama of Greece remained till Menander obscene because its origin was frankly phallic, it was in its beginnings a joyous celebration of reproductive powers, and sexual restraints were in some measure removed. It was a day's moratorium on morals, free speech (parrhama) was then particularly free," and many of the partiders, dressed in Dionysian satver style, wore a goat's tail and a large artificial phallius of red leather as part of their costume. This garb became traditional on the coince stage, it was a matter of sacred custom, religiously observed in Aristophanes, indeed, the phallus communed to be the inseparable emblem of the clown until the fifth century of our era in the West, and the last century of the Byzantine Empire in the Fast." Along with the phallus, in the Old Comedy, went the licentious kordar dance."

Strange to say, it was in Siedy that the rustic vegetation revel was first transformed into the comic drama. About 560 one Susarion of Megara Hybiaea, near Syracuse, developed the processional mirth into brief plays of rough satire and comedy." From Siedy the new art passed into the Peloponnesus and then into Attiea, comedies were performed in the villages by traveling players or local amateurs. A century passed before the authorities—to quote Aristotle's phrase"—treated the comic drama seriously enough to give it (465 B.c.) a chorus for representation at an official festival.

Tragedy eragordia, or the goat song-arose in like manner from the mimic representations, in dancing and singing, of satyrlike Dionysian revelers dressed in the costume of goats." These saryr plays remained till Europides an essential part of the Dionysian drima, each composer of a trugic trilogy was expected to make a concession to ancient custom by offering, as the fourth part of his presentation, a satyr play in honor of Dionysus. "Being a development of the satyr play," says Aristotle," "it was quite late before tragedy rose from short plots and comic diction to its full dignity." Doubtless other seeds matured in the birth of tragedy, perhaps it took something from the ritual worship and appearement of the dead, But essentially its source lay in munetic religious ceremonies like the representation, in Crete, of the birth of Zeus, or, in Argos and Samos, his symbolic marriage with Hera, or, in Heusis and elsewhere, the sacred invsteries of Demeter and Persephone, or, above all, in the Peloponnesus and Atuca, the mourning and rejoicing over the death and resurrection of Dionysus. Such representations were called dromena-things performed; drama is a kindred word, and means, as it should, an action. At Sievon tragic choruses, till the days of the dictator Cleisthenes, commemorized.

we are told, the "sufferings of Adrastus," the ancient king. At Icana, where Thespis grew up, a goat was sacrificed to Dionysus, perhaps the "goat song" from which tragedy derived its name was a chant sung over the dismembered symbol or embodiment of the drunken god." The Greek druma, like ours, grew out of religious ritual.

Hence the Athenian drama, tragge and comic, was performed as part of the festival of Dionysus, under the presidency of his priests, in a theater named after him, by players called "the Dionysian artists." The statue of Dionysis was brought to the theater and so placed before the stage that he might enjoy the spectacle. The performance was preceded by the sacrifice of an animal to the god. The theater was endowed with the sanctity of a temple, and offenses committed there were punished severely as sacrdeges rather than as merely crimes. Just as tragedy held the place of honor on the stage at the Ciry Dionysia, so comedy held the foreground at the festival of the Lenaea; but this festival too was Dionysian. Perhaps originally the theme, as in the drama of the Mass, was the passion and death of the god, gradually the poets were allowed to substitute the sufferings and death of a hero in Greek nivth. It may even be that in its early forms the drama was a magic ritual, designed to avert the tragedies it portrayed, and to purge the authence of evils, in a more than Aristotelian sense. by representing these as borne and finished with by proxy." In part it was this religious basis that kept Greek tragedy on a higher plane than that of the Elizabethan stage.

The chorus as developed for mimetic action by Arion and others became the foundation of dramatic structure, and remained an essential part of Greek tragedy until the later plays of Furipides. The earlier dramatists were called dancers because they made their plays chiefly a matter of choral dancing, and were actually teachers of dancing." Only one thing was needed to turn these choral representations into dramas, and that was the opposition of an actor, in dialogue and action, to the chorus. This inspiration came to one of these dancing instructors and chorus trainers. Thespis of Icarra -a town close to the Peloponnesian Megara, where the rites of Dionysus were popular, and not far from Lleusis, where the ritual drama of Demeter, Persephone, and Dionysus Zagreus was annually performed. Helped no doubt by the egoism that propels the world, Thespis separated himself from the chorus, gave himself individual recitative lines, developed the notion of opposition and conflict, and offered the drama in its stricter sense to history. He played various roles with such versimilitude that when his troupe performed at Athens. Solon was shocked at what seemed to him a kind of public deceit, and denounced this newfangled art as immoral --- a

charge that it has heard in every century. Peisistratus was more imaginative, and encouraged the competitive performance of dramas at the Dionysian festival. In 534 Thespis won the victory in such a contest. The new form developed so rapidly that Choerilus, only a generation later, produced 160 plays. When, fifty years after Thespis, Aeschylus and Athens returned victorious from the battle of Salamis, the stage was set for the great age in the history of the Greek drama.

VL RETROSPECT

Looking back upon the multifarious civilization whose peaks have been sketched in the foregoing pages, we begin to understand what the Greeks were fighting for at Marathon. We picture the Aegean as a beelieve of busy. quarrelsome, alert, inventive Greeks, establishing themselves obstinately in every port, developing their economy from fillage to industry and trade, and already creating great literature, physiosophy, and art. It is amazing how quickly and widely this new culture matured, laying in the sixth century all the foundations for the achievements of the fifth. It was a civilization in certain respects timer than that of the Periclean period, superior in opic and lyne poetry, enlivened and adorned by the greater freedom and mental activity of women, and in some ways better governed than in the later and more democratic age. But even of democracy the bases had been prepared, by the end of the century the dictatorships had taught Greece

enough order to make possible Greek bherty.

The realization of self-government was something new in the world; life without kings had not yet been dared by any great society. Out of this proud sense of independence, individual and collective, came a powerful stimulus to every enterprise of the Greeks, it was their liberty that inspired them to incredible accomplishments in arts and letters, in science and philosophy. It is true that a large part of the people, then as always. harbored and loved superstitions, mysteries, and myths, men must be consoled. Despite this, Greek life had become unprecedentedly secular, polities, law, literature, and speculation had one by one been separated and liberated from ecclesiastical power. Philosophy had begun to build a naturaastic interpretation of the world and man, of body and soul. Science, almost unknown before, had made its first hold formulations, the elements of buelid were established, clarity and order and honesty of thought had become the ideal of a saving nunority of men. A heroic effort of flesh and spirit rescued these achievements, and the promise they held, from the dead hand of alien despotism and the darkness of the Mystenes, and won for European civilization the trying privilege of freedom,

The Struggle for Freedom

I. MARATHON

"In the reigns of Darms, Xernes, and Artaxerxes," says Herodotus, "Greece suffered more sorrows than in twenty generations before." The Greek nation had to pay the penalty of its development, spreading everywhere, it was bound sooner or later to come into conflict with a major power. Using water as their highway, the Hellenes had opened up a trade route that extended from the eastern coast of Spain to the farthest ports of the Black Sea. This European water route. Greeo-Italian Sicilian—competed more and more with the Oriental land and water route—Indo-Perso-Phoenician; and thereby arose a lasting and bitter rivalry in which war, by all human precedents, was inevitable, and an which the battles of Lade, Marathon, Plataea, Himera, Mycale, the Euromedon, the Granicus, Issus, Arbela, Cannae, and Zama were merely incidents. The European system won against the Oriental partly because transport by water is cheaper than transport by land, and partly because it is almost a law of history that the rugged, warlike north conquers the easygoing, art—creating south.

In the year 512 Darms I of Persia crossed the Bosporus, invaded Seythia, and, marching westward, conquered Thrace and Macedon. When he returned to his capitals he had enlarged his realm to embrace Persia, Afghanistan, northern India, Turkestan, Mesopotamia, northern Arabia, Egypt, Cyprus, Palestine, Syria, Asia Minor, the eastern Aegean, Thrace, and Macedonia, the greatest empire that the world has yet seen had overextended itself to include and awaken its future conqueror. Only one important nation remained outside this vast system of government and trade, and that was Greece. By 510 Darius had hardly heard of it outside Ionia "The Athenians," he asked "who are they?" About 506 the dictator Hippias, deposed by revolution at Athens, fled to the Persian sarrap at Sardis, begged for help in regaining his power, and offered, in that event,

to hold Arnes under the Persian dominion.

To this temptation there was added in 500 a timely provocation. The Greek cities of Asia Minor, under Persian rule for half a century, suddenly dismissed their sarraps and declared their independence. Aristagoras of

Miletus went to Sparta to enlist its aid, without success, he passed on to Athens, mother city of many lonuan towns, and pleaded so well that the Athenians sent a fleet of twenty ships to support the revolt. Meanwhile the Ionians were acting with a chaotic vigor characteristic of the Greeks, each rebel city raised its own troops, but kept them under separate comtriand, and the Milesian army, led with more bravery than wisdom, marched upon Sardis and burned the great city to the ground. The Ionian Confederacy organized a united fleet, but the Samian contingent secretly made terms with the Persian satrap, and when, in 494, the Persian navy met the Ioman at Lade, in one of the major sea battles of history, the half hundred ships of the Samians sailed away without fighting, and many other contingents followed their example. The defeat of the lonians was complete, and Ionian civilization never quite recovered from this physical and spiritual disaster. The Persians laid siege to Miletus, captured it, killed the maies, enslaved the women and children, and so completely plundered the city that Miletus became from that day a minor town. Persian rule was re-established throughout Ionia, and Darius, resentful of Athenian interference, resolved to conquer Greece. Little Athens, as the result of her generous assistance to her daughter cines, found herself face to face with an empire literally a hundred times greater than Attica.

In the year 491 a Persian fleet of six hundred ships under Datis struck across the Aegean from Samos, stopped on the way to subdue the Cyclades, and reached the coast of Fubora with 200,000 men. Eubora subnutted after a brief struggle, and the Persians crossed the bay to Attica. They pitched their camp near Marathon, because Hippias had advised them that in that plain they could use their cavalry, in which they were overwhelmingly

superior to the Greeks."

All Greece was in turmoil at the news. The Persian arms had never yet been defeated, the advance of the Empire had never yet been stopped, how could a nation so weak, so scattered, so unused to unity, hold back this wave of Oriental conquest? The northern Greek states were loath to resist so monstrous a power, Sparta hesitatingly prepared, but allowed superstation to delay its mobilization, little Plataea acted quickly, and sent a large proportion of its citizens by forced marches to Marathon. At Athens Militades freed and enlisted slaves as well as freemen, and led them over the mountains to the battlefield. When the rival armies met, the Greeks had some twenty thousand men, the Persians probably one hundred thousand. The Persians were brave, but they were accustomed to individual fighting, and were not trained for the mass defense and attack of

the Greeks. The Greeks united discipline with courage, and though they committed the folly of dividing the command among ten generals, each supreme for a day, they were saved by the example of Aristides, who yielded his leadership to Miltiades." Under this blunt soldier's vigorous strategy the small Greek force routed the Persian horde in what was not only one of the decisive battles, but also one of the most incredible victories, of history. If we may accept Greek testimony on such a matter, 6,400 Persians, but only 192 Greeks, fell at Marathon. After the battle was over the Spartans arrived, mourned their tardiness, and praised the victors.

IL ARISTIDES AND THEMISTOCLES

The strange mixture of nobility and cruelcy, idealism and cymcism, in Greek character and history was illustrated by the subsequent careers of Miltiades and Aristides. Inflated by the praise of all Greece, Miltiades asked the Athenians to equip a fleet of seventy ships, to be under his unchecked command. When the ships were ready Miltiades led them to Pares, and demanded of its citizens one hundred talents (\$600,000) on pain of wholesale death. The Athenians recalled him and fined him fifty talents, but Miltiades died soon after, and the fine was paid by his son Cimon, the future rival of Pericles."

The man who had yielded place to him at Marathon survived the parfalls of success. Aristides was in life and manners a Spartan at Athens. His quiet, staid character, his modest simplicity and undiscourageable honesty won him the title of the Just, and when, in a drama of Aeschylus', the passage occurred—

> For not at seeming just, but being so, He ams; and from his depth of soil below Harvests of wise and prudent counsels grow—

all the audience turned to look at Aristides, as the living embodiment of the poet's lines.' When the Greeks captured the camp of the Persians at Marathon, and found great wealth in their tents, Aristides was left in charge of it, and "neither took anything for himself, nor suffered others to do it";" and when, after the war, the allies of Athens were induced to contribute annually to the treasury of Delos as a fund for common defense, Aristides was chosen by them to fix their payments, and none protested his decisions. Nevertheless, he was more admired than popular. Though

a close friend of Cleisthenes, who had so extended democracy, he was of the opinion that democracy had gone far enough, and that any further empowerment of the Assembly would lead to administrative corruption and public disorder. He exposed malfeasance wherever he found it, and made many enemies. The democranc party, led by Themistocles, used Cleisthenes' recently established device of ostracism to get rid of him, and in 482 the only man in Athenian history that was at once famous and honest was exiled at the height of his career. All the world knows—though again it may be only a fable—how Aristides inscribed his own name on the outracon for a letterless citizen who did not know him, but who, with the resentment of mediocrity for excellence, was tired of hearing him called the Just. When Aristides learned of the decision he expressed the hope that Athens would never have occasion to remember him."

The historian is constrained to admit that the public men of Athens were properly equipped with the unscrupulousness that sometimes enters into statesmanship. As much as Alcibrades at a later age, Themistocles was a very flame of ability, "he has a claim on our admiration quite extraordinary and unparadeled," says the always moderate Thucydides." Like Milnades, he saved Athens, but could not save himself, he could defeat a great empire, but not his own lust for power. "He received reluctantly and carelessly," says Plutarch, "instructions given him to improve his manners and behavior, or to teach him any pleasing or graceful accomplishment, but whatever was said to improve him in sagacity, or in the management of affairs, he would give attention to beyond his years, confident in his natural capacity for such things." It was Athens' misfortune that both I hemistocles and Aristides fell in love with the same girl, Stesilaus of Ceos. and that their animosity outlived the beauty that had aroused it " Nevertheless it was Themistocies whose foresight and energy prepared for, and carried through, the victory of Salamis, the most crucial battle in Greek history. As far back as 493 he had planned and begin a new harbor for Athens at the Piracus, now, in 482, he persuaded the Athenians to forego a distribution of money due them from the proceeds of the silver mines at Laurium, and to devote the sum to the banding of a hundred tricemes. Without this fleer there could have been no resistance to Xerxes.

III. XERXES

Darius I died in 485, and was succeeded by Xerxes I. Both father and son were men of abusty and culture, and it would be an error to think of

the Greco-Persian War as a contest between civilization and barbarism. When Darius, before invading Greece, sent heralds to Athens and Sparta to demand earth and water as symbols of submission, both cities had put the heralds to death. Troubled by portents, Sparta now repented of this violation of international custom, and asked for two citizens to go to Persia and surrender themselves to any punishment that the Great King tright exact in retribution. Sperthias and Bolis, both of old and wealthy families, volunteered, made their way to Xerxes, and offered to die in atonement for the kilong of Darius' messengers. Xerxes, says Herodotus," "answered with true greatness of soul that he would not act like the Lacedaemonians, who, by killing the heralds, had broken the laws which all men held in common. As he had blamed such conduct in them, he would never be guilty of it himself."

Xerxes prepared sesurely but thoroughly for the second Persian attack upon Greece. For four years he collected troops and materials from all the provinces of his realm, and when, in 481, he at last ser forth, his army was probably the largest ever assembled in history before our own century. Herodotus reckoned it, without moderation, at 2,641,000 fighting men, and an equal number of engineers, slaves, merchants, provisioners, and prostruces, he tells us, with perhaps a twinkle in his eye, that when Xerxes' army drank water whole rivers ran dry " It was, naturally and farally, a highly heterogeneous force. There were Persians, Medes, Baby-Ionians, Afghans, Indians, Bactrians, Soudians, Sacae, Assyrians, Armenians, Colemans, Seyths, Paeonians, Wysians, Paphlagonians, Phrygians, Thracians, Thessalians, Locrians, Bocotians, Acolians, Ionians, Lydians, Carrans, Cilicians, Cypriotes, Phoenicians, Syrians, Arabians, Fgyptians, Ethiopians, Liliyans, and many more. There were footmen, cavalrymen, chariots, elephants, and a fleet of transports and fighting triremes numbering, according to Herodotus, 1207 ships in all. When Greek spies were caught in the camp, and a general ordered their execution, Xerxes countermanded the order, spared the men, had them conducted through his forces, and then set them free, trusting that when they had reported to Athens and Sparts the extent of his preparations, the remainder of Greece would hasten to surrender."

In the spring of 480 the great host reached the Hellespont, where Egyptian and Phoenician engineers had built a bridge that was among the most admired mechanical achievements of antiquity. If again we may follow Herodotus, 674 ships of trueine or penteconter size were distributed in two rows athwart the strait, each vessel facing the current, and moored

with a heavy anchor. Then the builders stretched cables of flax or papyrns over each row of ships from bank to bank, bound the cables to every ship, and made them taut with capstans on the shore. Trees were cut and sawn into planks, and these, laid across the cables, were fastened to them and to one another. The planks were covered with brushwood, and this with earth, and the whole was trodden down to resemble a road. A bulwark was erected on each side of the causeway high enough to keep animals from taking fright at sight of the sea." Nevertheless many of the beasts, and some of the soldiers, had to be driven by the lash to trust themselves to the bridge. It stood the burden well, and in seven days and nights the entire host had passed over it successfully. A native of the region, seeing the spectacie, concluded that Xerxes was Zeus, and asked why the master of gods and men had taken so much trouble to conquer little Greece when he might have destroyed the presum; tuous nation with one thunderbolt."

The army marched overland through Thrace and down into Macedonia and Thessaly, while the Persian fleet, hugging the coasts, avoided the storms of the Aegean by passing southward through a canal dug by forced labor across the isthmus at Mt. Athos to the length of a mile and a quarter. Wherever the army ate two meals, we are told, the city that fed it was interly rained, Thasos spent four hundred silver talents—approximately a million dollars in playing host to Xerxes for a day. The northern Greeks, even to the Attic frontier, surrendered to fear or bribery, and allowed their troops to be added to Xerxes' millions. Only Plataes and Thespiae, in the north, prepared to fight.

IV. SALAMIS

How can we imagine, today, the terror and desperation of the southern Greeks at the approach of this polyglot avalanche? Resistance seemed insane, the loyal states could not muster one tenth of Xerxes' force. For once Athens and Sparta worked together with single mind and heart. Delegates were sped to every city in the Peloponnesus to beg for troops or supplies, most of the states co-operated. Argos refused, and never lived down her disgrace. Athens fitted out a fleet that sailed north to meet the Persian armada, and Sparta dispatched a small force under King Leonidas to halt Xerxes for a while at Thermopylae. The two navies met at Artemisium, off the northern coast of Euboea. When the Greek admirals saw the overwhelming number of the enemy's vessels they were of a mind to withdraw. The Euboeans, fearing a descent of the Persians upon their

shores, sent to Themistocles, commander of the Athenian contingent, a bribe of thirty talents (\$180,000) on condition that he persuade the Greek leaders to fight, he succeeded by sharing the bribe. With characteristic subtlety Themistocles had sailors inscribe upon the rocks messages to the Greeks in the Persuan fleet begging them to desert, or in any case not to fight against their motherland, he hoped that if the lumines saw these words they would be moved by them, and that if Xerxes saw and understood them, the king would not dare to use Hellenes in the battle. All day the tival fleets fought, tintil right put an end to the engagement before either side could win, the Greeks then retired to Artemisium, the Persuans to Aphetae. Considering the inequality of numbers, the Greeks justifiably looked upon the battle as a victory. When news came of the disaster at Thermopylae the surviving Greek fleet sailed south to Salanus, to provide a refuge for Athens.

Meanwhile Leonidas, despite the most heroic resistance in history, had been overwhelined at the "Hot Gates," not so much by the bravery of the Persians as by the treachery of Hellenes. Certain Greeks from Trachis not only betrayed to Xerxes the secret of the indirect route over the mountains, but led the Persian force by that approach to attack the Spartans in the rear. Leonidas and his three hundred elders (for he had chosen only fathers of sons to go with him, lest any Spartan family should be extinguished) died almost to the last man. Of the two Spartan survivors one fell at Plataea, the other hanged himself for shame." The Greek historians assure us that the Persians lost 20,000, the Greeks 300." Over the tomb of the latter heroes was placed the most famous of Greek epitaphs: "Go, stranger, and tell the Lacedaemomans that we be here in obedience to their laws."

When the Athenians learned that no barrier now remained between Athens and the Persians, proclamation was made that every Athenian should save his family as best he could. Some fied to Augina, some to Salamis, some to Troezen, some of the men were enlisted to fill up the crews of the fleet that was returning from Artemisium. Pluturch paints" a touching picture of how the tame animals of the city followed their masters to the shore, and howled when the overladen vessels drew off without them, one dog, belonging to Pericles' father, Xanthippus, leaped into the sea and swam alongside his ship to Salamis, where it died of exhaustion." We may judge of the excitement and passion of those days when we learn that an Athenian who, in the Assembly, advised surrender, was killed there and then, and

that a crowd of women went to his house and stoned his wife and children to death." When Xerxes arrived he found the city almost deserted, and

gave it over to pillage and fire.

Soon afterward the Persian fleet, twelve hundred strong, entered the Bay of Salamis. Against it were ranged three hundred Greek tritemes, still under divided command. The majorny of the admirals were opposed to risking an engagement. Resolved to force action upon the Greeks, Themistoeles resorted to a stratagem that would have cost him his life had the Persians won. He sent a trusted slave to Xerxes to tell him that the Greeks were intending to sail away during the night, and that the Persians could prevent this only by surrounding the Greek fleet. Xerxes accepted the advice, and on the next morning, with every escape blocked, the Greeks were compelled to give fight. Xerxes, seated in state at the foot of Mt. Aegaleus, on the Attic shore across from Salanus, watched the action, and noted the names of those of his men who fought with especial bravery. The superior tactics and seamanship of the Hellenes, and the confusion of tongues, minds, and superfluous slups among the Orientals, finally decided the issue in favor of Greece. According to Diodorus the invaders lost two hundred vessels, the defenders forty, but we do not have the Persian side of the story. Few of the Greeks, even from the lost ships, died; for being all excellent swimmers, they swam to land when their boats foundered." The remnant of the Persian fleet fled to the Hellespont, and the subtle Themistocles sent his slave again to Xerxes to say that he had dissuaded the Greeks from pursuit. Xerxes left 300,000 men under command of Mardonus, and with the rest of his troops marched back in humiliation to Sardis, a large part of his force dying of pestilence and dysentery on the Way.

In the same year as Salamis—possibly, as the Greeks would have it, on the same day (September 23, 480 B.C.)—the Greeks of Siedy fought the Carthagmians at Hunera. We do not know that the Phoenicians of Africa were acting in concert with those who supported Xerves and so largely manned his fleet, perhaps it was only a coincidence that Greece found itself assaulted in east and west at once." In the traditional account Hamilear, the Carthagman admiral, arrived at Panormus with 3000 slips and 300,000 troops, he proceeded thence to lay slege to Himera, where he was met by Gelon of Syracuse with 55,000 men. After the fashion of Pume generals, Hamilear stood aside from the battle, and burned sacrificial victims to his gods as the contest raged; when his defeat became evident he threw him-

self into the fire. A tomb was erected to him on the site, and there his grandson Himilton, seventy years afterwards, slaughtered 3000 Greek cap-

taves in revenge."

A year later (August, 479) the liberation of Greece was completed by almost simultaneous engagements on land and sea. Mardonius' army, living leisurely on the country, had pitched its camp near Plataea on the Borotian plain. There, after two weeks of waiting for propinous omens, a Greek force of 110,000 men, led by the Sparian king Pausanias, joined issue with them in the greatest land battle of the war. The non-Persians in the invading force had no heart for the conflict, and took to dight as soon as the Persian contingent, which bore the point of the attack, began to waver. The Greeks won so overwhelming a victory that (according to their historians) they lost but 159 men, while of the Persian force 260,000 were slain. On the same day, the Greeks aver, a Greek squadron met a Persian floulla off the coast of Myeale, the central meeting place of all long. The Persian fleet was destroyed, the Ionian cities were freed from Persian rule, and control of the Hellespont and the Bosporus was won by the Greeks as they had won it from Troy seven bundred years before.

The Greco-Persian War was the most momentous conflict in European history, for it made Europe possible. It won for Western civilization the opportunity to develop its own economic life unburdened with ahen tribute or taxation—and its own political institutions, free from the dictation of Oriental kings. It won for Greece a clear road for the first great experiment in liberty, it preserved the Greek mind for three centuries from the enervating mysticism of the East, and secured for Greek enterprise full freedom of the sea. The Athenian flect that remained after Salamis now opened every port in the Mediterranean to Greek trade, and the commercial expansion that ensued provided the wealth that financed the leisure and culture of Perittean Athens. The victory of artle Heilas against such odds stimulated the pride and lifted up the spirit of its people, out of very grantiude they felt called upon to do unprecedented things. After centuries of preparation and sacrifice Greece entered upon its Golden Age

^{*} These figures from Herodotus" are presentable an outburst of particular magination. Plutarch triving to be impaired, raises the Greek loss to 1760, and Diodorus Siculus, though always generous with numbers, lowers the Parsian loss to toupon, but even Plutarch and Diodorus were Greeks.

Pericles and the Democratic Experiment

L. THE RISE OF ATHENS

"THE period which intervened between the birth of Perioles and the death of Aristotle," wrote Sheney," is undoubtedly, whether considered in itself or with reference to the effect which it has produced upon the subsequent destines of civilized man, the most memorable in the lustory of the world." Athens dominated this period because she had won the allegiance—and the contributions—of most Acgean cities by her leadership in saving Greece, and because, when the war was over, long was impoverished and Sparta was disordered by demolnation, earthquake, and insurrection, while the fleet that Themistocles had created now rivaled with the conquests of commerce its victories at Artemisium and Salamis.

Not that the war was quite over internutently the struggle between Greece and Persia continued from the conquest of long by Cyrus to the overthrow of Darius III by Alexander. The Persians were expelled from Ionia in 479, from the Black Sea in 476, from Thrace in 475, and in 468 a Greek fleet under Camon of Athens decisively defeated the Persians on land and sea at the mouth of the Lurymedon.* The Greek cities of Asia and the Aegean, for their protection against Persia, now (477) organized under Athenian leadership the Delian Confederacy, and contributed to a common fund in the temple of Apollo on Delos. Since Athens donated shaps instead of money, it soon exercised, through its sea power, an effective control over its abies; and rapidly the Confederacy of equals was transformed into an Athenian Empire.

In this policy of imperial aggrandizement all the major statesmen of Arhens—even the virtuous Aristides and later the impeccable Pericles joined with the unscrupulous Themistocles. No other man had deserved so well of Athens as Themistocles, and no one was more resolved than he to be repaid for it. When the Greek leaders met to give first and second

A river in Pemphylia, in sombern Asia Minor.

awards to those men who had most ably defended Greece in the war, each of them voted for himself first, and for Themistocles second. It was he who set the course of Greek history by persuading Arhens that the road to supremacy lay not on land but on the sea, and not by war so much as by trade. He negotiated with Persia, and sought to end the strife between the old and the young empire in order that unimpeded commerce with Asia might bring prosperity to Athens. Under his prodding the men, even the women and children, of Athens raised a wall around the city, and another around the ports at the Piracus and Munvehia, under his lead, carried forward by Pericles, great quays, warehouses, and exchanges were erected at the Piracus, providing every convenience for maritime trade. He knew that these policies would arouse the jealousy of Sparta, and might lead to war between the rival states, but he was stirred on by his vision of Athens'

development, and his confidence in the Athenian fleet.

His aims were as magnificent as his means were venal. He used the navy to force tribute from the Cyclades, on the ground that they had yielded too quickly to the Persians, and had lent Xerxes their troops, and he appears to have accepted bribes to let some extes off." For like considerations he arranged the recall of exiles, sometimes keeping the money, says I imocreon, though he had failed to obtain the recall. When Aristides was placed in charge of the public revenue he found that his predecessors had embezzled public funds, and not least lavishly Themistocles." Toward 471 the Athemans, fearing his unmoral intellect, passed a vote of ostracism upon him, and he sought a new home in Argos. Shortly thereafter the Sparians found documents apparently implicating Themistocles, in the secret correspondence of their regent Pausanius, whom they had starved to death for entering into traitorous negotiations with Persia. Happy to destroy her ablest enemy. Sparta revealed these papers to Atnens, which at once sent out an order for Themistocles' arrest. He fled to Corcyra, was denied refuge there, found brief asylum in Fpirus, and thence sailed secretly to Asia, where he claimed from Xerxes' successor some reward for restraining the Greek pursuit of the Persian fleet after Salamis. Lured by Themistocles' promise to help him subjugate Greece, Artaxerxes I received him into his counsels, and assigned the revenues of several cities for his maintenance Before Themistocles could carry out the schemes that never let him rest he died at Magnesia in 449 B.C., at the age of sixty-five, admired and disliked by all the Mediterranean world.

After the passing of Themistocles and Aristides the leadership of the democratic faction at Athens descended to Ephialtes, and that of the oli-

garchie or conservative faction to Cimon, son of Militades. Cimon had most of the virtues that Themistocles lacked, but none of the subtlety that ability must depend upon for polytical success. Unhappy amid the intrigues of the city, he secured command of the fleet, and consolidated the liberues of Greece by his victory at the Eurymedon Returning to Athens in glory, he ar once lost his popularity by advising a reconciliation with Sparta. He won the Assembly's reluctant consent to lead an Athenian force to the aid of the Spartans against their revoked Helots at Ithome; but the Spartans suspected the Athemans even when bringing gifts, and so clearly distrusted Cimon's soldiers that these returned to Athens in anger, and Cimon was disgraced. In 461 he was ostracized at the instigation of Pericles, and the oligarchie parry was so demoralized by his fall that for two generations the government remained in the hands of the demicrats. Four years later Pericles, repentant (or, rumor said, enamored of Camon's sister Flyinice), secured his recall, and Canon died with honors in a naval campaign in Cyprus.

The leader of the democratic party at this time was a man of whom we know strangery little, and yet his activity was a forming point in the listory of Athens. Ephraltes was poor but incorrupuble, and did not long survive the aumosities of Athenian politics. The popular faction had been strengthened by the war, for in that crisis all class divisions among freemen had for a moment been forgotten, and the saving victory at Salamis had been won not by the army-which was dominated by the anstocrats-but by the navy, which was manned by the poorer citizens and controlled by the mercantile middle class. The oligarchic party sought to maintain its privileges by making the conservative Areopagus the supreme authority in the state. I phiages replied by a litter attack upon this ancient senate. He impeached several of its members for malfeasance, had some of them put to death,' and persuaded the Assembly to vote the almost complete abolition of the powers that the Arcopagus still retained. The conservative Aristotle later approved this ratheal policy, on the ground that "the transfer to the commons of the judicial functions that had belonged to the Senate appears to have been an advantage, for corruption finds an easier

Grate's statement written about 850, of the case against the Arcopagus recalls certain criticisms of the Supreme Court of the Loned States in 1017. "The Arcopagus, standing alone in the emptyment of a ine-tensive, uppears to have exercised an undefined and extensive control which long communione had gradually consecrate I. It was invested with a send of religious respect. The Arcopagus also exercised a supervision over the public assembly, taking care that none of the proceedings—should be such as a infringe the estalashed naw of the country. These were powers immense, undefined, not derived from any formal grant of the people."

material in a small number than in a large one." But the conservatives of the time did not see the issue so calmly. Ephiakes, having been found unpurchasable, was assassinated in 461 by an agent of the obgarchy, and the perilous task of leading the democratic party passed down to the aristocratic Pericles.

IL. PERICLES

The man who acted as commander in chief of all the physical and spiritual forces of Athens during her greatest age was born some three years before Marathon. This father, Xanthippus, had fought at Salamis, had led the Atheman fleet in the battle of Mycale, and had recaptured the He lespoint for Greece. Pericles' mother, Agariste, was a granddaughter of the reformer Cleisthenes, on her side, therefore, he belonged to the ancient family of the Alemacomds. "His mother being near ner time," says Piutarch, "fancied in a dream that she was brought to bed of a hon, and a few days after was delivered of Pericles-in other respects perfectly formed, only his head was somewhat longish and out of proportion"," his critics were to have much fon with this very dobeocephabe head. The most famous music teacher of his time. Damon, gave him instruction in music, and Pythocleides in music and literature, he heard the lectures of Zeno the Fleatic at Athens, and became the friend and pupil of the philosopher Anaxagoras. In his development he absorbed the rapidly growing culture of his epoch, and united in his mind and policy all the threads of Athenian civilization-economic, military, literary, artistic, and philosophical. He was, so far as we know, the most complete man that Greece produced.

Seeing that the oligarchic party was out of step with the time, he attached himself early in life to the party of the demos—i.e., the free population of Athens, then, as even in Jefferson's day in America, the word "people" carried certain proprietary reservations. He approached politics in general, and each situation in it, with careful preparation, neglecting no aspect of education, speaking seldom and briefly, and praying to the gods that he might never utter a word that was not to the point. Even the comic poets, who disliked him, spoke of him as "the Olympian," who wielded the thunder and lightning of such eloquence as Athens had never heard before, and yet by all accounts his speech was unimpassioned, and appealed to enlightened minds. His influence was due not only to his intelligence but to his probity, he was capable of using bribery to secure state ends, but was himself "manifestly free from every kind of corruption, and

superior to all considerations of money"," and whereas Themistocles had entered public office poor and left it rich, Pericles, we are told, added nothing to his patrimony by his political cureer." It showed the good sense of the Athenians in this generation that for almost thirty years, between 467 and 428, they elected and re-elected him, with brief intermissions, as one of their ten strategos or commanders, and this relative permanence of office not only gave him supremacy on the military board, but enabled him to raise the position of strategos autobrator to the place of highest influence in the government. Under him Athens, while enjoying all the privileges of democracy, acquired also the advantages of anstocracy and dictatorship. The good government and cultural patronage that had adorned Athens in the age of Peisistratus were continued now with equal unity and decisiveness of direction and intelligence, but also with the full and annually renewed consent of a free curzenship. History through him illustrated again the principle that liberal reforms are most ably executed and most permanearly secured by the cautious and moderate leadership of an aristocrat enjoying popular support. Greek civilization was at its best when democfacy had grown sufficiently to give it variety and vigor, and anstocracy survived sufficiently to give it order and taste.

The reforms of Pericles substantially extended the authority of the people. Though the power of the benges had grown under Solon, Cleisthenes, and Ephialtes, the lack of payment for jury service had given the well to do a predominating influence in these courts. Pericles introduced (451) a fee of two obols (14 cents), later raised to three, for a day's duty as juror, an amount equivalent in each case to half a day's earnings of an average Athenian of the time " The notion that these modest sums weakened the fiber and corrupted the morale of Athens is hardly to be taken seriously, for by the same token every state that pays its judges or its jurvaien would long since have been destroyed. Pencles seems also to have established a small remuneration for military service. He ecowned this scandalous generosity by persuading the state to pay every citizen two ohols annually as the price of admission to the plays and games of the official festivals; he excused himself on the ground that these performances should not be a luxury of the upper and middle classes, but should contribute to elevate the mind of the whole electorate. It must be confessed, however, that Piaro, Aristotle, and Piutarch conservatives all-were agreed that these pittances injured the Athenian character."

Continuing the work of Ephialtes, Pericles transferred to the popular courts the various judicial powers that had been possessed by the archon-

and magistrates, so that from this time the archonship was more of a bureaucratic or administrative office than one that carried the power of forming policies, deciding cases, or issuing commands. In 457 eligibility to the archonship, which had been confined to the wealther classes, was extended to the third class, or zengitai; soon thereafter, without any legal form, the lowest entiren class, the theter, made themselves eligible to the office by romancing about their income, and the importance of the theter in the defense of Athens persuaded the other classes to wink at the fraud." Moving for a moment in the opposite direction, Pericles (451) carried through the Assembly a restriction of the franchise to the legitimate offspring of an Athenian father and an Athenian mother. No legal marriage was to be permitted between a cruzen and a noncitizen. It was a measure aimed to discourage intermarriage with foreigners, to reduce illegitimate births, and perhaps to reserve to the jectors burghers of Athens the material rewards of cruzenship and empire. Pericles limited would soon have rea-

son to regret this exclusive legislation. Since any form of government seems good that brings prosperity, and even the best seems bad that lunders it. Pericles, having consolidated his political position, turned to economic statesmanship. He sought to reduce the pressure of population upon the narrow resources of Attiea by establishing colonies of poor Atheman citizens upon foreign soil. To give work to the idle," he made the state an employer on a scale unprecedented in Greece ships were added to the fleet, arsenals were hult, and a great corn exchange was erected at the Piracus. To protect Arhens effectively from siege by land, and at the same time to provide further work for the unemployed, Pericles persuaded the Assembly to supply funds for constructing eight nules of "Long Walls," as they were to be called, connecting Athens with the Piracus and Phalerum, the effect was to make the city and its ports one fortified enclosure, open in wartime only to the sea on which the Atheman fleet was supreme. In the hostility with which unwalted Sparta looked upon this program of fortification the oligarchic party saw a chance to recapture political power. Its secret agents invited the Sparrans to invade Artica and, with the aid of an oligarchic insurrection, to put down the democracy, in this event the obgarchs pledged themselves to level the Long Walls. The Spartans agreed, and dispatched an army which defeated the Athemans at Tanagra (457), but the oligarchs failed to make their revolution. The Spartans returned to the Peloponnesus empty-handed, dourly awaiting a better opportunity to overcome the flourishing rival that was taking from them their traditional leadership of Greece.

Pericles rejected the tempration to retaliste upon Sparta, and instead, devoted his energies now to the beautification of Athens. Hoping to make his city the cultural center of Helias, and to rehuld the incient shrineswhich the Persians had destroyed on a scale and with a splendor that would lift up the soul of every citizen, he devised a plan for using all the genius of Athens' arrists, and the labor of her remaining unemployed, in a bold program for the architectural adorminent of the Aeropolis. "It was his desire and design," says Plutarch, "that the undisciplined mechanic multitude . . . should not go without their share of public funds, and yet should not have these given them for sitting still and doing nothing; and to this end he brought in these vast projects of construction." To finance the undertaking he proposed that the treasury accumulated by the Delian Confederacy should be removed from Delos, where it lay idle and insecure, and that such part of it as was not needed for common defense should be used to beautify what seemed to Pericles the legitimate capital of a beneficent empire.

The transference of the Delian treasury to Athens was quite acceptable to the Athenians, even to the oligarchs. But the voters were loath to spend any substantial part of the fund in adorning their city-whether through some qualm of conscience, or through a secret hope that the money might be appropriated more directly to their needs and enjoyment. The obgarchie leaders played upon this feeling so eleverly that when the matter neared a vote in the Assembly the defeat of Pericles' plan seemed certain. Plutarch tells a delightful story of how the subtle leader turned the tide. "Very well,' said Pericles; 'let the cost of these buildings go not to your account but to mine; and let the inscription upon them stand in my name." When they heard him say this, whether it were out of a surprise to see the greatness of his spirit, or out of emulation of the glory of the works, they cried aloud, bidding him spend on . . . and spare no cost till all were

finished."

While the work proceeded, and Pencles' especial protection and support were given to Pheidias, Ictinus, Mnesicles, and the other artists who labored to realize his dreams, he lent his patronage also to literature and philosophy; and whereas in the other Greek esties of this period the strife of parties consumed much of the energy of the citizens, and literature languished, in Athens the stimulus of growing wealth and democratic freedom was combined with wise and cultured leadership to produce the Golden Age. When Pericles, Aspasia, Pheidias, Anaxagoras, and Socrates attended a play by Euripides in the Theater of Dionysus, Athens could see visibly

the zenith and unity of the life of Greece-statesmanship, art, science, philosophy, literature, religion, and morals living no separate career as in the pages of chromolers, but woven into one many-colored fabric of a

nanon's history.

The affections of Pericles wavered between art and philosophy, and he might have found it hard to say whether he loved Pheidias or Anaxagoras the more, perhaps he turned to Aspasia as a compromise between beauty and wisdom. For Anaxagoras he entertained, we are told, "an extraordinary esteem and admiration." It was the philosopher, says Plato," who deepened Pericles into statesmanship, from long intercourse with Anaxagoras, Plutarch believes, Pericles derived 'nor merely elevation of purpose and dignity of language, raised far above the base and dishonest builfooneries of mob eloquence, but, besides this, a composure of countenance, and a screnity and calmness in all his movements, which no occurrence whilst he was speaking could disturb." When Anaxagoras was old, and Pericles was absorbed in pubnic affairs, the statesman for a time let the philosopher drop out of his life, but later, hearing that Anaxagoras was starving, Pericles hastened to his relief, and accepted hundly his reliuke, that "those who have occasion for a lamp supply it with oil."

It seems hardly credible, and yet on second thought most natural, that the stern "Olympian" should have been keenly susceptible to the charms of woman, his self-control fought against a deheate sensibility, and the toils of office must have heightened in him the normal male longing for feminine renderness. He had been many years married when he met Aspassa She belonged to-she was helping to create the type of hetairs that was about to play so active a part in Atheman life: a woman rejecting the seclusion that marriage brought to the ladies of Athens, and preferring to live in unneensed unions, even in relative promiscuity, if thereby she might enjoy the same freedom of movement and conduct as men, and partic pate with them in their cultural interests. We have no testimony to Aspasia's beauty, though ancient writers speak of her "small, high-arched foot, "her silvery voice," and her golden hair " Aristophanes, an unscrupulous polytical enemy of Pericles, describes her as a Milesian courtesan who had established a huxurious brothel at Megara, and had now imported some of her girls into Athena, and the great comedian delicately suggests that the quarrel of Athens with Wegara, which precipitated the Peloponnesian War, was brought about because Aspasia persuaded Pericles to revenge her upon Megarians who had kidnaped some of her personnel." But Aristophanes was not an historian, and may be trusted only where he himself is not concerned.

Arriving in Athens about 450, Aspasia opened a school of rhetoric and philosophy, and boldly encouraged the public emergence and lugher education of women. Many girls of good family came to her classes, and some husbands brought their wives to study with her." Men also attended her lectures, among them Pericles and Socrates, and probably Anaxagoras, Euripides, Alcibiades, and Pheidias. Socrates said that he had learned from her the art of cloquence," and some ancient gossips would have it that the statesman inherited her from the philosopher." Pericles now found it admirable that his wife had formed an affection for another man. He offered her her freedom in return for his own, and she agreed; she took a third husband," while Pericles brought Aspasia home. By his own law of 451 he could not make her his wife, since she was of Milesian birth, any chald be might have by her would be illegitimate, and meligible to Atheman entizenship. He seems to have loved aer sincerely, even uxoriously, never leaving his home or returning to it without kissing her, and finally willing his fortune to the son that she bore han. From that time onward he forewent all social afe outside his home, seldom going anywhere except to the agora or the council hall, the people of Athens began to complain of his aloofness. For her part Aspasta made his home a French Enlightenment salon, where the art and science, the Lterature, philosophy, and statesmanship of Athens were brought together in mutual stimulation. Socrates marveled at her eloquence, and credited her with composing the funeral oration that Pericles delivered after the first casualties of the Peloponnesian War," Aspasia became the uncrowned queen of Athens, setting fashion's tone, and giving to the women of the city an exciting example of mental and moral freedom.

The conservatives were shocked at all this, and turned it to their purposes. They denounced Pericles for leading Greeks out to war against Greeks, as in Aegina and Samos, they accused him of squandering public funds, finally, through the mouths of irresponsible counce dramatists abusing the free speech that prevailed under his rule, they charged him with turning his home into a house of ill fame, and having relations with the wife of his son." Not during to bring any of these matters to open trial, they attacked him through his friends. They indicted Pheidias for embezzling, as they afleged, some of the gold assigned to him for his chrysele-phantine Athena, and apparently succeeded in convicting him, they in-

dicted Anaxagoras on the ground of irrengion, and the philosopher, on Pericles' advice, fled into exile, they brought against Aspasia a like writ of impiety (graphe archeias), complaining that she had shown disrespect for the gods of Greece. The conne poets satirized her mercilessly as a Deinneira who had ruined Pericles, and called her, in plain Greek, a concubine, one of them, Hermippus, doubtless in turn a dishonest penny, accused her of serving as Pericles' procuress, and of bringing freeborn women to han for his pleasure. At her trial, which took place before a court of fifteen hundred juriors, Pericles spoke in her defense, using all his eloquence, even to tears, and the case was dismissed. From that moment (432) Pericles began to lose his hold upon the Athenian people, and when, three years sater, death came to him, he was already a broken man.

III. ATHENIAN DEMOCRACY

1. Deliberation

These strange indictments suffice to show how real was the limited democracy that functioned under the supposed dictatorship of Pericles. We must study this democracy carefully, for it is one of the outstanding experiments in the aistory of government. It is limited, first, by the fact that only a small numerity of the people can read. It is lumited physically by the difficulty of reaching Athens from the remoter towns of Artica. The franchise is restricted to those sons, of two free Athenian parents, who have reached the age of twenty-one, and only they and their families enjoy cas I rights, or directly bear the military and fiscal burdens of the state. Within this jealously circumsembed circle of 43,000 citizens out of an Attic population of 315,000, political power, in the days of Pericles, is formally equal; each enizen enjoys and missis upon isonomia and iregoria-equal rights at law and in the Assembly. To the Athenian a citizen is a man who not only votes, but takes his turn, by lot and rote, as magistrate or judge, he must be free, ready, and able to serve the state at any time. No one who is subject to another, or who has to labor in order to live, can have the time or the capacity for these services, and therefore the manual worker seems to most Athenians unfit for citizenship, though, with human inconsistency they admit the peasant proprietor. All of the 115,000

Derance, wife of Herseles, caused his death by presenting him with a positive robe.
 Sophocles' Truchinan Women.

slaves of Attica, all women, nearly all workingmen, all of the 28,500 "mer ies" or resident aliens, and consequently a great part of the trading class, are excluded from the franchise, t

The voters are not gathered into parties, but are loosely divided into followers of the obgareme or the democratic factions according as they oppuse or favor the extension of the franchise, the dominance of the Assembly, and the governmental succor of the poor at the expense of the rich. The active members of each faction are organized into clubs called betareia, companionships. There are clubs of all kinds in Periclean Athens-religious clubs, kinship clubs, military clubs, workers' clubs, actors' clubs, political clubs, and clubs honestly devoted to eating and drinking. The strongest of all are the oligarchie clubs, whose members are sworn to mutual aid in politics and law, and are bound by a common passionate hostility to those lower enfranchised ranks that press upon the toes of the landed aristocracy and the moneyed merchant class." Against them stand the relatively democratte party of small businessmen, of cutzens who have become wage workers, and of those who man the merchant ships and the Athenian fleet, these groups resent the luxuries and privileges of the rich, and raise up to leadership in Arnens such men as Cleun the tanner, Lysteles the sheep dealer, I ugrates the tow seller, Cleophon the harp manufacturer, and Hyperbolus the lampmaker. Pericles holds them off for a generation by a subtle nuxture of democracy and anstocracy, but when he dies they inherit the government and thoroughly enjoy its perquisites. From Solon to the Roman conquest this bitter conflict of oligarchs and democrats is waged with oratory, votes, ostracism, assassination, and cavil war.

Fvery voter is of right a member of the basic governing body-the ekklena, or Assembly, there is at this level no representance government. Since transportation is difficult over the hills of Attica, only a fraction of the eligible members ever attend any one meeting, there are rarely more than two or three thousand. Those citizens who live so Athens or at the Piracus come by a kind of geographical determinism to dominate the Assembly, in this way the democrats gain ascendancy over the conservatives, who are for the most part scattered among the farms and estates of Attica. The Assembly meets four times a month, on important occasions in the agora, in the Theater of Dionysus, or at the Piraeus, ordinarily in a semicircular place called the Pnyx on the slope of a hill west of the Arcopagus;

The Greek word, metorical means sharing the home."

† The figures are from Gottone A.W., Low Loginar on of Athens in the Fifth and Fourth Connected B.C., pp. 21-26, 4" They are frankly conjectural. The total figure meander the wives and muons children of the connects.

in all these eases the members sit on benches under the open sky, and the sitting begins at dawn. Lach session opens with the sacrifice of a pig to Zens. It is usual to adjourn at once in case of a storm, earthquake, or eclipse, for these are accounted signs of divine disapproval. New legislation may be proposed only at the first session of each month, and the member who offers it is held responsible for the result of its adoption, if these are seriously evil another member may within a year of the vote invoke upon lum the graphe paranomon, or writ of illegality, and have him fined, disfranchised, or put to death, this is Athens' way of discouraging hasty legislation. By another form of the same writ a new proposal may be checked by a demand that before its enactment one of the courts shad pass upon its constitutionality-i.e., its agreement with existing law." Again, before considering a bill, the Assembly is required to submit it to the Council of Five Handred for prehiminary examination, very much as a bill in the American Congress, before discussion of it on the floor, is referred to a committee presumed to have especial knowledge and competence in the marter involved. The Council may not reject a proposal outright; it may only report it, with or without a recommendation.

Ordinarily the presiding officer opens the Assembly by presenting a probableums, or reported bill. Those who wish to speak are heard in the order of their age, but anyone may be disqualified from addressing the Assembly if it can be shown that he is not a landowner, or is not legally married, or has neglected his duties to his parents, or has offended public morals, or his evaded a military obligation, or has thrown away his shield in battle, or owes taxes or other money to the state. Only trained orators avail themselves of the right to speak, for the Assembly is a difficult audience. It laughs at mispronunciations, protests aloud at digressions, expresses ats approval with shours, whistling, and clapping of hands, and, if it strongly disapproves, makes such a din that the speaker is compelled to leave the bema, or rostrum." Fach speaker is allowed a given time, whose lapse is measured by a clepsydra or water clock." Voting is by a show of hands unless some individual is directly and specially affected by the proposal, in which case a secret ballot is taken. The vote may confirm, amend, or override the Council's report on a bill, and the decision of the Assembly is final. Decrees for unmediate action, as distinct from laws, may be enacted more expeditiously than new legislation, but such decrees may with equal expedition be canceled, and do not enter into the body of Athenian aw.

Above the Assembly in dignity, inferior to it in power, is the boule, or

257

Council. Originally an upper house, it has by the time of Pericles been reduced in effect to a legislative committee of the ekklesia. Its members are chosen by lot and rote from the register of the entizens, fifty for each of the ten tribes, they serve for a year only, and receive, in the fourth century, five obols per day. Since each councilor is disqualified for re-election until all other engible entizens have had a chance to serve, every entizen, in the normal course of events, sits on the boule for at least one term during his life. It meets in the bouleuterion, or conneil hall, south of the agora, and its ordinary sessions are public. Its functions are legislative, executive, and consultative in examines and reformulates the bills proposed to the Assembly, it supervises the conduct and accounts of the religious and administrative officials of the city, it controls public finances, enterprises, and buildings, it issues executive decrees when action is called for and the Assembly is not in session, and, subject to later revision by the Assembly, it controls the foreign affairs of the state

To perform these var ed tasks the Council divides uself into ten pry tanies, or committees, each of fifty members, and each prytany presides over the Council and the Assembly for a month of thirty-six days. Every morning the presiding prytany chooses one of its members to serve as chairman of itself and the Council for the day, this position, the highest in the state, is therefore open by for and turn to any citizen; Athens has three hundred presidents every year. The lot determines at the last moment which prytany, and which member of it, shall preside over the Council during the month or the day, by this device the corrupt Athenians hope to reduce the corruption of justice to the lowest point attainable by human character. The acting privany prepares the agenda, convokes the Council, and formulates the conclusions reached during the day. In this way, through Assembly, Council, and prytany, the democracy of Athens carries out its legislative functions. As for the Areopagus, its powers are in the fifth century restricted to trying cases of arson, willful violence, poisoning, or premeditated murder. Slowly the law of Greece has been changed "from starus to contract," from the whim of one man, or the edict of a narrow class, into the deliberate agreement of free citizens.

2, Law

The earliest Greeks appear to have conceived of law as sicred custom, divinely sanctioned and revealed, themis* meant to them both these customs and

^{*} Le., where it had down, from re-thoms, I place, of our down in its early sense of law, and the Russian shows.

a goddess who (like India's Rita or China's Tao or Tien) embodied the moral order and harmony of the world. Law was a part of theology, and the oldest Greek laws of property were mingled with httirgical regulations in the ancient temple codes." Perhaps as old as such religious law were the rules established by the decrees of tribal chieftains or kings, which began as force and ended, in time, as sanctities.

The second phase of Greek legal history was the collection and co-ordination of these buly customs by lawgivers (thermurberar) like Zaieneus, Charondas, Draco, So on, when such men put their new codes into writing, the thermot, or sacred usages, became nomor or man made laws. In these codes law freed uself from religion, and became increasingly secular, the intention of the agent entered more fully into magment of the act, family liability was replaced by individual responsibility, and private revenge gave way to statutory pumshment by the state.

The third step in Greek legal development was the accumulative growth of a body of law. When a Periciean Greek speaks of the law of Athens he means the codes of Draco and Solon, and the measures that have been passed—and not repealed by the Assembly or the Council. If a new law contravenes an old one, the repeal of the latter is prerequisite, but scruting is seidom complete, and two statutes are often found in ludberous contradiction. In periods of exceptional legal confusion a committee of namothetia, or law determiners, is chosen by lot from the popular courts to decide which laws shall be retained, in such cases advocates are appointed to defend the old laws against those who propose to repeat them. Under the supervision of these namothetia the laws of Athens, phrased in simple and intengible language, are cut upon stone stabs in the King's Porch, and thereafter no magnitude is allowed to decide a case by an unwritten law.

Athenian law makes no distinction between a civil and a criminal code, except that it reserves murder cases for the Areopagus, and in civil sums leaves the complainant to enforce the court's decree himself, going to his aid only if he meets with resistance." Murder is infrequent, for it is brunded as a sacrdege as well as a crime, and the dread of feud revenge remains if the law fails to accumine conditions direct retaliation is still tolerated in the fifth century, when a husband finds his mother, wife, concubine, sister, or daughter in ill cir relations he is contact to kill the male offender at once." Whether a willing is intentional or not it has to be explaited as a pollution of the city's soil, and the rites of purification are punitully rigid and complex. If the victim has granted pardon before dying, no action can be brought against the killer." Beneath the

In Periodean Arhens the name thermothetat was given to the six minor archons who
recorded, interpreted, and enforced the laws, or Aristotle's day they presided over the
popular courts.

Areopagus are three tribunals for homicide cases, according to the class and origin of the victim, and according as the act was intentional, or excusable, or not. A fourth tribunal holds court at Phreattyx on the coast, and tries those who, while exiled for impremeditated homicide, are now charged with another and premeditated murder; being political by the first crune, they are not allowed to touch Artic soil, and their defense is conducted from a boat near the shore.

The law of property is uncompromisingly severe. Contracts are rigorously enforced, all jurors are required to swear that they "will not vote for an aboution of private debts, or for a distribution of the lands or houses belonging to Atoenians", and every year the head arthon, on taking office, has proclamation made by a hersid that what each possesses he shall remain possessor artid absolute master thereof " The right of bequest is still narrowly limited. Where there are male children the old religious conception of property, as bound up with a given family line and the care of ancestral spirits, demands that the estate should automatically pass to the sons, the father owns the property only in trust for the family dead, Lying, and to be born. Whereas in Sparta (as in England) the parrimony is indivisible and goes to the cluest son, in Athena (very much as in France) it is apportunied among the male nears, the oldest receiving a moderately larger share than the others." As early as Hesiod we find the peasant lumming his family in Gadic tashion, lest his estate be rumously divided among many soms." The hasband's property never descends to the Wishow, 24, that remains to her is her downy. Wiles are as complex in Pericles' day as an our own, and are couched in much the same terms as now " In this as in other matters Greek egislation is the basis of that Roman few which in turn has provided the legal toundations of Western society.

3. Justice

Democracy reaches the judiciary last of all, and the greatest reform accomplished by Ephialtes and Pericles is the transfer of judicial powers from the Areopagus and the archors to the beliave. The establishment of these popular courts gives to Athens what trial by jury will win for modern Europe. The beliavea[®] is composed of six thousand dieasts, or jurors, annually drawn by lot from the register of the extizens; these six thousand are distributed into ten dieasteries, or panels, of approximately five hundred each, leaving a surplus for vacancies and emergencies. Minor and local cases are settled by thirty judges who periodically visit the demes or counties of Attica. Since no juror may serve more than a year at a time, and

^{*} Senerly, believe is the name of the place where the courts there, and was so called (from belief, and because the sessions were held in the open six

eligibility is determined by rotation, every citizen, in the average of chance, becomes a juror every third year. He does not have to serve, but the payment of two-later three lobols per day obtains an attendance of two or three hundred jurors for each panel. Important cases, like that of Socrates, may be fried before vast dicasteries of twelve hundred men. To reduce corruption to a minimum, the panel before which a case is to be tried is determined by lot at the last minute, and as most trials last but a day we do not hear much of bribery in the courts, even the Athenians find it difficult to bribe in a moment three hundred men.

Despite expedition, the courts of Athens, like courts the world over, are usually behind their calendar, for the Athenians itch to bugate. To cool this fever pub ic arbitrators are chosen by lot from the roster of citizens who have reached their systeth year, the parties to a dispute submit their compaint and defense to one of these, again chosen by lot at the last minute, and each party pays him a small fee. It he fails to reconcile them he gives his judgment, so compized by an oath. Fither party may then appeal to the courts, but these ust ally retuse to hear minor cases that have not been submitted to arbitration. When a case is accepted for trial the piez is entered or sworn to, the witnesses make their depositions and swear to them, and all these statements are presented to the court in written form. They are scaled in a special box, and at a later date they are opened and examined, and judgment is given, by a panel chosen by lot. There is no public prosecutor, the government relies upon private cityzens to accuse before the courts any one guilty of serious offenses against morals. religion, or the state. Hence arises a crass of 'sycophanes," who make such charges a regular practice, and develop their profession into an art of blackman, in the tourth century they earn a good Lying by bringing-or, better, threatening to bring actions against rich nien, believing that a popular court will be loath to acquir those who can pay substantial fines." The expenses of the courts are mostly covered by fines roposed upon convicted men. Plaintiffs who fail to substantiate their charges are also fined, and if they receive less than a fitch of the nators' votes they are subject to a lashing, or to a penalty of a thousand describes (\$1000). Each party in a trial usually acts as his own lawyer. and has to make in person the first presentation of his case. But as the complexity of procedure rises, and bugants detect in the jurors a certain sensitivity to eloquence, the practice grows of engaging a thetor or orator, versed in the law, to support the complaint or defense, or to prepare, in his client's name and

[•] Critin, each friend of Socriers, complained that it was difficult for one who withed to mind his own lateries to live at Arbers. "For at the very cine," he said "rhere are people bringing actions against me, not because they have suffered any wrongs from me, but because they have suffered any wrongs from me but because they think that I would rather pay them a sum of money than have the broable of law proceedings."

character, a speech that the client may read to the court. From these special rhetor-pleaders comes the lawyer. His amoquaty in Greece appears from a remark in Diogenes Laertius that Bias, Wise Man of Priene, was an eloquent pleader of causes, who always reserved his talents for the just side. Some of these lawyers are attached to the courts as exegerat, or interpreters, for many of the juriors have no more legal knowledge than the parties to the case.

Evidence is ordinarily presented in writing, but the watness must appear and swear to its accuracy when the grammaton, or clerk of the court, reads it to the jurors. There is no cross-examination. Perjury is so frequent that cases are sometimes decided in the face of exposit sworn evidence. The testimony of women and min its is accepted only in murder trials, that of slaves is admitted only when drawn from them by torture, it is taken for granted that without torture they will be. It is a barbarous aspect of Greek law destined to be outdone in Ruman prisons and Inquisition chambers, and perhaps tivaled in the secret rooms if police courts in our time. Forture, in Pericles day, is forbidden in the case of critizens. Many masters decline to let their slaves be used as witnesses, even when their case may depend upon such testimony, and any permanent imary done to a slave by forture must be made good by those who inflicted it."

Penasties take the form of flogging, fines, disfranchisement, branding, confiscation, expe, and death, imprise minert is soldom used as a punishment. It is a principle of Greek law that a slave should be punished in his body, but a freeman in his property. A vase painting shows a slave hung up by his arms and legs, and mercilessly lashed. Fines are the usual penalty 1 it citizens, and are assessed on a scale that opens the democracy to the charge of fattering its purse through unjust condemnations. On the other hand a convicted person and his accuser are in many cases allowed to name the fine or punishment that they think just, and the court then chooses between the suggested penalties. Marder, sacrifege, treason, and some offenses that seem in nor to us are pumpled with both confiscation and death, but a prospective death penalty may usually be avoided before trial by voluntary exist and the aban limitent of property. If the accused disdains flight and is a citizen, death is inflicted as painlessly as possible by administering hembook, which gradually bemanlis the body from the feet upward, killing when it reaches the heart. In the case of slaves the death penalty may be effected by a brutal endgeling." Sometimes the condenne I betere or after death, may be hurted over a caff into a pat called the barathran. When a sentence of death is laid upon a murderer it is carried out by the public executioner in the presence of the relatives of the victim, as a concession to the old custom and spirit of revenge.

The Athenian code is not as enlightened as we might expect, and advances only moderately upon Hammurabi's. Its basic defect is the limitation of legal

rights to freemen constituting hardly a seventh of the population. Even free women and children are excluded from the proud nonomia of the cutzens, menes, foreigners, and saves can bring suit only through a patron cinzen. Sycophantic blackmail, frequent torture of slaves, capital punishment for minor offenses, personal abuse in forensic debate, the diffusion and weakening of judicial responsibility, the susceptibility of jurors to oratorical displays, their inabout to remper present passions with a knowledge of the past of a wise calculation of the future-these are black marks against a system of law envied throughout Greece for its comparative mildness and integrity, and sufficiently dependable and practical to give to Atheman life and property that orderly protection which is so necessary for economic activity and moral growth. One test of Athenian law is the reverence that nearly every citizen fee's for it, the law is for him the very soul of his city, the essence of its beneficence and strength. The best judgment of the Athenian code is the readiness with which other Greek states adopt a large part of it. "Everyone would admit," says Isocrates, "that our laws have been the source of very many and very great benefits to the life of humanity," Here for the first time in history is a government of laws and not of men.

Athenian law prevails throughout the Athenian Empire of two milion souls while that Empire endures, but for the rest Greece never achieves a common system of purisprudence. International law makes as sorry a picture in fifthcentury Athens as in the world today. Nevertheless external trade requires some legal code, and commercial treaties (symbola) are described by Demostheres as so numerous in his time that the laws governing commercial disputes "are everywhere identical. " These treatises establish consular representation, guarantee the execution of contracts, and make the judgments given in one signatury nation valid in the others." This, however, does not put an end to puracy, which breaks our whenever the dominant fleet is weakened, or relaxes ats watchfulness. Eternal vigilance is the price of order as well as of liberty, and law lessness stalks like a worf about every settled ream, seeking some point of weakness which may give it entry. The right of a city to lead foraging expeditions upon the persons and property of other cities is accepted by some Greek states so long as no treaty specifically forbids it. Religion succeeds in making temples inviolable unless used as military bases, it protects heralds and pagrams to Panhellenic festivals, it requires a formal declaration of war before hostilities, and the granting of a truce, when asked, for the return and hurial of the dead in battle. Poisoned weapons are avoided by general custom, and prisoners are usually exchanged or ransomed at the recognized tariff of two minas-later one mina (\$100) each," otherwise war is nearly as brutal among the Greeks as in modern Christendom. Treaties are numerous, and are soleninrzed with pious ouths, but they are almost always broken. Alnances are frequent, and sometimes generate lasting leagues, like the Delphic Amphictvony in the sixth century and the Achaean and Actolian Leagues in the third. Occasionally two entes exchange the courtesy of population, by which each gives to the other's freemen the rights of citizenship. International arbitration may be arranged, but the decisions arrived at in such cases are as often as not rejected or ignored. Towards forcigners the Greek feels no moral obligation, and no legal one except by treaty, they are barbartor*—not quite "barbarians," but outsiders—aliens speaking outlandish tongues. Only in the Store philosophers of the cosmopolitan Hellenistic era will Greece rise to the conception of a moral code embracing all markind.

4. Administration

As early as 487, perhaps earlier, the method of election in the choice of archons is replaced by lot, some way must be found to keep the rich from buying, or the knaves from snuling, their way into office. To render the selection less than wholly accidental, all those upon whom the lot falls are subjected, before taking up their duties, to a rigorous dokimasia, or character examination, conducted by the Council or the courts. The candidate must show Atheman parentage on both sides, freedom from physical defect and scandar, the pious honoring of his ancestors, the performance of his military assignments, and the full payment of his taxes, his whole life is on this occasion exposed to challenge by any citizen, and the prospeet of such a scrumy presumably frigatens the most worthless from the sortition. If he passes this test the archon swears an eath that he will properly perform the obligations of his office, and will dedicate to the gods a golden starge of life size if he should accept presents or bribes." The fact that chance is allowed to play so large a part in the naming of the nine archons suggests the diminution which the office has suffered since Solon's day, its functions are now in the nature of administrative routine. The archon basileus, whose name preserves the empty title of king, has become merely the chief religious official of the city. Nine tunes yearly the archon is required to obtain a vote of confidence from the Assembly, his actions and judgments may be appealed to the boule or the behave; and any cirizen may indict him for malfeasance. At the end of his term all his official acts, accounts, and documents are reviewed by a board of logistal responsible to

The word is cousin to the Sanskin harriers on I the Latin halbus both of which mean stammering, of our habble. The Greeks implied by harbarot tather strangeness of speech than each of on I rat on and used harbaromos precisely as we following them, use harbaroms to mean an alien or quasi alien distortion of a nation's ideas.

the Council; and severe penalties, even death, may avenge serious misconduct. If the archon escapes these democratic dragons he becomes, at the end of his year of office, a member of the Arcopagus, but this, in the fifth century, is a well-nigh empty honor, since that body has lost nearly all

its powers.

The archons are but one of many commutees which, under the direction and scrutmy of the Assembly, the Council, and the courts, administer the affairs of the city. Aristotle names twenty five such groups, and estimates the number of municipal officials at seven hundred. Nearly all of these are chosen annually by lot; and since no man may be a member of the same commutee twice, every citizen may expect to be a city dignitary for at least one year of his life. Athens does not believe in government by ex-

репъ.

More importance is attached to military than to civil office. The ten strategot, or commanders, though they too are appointed for a year only, and are at all times subject to examination and recall, are chosen not by for but by open election in the Assembly. Here ability, not popularity, is the road to preferment, and the ekklena of the fourth century shows its good sense by choosing Phocion general forty-five times, despite the fact that he is the most unpopular man in Athens and makes no secret of his scorn for the crowd. The functions of the strategos expand with the growth of international relations, so that in the later fifth century they not only manage the army and the navy, but conduct negotiations with foreign states, and control the revenues and expenditures of the city. The commander in chief, or strategos autokraior, is therefore the most powerful man in the government; and since he may be re-elected year after year, he can give to the state a continuary of purpose which its constitution might otherwise render impossible. Through this office Pericles makes Athens for a generation a democratic monarchy, so that Thucydides can say of the Atheman polity that though it is a democracy in name it is really government by the greatest of the citizens.

The army is identical with the electorate, every citizen must serve, and is subject, until the age of sixty, to conscription in any war. But Athenian life is not imbitarized, after a period of youthful training there is little of martial drul no strutting of uniforms, no interference of soldiery with the civilian population. In active service the army consists of light armed infantry, chiefly the poorer citizens, carrying slings or spears, the heavy-armed infantry, or hoplites, those prosperous citizens who can afford armor, shield, and javelin, and the cavalry of nich men, clad in armor and helmer,

and equipped with lance and sword. The Greeks excel the Asiatics in military discipline, and perhaps owe their achievements to a striking combination of loyal obedience on the battleneld with vigorous independence in civil affairs. Nevertheless there is no science of war among them, no definite principles of tactics on strategy, before I paramondas and Philip. Cities are usually waked, and detense is among the Greeks as among ourselves—more effective than offense, otherwise man might have no civilization to record. Siege armies bring up great beams suspended by chains, and, drawing the beams back, drive them forward against the wall, this is as far as siege machinery develops before Archimedes. As for the navy, it is kept up by choosing, each year, four hundred trierarchs, rich men whose privilege it is to recruit a crew, equip a trireme with materials supplied by the state, pay for its building and launching, and keep it in repair, in this way Athens supports in peacetime a fleet of some sixty ships."

The maintenance of the army and the navy constitutes the chief expenditure of the state. Revenues come from trathe tolls, harbor dues, a ruo per cent tariff on imports and exports, a twelve-drachma annual poll tax on menes, a half-drachma tax on treedmen and slaves, a tax on prostitutes, a sales tax, licenses, fines, confiscations, and the imperial tribute. The rax on farm produce, which financed Athens under Peisistratus, is abandoned by the democracy as derogatory to the dignity of agriculture. Most taxes are farmed out to publicans, who codect them for the state and pocker a share as their profit. Considerable income is derived from state ownership of mineral resources. In emergencies the city resorts to a capital levy, the tate rising with the amount of property owned, by this method, for example, the Athenians in 428 raise two hundred talents (\$1,100,000) for the siege of Mytilene. Rich men are also invited to undertake certain leiturgian, i.e., public services, such as equipping embassies, fitting out slups for the fleet, or paying for plays, musical contests, and games. These "liturgies" are voluntarily undertaken by some of the wealthy, and are forced by pubhe opinion upon others. To add to the discomfort of the well to do, any estizen assigned to a liturgy may compel any other to take it from him. or exchange fortunes with him, if he can prove the other to be richer than hunself. As the democratic faction grows in power it finds ever more numerous occasions and reasons for using this device, and in return the financiers, merchants, manufacturers, and landed proprietors of Attica study the arts of concealment and obstruction, and meditate revolution,

Excluding such gifts and levies, the total internal revenue of Athens in the time of Pericles amounts to some four hundred talents (\$2,400,000) a

year, to which is added six hundred talents of contributions from subjects and allies. This income is spent without any budget, or advance estimate and allocation of finds. Under Pericles' thrifty management, and despite his unprecedented expenditures, the treasury shows a growing surplus, which in 440 stands at 9700 talents (\$68,200,000), a pretty sum for any eny in any age, and quite extraordinary in Greece, where few states in the Peli-ponnesus none—have any surplus at all." In cities that have such a reserve it is deposited, usually, in the temple of the city's good at Athens, after 434, in the Parthenon. The state claims the right to use not only this surplus, but, as well, the gold in the statues which it raises to its god, in the case of Phendas' Athene Parthenos this amounts to forty talents (\$240,000), and is so affixed as to be removable." In the temple the city keeps also its "theorie fund," from which it makes the payments annually due the citizens for attendance at the sacred plays and games.

Such is Atheman democracy—the narrowest and fullest in history—narrowest in the number of those who share its privileges, fullest in the directness and equality—with—which all the citizens control legislation, and administer public affairs. The faults of the system will appear vividiy as its history unfolds, indeed, they are already noised about in Aristophanes. The arresponsibility of an Assembly that may without check of precedent or revision vote its momentary passion on one day, and on the next day its passionate regret, punishing then not itself but those who have misled it, the lumination of legislative authority to those who can attend the ekkleria; the encouragement of demogragues and the wasteful ostracism of able men, the fiding of offices by lot and rotation, changing the personnel yearly and creating a chaos of government; the disorderliness of faction perpetually disturbing the gindance and administration of the state—these are vital defects, for which Athurs will pay the full penalty to Sparta, Philip, Alexander, and Rome.

But every government is imperfect, irksome, and mortal, we have no reason to believe that monarchy or aristocracy would govern Athens better, or longer preserve at, and perhaps only this chaotic democracy can release the energy that will lift Athens to one of the peaks of history. Never before or since has political life, within the circle of citizenship, been so intense or so creative. This corrupt and incompetent democracy is at least a school, the voter in the Assembly listens to the eleverest men in Athens, the jurior in the courts has his wits sharpened by the taking and sifting of evidence, the holder of office is molded by executive responsibility and

experience into a deeper maturity of understanding and judgment, "the city," says Simonides, "is the teacher of the man." For these reasons, it may be, the Athenians can appreciate, and thereby call into existence, Aeschylus and Eurepides, Socrates and Plato, the audience at the theater has been formed in the Assembly and the courts, and is ready to receive the best. This aristocratic democracy is no lassez-faire state, no mere watchman of property and order, it finances the Greek drama, and builds the Parthenon, it makes itself responsible for the welfare and development of its people, and opens up to them the opportunity on monon ton zen, alla tou ou zen-"not only to live, but to live well." History can afford to forgive it all its sins.

CHAPTER XII

Work and Wealth in Athens

I. LAND AND FOOD

AT the base of this democracy and this culture lies the production and distribution of wealth. Some men can govern states, seek truth, make music, carve statues, paint pictures, write books, teach children, or serve the gods because others toil to grow food, weave clothing, build dwellings, mine the earth, make useful things, trinsport goods, exchange them, or finance their production or their movement. Everywhere this is the foundation.

Supporting all society is the peasant, the poorest and most necessary of men. In Attica he has at least the franchise, only critizens are permitted to own land, and nearly all peasants own the soil that they till. Clan control of the land has disappeared, and private ownership is solidly established. As in modern France and America, this great class of small proprietors is a steadying conservative force in a democracy where the propertyless city dwellers are always driving toward reform. The ancient war between the country and the city between those who want high returns for agriculture and low prices for manufactured goods, and those who want low prices for food and high wages or profits in industry- is especially conscious and lively in Atrica. Whereas industry and trade are accounted plebeian and degrading by the Atherian citizen, the pursuits of husbandry are honored as the groundwork of national economy, personal character, and military power, and the freemen of the countryside tend to look down upon the denizens of the city as either weakling parasites or degraded slaves.1

The soil is poor of 630,000 acres in Attica a third is unsuitable for cultivation, and the rest is impoverished by deforestation, meager rainfall, and rapid erosion by winter floods. The peasants of Attica shirk no toil—for themselves or their handful of slaves—to remedy this dry humor of the gods, they gather the surplus flow of headwaters into reservoirs, dike the channels of the streams to control the floods, reclaim the precious humus of the swamps, build thousands of irrigation canals to bring to their thirsty fields the trickle of the rivulers, patiently transplant vegetables to improve

their size and quality, and let the land lie fallow in alternate years to regain its strength. They alkalinize the soil with salts like carbonate of lime, and fertilize it with potassium intrate, ashes, and human waste; the gardens and groves about Athens are enriched with the sewage of the city, brought by a main sewer to a reservoir outside the Dipylon, and led thence by bricklined canals into the valley of the Cephisus River. Different soils are mixed to their mutual benefit, and green crops like beans in flower are plowed in to nourish the earth. Plowing, harrowing, sowing, and planting are crowded into the brief days of the fall, the grain harvest comes at the end of May, and the rainless summer is the season of preparation and rest. With all this care Attica produces only 6-5,000 husbels of grain yearly—hardly enough to supply a quarter of its population. Without imported food Periclean Athens would starve, hence the urge to imperialism, and the necessity for a powerful fleet.

The countryside tries to atone for its parsimonious grain by generous harvests of olives and grapes. Hillsides are terrified and watered, and asses are encouraged to make the vine more fruitful by gnawing off the rwigs. Olive trees cover many a landscape in Penclean Greece, but it is Peisistratus and Solon who deserve the credit for introducing them. The olive tree takes sixteen years to come to truit, forty years to reach perfection, without the subsidies of Peisistratus it might never have grown on Attic soil; and the devastation of the olive orchards in the Peloponnesian War will play a part in the decline of Athens. To the Greek the olive has many uses, one pressing gives oil for eating, a second, oil for anomning, a third, oil for illumination, and the remainder is used as fuel. It becomes Attica's richest crop, so valuable that the state assumes a monopoly of its export, and pays with it and wine for the grain that it must import.

It forbids altogether the export of figs, for these are a main source of health and energy in Greece. The fig tree grows well even in and soil, its spreading roots gather whatever moisture the earth will yield, and its stinted foliage offers scant surface for evaporation. Furthermore, the his-bandman learns from the Fast the secret of caprification, he hangs branches of the wild male goat fig (caprificus) among the boughs of the female cultivated tree, and relies upon gall wasps to carry the fertilizing pollen of the male into the fruit of the female, which then bears richer and sweeter figs.

These products of the soil—cereals, olive oil, figs, grapes, and wine are the staples of diet in Attica. Cattle rearing is negligible as a source of food, horses are bred for racing, sheep for wool, goats for milk, asses, mules, cows, and oxen for transport, but chiefly pigs for food, and bees are kept as pro-

viders of honey for a sugarless world. Meat is a luxury, the poor have it only on feast days, the heroic banquets of Homeric days have disappeared. Fish is both a commonplace and a delicacy, the poor man buys a salted and dried, the rich man celebrates with tresh snark meat and eels." Cereals take the form of porndge, flat loaves, or cakes, often mixed with honey. Bread and cake are seldons baked at home, but are bought from women peddlers or in market stalls. Eggs are added, and vegetables-particularly beans, peas, cabbage, lentils, letrace, onions, and garlie. Froits are few; oranges and lemons are unknown. Notes are common, and condaments abound. Salt is collected in salt pans from the sea, and is traded in the interior for slaves, a cheap slave is called a "salting," and a good one is "worth his salt." Nearly everything is cooked and dressed with obve oil, which makes an excellent substitute for petroleum. Butter is hard to keep in Mediterranean lands, and olive oil takes its place. Honey, sweetmeats, and cheese provide dessert, cheesecakes are so fancied that many classic treatises are devoted to their esoteric art. Water is the usual drink, but everyone has wine, for no cavingation has found life tolerable without narcones or stimulants. Snow and ice are kept in the ground to cool wine in the hot months.' Beer is known but seorned in Peticlean days. All in al., the Greek is a moderate eater, and contents himself with two meals daily. "Yet there are many," says Hippocrates, "who, if accustomed to it, can easily bear three full meals a day."

IL INDUSTRY

Out of the earth come numerals and fuels as well as food. Lighting is provided by graceful lamps or torches—harming refined once oil, or resin—or by candies. Hear is derived from dry wood or charcoal, butting in portable braziers. The cutting of trees for fuel and budding denudes the woods and hills near the towns; already in the tith century timber for houses, furniture, and ships is imported. There is no coal.

Greek mining is not for fuels but for minerals. The soil of Atrica is rich in mathie, iron, zinc, silver, and lead. The mines at Laurium, near the southern tip of the perinsula, are in the phrase of Aeschylas "a fountain running silver" for Athens, they are a main support of the government, which retains all subsoil rights, and leases the mines to private operators for a talent (\$6000) fee and one twenty-fourth of the product yearly." In 483 a prespector discovers the first really profitable years at Laurium, and a silver rush takes place to the region of the mines. Only crizzens are allowed to lease the properties, and only slaves perform the work. The pious Navias, whose superstition will help to

turn Athens, makes \$170 a day by leasing a thousand slaves to the mine operators at a rental of one olso, (1º cents) each per day, many an Athenian fortune is inade in this way, or by fending money to the enterprise. The slaves in the mine number some twenty thousand, and include the superintendents and engineers. They work in ten hour shifts, and the operations continue without interruption, night and day. It the slave tests he feels the foreman's lash, if he tries to escape he is attached to his work by iron shackles, if he runs away and is captured his forehead is branded with a hot fron." The gaileries are but three teer high and two teet wide, the slaves, with pick or chisel and hammer, work on their knees, the r stormets, or their backs." The broken ore is carried out in baskets or bags handed from man to man, for the galleries are too narrow to let two men pass each other conveniently. The profits are enormous in 484 the share received by the government is a hundred talents (\$600,-600) a windfall that boards a fleet for Athens and saves Greece at Salamis, Even for others than the slaves there is evil in this as well as good, the Athenian treasury becomes dependent upon the trines, and when, in the Petopompesian War, the Sparrans capture Laurium the whole economy of Athens is upset The exhaustion of the veins in the fourth century co-operates with many other factors in Athenian decay. For Artica has no other precious metal in her soil.

Metallurgy advances with mining. The ore at Laurium is crushed in huge mertars with a heavy from pestle worked by slave power, then it goes to milis where it a ground between revolving stones of hard trachete, then it is sized by screening the material that passes through the screen is sent to an ore washer, where jets of water are discharged from eisterns upon inclined rectangular tables of wone covered with a smooth thui coat of hard cement, the t irrent is turned at sharp angles, where pockets mare the metal particles. The collected metal is thrown into small scienting furnaces equipped with blowers to raise the heat, at the bottom of each turnice are openings through which the moten metal is drawn. Lead is separated from the silver by heating the mosters meral on cupels of porous material and exposing it to the air by this simple process the lead is converted into litharge, and the silver is freed. The processes of stricking and retraing are competently performed, for the silver comes of Athens are morey eight per cent pure Laurium pays the price of the wearth it produces, as mining aways pays the price for metal industry, plants and men wither and die train the furnace fumes, and the vicinity of the works becomes a scene of dusty desoration."

Other industries are not so toilsome. Artica has many of them now, small in scale but remarkably specialized. It quarties mail le and other stones, it makes a rhousand shapes of pottery, it dresses hides in great tanneries like those owned by Cleon, rival of Pericles, and Anytis, accuser of Socrates in has wagon-mixers, shipl-unders, saddlers, harness makers, shoe manufacturers, there are saddlers who make only bridles, and shoemakers who make only men's of

women's shoes." In the huilding trades are carpenters, molders, stonecutters, meta, workers, painters, veneerers. There are blacksnuths, swordmakers, shieldmakers, lampmakers, lyre naners, maders, bakers, sausage men, ushmongerseverything necessary to an economic life busy and varied, but not mechanized or monormous. Common textiles are still for the most part produced in the home, there the women weave and mend the ordinary clotning and bedding of the tam'ly, some carding the wood, some at the spinning wheel, some at the loom, some bent over an embroidery frame. Special tahries come from workshops, or from abroad-fine linens from Egypt, Amorgos, and Tarentum, dyed woolens from Syracuse, blankets from Corinth, carpets from the Near Fast and Carthage, colorful coverlets from Cyprus, and the women of Cos, late in the fourth century, learn the art of unwinding the cocoons of the silkworm and weaving the filaments into silk " In some homes the women become so highly skilled in text le arts that they produce more than their tamilies can use they sell the surplus at first to consumers, then to middlemen, they employ helpers, freedmen or slaves, and in this way a domestic industry develops as a step to a factory system.

Such a system begins to take form in the age of Pericles. Pericles himself, like Alcibiades, owns a factory. No machinery is available, but slaves can be had in aliandance, it is because muscle power is cheap that there is no incentive to develop machinery. The erganena of Athens are rather workshops than factories the largest of them, Cephalus' shield factory, has 120 workmen, Timarchus' shoe factory has ten, Demosthenes' cabinet factory twenty, his armor factory thirty. At first these shops produce only to order, later they manufacture for the market, and finally for export, and the spread and abundance of comage, replacing barter, facilitates their operations. There are no corporations, each factory is an independent unit, owned by one or two men, and the owner often works beside his slaves. There are no patents, crafts are handed down from father to son, or are learned by apprennees, the Athemans are exempted by law from caring for the old age of parents who have failed to reach them a trade." Hours are long but work is lessurely, master and man labor from dawn to twilight, with a siesta at sammer moons, There are no vacations, but there are some sixty workless holydays every year.

III. TRADE AND FINANCE

When an individual, a family, or a city creates a surplus, and wishes to exchange it, trade begins. The first difficulty here is that transport is costly, for roads are poor, and the sea is a snare. The timest road is the Sacred Way from Athens to Lieusis, but this is mere dirt, and is often too narrow to let vehicles pass. The bridges are precarious causeways formed by earthen

dikes, which as likely as not have been washed away by floods. The usual draft animal is the ox, who is too philosophical to enrich the trader that depends upon him for transport, wagens are tragic, and always break down, or get bogged in the mid, it is better to pack the goods on the back of a mule, for he goes a trille faster, and does not take up so much of the road. There is no postal service in Greece, even for the governments, they are content with runners, and private correspondence must wait the chance of using these. Important news can be flashed by fire beacons from hill to hill, or sent by carrier pigeons." There are inns here and there on the road, but they are tayored by robbers and vermin, even the god Dionysus, in Aristophanes, inquires of Herneles for "the eating-houses and hostels where there are the fewest bugs."

Sea transport is cheaper, especially if voyages are limited, as most of them are, to the cattin summer months. Passenger tartiffs are low, for two drach-thas (\$2) a tamaly can secure passage from the Piraeus to Lgypt or the Black Sea," but ships do not cater to passengers, being made to carry goods or wage war or do either at need. The main montre power is wind upon a sail, but slaves ply the ours when the wind is contrary or dead. The smallest seagoing merchant vessels are triaconters with thirty ours, all on one level, the penteconter has fifty. Back about 700 the Corinthians launched the first triteme, with a crew of two hundred men plying three banks or tiers of ours, by the fifth century such ships, beautiful with their long and lotty prows, have grown to 256 tons, carry seven thousand bushels of grain, and become the talk of the Mediterranean by making eight miles an hour."

The second problem of trade is to find a reliable medium of exchange. Every city has its own system of weights and measures, and its own individual coinage, at every one of a hundred frontiers one most transvalue all values skepticady, for every Greek government except the Atheman cheats by debasing its coins." "In most cities," says an anonymous Greek, "merchants are compelled to ship goods for the return journey, for they cannot get money that is of any use to them elsewhere." Some cities muit coins of electrons—a compound of silver and gold—and rival one another in getting as little gold as possible into the mixture. The Atheman government, from Solon onward, helps Atheman trade powerfully by establishing a reliable coinage, stamped with the owl of Athema, "taking owls to Athems" is the Greek equivalent of "carrying coals to Newcastle." Because Athems, through all her vicessitudes, retuses to depreciate her silver drachmas, these "owis" are accepted gladly throughout the Mediterranean world, and tend

to displace local currencies in the Aegean. Gold at this stage is still an article of merchandise, sold by weight, rather than a vehicle of trade, Athens mints it only in rare emergencies, usuably in a ration to silver of 14 to 1." The smallest Athenian coins are of copper, eight of these make an obol—2 coin of iron or bronze, named from its resemblance to nails or spits (obelishor). Six obols make a drachma, i.e., a handful, two drachmas make a gold stater, one hundred drachmas make a mina, sixty minas make 2 talent. A drachma in the first half of the fifth century buys a bushel of grain, as a dollar does in twentieth-century America. There is no paper money in Athens, no government bonds, no joint-stock corporitions, no stock

exchange.

But there are banks. They have a hard struggle to get a footing, for those who have no need for loans denounce interest as a crimie, and the philosophers agree with them. The average fitth-century Athenian is a hoarder, if he has savings he prefers to hide them rather than entrust them to the banks. Some men lend money on mortgages, at 16 to 18 per cent, some lend it, without interest, to their friends, some deposit their money in temple treasures. The temples serve as banks, and end to individuals and states at a moderate interest, the temple of Apollo at Delphi is in some measure an international bank for all Greece. There are no private foans to governments, but occasionally one state lends to another. Meanwhile the money changer at his table (trapeza) begins in the fifth century to receive money on deposit, and to lend it to merchants at interest rates that vary from 12 to 30 per cent according to the risk, in this way he becomes a banker, though to the end of ancient Greece he keeps his early name of trapeure, the man at the table. He takes his methods from the Near East, improves them, and passes them on to Rome, which hands them down to modern Furope. Soon after the Persian War Themistocles deposits seventy ralents (\$420,000) with the Corinthian banker Philostephanus, very much as political adventurers feather foreign nests for themselves today, this is the earliest known allusion to secular-nontemple-banking. Towards the end of the century Antisthenes and Archestratus establish what will become, under Passon, the most famous of all private Greek banks. Through such trapezata money circulates more freely and rapidly, and so does more work, than before, and the facilities that they offer stunulate creatively the expansion of Athenian trade.

^{*}In this volume an obol is reclaimed as equivalent in buying power to 17 cents in United Scates currency in 1948, a drachina as \$1/2 talent as \$6000. These entiredents are only approximate, for prices rose throughout Greek history, of section V of this chapter.

Trade, not industry or finance, is the soul of Athenian economy. Though many producers still sell directly to the consumer, a growing number of them require the intermediary of the market, whose function it is to buy and store goods until the consumer is ready to purchase them. In this way a class of retailers arises, who peddie their wares through the streets, or in the wake of armies, or at festivals or fairs, or offer them for sale in shops or stalls in the agora or elsewhere in the town. To the shops come freemen or metics or slaves to haggle with tradesmen and buy for the home. One of the severest disabilities suffered by the "free" women of Athens is that custom does not allow them to shop."

Foreign commerce advances even faster than domestic trade, for the Greek states have learned the advantages of an international division of labor, and each specializes in some product, the shieldmaker, for example, no longer goes from city to city at the call of those who need him, but makes his shields in his shop and sends them out to the markets of the classic world. In one century Athens moves from household economy, wherein each household makes nearly all that it needs to urban economy wherein each town makes nearly all that it needs-to international economy, where each state is dependent upon unports, and must make exports to pay for them. The Athenian fleet for two generations keeps the Aegean clear of purates, and from 480 to 430 commerce thrives as it never will again until Pompey suppresses paracy in 65 h c. The docks, warehouses, markets, and banks of the Piraeus offer every facility for trade, soon the busy port becomes the chief center of distribution and reshipment for the commerce between the Last and the West. "The arricles which it is difficult to get, one here, one there, from the rest of the world," says Isocrates, "all these it is easy to buy in Athens." "The magnitude of our city,' says Thuey dides, "draws the produce of the world into our harbor, so that to the Athenian the fruits of other countries are as familiar a luxury as those of his own " From the Piracus merchants carry the wine, oil, wool, materals, marble, pottery, arms, luxuries, books, and works of art produced by the fields and shops of Attica, to the Piracus they living gram from the Byzantium, Syria, Egypt Italy, and Sicily, fruit and cheese from Study and Phoenicia, meat from Phoenicia and Italy fish from the Black Sea, nuts from Paphlagonia, copper from Cyprus, tin from England, iron from the Pontic coast, gold from Thisos and Thrace, timber from Thrace and Cyprus, embroidenes from the Near Fast, wools, flax, and dives from Phoenicia, spices from Cyrene, swords from Chalcis, glass from Fgypt, tiles from Corinth, beds from Chios and Miletus, boots and bronzes from

Erruris, ivory from Ethiopia, perfumes and omitments from Arabia, slaves from Lydia, Syria, and Scytina. The colonies serve not only as markets, but as shipping agents to send Athenian goods into the interior, and though the emes of long decay in the fifth century because the trade that once passed there is diverted to the Propontis and Cana during and after the Persian War, Italy and Sieuly replace them as outlets for the surplus products and population of mainland Greece. We may estimate the amount of Aegean commerce from the return of 1200 talents from a 5 per cent tax laid in 413 upon the imports and exports of the emes in the Athenian

Empire, indicating a trade of \$144,000,000 a year

The danger lurking in this prosperity is the growing dependence of Athers upon unported grain, hence her insistence upon controlling the Hellespont and the Black Sea, her persistent colonizing of the coasts and isles on the way to the straits, and her disastrous expeditions to Egypt in 459 and to Sicily in 415. It is this dependence that persuades Athens to transform the Confederacy of Delos into an empire, and when, in 405, the Sparrans destroy the Athenian fleet in the Hellespont, the starvation and surrender of Athens are mevitable results. Nevertheless it is this trade that makes Athens rich, and provides, with the imperial indute, the sinews of her cultural development. The merchants who accompany their goods to all quarters of the Mediterranean come back with changed perspective, and alert and open minds, they bring new ideas and ways, break down ancient taboos and sloth, and replace the familial conservatism of a rural aristocracy with the individualistic and progressive spirit of a mercantile civilization. Here in Athens Fast and West meet, and jar each other from their ruis. Old myths lose their grasp on the souls of men, leisure rises, inquiry is supported, science and philosophy grow. Athens becomes the most intensely able city of her time.

IV. FREEMEN AND SLAVES

Who does all this work? In the countryside it is done by citizens, their families, and free hired men, in Athens it is done partly by entirens, partly by freedmen, more by metics, mostly by slaves. The shopkcepers, artisans, merchants, and bankers come almost entirely from the voteless classes. The burgher looks down upon manual labor, and does as little of it as he may. To work for a livelihood is considered ignoble, even the professional practice or teaching of music, sculpture, or painting is accounted by many

Greeks "a mean occupation." Hear blunt Xenophon, who speaks, however, as a proud member of the knightly class:

The base mechanic arts, so called, are held in ill repute by civthred communities, and not unreasonably, seeing they are the ruin of the bodies of all concerned in them, workers and overseers alike, who are forced to remain in sitting postures or to hig the gloom, of else to crouch whole days confronting a furnace. Hand in hand with physical energation follows apace an enfeeting of soul, while the demand which these base mechanic arts make on the time of those employed in them leaves them no leisure to devote to the claims of friendship and the state."

Trade is similarly scorned, to the anstocratic or philosophical Greek it is merely money making at the expense of others, it aims not to create goods but to buy them cheap and selethetts dear, no respectable entizen will engage in it, though he may quietly invest in it and profit from it so long as he lets others do the work. A freeman, says the Greek, must be free from economic tasks, he must get slaves or others to attend to his material concerns, even, if he can, to take care of his property and his fortune, only by such liberation can be find time for government, war, hterature, and philosophy. Without a lessure class there can be, in the Greek view, no standards of taste, no encouragement of the arts, no civilization. No man

who is in a hurry is quite civilized.

Most of the functions associated in history with the middle class are in Athens perfamed by metics-freemen of foreign birth who, though ineligible to citizenship, have fixed their domicile in Athens. For the most part they are professional men, merchants, contractors, manufacturers, managers, tradesmen, craftsmen, artists, who, in the course of their wandering, have found in Athens the economic liberty, opportunity, and stimulus which to them is far more vital than the vote. The most important industrial undertakings, outside of mining, are owned by metics, the ceramte industry is theirs completely, and wherever middlemen can squeeze themselves in between producer and consumer they are to be found. The law harasses them and protects them. It taxes them like citizens, tays "liturgies" upon them, exacts military service from them, and adds a polltax for good measure, it forlods them to own land or to marry into the family of a citizen, it excludes them from its reagious organization, and

^{*} Phancel, Perules I movem The Greek Communicath, 121 and Ferguson, Greek Imperiation, 61 feel that the American I sd to for a small labor has been exeggerated, but cf. Glotz, Ancient Greece at Work, 160.

from direct appeal to its courts. But it welcomes them into its economic life, appreciates their industry and skill, enforces their contracts, gives them religious treedom, and guards their wealth against violent revolution. Some of them flaunt their riches vulgarly, but some of them, too, work quietly in science, literature, and the arts, practice law or medicine, and create schools of rhetoric and philosophy. In the fourth century they will provide the authors and subject of the comic drama, and in the third they will set the cosmopolitan tone of Hellenstic society. They itch for currenship, but they love Athens proudly, and contribute painfully to finance her defense against her enemies. Through them, chiefly, the fleet is maintained, the empire is supported, and the commercial supremisely of Athens is preserved.

Mingled with the metics in political disabilities and economic opportunities are the freedmen—those who once were slaves. For though it is inconvenient to liberate a slave, since usually he must be replaced by another, yet the promise of freedom is an economical stimulus to a young slave, and many Greeks, as death approaches, reward their most loval slaves with manumission. The slave may be freed through ransoning by relatives or friends, as in the case of Plato, or the state, indemnifying his owner, may free him for service in war, or he himself may save his obols until he can huy his liberty. Take the metic, the freedman engages in industry, trade, or finance, at the lowest he may do for pay the work of a slave, at the top he may become a magnate of industry. Aly has manages Demosthenes' armor factory, Pasion and Phormio become the richest bankers in Athens. The freedman is especially valued as an executive, for no one is more severe with slaves than the man who has come up from slavery,* and has known only oppression all the days of his life.

Beneath these three classes—citizens, metics, and freedmen are the 115,000 slaves of Artica.* They are recruited from unransomed prisoners of
war, victums of slave raids, infants rescued from exposure, wastrels, and
criminals. Few of them in Greece are Greeks. The Hellene looks upon
foreigners as natural slaves, since they so readily give absolute obedience
to a king, and he does not account the servitude of such men to Greeks as

^{*}The figure is Gombe's. Le Possible the number was much greater Sunday on the number of a speech uncertainty are fixed to Hypere-less in the gives the number of adult in the slaves allowed to a speech uncertainty and according to the automate Attendeds the census of Artica by Democratis Phalorical about the gave those of the number of the inches and free inch, and process states. Tomacus about the reckened the states of Counts at 46,000 and Apsinde about two those of Argins at 40,000 and Apsinde about two those of Argins at 40,000 and apsinde about two thereof for sale in the slave matter of Counts, Argins, and Arberta.

unreasonable. But he balks at the enslavement of a Greek, and seldom stoops to it. Greek traders buy slaves as they would merchandise, and offer them for sale at Ch.os. Detos, Cornub. Aegina, Athens, and wherever else they can find purchasers. The slave dealers at Athens are among the nehest of the metics. In Delos it is not unusual for a thousand slaves to be sold in a day, Cimon, after the battle of the Eurymedon, puts 20,000 prisoners on the slave market." At Athens there is a mart where slaves stand ready for naked inspection and bargaining purchase at any time. They cost from halt a mina to ten minas (\$50 to \$1000) They may be bought for direct use, or for investment, men and women in Athens find it profitable to buy slaves and rent them to homes, factories, or mines, the return is as high as 33 per cent." Even the poorest citizen has a slave or two, Aeschines, to prove his poverty, complains that his family has only seven, nich homes may have fifty " The Athenian government employs a number of slaves as clerks, attendants, minor officials, or poncemen, many of these receive their clothing and a daily "allowance" of half a drachma, and are permitted to live where they please

In the countryside the slaves are few, and are chiefly women servants m the home, in northern Greece and most of the Peloponnesus serfdom makes slavery superfluous. In Cornith, Megara, and Athens slaves do most of the manual labor, and women slaves most of the domestic toil, but slaves do also a great part of the clerical, and some of the executive work, in industry, commerce, and mance. Most skilled labor is performed by freemen, freedmen or menes, and there are no learned slaves as there will be in the Hellenstie period and in Rome. The slave is seldom allowed to bring up children of his own, for it is cheaper to buy a slave than to rear one. If the slave misbehaves he is whipped, if he resultes he is tortured, when he is struck by a freeman he must not defend hanself. But if he is subjected to great cruelry he may flee to a temple, and then his master must sel, him. In no case may his master kill him. So long as he labors he has more security than many who in other civilizations are not called slaves, when he is ill, or old, or there is no work for him to do, his master does not throw him upon public rehef, but continues to take care of him. If he is loyal he is treated like a faithful servant, almost like a member of the family. He is often allowed to go into business, provided he will pay his owner a part of his earnings. He is free from raxation and from military service. Nothing in his costume distinguishes him, in fifth century Athens, from the freeman, indeed the "Old Oligarch" who about 425 writes a pamphlet on The Polity of the Athemans complains that the slave

does not make way for citizens on the street, that he talks freely, and acts in every detail as if he were the equal of the citizen." Athens is known for mildness to her slaves it is a common judgment that slaves are better off in democratic Athens than poor freemen in oligarchic states." Slave revolts,

though feared, are rare in Attica."

Nevertheless the Athenian conscience is disturbed by the existence of slavery, and the philosophers who defend it reveal almost as clearly as those who denounce it that the moral development of the nation has outrun its institutions. Plato condemns the enslavement of Greeks by Greeks, but for the rest accepts slavery on the ground that some people have underprivileged minds." Aristotle locks upon the slave as an animate tool, and thinks that slavery will continue in some form until all menial work can be done by self-operating machines." The average Greek though kind to his slaves, has no notion of how a cultured society can get along without slavery, to abolish slavery, he feels, it would be necessary to abolish Athens. Others are more radical. The Cyme philosophers condemn slavery outright, their successors, the Stoics, will condemn it more pointely, Euripides again and again stirs his audiences by sympathetic pictures of war-captured slaves, and the sophist Alcidamas goes about Greece preaching, unmolested, the doctrine of Rousseau almost in the words of Rousseau "God has sent all men into the world free, and nature has made no man a slave."4 But slavery goes on.

V. THE WAR OF THE CLASSES

The exploitation of man by man is less severe in Athens and Thebes than in Sparta or Rome, but it is adequate to the purpose. There are no castes among the freezien in Athens, and a man may by resolute ability rise to anything but entrenship, hence, in part, the fever and turbulence of Athenian life. There is no tense class distinction between employer and employee except in the mines, usually the master works beside his men, and personal acquaintance dulls the edge of exploitation. The wage of nearly all artisans, of whatever class, is a drachma for each actual day of work," but unskilled workers may get as low as three obols (50 cents) a day." Piecework tends to replace timework as the factory system develops, and wages begin to vary more widely. A contractor may hire slaves from their owner for a rental of one to four obols a day." We may estimate the buying power of these wages by comparing Greek prices with our own. In 414 a house and estate in Attica cost twelve hundred drachmas, a medimmus, or 1½

bushels, of barley costs a drachma in the sixth century, two at the close of the fifth, three in the fourth, five in the time of Alexander, a sheep costs a drachma in Solon's day, ten to twenty at the end of the fifth century," in Athens as elsewhere currency tends to increase faster than goods, and prices use. At the close of the fourth century prices are five times as high as at the opening of the sixth, they double from 480 to 404, and again from 404 to 330."

A single man lives comfortably on 120 drachmas (\$120) a month," we may judge from this the condition of the worker who earns thirty druchmas per month, and has a family. It is true that the state comes to his relief in tunes of great stress, and then distributes corn at a nonunal price. But he observes that the goddess of liberty is no friend to the goddess of equality, and that under the free laws of Athens the strong grow stronger, the rich richer, while the poor remain poor " Individualism stimulites the abie, and degrades the simple, it creates wealth magnificently, and concentrates it dangerously. In Athens, as in other states, eleverness gets all that it can, and mediocrity gets the rest. The landowner profits from the rising value of his land, the merchant does his best, despite a hundred laws, to secure corners and monopones, the speculator reaps, through the high rate of interest on loans, the Lon's share of the proceeds of industry and trade. Demagogues arise who point out to the poor the inequality of human possessions, and conceal from them the inequality of human economic ability, the poor man, face to face with wealth, becomes conscious of his poverty, broods over his unrewarded ments, and dreams of perfect states. Bitterer than the war of Greece with Persia, or of Athens with Sparta, is, in all the Greek states, the war of class with class.

In Artica it begins with the conflict between the new rich and the landed aristocracy. The ancient families still love the soil, and live for the greater part on their estates. Divis on of the partitiony through many generations has made the average holding small (the rich Alcibiades has only seventy acres), and the squite in most cases labors personally on the soil, or in the management of his property. But though the aristocrat is not rich, he is proud, he adds his tather's name to his own as a title of nobility, and he remains aloof as long as he can from the mercantile bourgeoiste which is capturing the wealth of Athens' growing trade. His wife, however, cries for a city home and the varied life and opportunities of the metropolis, his

The great formines of Greek antiquity were of course condest or amount by modern translated. Call of the wealth-ox of the Athemans, is soil to have a so conduct talents (\$1,200,000); Nielas, one hundred.¹⁰

daughters wish to live in Athens and snare rich husbands, his sons hope to find hetairal there and to give gav parties in the style of the nouveaux richer. As the aristocrat cannot compete in hixury with the merchants and manufacturers, he accepts them, or their children, as sons-in-law or daughters-in-law, they are anxious to climb, and willing to pay. The upshot is a union of the rich in land with the rich in money, and the formation of an upper class of oligarchs, envied and hated by the poor, angry at the excesses and extravigance of democracy, and fearful of revolution.

It is the insolence of the new wealth that brings on the second phase of the class war the struggle of the poorer citizens against the rich. Many of the bourgeoine flaunt their wealth like Alcibiades, but few others can so charm the 'mechanic multirude" by dramatic audacity and elegance of person or speech. Young men conscious of ability and frustrated with poverty translate their personal need for opportunity and place into a general gospel of revolt, and intellectuals eager for new ideas and the applause of the oppressed formulate for them the arms of their rebellion." They call not for the socialization of industry and trade but for the abolition of debts and the redistribution of the land-among the entitiens, for the radical movement in fifth-century. Athens is confined to the poorer voters, and never dreams, at this stage of liberating the slaves, or letting the metics in on the reallotment of the soil. The leaders talk of a golden past in which all men were equal in possessions, but they do not wish to be taken too literally when they speak of restoring that paradise. It is an aristocratic communism that they have in mind-not a nationalization of the land by the state, but an equal sharing of it by the citizens. They point our how unreal is the equality of the franchise in the face of mounting economic inequality, but they are resolved to use the political power of the poorer citizenty to persunde the Assembly to sluce into the pockets of the needy-by fines liturgies, confiscations, and public works"-some of the concentrated wealth of the rich." And to give a lead to future rebels they adopt red as the symbolic color of their revolt."

In the face of this threat the rich band themselves in secret organizations pledged to take common action against what Plato, despite his communism, will call the "monstrous beast" of the aroused and hungry mob." The free workers also organize—have at least since Solon organized—themselves into clubs (eranoi, thistor) of stonemasons, marble cutters, woodworkers, two-evworkers porters, fishermen, actors, etc., Socrares is a member of a sculptor's thistor." But these groups are not so much trade-unions as mutual benefit

[•] The sculptors and architects of Greece formed a gold of builders, with their own religious mysteries, and became the forerunners of the Freemasons of Isree Europe.

societies: they come together in meeting places called synois or synagogues, have banquers and games, and worship a patron delity, they make payments to sick members, and contract collectively for specific enterprises, but they do not enter visibly into the Athenian class war. The bartle is fought on the fields of literature and politics. Pamphletters like the "Old Oligarch" issue denunciations or defenses of democracy. The comic poets, since their plays require rich men to finance their production, are on the side of the drachmas, and pour ridicule upon the radical leaders and their utopias. In the Ecclesianusae (392) Anistophanes introduces us to the lady communist Pranagora, who makes an oration as follows:

I want all to have a share of everything, and all property to be in common, there will no longer be either rich or poor, no longer shall we see one man harvesting vist tracts of land, while another has not ground enough to be buried in.... I intend that there shall only be one and the same condition of life for all.... I shall begin by making land, money, everything that is private property, common to all.... Women shall belong to all men in common."

"But who," asks Blepyrus, "will do the work?" "The slaves," is her reply. In another comedy, the Plants (408), Aristophanes allows Poverty, who is threatened with extinction, to defend herself as the necessary goad to human toil and enterprise:

I am the sole cause of all your blessings, and your safety depends upon me alone. . . . Who would wish to hammer iron, build ships, sew, turn, cut up leather, bake bricks, blench linen, tan hides, or break up the soil with the plow and garner the gains of Demeter if he could live in idleness and free from all thus work? . . If your system [communism] is applied . . . you will not be able to sleep in a bed, for no more will ever be manufactured, nor on carpets, for who would weave them if he had gold?**

The reforms of Ephialtes and Pericles are the first achievement of the democratic revolt. Pencles is a man of judgment and moderation; he does not wish to destroy the rich but to preserve them and their enterprise by easing the condition of the poor, but after his death (420) the democracy becomes so radical that the oligarchic party conspires again with Sparta, and makes in 411, and once more in 404, a rich man's revolution. Nevertheless, because wealth is great in Athens and trickles down to many, and because fear of a slave uprising gives the critizenty paose, the class war in Athens is milder, and sooner reaches a working compromise, than in Greek states where the middle class is not strong enough to mediate between rich

and poor. At Samos, in 412, the radicals seize the government, execute two hundred aristocrats, banish four hundred more, divide up the lands and houses among themselves," and develop another society like that which they have overthrown. At Leontini, in 422, the commoners expel the oligarchs, but soon afterward take to flight. At Coreyra, in 427, the oligarchs assassinate sixty leaders of the popular party, the democrats seize the government, in prison four hundred aristocrats, try fifty of them before a kind of Commutee of Public Safety, and execute all fifty at once, seeing which a considerable number of the surviving prisoners slay one another, others kill themselves, and the rest are wailed up in the temple in which they have sought sanctuary, and are starved to death. I hucydides describes the class war in Greece in a timeless passage

During seven days the Cores racans were engaged in butchering those of their tellow-citizens whom they regarded as their enemies: and although the crone as pured was that of attempting to put down the democracy, some were slain also for private hatred, others by their del tory because of the monies owed to them. Death thus raged in every shape, and as usually happens at such macs, there was no length to which violence did not go, sons were killed by their fathers, and suppliants were dragged from the alter or shan upon it. . . Revolution thus ran its course from city to city, and the places where it armed last from baying heard what had been done before, carried to a still greater excess the refinement of their inventions ... and the atrocity of their reprisals. Corry ra gave the first example of these crimes of the revenge exacted by the governed -who had never experienced equitable treatment, or, indeed, aught but violence from their rulers-when their hour came, of the in quitous resolves of those who desired to get rid of their accustomed poverry, and ardently covered their neighbors' goods, and the sayage and profess excesses into which men who had begun the struggle not in a class but in a party spirit, were hurried by their passions. . . . In the confusion into which life was now thrown in the cities, human nature, always rebelling against the law and now its master, glada showed itself ingoverned in passion, above respect for astice, and the enemy of all superiority. Reckless as dacity came now to be considered the courage of a loyal ally, pr. dent bestration, specious cowardice, moderation was held to be a cloak for unmanliness, ability to see all sides of a question was accounted inability to act on any....

The cause of all these evils was the last for power arising from greed and ambition. . . The leaders in the cities, each provided

with the fairest professions, on the one side with the cry of the policical equality of the people, on the other of a moderate aristocracy, sought prizes for themselves in those public interests which they pretended to cherish, and, recoiling from no means in their struggle for ascendancy, engaged in the direct excesses. . . . Religion was in honor with neither party, but the use of fair phrases to arrive at guilty ends was in high reputation. . The ancient simplicity into which honor so largely entered was laughed down, and disappeared, and society became divided into camps in which no man trusted his fellow. . . Meanwhile the moderate part of the entirens perished between the two, either for not joining in the quarrel, or because enty would not suffer them to escape. . . The whole Hellenic world was convulsed.**

Athens survives this turbulence because every Athenian is at heart an individualist, and loves private property; and because the Athenian government finds a practicable medium between socialism and individualism in a moderate regulation of business and wealth. The state is not afraid to regulate- it sets a limit upon the size of downes, the cost of funerals, and the dress of women," it taxes and supervises trade, enforces fair weights and measures and honest quality so far as the ingenuity of human rascality permits," it limits the export of food, and enacts sharp laws to govern and chasten the practices of merchants and tradesmen. It watches the grain trade earefully, and legislates severely against corners even to the death penalty by forbidling the purchase of more than seventy-five busbels of wheat at a time, it interdicts loans on outgoing cargoes unless the return shipment is to bring grain to the Piracus, it requires that all corn loaded by vessels owned in Athens shall be brought to the Piracus, and it prohibits the export of more than a third of any corn cargo that reaches tout port." By keeping a reserve of grain in state-owned storehouses, and pouring this upon the market when prices rise too rapidly. Athens sees to it that the price of bread shall never be evorbitant, that millionaires shall not be created out of the hunger of the people, and that no Atheman shall starve." The state regulates wealth through taxation and liturgies, and persuades or compels rich men to supply funds for the fleet, the drama, and the theoric payments that enable the poor to artend the plays and the games. For the rest Athens proteers freedom of trade, private property, and the opportunity to profit, deening them the necessary implements of human liberty, and the most powerful stimuli to industry, commerce, and prosperity.

Under this system of economic individualism tempered with socialistic

regulation, wealth accumulates in Arhens, and spreads sufficiently to prevent a radical revolution, to the end of ancient Athens private property remains secure. The number of citizens with a comfortable income doubles between 480 and 431," the public revenue grows, public expenditures rise, and yet the treasury is full beyond any precedent in Greek history. The economic basis of Athenian freedom, enterprise, art, and thought is firmly laid, and will bear without strain every extravagance of the Golden Age except the war by which all Greece will be ruined.

CHAPTER XIII

The Morals and Manners of the Athenians

f. CHILDHOOD

VERY Athenian entiren is expected to have children, and all the forces of religion, property, and the state unite to discountenance childlessness. Where no offspring comes, adoption is the rule, and high prices are paid for prepossessing orphans. At the same time law and public opinion accept infanticide as a legitimiste safeguard against excess population and a pauperizing fragmentation of the land, any father may expose a newborn child to death either as doubtfully his, or as weak or deformed. The children of slaves are seldom allowed to live. Girls are more subject to exposure than boys, for every daughter has to be provided with a dowry, and at marriage she passes from the home and service of those who have reared her into the service of those who have not. Exposure is effected by leaving the infant in a large earthenware vessel within the precincts of a temple or in some other place where it can soon he rescued if any wish to adopt it. The parental right to expose permits a rough eugenies, and co-operates with a rigorous natural selection by hardship and competition to make the Greeks a strong and healthy people. The philosophers almost unanimously approve of family lumination: Plato will call for the exposure of all feeble children, and of those born of base or elderly parents;3 and Aristotle will defend abortion as preferable to infanticide. The Hippocratic code of medical ethics will not allow the physician to effect abortion, but the Greek midwife is an experienced hand in this field, and no law impedes her. 62

On or before the tenth day after birth the child is formally accepted into the family with a religious ritual around the hearth, and receives presents and a name. Usually a Greek has but one name, like Socrates or Archimedes, but since it is customary to call the cidest son after the paternal grandfather, repetition is frequent, and Greek history is confounded with a multiplicaty of Xenophons, Aeschineses, Thucydialeses, Dingeneses, and Zenos. To avoid ambiguity the father's name or the place of birth may be added, as with Kimon Militadou.

^{*} We have no evidence of contraceptive devices among the Greeks.*

Cimon son of Miltiades—or Diodorus Siculus—Diodorus of Sicily, or the problem may be solved by some joby meanane, like Callimedon—The Crab.*

Once the child is so accepted into the family it cannot lawfully be exposed, and is reared with all the affection that parents lavish upon their children in every age. Themistocles describes his son as the real ruler of Athens, for he, Themistocles, the most influential man in the city, is ruled by his wife, who is ruled by their child. Many an opigram in The Greek Anthology reveals a tender parental love:

I wept at the death of my Theonoc, but the hopes centered in our child lightened my sorrows. And now envious Fate has betreaved me of the boy as well. Alas? I am cheated of thee, my child, all that was left to me. Perseptione, hear this cry of a father's grief, and lay the child upon his dead mother's breast."

The tragedies of adolescence are eased with many games, some of which will survive the memory of Greece. On a white perfume vase made for a child's grave a little boy is seen taking his toy cart with him down to Hades.' Babies have terra-cotta rattles containing pebbias, girls keep house with their dols, boys fight great campaigns with clay suldiers and generals, nurses push children on swings or balance them on seesaws, boys and girls rout hoops, thy kites, spin tops, play hide-and seek or blindman's little or tug of war, and wage a handred merry contests with pebbles, nuts, routs, and balas. The markles of the Golden Age are dried beaus shot from the fingers, or smooth stones shot or tossed into a circle to dislodge enemy stones and come to rest as near as possible to the center. As children approach the "age of reason"—seven or eight—they take up the game of dice by throwing square knucklebones (astragali), the highest throw, six, being counted the test.' The games of the young are as old as the sins of their fathers.

IL EDUCATION

Athens provides public gymnasiums and polaestras, and exercises some loose supervision over teachers, but the city has no public schools or state universities, and education remains in private hands. Plato advocates state schools, but Athens seems to believe that even in education competition will produce the test results. Professional schoolmasters set up their own schools, to which freeborn boys are sem at the age of six. The name paidagogos is given not to the teacher but to the slave who conducts the loy daily to and from school, we bear of no boarding schools. Attendance at school commutes till fourteen or sixteen, or till a later age among the well to do." The schools have no desks but only benches, the pupil holds on his knee the roll from which he reads or

the material upon which he writes. Some schools, anticipating much later fashions, are adorned with statues of Greek heroes and gods, a few are elegantly furnished. The teacher teaches all subjects, and attends to character as well as intellect, using a sandal.⁴⁰

The curriculum has three divisions—writing, music, and gymnastics, eager modernists will add, in Aristotle's day, drawing and painting. Writing includes reading and arithmetic, which uses letters for numbers. Everyone learns to play the lyre, and much of the material of instruction is put into poerical and musical form." No time is spent in acquiring any foreign language, much less a dead one, but great care is taken in learning the correct usage of the mother tongue. Gymnastics are taught chiefly in the gymnastim and the palaestra, and no one is considered educated who has not learned to wrestle, swim, and use the bow and the sling.

The education of girls is carried on at home, and is largely confined to "domestic science." Outside of Sparta girls take no part in pulsac gynnastics. They are taught by their mothers or marses to read and write and reckon, to spin and weave and embroider, to dance and sing and play some instrument. A few Greek women are well educated, but these are mostly herairal, for respectable ladies there is no secondary education, until Aspasia lures a few of them into rhetoric and philosophy. Higher education for men is provided by professional rhetors and sophists, who offer instruction in oratory, science, philosophy, and bistory. These independent teachers engage lecture halls near the gynnasium or palaestes, and constitute together a scattered university for pre-Platonic Athens. Only the prosperous can study under them, for they charge high fees, but anti-tonis youths work by right in mill or field in order to be able to attend by day the classes of these normadic professors.

When boys reach the age of sixteen they are expected to pay special attention to physical exercises, as fitting them an some measure for the tasks of war. Even their sports give them indirectly a military preparation, they run, leap, wrestle, hunt, drive charsots, and hurl the tayelin. At eighteen they enter upon the second of the four stages of Athenian are pan, ephenos aner, geron, child, youth, man, elder), and are entolled into the ranks of Athenis' soldier youth, the epheboilt. Under moderators chosen by the leaders of their tribes they are trained for two years in the duties of chizendup and war. They live and eat together, wear an impressive uniform, and submit to moral supervision right and day. They organize themselves democratically on the model of the city, meet in assembly, pass resolutions, and creek laws for their own governance.

[•] In one of the pictures at Pompea, probably copied from the Greek, we see a pupil supported upon the shoulders of another and held at his held by a third, while the teacher flogs ham."

t This institution, however, cannot yet be traced back beyond 336 n.c.

they have archous, strategor, and judges." For the first year they are schooled with strenuous drill, and hear ectures on aterature, music, geometry, and rhetoric." At nineteen they are assigned to garrison the frontier, and are entrusted for two years with the protection of the city against attack from without and disorder within. Solemnly, in the presence of the Council of Five Hundred, with hands stretched over the altar in the temple of Agranios, they take the nath of the young men of Athens:

I will not disgrace the sacred arms, nor will I abandon the man next to me, whoever he may be. I will bring and to the ritual of the state, and to the holy duties, both alone and in company with many. I will transmit my native commonwealth not lessened, but larger and better than I have received it. I will obey those who from time to time are judges, I will obey the established statutes, and whatever other regulations the people shall enact. If any one shall artempt to destroy the statutes I will not permit it, but will repel him both alone and with all. I will honor the ancestral faith."

The ephelon are assigned a special place at the theater, and play a prominent role in the religious processions of the city, perhaps it is such young men that we see riding so handsomely on the Parthenon frieze. Periodically they exhibit their accomplishments in pub is contests, above all in the relax torch race from the Piracus to Athens. As the city comes out for this picture-sque event, and lines the four and-a half-male road, the race is run at night, and the way is not illuminated, all that can be seen of the runners is the leaping aght of the turches that they carry forward and pass on. When, at the age of twenty-one, the training of the ephelon is completed, they are freed from parental authority, and formally admitted into the functivenship of the enty-

Such is the education—eked out by lessons learned in the home and in the street—that produces the Athensan crizen. It is an excellent combination of physical and mental, moral and esthetic, training, of supervision in visith with freedom in maturity, and in its hexiday it turns out young men as fine as any in history. After Pericles theory grows and beclouds practice, philosophers debate the goals and methods of education—whether the teacher should aim chiefly at intellectual development or at moral character, chiefly at practical ability or the promotion of abstract science. But ad agree in arraching the highest importance to education. When Arist ppus is asked in what way the educated are superior to the untuited he answers, as broken hi rises are to the unbroken, and Aristotle to the same question replies, as the living are to the dead." At least, adds Aristippus. If the pup I derives no other good, he will not, when he attends the theater, be one stone upon another."

HL EXTERNALS

The citizens of Athens, in the fifth century, are men of medium height, vigorous, bearded, and not all as lundsome as Pheidias' horsemen. The ladies of the vases are graceful, and those of the stelae have a dignified love mess, and those it olded by the sculptors are supremely beautiful, but the actual ladies of Athens, limited in their mental development by an almost Oriental seclusion, are at best as pretty as their Near Fastern sisters, but no more. The Greeks admite beauty even beyond other nations, but they do not always embody it Greek women, like others, find their figures a little short of perfection. They lengthen them with high cork soles on their shoes, pad our deholencies with wadding, compress adundances with lading, and support the breasts with a cloth brassiere.**

The hair of the Greeks is usually dark, blondes are exceptional, and much admired, many wemen, and some men, due their hair to make it blonde. or to conceal the grayness of age." Both seves use oils to help the growth of the bur and to protect it against the sun, the women, and again some men, add perfumes to the oil." Both sexes, in the sixth century, wear the hair long, usually bound in braids around or behind the head. In the fifth century the women vary their conflure by knotting the hair low on the pape of the neck, or letting it fail over the shoulders, or around the neck and upon the breast. The ladies like to bind their hair with gay ribbons, and to adorn these with a jewel on the forehead." After Marathon the men begin to cut their hair, after Alexander they will shave their mustaches and beards with sickle-shaped razors of iron. No Greek ever wears a mustache without a beard. The beard is neatly trinimed, usually to a point The bather not only cuts the bair and shaves or truns the beard, but he manicures his customer and otherwise polishes him up for presentation, when he has finished he offers him a mirror in the most modern style." The barber has his shop, which is a center for the "wineless symposia" (as Theophrastus calls them) of the local gossips and gaddies, but he often works ourside it under the sky. He is garrul as by profession, and when one of his kind asks King Archelaus of Macedon how he would like to have his hair cut the king answers. "In silence ". The women also shave here and there using razors or depilatories of arsenic and lime

Perfumes made from flowers, with a base of oil-are numbered in the

^{*} Plurisch rells a pretty wars of how an en demic of stretch arrong the women of Milens was quilleds and complete a ended by an orderance decreeing that self-siz n women should be carried maked through the marketplace to their hural.*

hundreds. Socrates complains that men make so much use of them." Every lady of class has an armory of mirrors, pins, hairpins, safety pins, tweezers, combs, seem bottles, and pots for rouge and creams. Cheeks and lips are painted with sticks of minium or alkanet root, evebrows are penciled with lampblack or pulverized animony, eyebds are shaded with antimony or kohl, evelashes are darkened, and then set with a mixture of egg white and gum ammoniae. Creams and washes are used for removing wrinkles, freekles, and spots, disagreeable applications are kept on the face for hours in the patient lust to seem, if one cannot be, beautiful. Oil of mastic is employed to prevent perspiration, and specific perfumed unguents are applied to various parts of the body, a proper lady uses palm oil on the face and breast, marjoram on the evebrows and hair, essence of thyme on the throat and knees, mint on the arms, myrth on the legs and feet." Against this seductive armament men protest to as much effect as in other ages. A character in Athenian comedy reproves a lady in cosmeno detail. "If you go out in summer, two streaks of black run from your eyes, perspiration makes a red furrow from your cheeks to your neck, and when your hair touches your face it is blanched by the white lead "Women remain the same, because men do.

Water is limited, and cleanliness seeks substitutes. The well to do bathe once or twice daily, using a soap made of olive oil mixed with an alkali into a paste, then they are anointed with fragrant essences. Comfortable homes have a paved bathroom in which stands a large marble basin, usually filled by hand, sometimes water is brought by pipes and channels into the house and through the wab of the bathroom, where it spours from a metal nozzle in the shape of an animal's head, and falls upon the floor of a small shower bath enclosure, whence it runs out into the garden." Most people, unable to spare water for a bath, rub themselves with oil, and then scrape it off with a crescent-shaped strigh, as in Lyappus' Apoxiomenor. The Greek is not fastidiously clean, his hygiene is not so much a matter of indoor toilerte as of abstemious diet and an autive outdoor life. He seldom sits in closed homes, theaters, churcles, or halls, rarely works in closed factories or shops, his drama, his worship, even his government, proceed under the sun, and his simple clothing which lets the air reach every part of his body, can be thrown aside with one swing of the arm for a bout of wrestling or a bath of starshine.

Greek dress consists essentially of two squares of cloth, loosely draped about the body, and seldom tailored to fit the individual, it varies in minor detail from city to city, but remains constant for generations. The chief

garment at Athens is for men the chiton, or tunic, for women the peplos, or robe, both made of wool. If the weather requires it these may be covered with a mantle (himation) or cloak (chlamys), suspended like them from the shoulders, and faring freely in those natural folds that so please us in Greek statuary. In the fifth century clothing is usually white, women, rich men, and gay youds, however, go in for color, even for purple and dark red, and colored stripes and embroidered hems, and the women may bind a colored girdle about the waist. Hats are unpopular on the ground that they keep moisture from the hair and so make it prematurely gray," the head is covered only in traveling, in battle, and at work under the hot sun; women may wear colored kercluefs or bandeaux, workers sometimes wear a cap and northing else." Shoes are sandals, high shoes, or boots, usually of leather, back for men, colored for women. The ladies of Thebes. says Dicaearchus, "wear low purple shoes laced so as to show the bare feet." Most children and workingmen dispense with shoes altogether, and no one bothers with stockings."

Both seves announce or disguise their incomes with jewelry. Men wear at least one ring. Aristotle wears several." The walking sticks of the men may have knobs of silver or gold. Women wear bracelets, necklaces, diadems, carrings, brooches and chains, jeweled clasps and buckles, and sometimes jeweled bands about the ankles or the upper arms. Here, as in most mercantile custures, hixury runs into excess among those to whom wealth is a novelty. Sparta regulates the headdress of its ladies, and Arhens forbids women to take more than three dresses on a journey. Women smile at these restrictions, and, without lawyers, get around them, they know that to most men and to some women dress makes the woman, and their behavior in this matter reveals a wisdom gathered through a thousand centuries.

IV. MORALS

The Athenians of the fifth century are not exemplars of morality; the progress of the intellect has loosened many of them from their ethical traditions, and has turned them into almost unmotal individuals. They have a high reputation for legal justice, but they are seldom altruistic to any but their children, conscience rarely troubles them, and they never dream of loving their neighbors as themselves. Manners vary from class to class; in the dialogues of Plato life is graced with a charming courtesy, but in the comedies of Aristophanes there are no manners at all, and in public oratory

personal abuse is relied upon as the very soul of eloquence, in such matters the Greeks have much to learn from the time-polished "barbanans" of Egypt or Persia or Babylon. Salutation is cordial but simple, there is no bowing, for that seems to the proud citizens a vestige of monarchy, handshaking is reserved for oaths or solemn farewells, usually the greeting is merely Change—Rejoice"—followed, as elsewhere, by some bruliant remark about the weather."

Hospitality has lessened since Homeric days, for travel is a little more secure than then, and inns provide food and shelter for transients, even so it remains an ourstanding virtue of the Athenians. Strangers are welcomed though without introduction, if they come with letters from a common friend, they receive bed and board, and sometimes parting gifts. An invited guest is always privileged to bong an uninvited guest with him. This freedom of entry gives rise in time to a class of parasites-parasitora word originally appared to the clergy who are the "com left over" from the remple supplies. The well to do are generous givers in both public and private philanthropy, the practice as well as the word is Greek. Charity tharms or love is also present, there are many institutions for the care of strangers, the sick, the poor, and the old." The government provides pensions for wounded soldiers, and brings up war orphans at the expense of the state, in the fourth century it will make payments to disabled workmen." In periods of drought, war, or other crisis, the state pays two obols (14 cents) a day to the needy, in addition to the regular fees for attendance at the Assembly, the courts, and the plays. There are the normal scandals. a speech of Lysias concerns a man who, though on public relief, has rich men for his friends, earns money by his handicraft, and rides horses for recreation."

The Greek might admit that honesty is the best policy, but he tries everything else first. The chorus in Sophocles' Philocretes expresses the tenderest sympathy for the wounded and deserted soldier, and then takes advantage of his sumber to counsel Neoptolemus to betray him, steal his weapons, and leave him to his fate. Everyone complains that the Athenian retailers adulterate their goods, give short weight and short change despite the government inspectors, shar the fulcrum of their scales towards the measuring weights," and he at every opportunity, the sausages, for example, are accused of being dogs." A comic dramatist calls the fishmongers "assanis", a gentler poet calls them "burglars." The politicians are not much better, there is hardly a man in Athenian public life that is not charged with crookedness;" an honest man like Aristides is considered excuring news, al-

most a monstrosity, even Diogenes' daytime lantern does not find another. Thucydides reports that men are more anxious to be called clever than honest, and suspect honesty of simplicity." It is an easy matter to find Greeks who will betray their country "At no time," says Pausanins, "was Greece wanting in people afflicted with this rich for treason." Bribery is a popular way to policical advancement, cruminal impunity, diplomatic accomplishments, Pericles has large sums voted to him for secret uses, presumably for lubricating international negotiations. Morality is strictly tribal; Xenophon, in a treatise on education, frankly advises lying and robbery in dealing with the enemies of one's country." The Atherian envoys at Sparta in 432 defend their empire in plain terms: "It has always been the law that the weaker should be subject to the stronger . no one has ever allowed the cry for justice to hinder his ambition when he had a chance of gaining anything by might" -though this passage, and the supposed speech of the Athenian leaders at Meios," may be exercises of Thucydides' philosophical imagination, inflamed by the extrical discourses of certain Sophists, it would be as fair to judge the Greeks from the unconventional ethics of Gorgias, Callicles, Thrasymachus, and Thucy dides as it would he to describe the modern European by the brilliant bizarrenes of Machiavelli. La Rochefoucauld, Nietzsche, and Stirner-not saying how fair that would be That something of this superiority to morals is an active ingredient in the Greek character appears in the readiness with which the Sparrans agree with the Athenians on these mooted points of morals. When the Lacedaemonian Phoebidas, despite a treaty of peace, treacherously seizes upon the citadel of Thebes, and the Spartan King Agesilaus is quesboned about the justice of this action, he replies: "Inquire only if it is useful, for whenever an action is useful to our country it is right." Time and again truces are violated, solemn promises are broken, envoys are slam " Perhaps, however, the Greeks differ from ourselves not in conduct but in candor; our greater delicacy makes it offensive to us to preach what we practice.

Custom and religion among the Greeks exercise a very modest restraint upon the victor in war. It is a regular matter, even in civil wars, to sack the conquered city, to finish off the wounded, to slaughter or enslave all unransomed prisoners and all captured noncombatants, to burn down the houses, the fruit trees, and the crops, to externinate the live stock, and to destroy the seed for future sowings." At the opening of the Peloponnesian War the Spartans butcher as enemies all Greeks whom they find on the sea, whether allies of Athens or neutrals," at the battle of Aegospotami,

which closes the war, the Spartans put to death three thousand Athenian prisoners" almost the selected best of Athens' depleted citizenry. War of some kind of city against city or of class against class—is a normal condition in Hellas. In this way the Greece that defeated the King of Kings turns upon itself. Greek meets Greek in a thousand battles, and in the course of a century after Marathon the most brilliant civilization in history consumes itself in a prolonged national suicide.

V. CHARACTER

If we are still attracted to these reckless disputants it is because they cover the nakedness of their sins with an exhibiting vigor of enterprise and intellect. The nearness of the sea, the opportunities of trade, the freedom of economic and political life form the Athenian to an unprecedented excitability and resilience of temper and thought, a very fever of mind and sense. What a change from the Orient to Europe, from the drowsy southern regions to these intermediate states where winter is cold enough to invigorate without dulling, and summer warm enough to liberate without enfecting body and soul! Here is faith in life and man, a zest of living never rivaled again until the Renaissance.

Out of this stimulating inflied comes courage, and an impulsiveness all the world away from the sophrosyne-self-control-which the philosophers vamly preach, or the Olympian serenity which young Winckelmann and old Goethe will foist upon the passionate and restless Greeks. A nation's ideals are usually a disguise, and are not to be taken as history. Courage and temperance-andreia, or manliness, and the moden agan, or "nothing in excess" of the Deaphic inscription-are the rival mottoes of the Greek; he realizes the one frequently enough, but the other only in his peasants, philosophers, and sames. The average Athenian is a sensualist, but with a good conscience, he sees no sin in the pleasures of sense, and finds in them the readiest answer to the pessimism that darkens his meditative intervals. He loves wine, and is not ashamed to get drunk now and then, he loves women, in an almost innocently physical way, easily forgives himself for promiseuity, and does not look upon a lapse from virtue as an irremediable disaster. Nevertheless he dilutes two parts of wine with three of water, and considers repeated drunkenness an offense against good raste. Though he seldom practices moderation he sincerely worships it, and formulares more clearly than any other people in history the ideal of selfmastery.

The Athenians are too brilliant to be good, and scorn stupidity more than they abonunate vice. They are not all sages, and we must not picture their woman as all lovely Nausicias or stately Helens, or their men as combining the courage of Ajax with Nestor's wisdom, history has remembered the geniuses of Greece and has ignored her fools (except Nicias); even our age may seem great when most of us are forgotten, and only our mountain peaks have escaped the obscurity of time. Discounting the pathos of distance, the average Athenian remains as subtle as an Oriental, as enamored of novelty as an American, endlessly curious and perperually mobile, always preaching a Parmemidean calm and always tossed upon a Heraciertean sea. No people ever had a livelier fancy, of a readier tongue. Clear thought and clear expression seem divine things to the Athenian, he has no patience with learned obtuscation, and looks upon informed and intelligent conversation as the highest sport of civilization. The secret of the exuberance of Greek life and thought lies in this, that to the Greek, man is the measure of all things. The educated Athenian is in love with reason, and seklom doubts its ability to chart the universe. The desire to know and understand is his noblest passion, and as immoderate as the rest. Later he will discover the limits of reason and human effort, and by a natural reaction will fall into a pessimism strangely discordant with the characteristic buoyance of his spirit. Even in the century of his exuberance the thought of his profoundest men-who are not his philosophers but his dramansis will be clouded over with the clusive brevity of delight and the patient pertinacity of death.

As inquisitiveness generates the science of Greece, so acquisitiveness establishes and dominates its economy. Love of wealth wholly absorbs men," says Plato, with the exaggeration usual in moralists, "and never for a moment allows them to think of anything but their own private possessions, on this the soul of every entren hangs suspended." The Athenians are competitive animals, and stimulate one another with nearly ruthless rivalry. They are shrewd, and give the Semites a close run in cunning and stratagem; they are every bit as stiff-necked as the Bibbeal Hebrews, as pugnacious, obstinate, and proud. They bargain virulently in buying and self-ing, argue every point in conversition, and, when they cannot make war upon other countries, quarrel among themselves. They are not given to sentiment, and disapprove of Euripides' tears. They are kind to animals and cruel to men, they regularly use torture upon unaccused slaves, and sleep heartily, to all appearances, after slaughtering a cityful of noncombatants. Nevertheless they are generous to the poor or the disabled, and

when the Assembly learns that the granddaughter of Aristogeiton the tyrannicide is living in destitution on Lemnos, it provides funds to bring her to Athens and to give her a downy and a husband. The oppressed and hunted of other cities find a sympathetic refuge in Athens.

In truth the Greek does not think of character in our terms. He aspires neither to the conscience of the good bourgeos, nor to the sense of bonor of the aristocrat. To the Greek the best lite is the fullest one, rich in health, strength, beauty, passion, means, adventure, and thought. Virtue is arete, manly—literally and originally, martial. excellence (Ares, Mars), precisely what the Romans called virtus, man liness. The Athenian ideal man is the kalokagathos, who combines beauty and justice in a gracious art of living that frankly values ability, fame, wealth, and friends as well as virtue and humanity, as with Goethe, self-development is everything. Along with this conception goes a degree of vanity whose candor is hardly to our taste, the Greeks never tire of admiring themselves, and announce at every turn their superiority to other warriors, writers, artists, peoples. If we wish to understand the Greeks as against the Romans we must think of the French vs. the English, if we wish to feel the Spartan spirit as opposed to the Athenian we must think of the Germans vs. the French.

All the qualities of the Athemans come together to make their city-state. Here is the creation and summation of their vigor and courage, their brillance and loguacity, their inruliness and acquisitiveness, their varity and patriotesm, their worship of beauty and freedom. They are rich in passions but poor in prejudices. Now and then they tolerate religious intolerance, not as a check upon thought but as a weapon in partisan politics, and as a bound to moral experimentation, otherwise they insist upon a degree of liberty that seems fantastically chaotic to their Oriental visitors. But because they are free, because, ultimately, every office is open to every citizen, and each is ruled and ruler in turn, they give half their lives to their state. Home is where they sleep, they live in the market place, in the Assembly, in the Council, in the courts, in the great festivals, athlene contests, and dramatic speciacles that glorify their city and its gods. They recognize the right of the state to conscript their persons and their wealth for its needs. They forgive its exactions because it gives more opportunity for human development than man has ever known before, they fight for it fiercely because it is the mother and guardian of their liberties. "Thus," says Herodorus, "did the Athemans increase in strength. And it is plain enough, not from this instance only but from many examples, that freedom is an excellent thing, since even the Athenians, who, while they communed under the rule of dictators, were not a whit more valiant than any of their neighbors, no sooner shook off the yoke than they became decidedly the first of all.***

VI. PREMIARITAL RELATIONS

In morality, as in alphabet, measures, weights, coinage, costume, music, astronomy, and mystic cuits, classic Athens seems more Oriental than European. The physical basis of love is accepted trankly by both sexes, the love philters that antions ladies brew for negligent men have no merciv Platonic aim. Premarital chasticy is required of respectable women, but among unmarried men after the ephetic period there are few moral restraints upon desire. The great festivals, though religious in origin, are used as safety valves for the natural promisently of humanity, sexual icense on such occasions is condoned in the belief that monogram may be more cashy achieved during the balance of the year. No stigma is attached in Athens to the occasional intercourse of young men with courtesans, even married men may patronize them without any greater moral penalty than a scolding at home and a slightly tarnished reputation in the city. Athens officially recognizes proxitution, and levies a tax upon its practitioners.

With a career so open to talent, harlotty becomes in Athens, as in most other caties of Greece, a well-plied profession with many specialties. The lowest order of them, the parmer, live chiefly at the Picacus, in common brothels marked for the convenience of the public with the phallic synders of Priapus. An obol secures admission to these houses, where the girls, so aghtly clad that they are called gymna +naked ,, allow their prospective putchasers to examine them like dogs in a kennel. A man may strike a bargain for any period of time, and may arrange with the madam of the house to take a guil to live with him for a week, a month, or a year, sometimes a girl is hired out in this way to two or more men, distributing her time among them according to their means." Higher than these garls in the affection of the Athenians are the auletrides, or flute-players, who, ake the genths of Japan, asset at 'stag' entertainments, provide missic and gasety, perform dances artistic or fascivious, and then, it properly induced, sangle with the guests and spend the night with them." A few old courtesans may stave off destitution by developing training schools for such flute girls, and teaching them the science of cosmeric adoriment, personal transfiguration, musical entertainment, and amornus damance. Tradition hands down carefully from one generation of courtesans to another, like a precious beritage, the arts of inspiring love by judicious display, holding it by cov refued, and making it pay " Nevertheless some of the auletrides, if we may take Lucian's word for it from a later age, have tender hearts, know real affection.

and rum themselves, Camille-like, for their lovers' sakes. The honest courtesan is an ancient theme hoary with the dignity of age.

The highest class of Greek courtesans is composed of the hetagram liferally, companions. Unake the portial, who are mostly of Oriental Litth, the heraural are usually women of the citizen class, who have fallen from the respectability or fled from the seclusion required of Athenian maios and mattons. They live independently, and entertain at their own homes the lovers whom they lure, Though they are mostly brunettes by nature, they die their hair vellow in the belief that Athenians prefer blondes, and they distinguish themse yes, apparently under legal compulsion, by wearing flowers robes." By occasional reading, or attending lectures, some of them acquire a modest edication, and amuse their custured patrons with learned conversation. Thats, Dictima, Thargelia, and Leontium, as well as Aspasia, are celebrated as philosophical disputants, and sometimes for their polished acceary style." Many of them are remained for their wir, and Atheman literature has an anthology of hetairas epigrams." Though ad courtesans are denied civil rights, and are forbidden to enter any temple but that of their own goddess, Aphrodite Pandensos, a select minority of the hetairm enjoy a bigh standing in male society at Athens, no man is ashamed to be seen with these, philosophers contend for their favors, and an historian chronicies their lustory as piousiv as Plutarch."

In such ways a number of them achieve a certain scholastic immortality. There is Clepsydra, so named because she accepts and dismisses her lovers by the hourglass, Thargelia, who, as the Mara Hari of her time, serves the Persians as a spy by sleeping with as many as possible of the statesmen of Athens," Theoris, who consoles the old age of Sophocles, and Archippe, who succeeds her about the math decade of the dramatist's tife," Archeanassa, who amuses Plato," and Danze and Leontonin, who teach Fpacurus the philosophy of pleasure. Themistorioe, who practices ber art until she has lost her last tooth and her last lock of hair, and the bisonessike Griathaena, who, having spent much time in the training of her daughter, demands a thousand druchmas (\$1000) as the price of the young lady's company for a night." The beauty of Phrine is the talk of fourth-century Athens, since she never appears in pullic except completely yeded, but, at the Fleuvinian festival, and again on the feast of the Poseidonia, disrobes in the sight of all, lets down her hair, and goes to bathe in the sea. For a time she loves and respires Praxiteies, and poses for his Aphrodites, from her too, Apeiles takes his Aphrodue Anadyomene " So rich is Phry ne from her loves that she offers to rebuild the ways of Thehes if the Thebans will inscribe her name on the structure, which they stabbornly refuse to do Perhaps she asks too large an hi norarium from Futhias; he revenges himself by indicting her on a charge of impicty. But a member of the court is one of her chents, and Hypereides, the orator, is her devoted lover.

Hypereides defends her not only with eloquence but by opening her tunic and revealing her bosom to the court. The jouges took upon her beauty, and vindicate her party."

Lais of Corinth, says Athenaeus, "appears to have been superior in beauty to any woman that had ever been seen." As many cities as claimed Homer dispute the nonor of having witnessed her birth. Sculptors and painters beg her to pose for them, but she is cost. The great Alvron, in his old age, persuades her, when she disrobes he forgets his white hair and beard, and offers her all his possessions for one night, whereupon she smales, shrugs her rounded shoulders, and leaves him statueless. The next morning, hurning with readolescence, he has his hair transaed, and I is beard out off, he puts on a scarlet robe and a golden girdle, a chain of gold around his neck and rings on all his fingers. He colors his cheeks with rouge, and perfumes his garments and his flesh. He seeks out Lais, and announces that he loves her "My poor friend," she replied, seeing through his incremorphosis, 'you are asking me what I refused to your father vesterday " She lays up a great fortune, but Joes not retuse herselt to poor but comely lovers, she restores the ugh Demosthenes to virtue by asking ten thousand drachmas for an evening," and from the well-to-do Aristippus she earns such sums as scandalize his servant," but to the penniless Diogenes she gives herself for a pirtance, being pleased to have philosophers at her feet. She spends her wesith generously upon temples, public buildings, and friends, and finally returns, after the custom of her kind, to the poverty of her youth. She plies her trade patiently to the end, and when she dies she is bonored with a splendid tomb as the greatest conquerur that the Greeks have ever known."

VII. GREEK FRIENDSHIP

Stranger than this strange entente between prostitution and philosophy is the placed acceptance of sexual inversion. The chief tivals of the hetaria are the boys of Athens, and the courtesans, scandalized to the very depths of their pockets, never tire of denouncing the immorably of homosexual love. Merchants import handsome lads to be sold to the highest hidder, who will use them first as concubines and later as slaves," and only a negogible minority of males think it amuss that the efferimante young aristocrats of the city should arouse and assuage the ardor of aging men. In this matter of genders Sparta is as careless as Athens, when Aleman wishes to compliment some girls he calls them his "female boy-friends." Athenian iaw disfranchises those who receive homosexual artentions," but public opinion tolerates the practice humorously; in Sparta and Crete no stigma of any kind is attached to it," in Thebes it is accepted as a valuable source of military organization and bravery. The greatest heroes in the fond remembrance of Athens are Harmodius and Aristograton,

tyranneides and lovers, the most popular in Athens in his day is Alcibiades, who boasts of the men who love time, as late as Aristotle "Greek lovers" poight taeir troth at the tomb of locaus, courade of Heracles," and Aristoppus describes Xenophon, leader of armies and hardheaded man of the world, as infat-nated with young Cleanas." The arrachment of a man to a boy, or of a boy to a boy, shows in Greece all the symptoms of romantic love—passion, piety, costasy, jealousy, sevenading, brooding moaning, and sleeplessness." When Plato, in the Pracdrus, talks of human love, he means homosexual love, and the disputants in his Symposium agree on one point that love between man and man is nobler and more spiritual than love between man and woman." A similar inversion appears among the women, occasionally among the finest, as in Sappino, frequently among the courtesans, the ametrides love one another more passionately than they love their patrons, and the portuna are hothouses of Lesbian romance."

How shall we explain the popularity of this perversion in Greece? Aristotle artenbutes it to fear of overpopulation," and this may account for part of the phenomenon, but there is obviously a connection between the prevalence of both homosexua ty and prostatution in Athens, and the secusion of women. After the age of six the boys of Periclean Athens are taken from the gynaeceum in which respectable women spend their lives, and are brought up carefly in companionship with other boys, or men, little opportunity is given them, in their formative and almost neutral period, to know the attractiveness of the render sex. The life of the common mess hall in Sparta, of the agora, gymmasium, and palaestra in Athens, and the career of the ephebos, show the youth only the male form, even art does not announce the physical beauty of woman until Praxicles. In married afe the men seldom find mental companionship at home, the ranty of education among women creates a gult between the sexes, and men seek elsewhere the charms that they have not permitted their wives to acquire. To the Athenian citizen his home is not a castle but a dormitory, from morning to evening, in a great number of cases, he lives in the city, and earely has social contacts with respectable women other than his wife and daughters. Greek society is unisexual, and misses the disturbance, grace, and stumplation that the spirit and charm of women will give to Renassance Italy and Enlightenment France.

VIII, LOVE AND MARRIAGE

Romanne love appears among the Greeks, but seldom as the cause of marriage. We find intile of it in Homer, where Agamemnon and Achilles frankly think of Chryseis and Briseis, even of the discouraging Cassandra, in terms of physical desire. Nausicaa, however, is a warning against too

broad a generalization, and legends as old as Homer tell of Heracles and Iola, of Orpheus and I ury dice. The lyne poets, again, talk abundantly of love, commonly in the sense of amorous appetite, stones like that which Stesichorus tells of a maiden dying for love" are exceptional, but when Theano, wife of Pyth goras, speaks of love as "the sickness of a longing soul," we feel the authentic note of romantic rit. As refinement grows, and superimposes poetry upon heat, the tender sentiment becomes more frequent, and the increasing delay that civilization places between desire and fulfillment gives unagination leisure to embelish the oh ect of hope. Aeschylus is still Homeric in his treatment of sex; but in Sophocles we hear of Love" who "rules at will the gods,"* and in I ampides many a passage proclaims Eros' power. The later dramatists often describe a youth desperately enamored of a gul." Aristotle suggests the real quality of romantic adoration when he remarks that "lovers look at the eyes of the beloved, in which modesty dwells."

Such affairs in classic Greece lead rather to premarital relations than to marrimony. The Greeks consider romantic love to be a form of "possession" or madness, and would sinde at anyone who should propose it as a fit guide in the choice of a marriage mate." Normally marriage is arranged by the parents as in always classic I rance, or by professional matchmakers," with an eye not to love but to downes. The father is expected to provide for his daughter a marriage portion of money, clothing, jewelry, and perhaps slaves." This remains to its end the property of the wife, and reverts to her in case of a separation from her husband, a consideration that discourages divorce by the male. Without a dowey a girl has little chance of marriage, therefore where the father cannot give it to her the relatives combine to provide it. Marriage by purchase, so frequent in Homeric days, has by this means been inverted in Percelean Circece in effect, as Furipides' Medea complains," the woman has to buy her master. The Greek, then, marries not for love, nor because he enjoys matrimony (for he prates endlessly about its tribulations), but to continue himself and the state through a wife suitably dowered, and children who will ward off the evil fate of an unrended soul. Even with these inductments he avoids wedlock as long

^{*} Cf. Antigone, 78 cf.:

When Love deputes ble carries his justical

Love, he loom.
The right of their chartels'

By delicate checks

On the den's pullow

Watches he ad the night-time long,

His prey he seeks

Over the billow,

Pustoral bounts he preys among.

Gods are deatherss, and they

Cannot clude hit whim,

And of and have a resc life's a day.

Mad is the heart that broodeth han the

as he can. The letter of the law forbids him to remain single, but the law is not always enforced in Periclean days; and after him the number of bachelors mounts until it becomes one of the basic problems of Athens." There are so many ways of being amused in Greece. Those men who yield marry late, usually near thirty, and then insist upon brides not much older than bifteen." "To mate a youth with a young wife is ill," says a character in Europides; "for a man's strength endures, while the bloom of

beauty quickly leaves the woman's form." or

A choice having been made, and the dowry agreed upon, a solemn betrothal takes place in the home of the girl's futher, there must be witnesses, but her own presence is not necessary. Withour such a formal betrothal no union is valid in Athenian law, it is considered to be the first act in the complex rate of marriage. The second act, which follows in a few days, is a feast in the house of the girl. Before coming to it the bride and bridegroom, in their separate homes, bathe in ceremonal purification. At the feast the men of both families sit on one side of the room, the women on the other, a wedding cake is eaten, and much wine is drunk. Then the bridgeroom escorts his veiled and white-robed bride-whose face he may not yet have seen into a carriage, and takes her to his father's dwelling amid a procession of friends and flute-playing girls, who light the way with torenes and raise the hymencal chant. Arrived, he carries the girl over the threshold, as if in simblance of capture. The parents of the youth greet the girl, and receive her with religious ceremony into the circle of the family and the worship of its gods, no priest, however, takes any part in the ritual. The guests then escort the couple to their room with an epithalamion, or marriage-chamber song, and linger busterously at the door until the bridegroom announces to them that the massage has been consummated.

Besides his wife a man may take a concubine. "We have courtesans for the sake of pleasure," says Demosthenes, 'concubines for the daily health of our bodies, and wives to bear us lawful offspring and be the faithful guardians of our homes". here in one startling sentence is the Greek view of woman in the classic age. Draco's laws permit concubinage, and after the Sicilian expedition of 415, when the roll of cinzens has been depleted by war and many girls cannot find husbands, the law explicitly allows double marriages, Socrates and Euripides are among those who assume this parience, knowing that the "second wife," when her charms wear off, will become in effect a household slave, and that only the offspring of the first

wife are accounted legismate. Adultery leads to divorce only when committed by the wife, the husband in such case is spoken of as "carrying horns" (keroesses), and custom requires him to send his wife away. The law makes adultery by woman, or by a man with a married woman, punishable with death, but the Greeks are too lement to concupiscence to enforce this statute. The injured husband is usually left to deal with the adulterer as he will and can—sometimes killing him in flagrante delicto, sometimes sending a slave to beat him, sometimes contenting himself with a money indemnity.

For the man divorce is simple; he may dismiss his wife at any time, without stating the cause. Barrenness is accepted as sufficient reason for divorcing a wife, since the purpose of marriage is to have children. If the man is sterile, law permits, and public opinion recommends, the reinforcement of the husband by a relative; the child born of such a union is considered to be the son of the husband, and must tend his departed soid. The wife may not at will leave her husband, but she may ask the archons for a divorce on the ground of the cruelty or excesses of her mate. Divorce is also altowed by mutual consent, usually expressed in a formal declaration to the archon. In case of separation, even where the husband has been guilty of adultery, the children remain with the man. All in all, in the marter of sex relations. Athenian custom and law are thoroughly man-made, and represent an Oriental retrogression from the society of Egypt, Creic, and the Homeric Age.

IX. WOMAN

As surprising as onything else in this civilization is the fact that it is brilliant without the aid or stimulus of women. With their help the Heroic Age aclueved splendor, the age of the dictators a lyric radiance, then, almost overright, married women vanish from the listory of the Greeks, as if to confute the supposed correlation between the level of civilization and the status of woman. In Herodotus woman is everywhere, in Thucydides she is nowhere to be seen. From Scinonides of Amorgos to Lucian, Greek hierature is offensively repetitious about the faults of women, and towards the close of it even the kindly Plurarch repeats Thucydides. The name of a decent woman, like her person, should be shut up in the house.

This seclusion of woman does not exist among the Dorians: presumably it comes from the Near East to Ionia, and from Ionia to Attica, it is part

of the tradmon of Asia. Perhaps the disappearance of inhentance through the mother, the rise of the middle classes, and the enthronement of the commercial view of life enter into the change, men come to indige women in terms of utility, and find them especially useful in the home. The Opental nature of Greek marriage goes with this Attie purdah, the bride is cut off from her kin, goes to live almost as a menial in another home, and worships other gods. She cannot make contracts, or incur debts beyould a triffing sum, she cannot bring actions at law, and Solon legislates that anything done under the influence of woman shall have no validity at law." When her husband dies she does not inherit his property. Even physiological error enters into her legal subjection, for just as primitive ignorance of the male role in reproduct on tended to exalt woman, so the male is exalted by the theory popular in classic Greece that the generative power belongs only to man, the woman being merely the carrier and nurse of the chail. The older age of the nun contributes to the subordination of the wite, he is twice her years when he marmes her, and can in some degree mold her nand to his own philosophy. Doubtless the male knows too well the beense allowed to his sex in Athens to risk his wife or daughter at large, he chooses to be free at the cost of her seclasion. She may, if properly veiled and attended, vait her relatives or intimates, and may take part in the religious cerebrations, including attendance at the plays, but for the rest she is expected to stay at hime, and not allow herself to be seen at a window. Most of her life is spent in the women's quarters at the rear of the house, no male visitor is ever admitted there, nor does she appear when men visit her husband.

In the home she is honored and obeyed in everything that does not contravene the patriarchal authority of her mate. She keeps the house, or superintends its management, she cooks the meals, cards and spins the wool, makes the clothing and bedding for the family. Her education is almost confined to household arts, for the Athenian believes with Furipides that a coman is handicapped by intellect. The result is that the respectable women of Athens are more modest, more "charming" to men, than their oke in Sparta, but less interesting and mature incapable of being comtakes to husbands whose minds have been foled and sharpened by a free and varied life. The women of sixth-century Greece contributed significantly to Greek literature, the women of Periclean Athens contribute nothing.

Toward the end of the period a movement arises for the emancipation of woman. Furified defends the sex with brave speeches and timid innu-

endoes, Anstophanes makes fun of them with hoisterous indecency. The women go to the heart of the matter and begin to compete with the netairal in making theniselves as attractive as the progress of chemistry will permit. "What sensible thing are we women capable of doing." asks Cleonica in Aristophanes' Lysistraia. "We do nothing but sit around with our paint and lipstick and transparent gowns, and all the rest of it." From 411 onward female roles become more prominent in Athenian drama, and reveal the growing escape of women from the solitude to which they have been confined.

Through it all the real influence of woman over man continues, making her subjection largely unreal. The greater eagerness of the male gives woman an advantage in Greece as elsewhere "Sir," says Samuel Johnson, "namire has given woman so much power that the law cannot afford to give her more "" Sometimes this natural sovereignty is en inneed by a substantial dowry, or an industrious tongue, or uxorious affection, more often it is the result of beauty, or the bearing and rearing of fine children, or the slow fusion of souls in the crucible of a common experience and task. An age that can portray such gentle characters as Anogone, Alcestis, Iphigenia, and Andromache, and such heromes as Hecuba, Cassandra, and Medea, could not be unaware of the highest and the deepest in woman. The average Athenian loves his wife, and will not always try to conceal it; the funeral stetae reveal surprisingly the tenderness of mate for mate, and of parents for children, in the intunacy of the home. The Greek Anthology is vivid with erotic verse, but it contains also many a roughing epigram to a beloved commude. "In this stone," says one epitaph, "Marathonis laid Nicopolis, and bedewed the marble chest with tears. But it was of no avail. What profit liath a man whose wife is gone, and who is left solitary on earth?"

X. THE HOME

The Greek family, like the Indo-European household in general, is composed of the father, the mother, sometimes a "second wite," their unmarried daughters, their sons, their stayes, and their sons' waves and children and slaves. It remains to the end the strongest institution in Greek exclization, for both in agriculture and in maintry it is the unit and instrument of economic production. The power of the father in Atrica is extensive, but much narrower than in Rome. He can expose the newborn child, sell the labor of his minor sons and unwedded daughters, give his daughters in marriage, and, under certain conditions, appoint another husband for his widow. But he cannot, in Atheronductions, appoint another husband for his widow.

nian law, sell the persons of his children, and each son, on marrying, escapes from parental authority, sets up his own hume, and becomes an independent member of the gene.

The Greek house is unpretentious. The exterior is seldom more than a stout blank wall with a parrow doorway, durith witnesses to the insecurity of Greek life. The material is sometimes studed, usually sun-baked brick. In the city the houses are crowded together in narrow streets, often they rise to two stories, occasionally they are renements housing several families, but nearly every citizen owns an individual home. Dweilings in Athens are small till Alcibiades sets a fashion of nuigniticence, there is a democratic taboo, reinforced by aristoembe precaution, against display, and the Athenian, living for the most part in the open air, does not endow the home with the significance and affection that it receives in colder zones. A rich house may have a colomisded porch facing the street, but this is highly exceptional. Windows are a hixury, and are confined to the upper story, they have no panes, but may be closed with shutters, or screened with lattices against the sam. The entrance door is ordinardy made of doal le leaves, turning upon vertical pivots risoning into the threshold and the littel. On the door of many well-to-do houses is a metal knocker, often in the form of a ring in a hon's mouth " The entrance hallway, except in the poorer dwellings, leads into an ante, or uncovered court, commonly paved with stones. Around the court may run a columned portico, in the center may be on astar, or a eistern, or both, perhaps also adorned with columns, and paved with a mosaic floor. Light and air come to the house chiefly through this court, for upon it open nearly all the rooms, to pass from one room to another it is usually necessary to enter the portion or the court. In the shade and privacy of the court and the portico much of the family's life is aved, and much of its work is done.

Gardens are rare in the city, and are confined to small areas in the court or behind the house. Country gardens are more spacious and mamerous, but the scarcity of rain in summer, and the cost of irrigation, make gardens a luxury in Attica. The average Greek has no Rousseasian sensitivity to nature, his mountains are still too triablesome to be beautiful, though his poets, despite its dangers, intone many paeans to the sea. He is not sentimental ability nature, so much as animistically imaginative, he peoples the woods and streams of his country with gods and sprites, and thinks of nature as not a landscape but a Valhalla, he names his mountains and tivers from the divinaties that inhal it them, and instead of painting nature directly he draws or carves symbolic images of the deities that in his poetic theology give at life. Not till Alexander's armies bring back Persian ways and gold will the Greek build himself a pleasure garden or "paradise." Nevertheless, flowers are loved in Greece as much as anywhere, and gardens and florists supply them all the year round. Flower girls

peddle roses, violets, hyacinths, narcessi, inses, invities, filees, crocuses, and anemones from house to house. Women wear flowers in their hair, dandles wear them behind the ear, and im festal occasions both sexes may come forth with flower garlands, let like, around the neck."

The interior of the house is simple. Among the poor the floors are of hardened earth, as income rises this basis may be covered with plaster, or paved with flar stones or with small round stones set in cement, as in the Near Fast immemorially, and ad this may be covered with reed mats or rugs. The brick walls are plastered and whitewashed. Fleating, which is needed for only three months of the year, is furnished by a brazier whose smuke his to find a way out through the door to the court. Decoration is minimal, but at the end of the fifth century the homes of the rich may have pitared halls, walls paneled with marbie or painted imitations of it, mural paintings and tapestries, and ceiling arabesques. Furniture is scanty in the average home-some chairs, some chests, a few tables, a ned. Cushings take the place of upholstery on chairs, but the seats of the rich may be carefully carved, and includ with silver, torsone, or wory. Chests serve as both closets and chars. Tables are small, and usually three-legged, whence their name trapezar, they are brought in and removed with the food, and are hardly used for other purposes, writing is done upon the knee. Conches and beds are tavorne objects for adornment, being often inlaid or elaborately carved. Leather though stretched across the bedstead serve as a spring, there are instrusses and pillows, and embroidered covers, and commonty a raised headrest. Lamps may be hung from the ceiling, or placed upon stands, or take the form of torches elegantly wrought

The kitchen is equipped with a great variety of iron, bronze, and earthenware vessels, glass is a rare luxury, not made in Greece. Cooking is done over an open tire, stoves are a Hellenstic mnovation. Arbeman meals are simple, bae the Sparran and unlike the Bocotian, Corporbian, or Siedian, but when honored guests are expected it is customary to engage a professional cook, who is always male. Cooking is a highly developed art, with many texts and heroes; some Greek cooks are as widely known as the latest victor in the Olympic games. To eat alone is considered batharous, and table manners are looked upon as an index of a civilization's development. Women and how sit at meals before small tables, men rechne on ecothes, two on each. The family ears together when alone, if male guests come, the women of the family retire to the gynacceum. Attendants remove the sandals or such the feet of the guests before the latter reclare, and offer them water to cleanse their hands sometimes they anome the heads of the guests with fragrant oils. There are no knives or forks, but there are spoons soud food is eaten with the lingers. Dur ing the meal the fingers are cleaned with scraps or crumbs of I read, after it with water. Before dessert the attendants till the cup of each guest from a

krater, or mixing bowl, in which wine has been diluted with water. Plates are of earthenware, silver plate appears as the fifth century ends. Epicures grow in number in the fourth century, one Puhyllus has coverings made for all tongue and fingers so that he may cut food as not as be likes." There are a few vegetarians, whose guests make the usual jokes and complaints, one diner flees from a vegetarian feast for fear that he will be offered hay for dessert."

Drinking is as important as eating. After the despinon, or dinner, comes the symposion, or drinking together. At Sparta as well as at Athens there are drinking clubs whose members become so attached to one another that such organizations become potent political instruments. The procedure at banquets is complicated, and philosophers like Xenocrotes and Aristi tle think it desirable to see down laws for them " The floor, upon which uneaten material has been thrown, is swept clean after the meal, perfunes are passed around, and much wine. The guests may then dance, not in pairs or with the other sex (for usually only males are invited), but in groups, or they biay games like korralios,* or they may match poems, wattersins, or riddles, or watch professional performers like the female acrobat in Xemphon's Symporium, who tosses twelve hoops at once and then dances somersaults through a hoop "set all around with upright swords." Hute girls may appear, play, sing, dance, and love as arranged for. Educated Athenians prefer, now and then, a symposium of conversation, conducted in an orderly manner by a symposiarch chosen by a throw of the esce to act as chairman. The guests take care not to break up the talk into small greaps, which usually means small talk, they keep the conversation general, and beten, as courreously as their vivacity will permit, to each man in turn. So elegant a discourse as that which Plato offers us is deabtless the product of his bridiant imagination, but probably Athens has known dialogues as lively as his, perhaps profounder, and in any case it is Athenian society that suggests and provides the background. In that exesting atmosphere of free wits the Athenian mind is formed.

XI. OLD AGE

Old age is feared and mourned beyond wont by the life-loving Greeks. Even here, however, it has its consolations, for as the used up body is returned like worn currency to the mint, it has the solace of seeing, before it is consumed, the fresh new life through which it cheats mortality. It is true that Greek history reveals cases of selfish carelessness or coarse insolence towards the old. Athenian society, commercial, individualistic, and innovating, tends to be inskind to old age, respect for years goes with a religious and conservative society

This consisted in throwing liquid from a cup so that it would strike some small object placed at a distance.

like Sparta's, while democracy, loosening all bonds with freedom, puts the accent on youth, and favors the new against the old. Athenian history offers several instances of children taking over their parents' property without proof of ambeedity in the elders, "Lut Sophoeles rescues himself from such an action simply by reading to the court some passages from his latest play. Athenian law commands that some shall support their infirm or aged parents, in and public opinion, which is always more fearth, than the law, enjoins modesty and respect in the I chavior of the young towards the old. Plato takes it for granted that a word-bred youth will be alent in the presence of his seniors unless he is asked to speak. There are in the Interature many pictures of modest adolescence, as in the earner dialogues of Piata or the Symposium of Xenophon, and there are touching stories of filtal devotion, like that of Orestes to Agamennon, and of Antigone to Oedipus.

When death comes, every precaution is taken that the soul of the departed shall be spared an avoidable suffering. The body must be buried or lairned, else the soul will wander restless y about the world, and will revenge uself upon its negligent posterity, it may, for example, reappear as a ghost, and bring disease or disaster to plants and men. Cremation is more popular in the Heroic Age, burial in the classic. Burial was Mycemacan, and will survive into Christianity, cremation apparently entered Greece with the Achievans and the Dorians, whose nomad had to small empossible the proper care of graves. One or the other is so obligatory among Athenians that the victorious generals at Arginusae are put to death for a lowing a severe storm to deter them from recovering and burying their dead.

Greek hurial customs carry on old ways into the future. The corpse is bathed, anomited with perfumes, crowned with flowers, and dressed in the finest garments that the family can afford. An abol is placed between the teeth to pay Charon, the mythatal boutman who ferries the dead across the Styx to Hades . The body is placed in a cettin of pottery or word, to "bave one foot in the coffin" is already a proverb in Greece " Mourning is elaborate black garments are worn, and the hair, or part of it, is shorn as a gift for the dead. On the third day the corpse is carried on a lifer in procession through the streets, while the wemen weep and heat their breasts, professional wallers or dirge singers may be fired for the occasion. Upon the sod of the covered grave wine is poured to slake the dead soul's thirst, and animals may be sacrificed for its food. The mourners lay wreaths of flowers or express upon the tomb, " and then return home to the funeral feast. Since the departed soul is believed to be present at this feast, sacred custom requires that 'of the dead nothing but good' shall be speken," this is the source of an ancient saw, and perhaps of the unfailing lands of our epitaphs. Periodically the children visit the graves

[·] It was the custom among the Greeks to carry small change in the mouth,

of their ancestors, and offer them food and drink. After the bartle of Plataea, where the Greeks of many cities have fallen, the Plataeans pledge themselves to provide for all the dead an animal repast, and six centuries later, in the days of Plutarch, this promise will still be performed.

After death the soul, separated from the body, dwells as an insubstantial shade in Fiades. In Homer only sports guilty of exceptional or sacrilegous offense suffer punishment there, all the test, vaints and sinners alike, share an equal fate of endless prowling about dark Pluto's realise. In the course of Greek history a belief arises, among the pooter classes, in Hades as a place of explation for sins. Acsolylus pictures Zeus as judging the dead there and punishing the guilty, though no word is said about rewarding the good. Only rarely duwe find mention of the Blessed Isles, or the Livian Fields, as licavens of eternal happiness for a few heroic souls. The thought of the gloomy fate awaring nearly all the dead darkens Greek literature, and makes Greek life less linght and cheerful than is fitting under such a sun.

The Art of Periclean Greece

L. THE ORNAMENTATION OF LIFE

"IT is beautiful," says a character in Xenophon's Economics,

to see the footgear ranged in a row according to its kind, beautiful to see garments sorted according to their use, and coverlets, beautiful to see glass vases and tableware so sorted, and beautiful, too, despite the jeers of the witless and hippant, to see cooking-pots arranged with scose and symmetry. Yes, all things without exception, because of symmetry, will appear more beautiful when placed in order. All these utensils will then seem to form a choir, the center which they unite to form will create a beauty that will be enhanced by the distance of the other objects in the group.

This passage from a general reveals the scope, simplicity, and strength of the esthetic sense in Greece. The feeling for form and rhythm, for precision and clarity, for proportion and order, is the central fact in Greek culture, it enters into the shape and ornament of every bowl and vase, of every statue and painting, of every temple and tomb, of every poem and drama, of all Greek work in science and philosophy. Greek art is reason made manifest. Greek painting is the logic of line, Greek sculpture is a worship of symmetry, Greek architecture is a marble geometry. There is no extravagance of emotion in Periclean art, no bearrerie of form, no striving for novelry through the abnormal or unusual,* the purpose is not to represent the indiscriminate irrelevancy of the real, but to catch the illuminating essence of things, and to portray the ideal possibilities of men-The pursuit of wealth, beauty, and knowledge so absorbed the Athenians that they had no time for goodness. "I swear by all the gods," says one of Xenophon's banqueters, "that I would not choose the power of the Persian king in preference to beauty "

The Greek, whatever the romanticists of less virile ages may have fancied of him, was no efferminate esthete, no flower of ecstasy murmuring mys-

^{*} Philokaioumen mer' emeletar, says Thucyd.dus' Pericles. "We love beauty without ex-

teries of art for art's sake; he thought of art as subordunate to life, and of living as the greatest art of all, he had a hearthy utilitarian bias against any beauty that could not be used, the useful, the beautiful, and the good were almost as closely bound together in his thought as in the Socratic philosophy.* In his view art was first of all an adornment of the ways and means of life he wanted his pots and pans, his lamps and chests and tables and beds and chairs to be at once serviceable and beautiful, and never too elegant to be strong. Having a vivid "sense of the state," he identified himself with the power and glory of his city, and employed a thousand artists to embellish its public places, emobile its festivals, and commemorate its history. Above all, he wished to honor or propitate the gods, to express his gratitude to them for life or victory, he offered votive images, lavished his resources upon his temples, and engaged statuaries to give to his gods or his head an enduring similitude in stene. Hence Greek art belonged nor to a museum, where men might go to contemplate it in a rare moment of esthetic conscience, but to the actual interests and enterprises of the people, its "Apollos" were not dead marbles in a gadery, but the likenesses of beloved deines, its reimples no mere curiosities for tourists, but the homes of hving gods. The artist, in this society, was not an insolvent recluse in a studio, working in a language alien to the common citizen, he was an artisan toiling with laborers of all degrees in a public and intelligible task. Athens brought together, from all the Greek world, a greater concourse of arrists, as well as of philosophers and poets, than any other city except Renassance Rome; and these men, competing in fervent rivalry and cooperating under enlightened statesmanslup, realized in fair measure the vision of Pericles.

Art begins at home, and with the person, men paint themselves before they paint pictures, and adorn their bodies before building homes. Jewelry, like cosmetics, is as old as history. The Greek was an expert cutter and engraver of genrs. He used simple tools of I rouze—p ain and tubular drills, a wheel, and a polishing maxture of emery powder and oil, yet his work was so delicate and minute that a microscope was probably required in executing the details, and is certainly needed in following them.* Coms were not especially pretty at Athens, where the grim nwl ruled the mint. His led all the mainland in this field, and towards the close of the fifth century. Syracuse issued a dekadrachma that has never been surpassed in ministratic art. In metalwork the masters of Chalca maintained their leadership, every Mediterranean city sought their iron, copper, and silver wares. Greek mirrors were more pleasing than mirrors by

^{**}Among the ancients," and Stendhal, "the beautiful is only the high relief of the useful."

their nature can frequently be, for though one might not see the elearest of redections in the polished homze, the mirrors themse was were of varied and attractive shapes, often emborately engraved, and upheld by figures of heroes, fair women, or gods.

The potters carried on the forms and methods of the sixth century, with their traditional bantes and rivalry. Sometimes they burnt into the vase a word of love for a boy, even Pheigins tollowed this custom when he carved upon the finger of his Zens the words, "Pantackes is fair." In the first half of the fifth century the red-figure style reached as spex in the Achilles and Pentheolea vase, the Acrop and the Fax cup in the Vatican, and the Berlin Museum Orpheus among the Thracians. More beautiful strewere the white leavithor of the midcentury, these stender flasks were dedicated to the dead, and were usually harie I with them, or thrown upon the pyre to let their fragrant oils mingle with the flames. The wase painters ventured into individualty, and sometimes fixed the clay with subjects that would have startled the staid masters of the Archaic age, one vose allows Athenian youths to endince confresans shamelessay, another shows men vorniting as they come from a banquet, other vases do what they can for sex education. The heroes of Perulein vise painting-Brygus, hotades, and Meidias-abandoned the old myths, and chose scenes from the life of their times, delighting above all in the graceful it overhent of woman and the natural play of the cluid. They drew more faithfully than their predecessors, they showed the body in three-quarters view as well as in profile, they produced light and shade by using than or thick schettons of the glaze, they m dexed the figures to show contours and depth, and the folds of feminine drapery. Corners and Sie han Gela were also centers of fine vase painting in this age, but no one questioned the supericrity of the Athenians. It was not the competition of other potters that overcame the artists of the Ceramicus, it was the rise of a rival art of decoration. The vase painters tried to meet the attack by mutating the themes and styles of the murabits, but the taste of the age went against them, and slowly, as the fourth century advanced, puttery resigned uself to being more and more an industry, less and less an art.

II. THE RISE OF PAINTING

Four stages vaguely divide the history of Greek painting. In the sixth century it is chiefly ceramic, devoted to the adormnent of vases, in the fifth it is thicfly architectural, giving color to public binadings and statues, in the fourth it hovers between the domestic and the individual, decorating dwellings and making portraits, in the Hellenistic Age it is chiefly individual, producing easely pictures for private purchasers. Greek painting begins as an offshoot of drawing, and remains to the end a matter essentially of drawing and design. In its

development it uses three methods fresco, or painting upon wet plaster, tempera, or painting upon wet cloth or boards with colors mixed with the white of eggs, and encauses, which mixed the colors with melted wax, this is as rear as antiques comes to painting in oils. Pliny, whose win to believe sometimes rivals that of Herodotus, assures us that the art of painting was already so advanced in the eighth century that Candaules, King of I ydia, paid its weight in good for a picture by Binarchus,' I ut all beginnings are mysteries. We may judge the high repute of painting in Greece from the fact that Pliny gives it more space than to sculpture, and apparently the great paintings of the classic and Hellenistic periods were as much discussed by the critics, and as highly regarded by the people, as the most distinguished specimens of architecture or statuary."

Polygnotus of Thasos was as famous in fifth-century Greece as Icumus or Pheidias. We find him in Athens about 4-2, perhaps it was the rich Cimon who procured him commissions to adorn several public buildings with murals.* Upon the Stoa, which thereafter was called Poecile, or the Painted Portico, and which, three centuries later, would give its name to the philosophy of Zeno, Polygnorus depicted the Sack of Troy -not the bloody massacre of the right of victory, but the scriber silence of the morning after, with the victors quieted by the ruin around them, and the deteated lying calm in death. On the walls of the temple of the Dioscuri he pointed the Rape of the Leucoppidae and set a precedent for his art by portraying the women in transparent drapers. The Amplianyonic Council was not shocked at invited Polygnoras in Delphi, where, in the Lesche, or Lounge he painted Odrs out in Hater and another Sack of Tros. An these were vast trescoes, almost empty of law scape or background, but so crowded with individualized byures that many assistants were needed to fill in with coor the master's carefully drawn designs. The Lesche mural of Troy showed Menelaus crew about to spread san for the return to Greece, m the center sat Heien, and though many other women were in the picture, all appeared to be gazing at her beauty. In a corner stood Andromache, with Asty anax at her lireast in another a little boy clung to an altar in fear, and in the distance a horse 20-ed around on the sandy beach." Here, half a century before Furquiles, was ad the drama of The Trojan Women. Polygnotus refused to take pay for these pictures, but gave them to Athens and Delphi out of the generosity of confident strength. All Hellas acclaimed him. Athens conferred entrenship upon him, and the Amphictyonic Council arranged that wherever he went in Greece he should be as Socrates wished to be) maintained at the public expense. All that remains of him is a little pigment on a wall at Delphi to remaid us that artistic immortality is a moment in geological time.

^{*}He repaid Creton by making live to his sister Elpinice, and painting her portrait at Landarez among the women of Tray "

About 470 Delphi and Corinth established quadrennial contests in painting as part of the Pythian and Isthman games. The art was now sufficiently advanced to enable Panaenus, brother (or nephew) of Pheidias, to make recognizable portraits of the Athenian and Persian generals in his Battle of Marathon. But it still placed all figures in one plane, and made them of one stature; it indicated distance not by a progressive diminution of size and a modeling with light and shade, but by covering more of the lower half of the farther figures with the curves that represented the ground. Towards 440 a vital step forward was taken. Agatharchus, employed by Aeschylus and Sophocles to paint scenery for their plays, perceived the connection between light and shade and distance, and wrote a treatise on perspective as a means of creating theatrical illusion. Anaxagoras and Democratus took up the idea from the sciennific angle, and at the end of the century Apollodorus of Athens won the name of skiagraphos, or shadow painter, because he made pictures in chiaroscuro-i.e., in light and shade, hence Pliny spoke of him as "the first to paint ob ecrs as they really appeared.""

Greek painters never made full use of these discoveries; just as Solon frowned upon the theatrical art as a deception, so the artists seem to have thought it against their honor, or beneath their dignity, to give to a plane surface the appearance of three dimensions. Nevertheless it was through perspective and chiaroscuro that Zeoxis, pupil of Apollodorus, made himself the supreme figure in fifth century painting. He came from Heracleia (Pontica²) to Athens about 424, and even aimly the noise of war his coming was considered an event. He was a "character," bold and conceited, and he painted with a swashbuckling brush. At the Olympic games he strutted about in a checkered tunic on which his name was embroidezed in gold, he could afford it, since he had already acquired "a vast amount of wealth" from his paintings." But he worked with the honest care of a great artist, and when Agatharchus boasted of his own speed of execution, Zeoxis said quietly, "I take a long time." He gave away many of his masterpieces, on the ground that no price could do them justice; and cities and kings were

happy to receive them.

He had only one rival in his generation—Parrhasius of Ephesius, almost as great and quite as vain. Parrhasius were a golden crown on his head, called himself "the prince of painters," and said that in him the art had reached perfection." He did it all in lusty good humor, singing as he painted." Gossip said that he had bought a slave and tortured him to study facial expression in pain for a picture of Prometheus," but people tell many stories about artists. Like Zeuxis he was a realist, his Runner was portrayed with such verisimili-

tude that those who beheld it expected the perspiration to fall from the picture, and the athlete to drop from exhaustion. He drew an immense mural of *The People of Athens*, representing them as implacable and merciful, proud and humble, theree and timid, fit kle and generous—and so faithfully that the Atheman public, we are informed, realized for the first time at sown

complex and contradictory character."

A great rivalry brought him into public competition with Zeuxis. The latter painted some grapes so naturally that birds tried to eat them. The judges were enthusiastic about the picture, and Zeuxis, confident of victory, bade Parthasius draw aside the curtain that concealed the I phesian's painting. But the curtain proved to be a part of the picture, and Zeuxis, having himself been deceived, handsomely acknowledged his defeat. Zeuxis suffered no loss of reputation. At Crotoria he agreed to paint a Helen for the temple of Literian Hera, in condition that the five loveliest women of the city should pose in the nude for him, so that he might select from each her fairest feature, and combine them ail an a second goddess of beauty." Penelope, too, found new life under his brosh, but he admired mi re his portrain of an artilete, and wrote under it that men would find it easier to criticize him than to equal him. All Greece enjoyed his conceit, and talked about him as much as of any dramatist, statesmen, or general. Only the prize fighters outdid his fame.

III. THE MASTERS OF SCULPTURE

1. Methods

None the less painting remained slightly alien to the Greek genius, which loved form more than color, and made even the painting of the classic age (if we may judge it from hearsay) a statuesque study in line and design rather than a sensoons seizure of the colors of life. The Hellene delighted rather in sculpture, he filled his home, his temp es, and his graves with terracutta statuettes, worshiped his gods with images of stone, and marked the tombs of his departed with stellae reliefs that are anding the commonest and most moving products of Greek art. The artisans of the stellae were simple workers who carved by rote, and repeated a thousand tunes the familiar theme of the quiet parting, with clasped hands, of the living from the dead. But the theme itself is noble enough to bear repetition, for it shows classic restraint at its best, and teaches even a romantic soul that feeling speaks

with most power when it lowers its voice. These slabs show us the dead most often in some characteristic occupation of life—a child playing with a hoop, a girl carrying a jar, a warrior proud in his armor, a young woman admiring her jewels, a boy reading a book while his dog lies content but watchful under his chair. Death in these stelae is made natural, and therefore forgivable.

More complex, and supreme in their kind, are the sculptural reliefs of this age. In one of them Orimeus hids a lingering farewell to Eurydice, whom Hermes has reclaimed for the nether world," in another Demeter gives to Triptulemus the griden grain by which he is to establish agriculture in Greece, here some of the coloring still adheres to the stone, and suggests the warmth and brusance of Greek relief in the Golden Age." Still more hearitful is The Birth of Aphrodae, carved on one side of the "Eudovisi Throne." by an unknown sculptor of presontable lonian training. Two goldesses are raising Aphrodate from the sea, her than wet garment chings to her form and reveals it in all the splendor of maturity, the head is seim Asianic, but the drapery of the attendant demes, and the soft grace of their pose, hear the stamp of the sensitive Greek eve and hand. On another side of the "throne" a nude garliplays the double three. On a third side a veiled woman prepares her lainp for the evening, perhaps the face and garments here are even nearer to perfection than on the central piece.

The advance of the fifth-century sculptor upon his forebears is impressive. Frontality is abandoned, foreshortening deepens perspective, stillness gives place to movement, rigidity to life. Indeed, when Greek statuary breaks through the old conventions and shows man in action, it is an artistic revontion, rarely befort, in Egypt or the Near Last, or in pre-Marathon Greece, has any sculpture in the round been caught in action. These developments owe much to the freshened vitality and buoyancy of Greek life after Salamis, and more to the patient study of motile anatomy by master and apprentice through many generations. "Is it not by modeling your works on living beings," asks Sociates, sculptor and philosopher, "that you make your statues appear alive?. And as our different attitudes cause the play of certain muscles of our body, upwards or downwards, so that some are contracted and some stretched, some wring and some relaxed, is it not by expressing these efforts that you give greater truth and verisimalitude to your works?" The Periclean sculptur is interested in every feature of the

A block of marble discovered in Rome in 1865 when the Villa I udosus was torn down. The original is in the Museu selle Terme in Rome, there is a good cupy in the Metropolitan Museum of Art in New York.

body in the abdomen as much as the face, in the marvelous play of the elastic flesh over the moving framework of the bones, in the swelling of muscles, tendons, and veins, in the endless wonders of the structure and action of hands and ears and feet, and he is fascinated by the difficulty of molding the extremities. He does not often use models to pose for him in a studio, for the most part he is content to watch the men stripped and active in the palaestra or on the athietic field, and the women solemnly marching in the reagious processions, or naturally absorbed in their demestic tasks. It is for this reason, and not through modesty, that he centers his studies of anatomy upon the male, and in his portraits of women substitutes the refinements of drapery for anatomical detail, though he makes the drapery as transparent as he dares. I sted of the stiff skirts of Egypt and archaic Greece he loves to show terminine robes agitated by a breeze, for here again he eatches the quanty of motion and life

He uses almost any workable material that comes to his hand-wood, mory bone, terra cotta, limestone, marbie, silver, go d, sometimes, as in the thry selephanting statues of Pheidias, he uses gold on the raunent and ivory for the flesh. In the Peloponnesus bronze is the sculptor's favorite material, for he admires its dark tints as well adapted to represent the bodies of men tanned by mudity under the sun, and not knowing the rapacity of man the dreams that it is more durable than stone. In Jonia and Arrica he prefers marble, its difficulty stimulates him, its firmness lets him chisel it safety, its translucent smoothness seems designed to convey the rosy color and delicate texture of a woman's skin. Near Athens the sculptor discovers the marble of Mr. Pentelicus, and observes how its iron content mellows with time and weather into a vein of gold glowing through the stone, and with the obsturare patience that is half of genius he slowly carves the quarries anto living statuary. When he works in bronze the fifth-century sculptor uses the method of hobow casting by the process of circ perdu, or lost wax te, he makes a model in plaster or clay, overlaps it with a thin coar of wax, govers it all with a mold of plaster or clay perforated at many points, and places the figure in a furnace whose heat melts the wax, which runs out through the byles, then he pours molten bronze into the mold at the top till the metal files all the space before occupied by the wax, he cools the figure, removes the outer mo d, and files and posshes, lacquers or paints or gilds, the brienze into the final form. If he prefers marble he begins with the unshaped block, unaided by any system of pointing," he works freehand, and

^{*} A method of indicating the depth to which at various points, a block of scidpford materral is a becomes a carver before the artist taxes it in round. This process came toro use in Hellenistic Greece.**

for the most part guides himself by the eye instead of by instruments;" blow by blow he removes the superfluous until the perfection that he has conceived takes shape in the stone, and, in Aristotle's phrase, matter becomes form.

His subjects range from gods to animals, but they must all be physically admirable, he has no use for weaklings, for intellectuals, for abnormal types, or for old women or men. He does well with the horse, but indifferently with other animals. He does better with women, and some of his anonymous masterpieces, like the meditative young lady holding her robe on her breast in the Athens Museum, achieve a quiet loveliness that does not lend itself to words. He is at his best with athletes, for these he admires without stant, and can observe without hindrance; now and then he exaggerates their prowess, and crosses their abdomens with incredible touseles, but despite this fault he can east bronzes like that found in the sea near Anticythera, and alternatively named an Ephebos, of a Perseus whose hand once held Medusa's snake harred head. Sometimes he catches a youth or a girl absorbed in some sample and spontaneous action, like the boy drawing a thorafrom his foot.* But his country's mythology is still the leading hispiration of his are. That terrible conflict between philosophy and religion which runs through the thought of the fifth century does not show yet on the monuments, here the gods are still supreme, and if they are dying they are nobly transmured into the poetry of art. Does the sculptor who shapes in bronze the powerful Zeus of Artemisium! really believe that he is modeling the Law of the World. Does the artist who carves the gentle and sorrowful Dionysus of the Delphi Museum know, in the depths of his marticulate understanding, that Dionyses has been shot down by the arrows of phalosophy, and that the traditional features of Dionysus' successor, Christ, are already previsioned in this head?

2. Schools

If Greek sculpture achieved so much in the fifth century, it was in part because each sculptor belonged to a school, and had his place in a long lineage of masters and pupils carrying on the skills of their art, checking the extravagances of independent individualines, encouraging their specific abilities, disciplining them with a sturdy grounding in the technology and achievements of the past, and forming them, through this interplay of talent

In the Capitoline Museum Rome probably a copy of a 66th-century Greek original.
 to the Athens Museum, reproduced in the Metropolitan Museum of Art.

and law, into a greater art than often comes to genius isolated and unruled. Great artists are more frequently the culmination of a tradition than its overthrow and though rebels are the necessary variants in the natural history of art, it is only when their new line has been steaded with heredity and chastened with time that it generates supreme personalities

Five schools performed this function in Periclean Greece those of Rhegam, Sicyon, Argos, Aegina, and Attiea. About 406 another Pythagoras of Samos settled at Rhegium, cast a Philococtes that won him Mediterrancan fame, and put into the faces of his statues such signs of passion, pain, and age as smocked all Greek sculptors till those of the Heliemstic period decided to initiate him. At Siev on Canachus and his brother Ariston es carried on the work begun a century earlier by Dipoemis and Scyllis of Crete. Cailon and Onaras brought distinction to Aegina by their skill with bronze, perhaps it was they who made the Aegina pediments. At Argos Ageladas organized the transmission of sculptural rechnique in a school that reached

its apex in Polycleitus,

Coming from Secon, Polycleites made hunself popular in Argos by designing for its remple of Hera, about 412, a gold and wory statue of the matron goddess, which the age ranked second only to the eary-selephantine mimensines of Pheidias.* At Ephesus he joined in a competition with Pheidias, Cresilas, and Phradinon to make an Amazon for the temple of Artems, the four artists were made judges of the result, each, the story goes, named his own work best, Polycleitus' second best, and the prize was given to the Sicyonian to But Polycleitus loved athletes more than women or gods. In the famous Diadumenos (of which the best surviving copy is in the Athens Museum) he chose for representation that mon cut in waich the victor lands about his head the fillet over which the judges are to place the laurel wreath. The chest and abdomen are too muscular for belief, but the body is vividiv posed upon one foot, and the features are a demnition of classic regularity. Regularity was the ferish of Polycleirus, it was his life aim to find and establish a canon or rule for the correct proportion of every part in a statue, he was the Pythagoras of sculpture, seeking a divine mathemattes of symmetry and form. The dimensions of any part of a perfect body, he thought, should bear a given ratio to the dimensions of any one part, say the index finger. The Polyeleitan canon called for a round head, broad shoulders, stocky torso, wide hips, and short legs, making all in all a

^{*} We have perhaps an echo of its majesty in the noble head of Juno in the British Museum, reputed to be a copy from Polymentus.

† Perhaps an American in the Vancian is a Roman copy of this work.

figure rather of strength than of grace. The sculptor was so fond of his canon that he wrote a treatise to expound it, and moided a statue to illustrate it. Probably this was the *Doryphoros*, or *Spear Bearer*, of which the Naples Museum has a Roman copy, here again is the brachycephalic head, the powerful shoulders, the short trunk, the corrugated musculature overflowing the groin. Lovelier is the *Westmacott Ephebos* of the British Museum, where the lad has feelings as well as muscles, and seems lost in a gentle meditation on something else than his own strength. Through these figures the canon of Polycleitus became for a time a law to the sculptors of the Polyonnesus; it influenced even Pheidas, and ruled till Praxiteles overthrew it with that rival canon of tall, shin elegance which survived through Rome into

the statuary of Christian Europe.

Myron mediated between the Peloponnesian and the Attic schools. Born at Fleutherne, living at Athens, and (says Pliny") studying for a while with Ageladas, he learned to unite Peloponnesian masculinity with Ionian grace. What he added to all the schools was motion he saw the athlete not, like Polyelettus, before or after the contest, but in it, and realized his vision so well in bronze that no other sculptor in listory has rivaled him in portraying the male body in action. About 470 he east the most famous of athletic statues-the Discobolos or Discus Thrower.* The wonder of the male frame is here complete, the body carefully studied in all those movements of muscle, rendon, and bone that are involved in the action, the legs and arms and trunk bent to give the fullest force to the throw, the face not distorted with effort, but calm in the confidence of ability, the head not heavy or brutal, but that of a man of blood and refinement, who could write books if he would condescend. This chef-d'ocuvre was only one of Myron's achievements, his contemporaries valued it, but ranked even more highly his Athena and Marsyast and his Ladas. Athens here is too lovely for the purpose, no one could guess that this demure virgin is watching with calin content the flaying of the defeated flutist. My ron's Marsyas is George Bernard Shaw caught in an unseemly but eloquent pose, he has played for the last time, and is about to die, but he will not die without a speech. Lidas was an athlete who succumbed to the exhaustion of victory, Myron portrayed him so realistically that an old Greek, seeing the statue, ened out: "Like as thou wert in life, O Ladas, breathing forth thy panting soul, such

^{*}The Museo delle Terme has the torso of a fine mathle copy by a Roman armst. The Musich Antiquarium has a late copy in bronze, the Metropolitan Museum of Art has a copy tanding the Vatican torso with the head from the Palazzo Lancelotti.

† There is a good copy of the Lateran copy in the Metropolitan Museum of Art.

hath Myron wrought thee in bronze, stamping on all thy body thine eagerness for the victor's crown." And of Myron's Heifer the Greeks said that it could do everything but moo."

The Attic or Athenian school added to the Peloponnesians and to Myron what woman gives to man—beauty, tenderness, delicacy, and grace; and because in doing this it still retained a masculine element of strength, it reached a height that sculpture may never attain again. Calamis was still a little archaic, and Nesiotes and Critius, in casting a second group of Tyranmouler, did not free themselves from the rigid simplicity of the sixth century. Lincian warns orators not to behave like such littless figures. But when about 423, Paconius of Thracian Mende, after studying sculpture at Athens, made for the Messemans a Nike, or Victory, he touched heights of grace and loveliness that no Greek would reach again until Praxiteles, and not even Praxiteles would surpass the flow of this drapery, or the eestasy of this motion.*

3. Pheidias

From 447 to 438 Pheidias and his aides were absorbed in carving the statues and reliefs of the Parthenon. As Piato was first a dramatist and then became a dramatic philosopher, so Pheidias was first a painter and then became a pictorial sculptor. He was the son of a painter, and studied for a while under Polygnorus, from him, presumably, he learned design and composition, and the grouping of figures for a total effect, from him, it may be, he acquired that "grand style" which made him the greatest sculptor in Greece. But painting did not satisfy him, he needed more dimensions. He took up sculpture, and perhaps studied the bronze technique of Ageladas. Patiently he made himself master of every branch of his art.

He was already an old man when, about 418, he formed his Athene Parthenos, for he depicted himself on its shield as aged and bald, and not unacquainted with grief. No one expected him to carve with his own hands the hundreds of figures that filled the metopes, frieze, and pediments of the Parthenon, it was enough that he superintended all Periclean building, and designed the sculptural ornament; he left it to his pupils, above all to Aleamenes, to execute the plans. He hunself, however, made three statues

^{*}The Nike was pieced together from fragments uncarribed by the German at Olympia in 1890 and is now in the Olympia Museum. Almost as beautiful are the Nereitar of Sea Madem, which were found headless among the runs of a monument in Lycian Xanthus, and are now in the British Museum. The Greek spark had penetrated even into non-Greek Assa.

of the city's goddess for the Acropolis. One was commissioned by Athenian colonists in Lemmos, it was of bronze, a little larger than life, and so delicatesy molded that Greek critics considered this Lemman Athena the most beautiful of Pheidias' works. 4" Another was the Athene Promachos, a colossal bronze representation of the goddess as the warlike defender of her city, it stood between the Propylaca and the Ereentheum, rose with its pedestat to a height of seventy feet, and served as a beacon to marmers and a warning to enemies, t The most famous of the three, the Athene Parthenos, stood thirty eight feet high in the interior of the Parthenon, as the girgin goddess of wiscom and chastily. For this culimnating figure Pheidias wished to use martile, but the people would have nothing less than wory and gold. The artist used every for the visible body, and fortyfour talents (1545 lbs.) of gold for the robe," furthermore, he adorned it with precious metals, and elaberate rehels on the helicet, the sandals, and the shield. It was so placed that on Arhena's feast day the sun would shane through the great doors of the temple directly upon the brilliant drapery and palled face of the Virgin.1

The completion of the work brought no happiness to Pheidas, for some of the gold and ivory assigned to him for the statue disappeared from his studio and could not be accounted for. The foes of Pericles did not overlook this opportunity. They charged Phendas with their, and convicted him. § But the people of Olympia interceded for him, and paid his bail of forty (2) talents, on condition that he come to Olympia and make a chryselephantine statue for the temple of Zeus," they were glad to trust hun with more wory and gold. A special workshop was built for him and his assistants near the temple precincts, and his brother Panaemis was commissioned to decorate the throne of the statue and the walls of the temple with paintings." Pheidias was enamored of size, and made his seated Zens sixty feet high, so that when it was placed within the temple critics complained that the god would break through the roof if he should take it into his head to stand up. On the 'dark brows" and "ambrosial locks" of the Thunderer, Pheidiss placed a crown of gold in the form of olive branches and leaves, in

No authentic copy remains.

t It was carried off to Constantinople about A.D. 330, and oppears to have been destroyed of a riot there an 1201."

th we may page from the "Lenomant" and "Varvaka" mostels of this reason that are preserved in the Athens Museum, we should not have cured much for the Athene Parthenor. The first has a sount frame and a swollen face, and the breast of the second is crawing with In cert snakes.

^{\$} Ca 438. There is much uncertainty about the date, and about the sequence of events in the later years of Pheedias' life."

the right hand he set a small statue of Victory, also in ivory and gold, in the left hand a scepter inlaid with precious stones, on the body a golden robe engraved with flowers, and on the feet sandals of solid gold. The throne was of gold, ebony, and ivory, at its base were smaller statues of Victory, Apollo, Artemis, Niobe, and Theban lads kidnaped by the Sphinx." The final result was so impressive that legend grew around it when Pheidias had finished, we are rold, he begged for a sign from heaven in approval, whereupon a hole of lightning struck the pavement near the statue's base -a sign which, like most celestial messages, admitted of diverse interpretations. The work was asred among the Seven Wonders of the World, and all who could afford it made a pilgrimage to see the invariante god. Acindius Paullus, the Roman who conquered Greece, was struck with awe on seeing the colossus, his expectations, he confessed, had been exceeded by the reality." Dio Chrysostom called it the most beautiful image on earth, and added, as Beethoven was to say of Beethoven's music. "If one who is heavyladen in mind, who has drained the cup of misfortune and sorrow in life, and whom sweet sleep visits no more, were to stand before this image, he would forget all the griefs and troubles that befall the life of man." The beauty of the statue," said Quintilian, "even made some addition to the received religion, the majesty of the work was equal to the god 100

Of Pheidias' last years there is no unchallenged account. One story pictures him as returning to Athens and dving in pal," another lets him stay in Flis, only to have I lis put him to death in 432," there is not much to choose between these denougments. This papils carried on his work, and attested his success as a teather by almost equaling him. Agoraeritus, his favorite, carved a famous Nemesis; Alcainenes made an Aphrodite of the Gardens which Lucian ranked with the highest masterpieces of siamary !" The school of Phe dias came to an end with the fifth century, but it left Greek sculpture considerably further advanced than it had found it. Through Pheidias and his followers the art had neared perfection at the very moment when the Peloponnesian War began the ruin of Athens. Technique had been mastered, anatomy was understood, life and movement and grace had been poured into bronze and stone. But the characteristic achievement of Pheidias was the attainment and definitive expression of the clarife style, the "grand style" of Winckelmann strength reconciled with beauty, feeling with restraint, motion with repose, flesh and bone with mind and soul. Here, after five centuries of effort, the famed "screnity" so imaginarively

^{*} Nothing remains of this Zeus but fragments of the pedestal. † A Draped Venus in the Lourze may be a copy of this statue.

ascribed to the Greeks was at least conceived, and the passionate and turbulent Athenians, contemplating the figures of Pheidias, might see how nearly, if only in creative sculptury, men for a moment had been like gods.

IV. THE BUILDERS

1. The Progress of Architecture

During the fifth century the Doric order consolidated its conquest of Greece. Among all the Greek temples built in this prosperous age only a few lunic shrines survive, chiefly the Liechtheum and the temple of Nike Apteros on the Acropolis, Attica remained faithful to Doric, ye ding to the lonic order only so far as to use it for the inner columns of the Propylaca, and to place a frieze around the Theseum and the Part ienon, perhaps a tendency to make the Dutie column longer and sleaderer reveals a further influence of the lonic style. In Asia Minor the Greeks imbibed the Oriental love of descate ornament, and expressed it in the complex calibration of the long entablature, and the creation of a new and more ornate order, the Cornatinan. Almat 430 (as Vienevius tells the tale) an Jonian sculptor, Callimachus, was struck by the sight of a basket of votive offerings, covered with a tile, which a morse has left upon the tumb of her mistress, a wild acanthus had grown around the basket and the tile, and the sculptor, pleased with the natural form so suggested, modified the lonic capitals of a temple that he was building at Corinth, by mingling acanthus leaves with the volues." Propably the story is a myth, and the nurse's basket bad less injurence than the palm and papy rus capitals of higy pt in generating the Cormibian style. The new order made attle headway in classic Greece, Ictimus used it for one isolated column in the court of an lonic temple at Phigalea, and towards the end of the fourth century it was used for the choragic minimument of Lysicrates. Only under the elegant Romans of the Empire did this delicate style reach its full development.

All the Greek world was building temples in this period. Civies almost bankrupted themselves in rivalry to have the fairest statuary and the largest shrines.
To her massive sixth-century eddices at Samos and Pipestas Ionia added new
long temples at Magnesia, Teos, and Priene. At Assis in the Troad Greek
colonists russed an almost archair Dorie fane to Athona. At the other end of
Hellas Crotinia built, about 480, a vast Dorie home for Hera, it survived till
1600, when a bishop thought he could make better use of its stones." To the
fifth century belong the greatest of the temples at Poseidonia (Paestum),
Segesta, Schmis, and Arragas, and the temple of Asclepius at Epidaurus. Ar
Syracuse the columns still stand of a temple russed to Athona by Gelon I, and
partly preserved by its transformation into a Christian church. At Bassac, near

Progales in the Peloponnesus, Ictinus designed a temple of Apollo strangely different from his other masterpiece, the Parthenon, here the Doric periptery enclosed a space occupied by a small nais and a large open court surrounced by an lonic colonnade, and around the interior of this court, along the inner face of the lonic columns, ran a frieze almost as graceful as the Parthenons, and having the added virtue of being visible.*

At Olympia the Fluir architect Labon, a generation before the Parthenon, raised a rival to it in a Dorse shrine to Zeus. Six columns stood at each end, thirteen on either side; perhaps too stout for beauty, and unfortunate in their material a coarse limestone coated with studen, the roof, however, was of Pentelse tiles. Paconins and Alcamenes, Pausanias tells us," carved for the pedaments powerful figurest portraying on the eastern gable the charior race between Pelops and Oenomaus, and on the western gable the struggle of Lapaths and centaurs. The Lapubs, in Greek legend, were a mountain tribe of Thessaly. When Postbous, their king, married Hippodemeia, daughter of King Ocnopians of Pisa in Ulis, he invited the centaurs to the wedning feast. The centains dwelt in the mountains about Pelisin, Greek art represented them as half man and half horse, possil is to suggest their untimed workeand nature, or because the centuurs were such excellent horsemen that each man and his mount seemed to be one annual. At the feast these horsemen got drunk, and tried to carry off the Lapith women. The Lapiths fought beavely for their ladies, and won. (Greek are never tired of this story, and perhaps used it to symbolize the clearing of the wilderness from wild beasis, and the stripgie between the human and the bestial in man.) The figures on the east pediment are orchaically stiff and still, those on the west seem bardly of the same period, for though some of them are crude, and the hair is stynzed in ancient fashi in, they are ance with action, and show a mature grasp of sculproral grouping. Startingly beautiful is the bride, a woman of no fragile slenderness, but of a full-bodied loveliness that space explains the war. A bearded centaur has one arm around her waist, one hand upon her breast, she is about to he spatched from her numbals, and yet the artist portrays her features in such calm repose that one suspects turn of having read Lessing or Winckelmann, or perhaps, like any woman, she is not insensitive to the compliment of desire. Less ambitious and massive, but more delicately finished, are the extent metopes of the temple, recounting certan labors of Heracles, one, wherem Heracles holds up the world for Atlas, stands out as a work of complete mastery. Heracles here is no abnormal grant, cock-ribbed with musculature, but samply a man of full and harmonious developnient Before him is Atlas, whose head would adorn the shoulders of Plato. At the left is one of Atias' daughters, perfect in the natural beauty of healthy

† Now in the Olympia Museum.

There eight of the columns remain, the walls of the most and parts of the inner colonnade. Frage error of the Invest are in the British Museum.

womanhood; perhaps the artist had some symbolism in mind when he showed her gently helping the strong man to bear the weight of the world. The specialist finds some faults of execution and detail in these half-runned metopes; but to an amateur observer the bride, and Heraeles, and the magliter of Adas, are as near to perfection as anything in the history of semipural rehef.

2. The Reconstruction of Athens

Attica leads all Greece in the abundance and excellence of its fifth-century bunding. Here the Done style, which tends elsewhere to a bulging corpulence, takes on Ionian grace and elegance, color is added to line, ornament to symmetry. On a dangerous head, and at Suna, in those who risked the sea raised to Poseidon a shrine of which e even columns stand. At Eleusis letinus designed a spacious temple to Denicier, and under Pericles' persuasion Athens contributed funds to make this editice worthy of the I leusanian festiva.. At Athens the proximity of good martile on Mt. Pentelicus and in Paros encouraged the artist with the finest of building materials. Seldom, until our periods of economic breakdown, has a democracy been able or willing to spend so largetly on public construction. The Parthenon cost seven hundred talents (\$4,200,000), the Athene Parthenos (which, however, was a gold reserve as well as a statue) cost \$6,000,000, the unfinished Propylaca, \$2,400,000, min or Periclean structures at Athens and the Piracus, \$18,000,000, sculpture and other decoration, \$16,200,000, altogether, in the sixteen years from 447 to 434, the city of Athens voted \$57,600,000 for public buildings, statuary, and painting." The spread of this sum among artesans and artists, executives and slaves, had much to do with the prosperity of Athens under Pericles.

Imagination can picture vaguely the background of this courageous adventure in art. The Athenaus, on their return from Salamis, found their enty almost wholly devastated by the Person occupation, every edifice of any value had been burned to the ground. Such a calamity when it does not destroy the latizens as well as the enty, makes them stronger, the "act of God" clears away many eyesores and unfit habitations, chance accomplishes what human obstinacy would never allow, and if food can be found through the crisis, the labor and gunus of men create a finer city than before. The Athenians, even after the war with Persia, were rich in both labor and genius, and the spirit of victory doubled their will for great enterprise. In a generation Athens was rebuilt, a new council chamber rose, a new

prytaneum, new homes, new porticoes, new walls of defense, new wharves and warehouses at a new port. About 446 Hippodamus of Miletus, chief town-planner of antiquity, laid out a new Piracus, and set a new style, by replacing the old chaos of haphazard and winding alleys with broad, straight streets crossing at right angles. On an elevation a mile northwest of the Acropolis unknown artists rused that smaller Parthenon known as the Theseum, or temple of Theseus.* Sculptors filled the pedaments with statuary and the metopes with reliefs, and can a frieze above the inner columns at both ends. Painters colored the moldings, the triglyphs, metopes, and frieze, and made bright murals for an interior dunly lit by light shiring

through marble tiles.†

The forest work of Perules' builders was reserved for the Acropolis, the ancient seat of the city's government and faith. Themistocles began its reconstruction, and planned a temp e one hundred feet long, known therefore as the Hecatompedon. After his fall the work was abandoned, the oligarciue parry opposed it on the ground that any dwelling for Athena, if it was not to bring bad luck to Athens, most be built upon the site of the old temple of Athene Polias (i.e., Athena of the Cay), which the Persians had destroyed. Pencles, caring nothing about superstitions, adopted the site of the Hecatompedon for the Parthenon, and, though the priests protested to the end, went on with his plans. On the southwestern slope of the Acropolis his artists creeted in Odenin, or Music Hali, onspile in Athens for its cone-shaped dome. It offered a handle to conservative saturists, who thenceforth referred to Pericles' conteal head as his odcion, or had of song. The Odeum was built for the most part of wood, and soon succumbed to time. In this auditorium musical performances were presented, and the Dionysian dramas were rehearsed, and there, annually, were beld the contests instituted by Pericles in vocal and instrumental music. The versatile statesman himself often acted as a judge in these competitions.

The road to the summit, in classical days, was devious and gradual, and was flanked with statues and votive offerings. Near the top was a majestically broad flight of marble steps, buttressed with bastions on either side,

er gushahle.

^{*} The name is a noracte some this recepte erected in 428 could not have been the Theorem to which, in 469, the or brough the supposed hores of these at, but time same reservoirs well as theft, and the trad monas name is commonly recailed for tack of a certain designation.

I The These are is the best preserved of all and one Greek holdings, even so it locks its marble tiles, its more a its necessary its peak termal scalptures and nearly all of its viernal coloring. The metopes are so hadly damaged that their reliefs are almost undis-

On the south bastion Callicrates raised a miniature Ionic temple to Athena as Nike Apteros, or the Wingless Victory.* Elegant reliefs (partly preserved in the Athens Museum) adorned the external balustrade with figures of winged Victories bringing to Athens their far-gathered spoils. These Nikai are in the noblest style of Pheidais, less vigorous than the massive goddesses of the Parthenon, but even more graceful in motion, and more delicate and natural in their protrayal of drapery. The Victory tying her sandals deserves her name, for she is one of the triumphs of Greek art

At the top of the Acropolis steps Mnesicles built, in elaboration of Myconaean pylons, an entrance with five openings, before each of which stood a Doric portico; these coloniades in time gave to the whole edifice their name of Propylaca, or Refore the Gates. Fach portico carried a frieze of triglyphs and metopes, and was crowned with a pediment. Within the passageway was an lonic coloniade, boldly inserted within a Doric form. The interior of the northern wing was decorated with paintings by Polygnotus and others, and contained votive tablets (pinakes) of terra cotta or marble, hence its name of Pinakotheka, or Hall of Tablets. A small south wing remained unfinished, war, or the reaction against Pericles, put a stop to the work, and left an ungainly mass of beautiful parts as a gateway to the Parthenon.

Within these gates, on the left, was the strangely Oriental Freehtheum. This, too, was overtaken by war not more than half of it was finished when the disaster of Aegospotanii reduced Athens to chaos and poverty. It was begun after Pericles' death, under the prodding of conservatives who feared that the ancient heroes Erechtheus and Cecrops, as well as the Athena of the older shrine, and the sacred snakes that haunted the spot, would punish Athens for building the Parthenon on another site. The varied purposes of the structure determined its design, and destroyed its unity. One wing was dedicated to Athene Polias, and housed her ancient image, another was devoted to Erechtheus and Postidon. The naos or cella, instead of being enclosed by a unifying peristyle, was here buttressed with three separate porticoes. The northern and eastern porches were upheld by slender Ionic

Statics of Nic or Victory were often code without wings, so that she right not be able to abandon the city. The tempte was alled lown by the Turks in all 1665 to make a formest. Lord Eight rescued some slain of the friend and sent them to the Benedi Massam. In 1814 the stones of the temple were pur together again, the restored building was replaced on the original site, and terra-corta casts were substituted for the missing parts of the badly damaged friend.

columns as beautiful as any of their kind.* In the northern porch was a perfect portal, adorned with a molding of marble flowers. In the cella was the primitive wooden statue of Athena, which the pious behaved had fallen from heaven, there, too, was the great lamp whose fire was never exinguished, and which Callinachus, the Cellini of his time, had fashioned of gold and embellished with acanthus leaves, like his Corinthian capitals. The south portico was the famous Porch of the Maidens, or Carvatids. These patient women were descended, presumably, from the basket bearers of the Orient, and an early carvatid at Tralles, in Asia Minor, betrays the Eastern-probably the Assy tian-origin of the form. The drapery is superb, and the natural flexure of the knee gives an impression of ease, but even these substantial ladies seem hardly strong enough to convey that sense of sturdy and reliable support which the finest architecture gives. It was an aberration of taste that Pheidias would probably have forbidden.

3. The Parthenon

In 447 letinus, aided by Calherates, and under the general supervision of Pheidias and Pencles, began to huild a new temple for Athene Parthenos In the western end of the structure he paiced a room for her maiden priestesses, and called it the room "of the virgins" ton parthenon, and in the course of carcless time this name of a part, by a kind of architectural metapher, was applied to the whole Jethans chose as his material the white traible of Mt. Penteheus, veined with iron grains. No mortar was used, the blocks were so accumtely squared and so finely finished that each stone grasped the next as if the two were one. The column drums were bored to let a small cylinder of observed connect them, and permit each drum to be turned around and around upon the one below it until the meeting surfaces were ground so smooth that the division between drums was almost invisible."

† This term was applied to the figures by the Roman architect Vitravius, from the name given to the priestesses of Arceins at Caryas in Laconia. The Athenians called them simply

Roras, or Muidens.

These colorins, rather than those of the Parthenon, set the style for later architecture. The (not of each was modulated into the six obste by an Artic base of three members, articulated by fillets or bands. The top of the column was graduated into the volume expital by a hand of flowers. The entablature had a richar decorated molding a frieze of black stone, and, under the cornice, a series of reliefs. The egg and dart and honeyweekle ornament of the molding was as carefully carved as the sculpture, the armus were paid as much for a foot of such molding as for a figure in the frieze."

The style was pure Doric, and of classic simplicity. The design was rectangular, for the Greeks did not care for circular or conical forms, hence there were no arches in Greek architecture, though Greek architects must have been familiar with them. The dimensions were modest 228 x 101 x 65 feet Probably a system of proportion, like the Polycleitan canon, prevailed in every part of the building, all measurements bearing a given relation to the diameter of the column." At Poseidonia the height of the column was four times its diameter; here it was five, and the new form mediated successfully between Spartan sturdiness and Attic elegance. Fach column swelled slightly (three quarters of an inch in diameter) from base to middle, tapered toward the top, and leaned toward the center of its colonnade, each corner column was a trifle thicker than the rest. Every horizontal line of stylolate and entablature was curved upward towards its center, so that the eye placed at one end of any supposedly level line of uld not see the farther half of the line. The metopes were not quite square, but were designed to appear square from below. All these curvatures were subtle corrections for optical illusions that would otherwise have made stylobate lines seem to sink in the center, columns to diminish upward from the base, and corner columns to be thinner and outwardly inclined. Such adjustments required considerable knowledge of mathematics and optics, and constituted but one of those mechanical features that made the temple a perfect union of science and art. In the Parthenon, as in current physics, every straight line was a curve, and, as in a painting, every part was drawn toward the center in subtle composition. The result was a certain flexibility and grace that scenied to give life and freedom to the stones.

Above the plain architrave ran an alternating series of triglyphs and metopes. In the mnety-two metopes were high rehefs recounting once thore the struggle of "civilization" against "savagery" in the wars of Greeks and Trojans, Greeks and Amazons, Lapiths and centaurs, giants and gods. These slabs are clearly the work of many hands and unequal skills; they do not match in excellence the reliefs of the cella frieze, though some of the centaur heads are Rembrandts in stone. In the gable pediments were statuary groups carved in the round and in heroic size. In the east pediment, over the entrance, the spectator was allowed to see the birth of Athena from the head of Zens. Here was a powerful recumbent "Theseus," a giant capable of philosophical meditation and civilized repose, and a fine figure of Iris, the female Hermes, with drapery clinging and yet blown by the wind—for

^{*}The naming of the Parthenon figures is mostly conjectural.

Pheidias considers it an ill wind that does not disturb some robe. Here also was a majestic "Hebe," the goddess of youth, who filed the cups of the Olympians with nectar, and here were three imposing "Fates." In the left corner four horses' heads—eyes flashing, nostrils snorting, mouths foaming with speed, announced the tising of the sun, while in the right corner the moon drove her chartot to her setting, these eight are the finest horses in sculptural lustory. In the west pedanent Athena contested with Poseidin the lordship of Artica. Here again were horses, as if to redeem the forked absurdity of man, and rechning figures that represented, with unrealistic magnificence. Athens' modest streams. Perhaps the male figures are too miscular, and the female too spacious, but seldom has stargary been grouped so naturally, or so slobfully adjusted to the narrowing spaces of a pediment "All other statues," said Camova, with some hyperboic, "are of stone, these are of flesh and blood."

More attractive, however, are the men and women of the frieze. For 525 feet along the top of the outer wall of the cela, within the portico, can this most famous of all rehefs. Here, presumably, the youths and maids of Attica are bearing homage and gifts to Athena on the festival day of the Panatoenaic games. One part of the procession moves along the west and north sides, another along the south side, to meet on the east front before the goddess, who proudly offers to Zeus and other Olympians the hospitality of her city and a share of her spoils. Handsome kingais move in graceful digney on stra handsomer steeds, chanots support dignitaries, while simple folk are happy to join in on foot, pretty girls and quiet old men carry olive branches and trays of cakes, attendants hear on their shoulders jugs of sacred wine, stately women convey to the goddess the pepl is that they have woven and embroidered for her in long anticipation of this holy day, sacrificial victims move with hoving patience or angry prescience to their fate, maidens of high degree bring itensils of ritual and sacrifice, and misicians play on their flures death ess ditties of no tone. Soldom have animals or men been honored with such painstaking art. With but two and a quarter inches of rehef the sculptors were able, by shiding and modeling, to achieve such an illusion of depth that one horse or horseman scenis to be beyond another, though the nearest is raised no farther from the background than the rest." Perhaps it was a mistake to place this extraordinary renef so high that men could not confortably confediplate at or exhaust its excellence. Pheidias excused himself, doubtless with a twinkle in his eye, on the ground that the gods could see it; but the gods were dving while he carved.

Beneath the seated detties of the frieze was the entrance to the inner

temple. The interior was relatively small, much of the space was taken up by two double-storied Done colonnades that supported the roof, and divided the naos into a nave and two aisles, while in the western end Athene Parthenos blinded her worshipers with the gold of her raiment, or frightened them with her spear and shield and snakes. Behind her was the Room of the Virgins, adorned with four columns in the lonic style. The marble tiles of the roof were sufficiently translucent to let some light into the nave, and yet opaque enough to keep out the best, moreover, piety, like love, deprecates the sun. The cornices were decorated with careful detail, surmounted with terra-cotta acroteria, and armed with gargovles to carry off the ram. Many parts of the temple were painted, not in subdued colors but in bright tints of yellow, blue, and red. The marble was washed with a stam of saffron and milk, the tright phy and parts of the molding were blue, the trieze had a bide background, the met ipes a red, and every figure in them was colered." A people accustomed to a Mediterranean sky can bear and reash brighter bues than those that suit the clouded atmosphere of northern Europe Today, shorn of its colors, the Parthenon is most beautiful at night, when through every columned space come changing vistas of sky, or the ever worshiptur moon, or the lights of the sleeping city mingling with the stars.

Greek art was the greatest of Greek products, for though its masterpieces have yielded one by one to the voracity of time, their form and spirit still survive sufficiently to be a guide and stimums to many arts, many generations, and many lands. There were faults here, as in all that men du. The

The Parther we the Percer bears one the These up was preserved through its me at a Chasting chart it needed no great change of many being in each case defeated to the View After the last above quation in case was transful and into a morphism and acquired " were in the when the Venetium has ged Auters, he hacks used the religious to store each day's au pay of powder for their artists. Moron a street also to then In the land I in Brenh so assessor to larker secured persons to remove a part of the seed marks to the Bratish Museum on the ground that they would be safer there than at the energy against we ther and war. He special reladed twent at about thicken metopes, and fifty-six slabs of the frieze. The Museum's current on so ayrant payared against buying this material; it was only after ten very of negotiate in that the Museum agreed to pay \$175,000 for them, which was less than as I was I so! Eight had spent in set using and transporting them." A ten years arer diring the Greek War of Independence (1821-1841). the Array are was runce hombarded, and a sich of the Freehtheam was destroyed " Some met we of the Parthenon are still in place a few slabs of the frieze are in the Athena Allocal and a reworth to on the Louise. The more of Subside Tempore have built a recurse of the Parthenon, in the same denergoins as the original with like materials and, so far as our knowle go goes, will the same occurations of Leonoring and the Metropoutan Mineum of Art commins a small appointment reproduction of the intersor

sculpture was too physical, and rarely reached the soul, it moves us more often to admire its perfection than to feel its life. The architecture was narrowly limited in torm and style, and clung across a thousand years to the simple rectangle of the Mycenaean megaron. It achieved almost nothing in secular fields, it attempted only the easier problems of construction, and avoided difficult tasks like the arch and the vault, which might have given it greater scope. It held up its roofs with the clumsy expedient of internal and superimposed colonnades. It crowded the interior of its temples with statues whose size was out of proportion to the edifice, and whose ornamentation lacked the simplicity and restraint that we expect of the classic style.*

But no faults can outweigh the fact that Greek art created the classic style. The essence of that style—if the theme of this chapter may be restated in closing—is order and form moderation in design, expression, and decoration, proportion in the parts and unity in the whole, the supremacy of reason without the extinction of feeling, a quiet perfection that is content with simplicary, and a sublimity that owes nothing to size. No other style but the Gothic has had so much influence, indeed. Greek statuary is still the ideal, and until vesterday the Greek column dominated architecture to the discouragement of more congenial forms. It is good that we are freeing ourselves from the Greeks, even perfection becomes oppressive when it will not change. But long after our liberation is complete we shall find instruction and stimulus in that art which was the life of reason in form, and in that classic style which was the most characteristic gift of Greece to mapkind.

^{*}One night also note the lack of order in the arrangement of the bit dings on the Accupolis, or in the secred encounts at Olympia, but it is difficult to say whether this disorder was a defect of tisse or an accident of history

CHAPTER XV

The Advancement of Learning

THE cultural activity of Periclean Greece takes chiefly three forms-art, drama, and philosophy. In the first, religion is the inspiration, in the second it is the liattleground, in the third it is the victim. Since the organization of a religious group presumes a common and stable creed, every reagion sooner or later comes into opposition with that fluent and changeful current of secular thought that we confidently call the progress of knowledge. In Athens the conflict was not always visible on the surface, and did not directly affect the masses of the people, the scientists and the philosophers carried on their work without explicitly attacking the popular faith, and often intigated the strife by using the old religious terms as symbols or allegories for their new beliefs, only now and then, as in the indictments of Anaxagoras, Aspasia, Diagoras of Melos, Unripides, and Socrates, did the stringgle come out into the open, and become a matter of life and death. But it was there. It ran through the Periclean age like a major theme, played in many keys and elaborated in many variations and forms, it was heard most distinctly in the skeptical discourses of the Sophists and in the materialism of Democritus, it sounded obscurely in the piery of Aeschylus, in the heresies of Furipides, even in the irreverent banter of the conservative Aristophanes, and it was violently recapitulated in the trial and death of Socrates. Around this theme the Athens of Pericles lived its mental life.

L THE MATHEMATICIANS

Pure science, in fifth-century Greece, was still the bandmaiden of philosophy, and was studied and developed by men who were philosophers rather than scientists. To the Greeks higher mathematics was an instrument out of practice but of logic, directed less to the conquest of the physical environment than to the intellectual construction of an abstract world.

Pepmar ar thmetic, before the Periclean period, was almost primitively clums. One upright stroke indicated 1, two strokes 1, three 3, and four 4, 5, 10, 100, 1000, and 10,000 were expressed by the initial letter of the Greek word.

On later (possibly Periclean) arithmetical notation of Chap XXVIII sect a below

for the number—peme, deka, bekaton, ebilion, myrior. Greek insthematics never achieved a symbol for zero. Like our own it betrayed its Oriental origin by taking from the Lgs pt and the decimal system of counting by tens, and from the Babylomans, in astronomy and geography, the daudeennal or sexagesimal system of counting by twelves or sixties, as still on our clocks, globes, and charts. Probably an absens hesped the people with the simpler calculations. I ractions were painful for them to work with a complex fraction they reduced at to an accumulation of fractions having 1 as their common numerator, so $\frac{1}{2}$ was broken down into $\frac{1}{2} + \frac{1}{2} + \frac{1$

Of Greek algebra we have no record before the Christian ers. Geometry, however, was a favorate study of the phylosophers, again less for its practical value than for its theoretical interest, the fascination of its deductive logic, its amon of subtlery and clarity, its imposing architecture of thought. Heree problems particularly attracted these mathematical metaphysicians, the squaring of the circle, the trisect on of the angle, and the doubling of the cibe. How popular the first puzzle became appears in Aristi phanes Birds in which a character representing the astronomer Meton enters upon the stage armed with ruler and compasses, and undertakes to show "how your circle may be made a square"-i.e., how to find a square whose area will equal that of a given circle Perhaps it was such problems as these that led the ater Pythagoreans to formulate a doctrine of iterational numbers and incommensurable cuantities.* It was the Pythagereans, too, whose studies of the parabola, the hyperbola, and the chane prepared for the epochal work of Apodonius of Perga on conic sections. About 440 Hippocrates of Chios (not the physician) published the first known book on germetry, and solved the problem of squaring the lune t About 4to Hippus of I be accomptished the trisection of an angle through the quadrative curve. About 410 Democratis of Abders announced that 'in constructing lines according to given conditions no one has ever surpassed me, not even the Egyptians," he almost made the boast forgivable by writing four books on geometry, and finding formulas for the areas of comes and pyramids." All in all the Greeks were as excellent in geometry as they were poor in arithmetic been into their are geometry entered servely, making many forms of cerargic and architectural ornament, and determining the proportions and curvatures of the Parthenon.

^{*}Irrational numbers are those that cannot be expressed by either a whole number or a fraction, blee the square troot if a linguishmentalise quantities are those for which on third quantity can be found with a bears to each of them a real time can resold by a real number also the side and diagnost of a square or the radius in the real terence of a circle.

† A mountake figure made by the area of two offersecting circles.

IL ANAXAGORAS

It was part of the struggle between religion and science that the study of astronomy was forbidden by Athenian law at the height of the Periclean age." At Acragas I inpedocles suggested that light takes time to pass from one point to another.' At Liea Parmenides announced the sphericity of the earth, divided the planet into five zones, and observed that the moon always has its bright portion turned toward the sun. At Thebes Philolaus the Pythagorean deposed the earth from the center of the universe, and reduced it to the status of one among many planets revolving about a "central fire." Leucippus, pupil of Philolaus, attributed the origin of the stars to the incandescent combustion and concentration of material "drawn onward in the universal movement of the circular vortex "" At Abdera Democratis, pupil of Lencippus and student of Babyloman lore, described the Milky Way as a mustitude of small stars, and summarized astronomic history as the periodical confision and destruction of an infinite number of worlds." At Chios Oenopides discovered the obliquity of the ecliptic.14 Nearly everywhere among the Greek colonies the fifth century saw scientific developments remarkable in a period almost devoid of scientific instruments.

But when Anaxagoras tried to do similar work at Athens he found the mood of the people and the Assembly as hostile to free inquity as the friendship of Percues was encouraging. He had come from Clazomenae about 480 a.c., at twenty years of age. Anaximenes so interested him in the stars that when someone asked him the object of life he answered, "The investigation of sun, moon, and heaven" He neglected his patrimony to chart the earth and the sky, and tell into poverty while his book On Nature was acclaimed by the intelligentsia of Athens as the greatest scientific work of the century.

It carried on the traditions and speculations of the Ionian school. The universe, said Anaxagoras, was originally a chaos of diverse seeds (spermata), pervaded by a notis, or Mind, tenuously physical, and akin to the source of life and motion in ourselves. And as mind gives order to the chaos of our actions, so the World Mind gave order to the primeval seeds, setting them into a rotatory vortes,* and guiding them toward the development of organic forms.* This rotation sorted the seeds into the four elements—fire, ait, water, and earth—and separated the world into two revolving layers, an outer one of "ether," and an inner one of air. "In consequence of this violent

Then is the Vortex that Aristophanes, in The Coulds, so effectively saturated as Socrates' substitute for Zent.

whirling motion, the surrounding fiery ether tore away stones from the earth, and kindled them into stars." The sun and the stars are glowing masses of rock. "The sun is a red hot mass many tunes larger than the Peroponnesus "4" When their revolving motion wanes, the stones of the outer layer fall upon the earth as meteors." The moon is an incandescent solid, having on its surface plains, mountains, and ravines," it receives its light from the sun, and is of all heavenly bodies the nearest to the earth." "The moon is echipsed through the interposition of the earth . . . the sun through the interposition of the moon." Probably other celestial bodies are inhabited like the earth, upon them "men are formed, and other animals that have life, the men dwell in cities, and cultivate fields as we do." Out of the inner or gaseous layer of our planet successive condensations produced clouds, water, earth, and stones. Winds are due to rarefactions of the atmosphere produced by the hear of the sun, "rhunder is caused by the collision of clouds, and lightning by their friction ". The quantity of matter never changes, but ali forms begin and pass away, in time the mountains will become the sea." The various forms and objects of the world are brought into being by increasingly definite aggregations of homogeneous parts (homotomeria) - All organisms were originally generated out of earth, moisture, and heat, and thereafter from one another." Man has developed beyond other animals because his erect posture freed his hands for grasping things."

These achievements-the foundation of meteorology, the correct explanation of eclipses, a rational by puthesis of planetary formation, the discovery of the borrowed light of the moon, and an evolutionary conception of animal and human life-made Anaxagoras at once the Copernicus and Darwin of his age. The Athenians might have forgiven him these apergus had he not neglected his none in explaining the events of nature and history; perhaps they suspected that this nous, like humpides' deus ex machina, was a device for saving the author's skin. Aristotle notes that Anaxagoras sought natural explanations everywhere." When a ram with a single from in the center of its forehead was brought to Pencles, and a soothsayer interpreted it as a supernatural omen. Anaxagoras had the animal's skull cleft, and showed that the brain, instead of filling both sides of the cramium, had grown upward towards the center, and so had produced the solitary hom." He aroused the sumple by giving a natural explanation of meteors, and re-

duced many mythical figures to personated abstractions."

The Athenians took him good-humoredly for a time, merely nicknaming him nous." But when no other way could be found of weakening Pericles. CHAP. XY)

Cleon, his demagogic rival, brought a formal indictment of implety against Anaxagoras on the charge that he had described the sun (still to the people a god) as a mass of stone on fire, and pursued the case so relentlessly that the philosopher, despite Pericles' brave defense of him, was convicted. Having no taste for hemlock, Anaxogoras fled to Lampsacus on the Heliespont, where he kept himself alive by reaching philosophy.† When news was brought to him that the Athemans had condemned him to death, he said, "Nature has long since condemned both them and me." He died a few years later, aged seventy-three.

The backwardness of the Athenians in astronomy was reflected in their calendar. There was no general Greek calendar, every state had its own, and each of the four possible points for beginning a new year was adopted somewhere in Greece, even the months changed their names across frontiers. The Attic calendar reckoned months by the moon, and years by the sun.* As rwelve lunar months made only 360 days, a thirteenth month was added every second year to hing the calendar into harmony with the sun and the seasons." Since this made the year ten days too long, Solon introduced the custom of having alternate months of twenty-nine and thirty days, arranged into three weeks (dekades) of ten (occosionally nine) days each," and as an excess of four days still remained, the Greeks omitted one month every eighth year. In this meredbily devious way they at last arrived at a year of 365 1/4 days. I

Meanwhile a mouest degree of progress was made in terrestrial science. Anaxagoras correctly explained the annual overflow of the Nile as due to the spring thaws and rains of I thiopia." Greek geologists artibuted the Straits of Cibrultar to a cleaving earthquake, and the Aegean isles to a subsiding sea." Xanthus of Lydio, about 406, surmised that the Mediterranean and the Red Sea were formerly connected at Suez, and Aeschylus noted the belief of his time that 5 city had been torn asunder from Italy by a convulsion of the earth." Sevlax of Caria (521-485) explored the whole coast of the Mediterranean and the Black Sea. No Greek seems to have dared so adventurous a voyage of discovers as that which the Carthaginian Hanno, with a fleet of sixty ships, led through Gibraltar some 2500 miles down the west coast of Africa (ca 400). Maps of the Mediterranean world were common in Athens at the end of the fifth century. Physics, so far as we know, remained undeveloped, though the curvatures of the Parthenon show considerable knowledge of optics. The

* Ca 434.* Another account praces the trial in 450.**
† According to a rival story he was impresented at Athens, and was awaiting the faral cup when Pencies arranged his escape."

⁴ Herodoms remarks on the superior calendar of the F.gy phans.* From F.gypt the Greeks took the gromon or sandas, and from Asia the clapsydra, or water clock, is their instruments for measuring time.

Pythagoreans, towards 450, announced the most lasting of Greek scientific hypotheses—the atomic constitution of matter. Empedocles and others expected a theory of the evolution of man from lower forms of afe, and described the slow advance of man from savagery to civilization.

III. HIPPOCRATES

The epochal event in the history of Greek science during the Periclean age was the rise of rational medicine. Even in the fifth century Greek medicine was in large measure bound up with religion, and the treatment of disease was still practiced by the temple priests of Asclepius. This temple therapy used a combination of empirical medicine with impressive ritual and charms that touched and released the imagination of the patient, possibly hypnosis and some form of anesthesia were also employed. Sceular medicine competed with this ecclesiastical medicine. Though both groups ascribed their origin to Asciepius, the profane Asclepiads rejected religious aids, made no claim to intractious cures, and gradually placed medicine

upon a rational basis.

Secular medicine, in fifth-century Greece, took form in four great schools, at Cos and Children Asia Monor, at Chrotona in Italy, and in Sieuv. At Acragas Empedocles, half philosopher and half miracle man, shared medical honors with the rational practitioner Acron.4 As far back as 520 we read of the physician Democedes, who, born at Crotona, practiced medicine in Aegina, Arnens, Samos, and Susa, cured Darius and Queen Atossa, and returned to spend his list days in the city of his birth." At Crotona, too, the Pythagorean school produced the most famous of Greek physicians before Hippocrates. Alemacon has been called the real father of Greek medicine," but he is clearly a late name in a long line of secular medicos whose origin is lost beyond the horizons of history. Early in the firth century he published a work On Nature (peri physeos)-the usual title, in Careece, for a general discussion of natural science. He, first of the Greeks, so far as we know, located the optic nerve and the Fustachian tohes, dissected animals, explained the physiology of sleep, recognized the brain as the central organ of thought, and defined health Pythagoreanly as a harmony of the parts of the body " At Cindus the dominating figure was Lury phron, who composed a medical summary known as the Cridian Sentences, explained pleurisy as a disease of the lungs, ascribed many illnesses to constipation, and became famous for his success as an obstetr cian." An unmerry war raged between the schools of Cos and Chidus, for the

Cridians, disliking Hippocrates' penchant for basing 'prognosis' upon general pathology, insisted upon a careful classification of each ailment, and a treatment of it on specific lines. In the end, by a kind of philosophical justice, many of the Cridian writings found their way into the Hippocratic Collection.

As we see Hippocrates in Suidas' rhumbhail biography, he appears as the outstanding physician of his time. He was born in Cos in the same year as Democritus, despite their far-separated homes the two became great friends, and perhaps the "laughing philosopher" had some share in the secularization of medicine. Hippocrates was the son of a physician, and grew up and practiced among the thousands of invalids and tourists who came to "take the waters" in the hot springs of Cos. His teacher, Herodicus of Selvinbria, formed his art by accustoming him to rely upon diet and exercise rather than upon drugs. Hippocrates won such repute that rulers like Perdiceas of Macedon and Arraveries I of Persia were among his patients, and in 440 Athens sent for him to try his hand at staying the great plague. His friend Democritus shamed him by completing a century, while

the great physician died at the age of eighty-three

Nothing in medical literature could be more heterogeneous than the collection of treatises anciently ascribed to Hippocrates. Here are text books for physicians, counsels for laymen, lectures for students, reports of researches and observations, clinical records of interesting cases, and essays by Sophists interested in the scientific or philosophical aspects of medicine. The forty two currical records are the only examples of their kind for the next seventeen hundred years, and they set a high standard of honesty by confessing that in sixty per cent of the cases the disease, or the treatment, proved tatal." Of all these compositions only four are by general consent from the pen of Hippocrates the 'Aphorasia," the 'Prognostic," the 'Regimen in Acute Diseases," and the inonograph "On Wounds in the Head', the remainder of the Corpus Hippocraticion is by a variety of authors ranging from the fifth to the second century a.c." There is a fair amount of nonsense in the assortment, but probably not more than the future will find in the treatises and histories of the present day. Much of the material is fragmentary, and takes a loose aphoristic form verging now and then upon Heroelettean obscurity. Among the "Aphorisms" is the famous remark that "Art is long, but time is fleeting "

The historical role of Hippocrates and his successors was the liberation of medicine from both religion and philosophy. Occasionally, as in the treatise on "Regimen," prayer is advised as an aid, but the page-by-page

tone of the Collection is a resolute reliance upon rational therapy. The essay on "The Sacred Disease" directly attacks the theory that ailments are caused by the gods, all diseases, says the author, have natural causes. Epilepsy, which the people explained as possession by a demon, is not excepted. "Ven continue to believe in its divine origin because they are at a loss to understand it. . . . Charlatans and quacks, having no treatment that would help, concealed and sheltered themselves behind superstition, and called this illness sacred in order that their complete ignorance might not be revealed." The mind of Hippocrates was typical of the Periclean tune spirit - imaginative but realistic, averse to mystery and weary of myth, recognizing the value of religion, but struggling to understand the world in rational terms. The influence of the Sophists can be felt in this move for the emancipation of medicine, and indeed, philosophy so powerfully affected Greek therapy that the science had to fight against philosophical as well as theological impediments. Hippocrates insists that philosophical theories have no place in medicine, and that treatment must proceed by careful observation and accurate recording of specific cases and facts. He does not quite realize the value of experiment, but he is resolved to be guided by experience."

The natal intection of Hippocratic medicine with philosophy appears in the once famous doctrine of humors.' The body, says Hippocrates, is compounded of blood, pldegm, veliow bile, and black bile; that man enjoys the most perfect health in whom these elements are duly proportioned and mingled, pain is the defect or excess of one "humor," or its isolation from the rest." This theory outlived all the other medical hypotheses of antiquity, it was abandoned only in the last century, and perhaps survives by transmigration in the doctrine of hormones or glandular secretions today. Since the behavior of the "humors" was considered subject to climate and diet, and the most prevalent animents in Greece were colds, pneumonia, and malaria, Hippocrates (?) wrote a brief treatise on "Airs, Waters, Places" in relation to health. "One may expose oneself confidently to cold," we are told, "except after eating or exercise. . . . It is not good for the body not to be exposed to the cold of winter." The scientific physician, wherever he settles, will study the effects, upon the local population, of the winds

and the seasons, the water supply and the nature of the soil.

The weakest point in Hippocratic medicine was diagnosis. There was, apparently, no taking of the pulse; fever was judged by simple touch, and auscultation was direct. Infection was understood in the case of scabies, ophthalma, and phthisis. The Corpus contains excellent clinical pictures

of epilepsy, epidemic parotitis, puerperal septicemia, and quotidian, tertian, and quartan fevers. There is no mention in the Collection of smallpox, measles, diphtheria, searlet fever, or syphilis, and no clear mention of typhoid fever." The treatises on "Regimen" move towards preventive medicine by advocating "prodiagnosis" an attempt to eatch the first symptoms of a disease, and mp it in the bud." Hippocrates was particularly fond of "progness", the good physician, he believed, will learn by experience to foresee the effects of various bodily conditions, and be able to predict from the first stages of a disease the course that it will follow. Most diseases reach a crisis in which either the illness or the patient comes to an end, the almost Pythagorean calculation of the day on which the crisis should appear was a characteristic element of Happocratic theory. If in these crises the natural heat of the body can overcome the morbid matter and discharge it, the patient is cured. In any cure nature-i.e., the powers and constitution of the body-is the principal healer, all that the physician can do is to remove or reduce the impediments to this natural defense and recuperation. Hence Hippocratic treatment makes little use of drugs, but depends chiefly upon fresh air, emetics, suppositories, enemas, cupping, bloodletting, fomentations, ointments, massage, and hydrotherapy. The Greek pharmacopoeia was reassuringly small, and consisted largely of purgatives. Skin troubles were treated with sulphur baths, and by administering the oil of dolphin livers." "Live a healthy life," Hippocrates advises, "and you are not likely to fah in, except through epidemic or accident. If you do fall ill, proper regunen will give you the best chance of recovery." Fasting was often prescribed, if the strength of the patient allowed, for "the more we nourish unhealthy bodies the more we insure them." In general "a man should have only one meal a day, unless he have a very dry belly."

Anatomy and physiology made slow progress in Greece, and owed much of this to the examination of animal entrails in the practice of augury. A little brochure "On the Heart," in the Hippocratic Collection, describes the ventricles, the great vessels, and their valves. Syennesis of Cyprus and Diogenes of Crete wrote descriptions of the vascular system, and Diogenes knew the significance of the pulse." Empedocles recognized that the heart is the center of the vascular system, and described it as the organ by which the pneuma, or vital breath (ovvgen), is carried through the blood vessels to every part of the body." The Corpus, following Alemaeon, makes the brain the seat of consciousness and thought, "Through it we think, see, hear, and distinguish the ugly from the beautiful, the bad from the good."

Surgery was still for the most part an unspecialized activity of advanced general practitioners, though the armies had surgeous on their stails." The I hippocratic literature describes trephining operations, and its treatment for dislocations of shoulder or jaw are "modern" in everything except anesthesia." A votive tablet from the temple of Asclepius at Atheus shows a folding case containing scalpels of various forms." The little museum at Lipidaurus has preserved for us ancient forceps, probes, scalpels, catheters, and specula essentially like those that are used today, and certain statues there are apparently models illustrating methods for teducing dislocations of the hip." The Hippocratic treatise "On the Physician" gives detailed directions for the preparation of the operating room, the arrangement of natural and artificial aght, the cleanliness of the hands, the care and use of instruments, the position of the patient, the bandaging of wounds, etc."

It is clear from these and other passages that Greek medicine in Happocrates' days had made great advances, technically and socially. Heretofore Greek physicians had imgrated from city to city as need called them, like the Sophasts of their time or the preachers of our own. Now they settled down, opened suresa. "healing places," or offices, and treated patients there or at the patients' homes." Women physicians were numerous, and were usually employed for diseases of their sex, some of their wrote authoritative treatises on the care of the skin and the hair." The state exacted no public examination of prospective practitioners, but required sansfactory evidence of an apprenticeship or rutelage to a recognized physician." City governments reconciled socialized with private medicine by engaging doctors to attend to public hearth, and to give medical treatment to the poor, the best of such state physicians, like Democedes, received two talents (\$12,toor) a year." There were, of course, many quacks and, as always, an inexhaustible supply of omniscient amateurs. The profession, as in all gencrations, suffered from its dishonest or incompetent minority," and like other peoples the Greeks revenged themselves upon the uncertainties of medicine by jokes almost as endless as those that wreak their vengeance upon marriage.

Hippocrates raised the profession to a higher standing by his emphasis on medical ethics. He was a teacher as well as a practitioner, and the famous oath ascribed to him may have been designed to ensure the loyalty of the

student to his instructor."

The each is regarded as deriving from the Hippocratic school rather than from the master himself; but Erotian, writing in the first century a.o., attributes it to Hippocrates."

The Hippocratic Oath

I swear by Apollo Physician, by Asclepius, by Hygiaea, by Panacea, and by all the gods and goddesses, making them my witnesses, that I was carry out, according to my ability and judgment, this oath and this indenture. To hold my teacher in this art equal to my own parents, to make han partner in my to chhood, when he is in need of money to share mine with him, to consider his family as my own brothers, and to teach their this art, if they want to learn it, without fee or indenture, to impart precept, oral instruction, and all other instruction to my own sons, to the sons of my teacher, and to indentured pupils who have taken the physician's early, but to nobody else. I will use treatment to help the sick according to my ability and judgment, but never with a view to injury and wrongdoing Neither with I administer a poison to anylouts when asked to do so, not will I suggest such a course. Similarly, I will not give to a woman a pessary to cause abortion. But I will keep pure and holy both my life and my art. I will not use the knife, not even, veniv, on sufferers from stone, but I will give place to such as are craftsmen therein. Into whatsoever houses I enter I will enter to here the sick, and I will abstrant from all intermonal wrongdings and harm, especially from abusing the bodies of man or woman, bond or free. And whatsnesser I shall see or hear in the course of my profession, as well as outside my profession in my intercourse with men, if it be what should not be published abroad I will never divulge, holding such things to be hely secrets. Now if I carry out this eath, and break it not, may I gain forever reputation among all men for my life and for my art, but if I transgress it and forswear myself, may the opposite befall me."

The physician, Hippocrates adds, should maintain a becoming exterior, keeping his person clean and his clothing neat. He must always remain calm, and must make his behavior inspire the patient with confidence." He must

keep a careful watch over himself, and . say only what is absolutely necessary. . When you enter a suck man's room, bear in mind your manner of sitting, reserve, arrangement of dress, decisive utterance, brevity of speech, composure, bedside manners . . self-control, rebuke of disturbance, readmess to do what has to be done. . I urge you not to be too unkind, but to consider carefully your patient's superabundance or means. Sometimes give your services

for nothing, and if there be an opportunity of serving a stranger who is in financial straits, give him full assistance. For where there is love of man, there is also love of the art."

If, in addition to all this, the physician studies and practices philosophy, he becomes the ideal of his profession, for "a physician who is a lover of wisdom is the equal of a god."

Greek medicine shows no essential advance upon the medical and surgical knowledge of Egypt a thousand years before the various Fathers of Medicine, in the matter of specialization the Greek development seems to have fallen short of the Egyptian. From another point of view we must hold the Greeks in high esteem, for not until the uneteenth century of our era was any substantial improvement made upon their medical practice or theory. In general, Greek science went as far as could be expected without instruments of observation and precision, and without experimental methods. It would have done better had it not been harassed by religion and discouraged by philosophy. At a time when many young men in Athens were taking up with enthusiasm the study of astronomy and comparative anatomy, the progress of science was halted by obscurantist legislation, and the persecutions of Apaxagoras, Aspasia, and Socrates, while the famous "turning around" of Sociates and the Sophists from the external to the internal world, from physics to ethics, drew Greek thought from the problems of nature and evolution to those of metaphysics and morals. Science stood still for a century while Greece succumbed to the charms of philosophy.

CHAPTER XVI

The Conflict of Philosophy and Religion

I. THE IDEALISTS

THE age of Pericles resembled our own in the variety and disorder of its thought, and in the challenge that it offered to every traditional standard and behef. But no age has ever rivaled that of Pericles in the number and grandeur of its philosophical ideas, or in the vigor and exuberance with which they were debated. I very issue that agitates the world today was bruited about in ancient Athens, and with such freedom and eagerness that all Greece except its youth was alarmed. Many cities-above all, Sparta forhade the public consideration of philosophical problems, "on account of the jeulousy and strife and profitless discussions" (says Athenaeus) "to which they give rise." But in Periclean Athens the "dear delight" of philosophy expeured the imagination of the educated classes, rich men opened their homes and salons in the manner of the French Unlightenment, philosophers were homzed, and clever arguments were applauded like sturdy blows at the Olympic games.' When, in 432, a war of swords was added to the war of words, the excitement of the Athenian mind became a fever in which all soberness of thought and judgment was consumed. The fever subsided for a time after the marty rdom of Socrates, or was dissipated from Athens to other centers of Greek life, even Plato, who had known the very height and cross of it, became exhausted after sixty years of the new game, and envied Egypt the inviolable orthodoxy and quiet stability of its thought. No age until the Renaissance would know such enthusiasm again.

Piato was the culmination of a development that began with Parmenides; he played Hegel to Parmenides' Kant; and though he scattered condemnation lavishly, he never ceased to reverence his metaphysical father. In the little town of Elea, on the western coast of Italy, 450 years before Christ, there began for Europe that philosophy of idealism which was to wage

through every subsequent century an obstinate war against materialism.*

The mysterious problem of knowledge, the distinction between noumenon and phenomenon, between the unseen real and the unreal seen, was flung into the caldron of European thought, and was to boil or simmer there through Greek and medieval days until, in Kant, it would explode again

in a philosophical revolution.

As Kant was "awakened" by Hume, so Parmemdes was aroused to philosophy by Xenophanes, perhaps his was one of many minds stirred by Aenophanes' declaration that the gods were my ths, and that there was only one reality, which was both world and God. Parmenides studied with the Pythagoreans also, and absorbed something of their passion for astronomy. But he did not lose himself in the stars. Lake most Greek plulosophers he was interested in living affairs and the state, Flea commissioned him to draw up for it a code of laws, which it tiked so well that its magistrates were thenceforth required to decide all cases by that code." Possibly as a recreamonal aside in a busy life he composed a philosophical poem On Nature, of which some 160 verses survive, enough to make us regret that Parmendes did not write prose. The poet announces, with a twinkle in his eye, that a goddess has denvered to him a revelation that all things are one, that motion, change, and development are unreal-phantasnis of superficial. contradictory, untrustworthy sense, that beneath these mere appearances lies an unchanging, homogeneous, indivisible, indissoluble, motionless unity, which is the only Being, the only I ruth, and the only God. Herseleitus said, Panta ret, all things change, Parmenides says, Hen ta panta, all things are one, and never change. At times, are Xenophanes, he speaks of this One as the universe, and calls it spheroidal and finite, at times, in an idealistic vision, he identifies Being with Thought, and sings, "One thing are Thinking and Being." as if to say that for us things exist only in so far as we are conscious of them Beginning and end, birth and death, formation and destruction, are of forms only, the One Real never begins and never ends, there is no Becoming, there is only Being. Motion, too, is unreal, it assumes the passage of something from where it is to where there is nothing, or empty space, but empty space, Not Being, cannot be, there is no yord, the One fills every nook and cranny of the world, and is forever at rest. 1

^{*} The Handus had seen the problem long before and were to remain Parmendeans to the end perhaps the antisemanument of the Liputabada had penetrated through long or Pythagoras to Parmendes.

t This steams the imagination but almost in Parmenidear fish on we speak of a table as it rest though it is composed (we are tood) of the most executive mobile "electrons." Parmenides saw the world as we see the table; the electron would see the table as we see the world.

It was not to be expected that men would listen patiently to all this, and apparently the Parmendean Rest became the target of a thousand metaphysical assaults. The significance of Parmenides' subtle follower, Zeno of Flea, lay in an arrempt to show that the ideas of plurality and motion were, at least theoretically, as impossible as Parmenides' motionless One. As an exercise in perversity, and to amuse his youth, Zeno published a book of paradoxes, of we channe have come down to us, and of which three will suffice First, said Zeno, any body, in order to move to point A, must reach B, the middle of its course toward A, to arrive it B it must reach C, the middle of its course roward B, and so on to infinity. Since an infinity of time would be required for this infinite series of motions, the motion of any looly to any point is impossible in a finite time. Second, as a variant of the first, swift footed Achides can never overrake the leasurely tortoise, for as often as Achilles reaches the point which the tortoise occupied, in that same moment the fortoise has moved beyond that point. I bird, a flying arrow is really at rest, for at any moment of its flight it is at only one point in space, that is, is motionless, its motion, however actual to the senses, is logically, metaphysically unreal **

Zeno came to Athens about 400, perhaps with Purmenides, and set the impressionable city astir by his skill in reducing any kind of philosophical

theory to absurd consequences. I mon of Phlius described

The two-edged tongue of nighty Zeno, who, Say what one would, would argue it untrue!

This pre-Socratic gadfly was (in the relative sense which our ignorance of the past compels us to give to such phrases) the father of logic, as Parmenides was for I urope the father of metiphysics. Socrates, who denounced Zeno's dialectical method,' imitated it so zealously that men had to kill him in order to have peace of mind. Zeno's influence upon the skeptical Sophists was decisive, and in the end it was his skepticism that triumphed in Pyrrho and Carneades. In his old age, having become a man "of great wisdom and learning," he complained that the philosophers had taken too scriously the intellectual pranks of his youth. His final escapade was more fatal to him he joined in an attempt to depose the tyrant Nearches at Hea, was folled and arrested, torrured and killed. He hore his sufferings bravely, as if to associate his name so soon with the Store philosophy.

^{*} The discussion of these paradoxes has gone on from Plato' to Bertrand Russel.' and may continue as onig as words are in maken for things. The assumptions that are all late the puzzles are that "offin to" is a thing instead of metely a word oducating the male are of the mind to concern an absolute on I, and that time apace, and motion are decontinuous, i.e., are composed of separate points or parts.

II. THE MATERIALISTS

As Parmendes' denial of motion and change was a reaction against the fluid and unstable meraphysics of Hercleitus, so his monisti was a counterblast to the atomism of the later Pythagoreans. For these had developed the number theory of their founder into the doctrine that all things are composed of numbers in the sense of indivisible units." When Philolaus of Thebes added that "all things take place by necessity and by harmony," everything was ready for the Atomic school in Greek philosophy.

About 435 Leucoppus of Mnetus came to Elea, and studied under Zeno; there, perhaps, he heard of the number atomism of the Pythagoreans, for Zeno had aimed some of his subtlest paradoxes at this doctrine of plurality." Leucoppus finally settled in Abdera, a flourishing Ionian colony in Thrace. Of his direct teaching only one fragment remains. "Nothing happens without a reason, but all things occur for a reason, and of necessity." Presumably it was in answer to Zeno and Parmenides that Leucoppus developed the notion of the void, or empty space, in this way he hoped to make motion theoretically possible as well as sensibly actual. The universe, said Leucoppus, contains atoms and space and nothing else. Atoms rumbling about in a vortex fall by necessity into the first forms of all things, like attaching itself to like, in this way arose the planets and the stars." All things, even the human soul, are composed of atoms.

Democratus was the pupil or associate of Laucippus in developing the atomistic philosophy into a rounded system of materialism. His father was a man of wealth and position in Abdeta;" from him, we are told, Democratus inherited a hundred talents (\$600,000), most of which he spent in travel." Unconfirmed stories send him as far as Egypt and Ethiopia, Babylonia, Persia, and India." "Among niv contemporaries," he says, "I have traveled over the largest portion of the earth in search of things the most remote, and have seen the most climates and countries, and heard the largest number of thinkers." At Boeonan Thebes he stopped long enough to imbibe the number atomism of Philolaus." Having spent his money he became a philosopher, lived simply, devoted hunself to study and contemplation, and said, "I would rather discover a single demonstration" (in geometry) "than win the throne of Persia." There was some modesty in him, for he shunned dialectic and discussion, founded no school, and sojourned in Athens without making himself known to any of the philosophers there."

[&]quot;To the wise and good man," he writes, "the whole earth is his fatherland."

Diogenes Laertius gives a long list of his publications in mathematics, physics, astronomy, navigation, geography, anatomy, physiology, psychology, psychotherapy, medicine, philosophy, music, and art." Thrasyllus called him pentathios in philosophy, and some contemporaries gave him the very name of Wisdom (sophia)." His range was as wide as Aristotle's, his style as lughly praised as Plato's." Francis Bacon, in no perverse moment, called him the greatest of ancient philosophers."

He begins, like Parmenides, with a critique of the senses. For practical purposes we may trust them, but the moment we begin to analyze their evidence we find ourselves taking away from the external world layer after layer of the color, temperature, flavor, savor, sweetness, bitterness, and sound that the senses lay upon it, these "secondary qualities" are in ourselves or in the total process of perception, not in the objective thing; in an earliess world a falling forest would make no noise, and the ocean, however angry, would never roar. "By convention (nomor) sweet is sweet, bitter is bitter, hot is hat, cold is cold, color is color, but in truth there are only atoms and the void "" Hence the senses give us only obscure knowledge, or opinion, genuine knowledge comes only by investigation and thought. "Verily, we know nothing Truth is huried deep. . . We know nothing for certain, but only the changes produced in our hody by the forces that impinge upon it." All sensations are die to atoms discharged by the object and falling upon our sense organs." All senses are forms of touch."

The atoms that constitute the world differ in figure, size, and weight; all have a tendency downward, in the resultant rotatory motion like atoms combine with like and produce the planets and the stars. No note, or intelligence, guides the atoms, no Empedoclean "love" or "hate" assorts them, but necessity -the natural operation of inherent causes—rules over all." There is no chance; thance is a fiction invented to disguise our ignorance." The quantity of matter remains always the same, none is ever created, none ever destroyed," only the atom combinations change. Forms, however, are innumerable, even of worlds there is probably an "infinite" number, coming into being and passing away in an interminable pageantry." Organic beings arose originally from the moist earth." Everything in man is made of atoms, the soul is composed of tiny, smooth, round atoms, like those of fire. Mind, soul, vital heat, vital principle, are all one and the same thing, they are not confined to men or animals, but are

diffused throughout the world, and in man and other animals the mental atoms whereby we think are distributed throughout the body.***

Nevertheless these fine atoms that constitute the soul are the noblest and most wonderful part of the body. The wise man will cultivate thought, will free hittself from passion, superstition, and fear, and will seek in contemplation and understanding the modest happiness available to human hife. Happiness does not come from external goods, a man "inust become accustomed to finding within himself the sources of his enjoyment." "Culture is better than riches. . . . No power and no treasure can outweigh the extension of our knowledge." Happiness is fitful, and "sensual pleasure affords only a brief satisfaction", one comes to a more lasting content by acquiring peace and serenity of soul (ataraxia), good cheer (euthirma), moderation (metriotes), and a certain order and symmetry of life (biou symmetria) " We may learn much from the animals-"spinning from the spider, building from the swaltow, singing from the nightingale and the swan";" but "strength of body is nobility only in beasts of burden, strength of character is nobility in man." So, Lke the heretics of Victorian England, Democratus raises upon his scandalous metaphysics a most presentable ethic. "Good actions should be done not out of compulsion but from conviction. not from hope of reward, but for their own sake, . . A man should feel more shame in doing evil before banself than before all the world."

He illustrated his own precepts, and perhaps justified his counsels, by living to the age of a hundred and nine, or, as some say, to merely ninety, years." Diogenes Laertius relates that when Democritus read in public his most important work, the megas diakomtos, or Great World, the city of Abdera presented him with a hundred talents (\$600,000), but perhaps Abdera had depreciated its currency. When someone asked the secret of his longevity, he answered that he are honey daily, and bathed his body with oil." Finally, having lived long enough, he reduced his food each day, determined to starve himself by easy degrees." "He was exceedingly old," says Diogenes,"

and appeared to be at the point of death. His sister lamented that he would die during the festival of the Thesmophoria, which would prevent her from discharging her dubes to the golidess. So he hade her be of good cheer, and to bring him hot loaves (or a little honey") every day. And by applying these to his nostrils he kept himself.

^{*} Lucreton attributes a lond of psychophysical parabelism to "the great Democratis," who flaid it down that the atom t of body and the atoms of mind are placed one beside one alternately in pairs, and so link the frame together."

alive over the festival. But when the three days of the feast were passed he expired without any pain, as Hipparchus assures us, having lived one hundred and nine years.

His city gave him a public funeral, and Timon of Athens praised him." He founded no school, but he formulated for science its most famous hypothesis, and gave to philosophy a system which, denounced by every other, has survived them all, and reappears in every generation.

HL EMPEDOCLES

Idealism offends the senses, materialism offends the soul; the one explains everything but the world, the other everything but life. To merge these half-truths it was necessary to find some dynamic principle that could mediate between structure and growth, between things and thought. Anaxagoras sought such a principle in a cosmic Mind, Empedocles sought it in the inherent forces that made for evolution.

This Leonardo of Acragas was born in the year of Marathon, of a wealthy family whose passion for horse racing gave no promise of philosophy. He studied for a while with the Pythagoreans, but in his exuberance he divilged some of their esotene doctrine, and was expelled." He took very much to heart the notion of transmigration, and announced with poetic sympathy that he had been "in bygone times a youth, a maiden, and a flowering shrob, a bird, yes, and a fish that swims in silence through the deep sea." He condemned the eating of animal food as a form of cannibalism, for were not these animals the reincarnation of human beings?" All men, he believed, had once been gods, but had forfested their heavenly place by some impurity or violence, and he was certain that he felt in his own soul intimations of a prenatal divinity. "From what glory, from what unmeasurable bliss, have I now sunk to roam with mortals on this earth!" Convinced of his divine origin, he put golden sandals upon his feet, clothed his body with purple robes, and crowned his head with laurel, he was, as he modestly explained to his countrymen, a favorite of Apollo, only to his friends did he confess that he was a god. He claimed supernatural powers, performed magic rites, and sought by incantations to wrest from the other world the secrets of human destiny. He offered to cure diseases by the enchantment of his words, and cured so many that the populace half believed his claims. Actually he was a learned physician fertile in suggestions to medical science, and skilled in the psychology of the medical

art. He was a brilliant orator; he "invented," says Aristotle," the principles of rhetoric, and taught them to Gorgas, who pedded them in Athens. He was an engineer who freed Selinus from pestilence by draining marshes and changing the courses of streams." He was a courageous statesman who, though himself an aristocrat, led a popular revolution against a narrow aristocraev, refused the dictatorship, and established a moderate democtacy. He was a poet, and wrote On Nature and On Purifications in such excellent verse that Aristotle and Cicero ranked him high among the poets, and Lucretius complimented him with initiation. "When he went to the Olympic games," says Diogenes Lacrius, "he was the object of general attention, so that there was no mention made of anybody else in com-

parison with him. 100 Perhaps, after all, he was a god.

The 470 lines that survive give us only hazardous intimations of his philosophy. He was an eclectic, and saw some wisdom in every system, He deprecated Parmenades' wholesale rejection of the senses, and welcomed each sense as an "avenue to understanding " Sensation is due to effluxes of particles proceeding from the object and falling upon the "pores" (poroi) of the senses, therefore light needs time to come from the sun to us." Night is caused by the earth intercepting the rays of the sun." All things are composed of four elements-air, fire, water, and earth. Operating upon these are two basic forces, attraction and repulsion, Love and Hate. The endless combinations and separations of the elements by these forces produce the world of things and history. When Love or the tendency to combine is dominant, matter develops into plants, and organisms take higher and higher forms. Just as transmagration weaves all souls into one biography, so in nature there is no sharp distinction between one species or genus and another, e.g., "Hair and leaves and the thick feathers of birds, and the scales that form on tough limbs, are the same thing." Nature produces every kind of organ and form, Love unites them, sometimes into monstrosities that perish through maladaptation, sometimes into organisms capable of propagating themselves and meeting the conditions of survival." All higher forms develop from lower forms." At first both sexes are in the same body, then they become separated, and each longs to be reunited with the other." To this process of evolution corresponds a process of dissolution, in which Hate, or the force of division, rears down the complex structure that Love has built. Slowly organisms and planets revert to more and more primitive forms, until all things are merged again in a

^{*} Perhaps Place posched here for Aristophanes' speech in the Symposium.

primeval and amorphous mass," These alternating processes of development and decay go on endlessly, in each part and in the whole, the two forces of combination and separation, Love and Hate, Good and Evil, fight and balance each other in a vast universal rhythm of Life and Death. So

old is the philosophy of Herbert Spencer."

The place of God in this process is not clear, for in Empedocles it is difficult to separate fact from metaphor, philosophy from poetry. Sometimes he identifies deary with the cosmic sphere itself, sometimes with the life of all life, or the mind of all mind, but he knows that we shall never be able to form a just idea of the basic and original creative power. "We cannot bring God near so as to reach him with our eyes and lay hold of him with our hands. . . For he has no human head attached to bodily members, nor do two branching arms daugle from his shoulders, he has neither feet nor knees not any harry parts. No, he is only mind, sacred and metfable mind, thaslung through the whole universe with swift thoughts." And Empedocles concludes with the wise and weary counsel of old age.

Weak and narrow are the powers implanted in the limbs of men, many the woes that fall on them and blunt the edge of thought, short is the measure of the lite in death through which they took. Then are they borne away, like smoke they vanish into me, and what they dream they know is but the intoe that each hath stimbled upon in wandering about the world. Yet boast they all that they have learned the whole. Vain fools! For what that is, no eye hath seen, no ear bath heard, nor can it be conceived by the mind of man.*

In his last years he became more distinctly a preacher and prophet, absorbed in the theory of remearnation, and imploring his feilow men to purge away the goalt that had exiled them from heaven. With the assorted wisdom of Buddha, Pythagotas, and Schopenhauer he warned the human race to abstain from marriage, procreation," and beans." When, in 415, the Athenians besieged Syracuse, Empedocles did what he could to help its resistance, and thereby offended Aeragas, which hated Syracuse with all the animosity of kiniship. Banished from his native city, he went to the mainland of Greece and died, some say, in Megara." But Hippobotus, says Diogenes Laertins," tells how Empedocles, after bringing back to full life a woman who had been given up for dead, rose from the feast that celebrated her recovery, disappeared, and was never seen again. Legend said that he had leaped into Etna's fiery mouth so that he might die without leaving a trace behind him, and thereby confirm his divinity. But the

elemental fire betrayed him, it flung up his brazen shippers and left them, like heavy symbols of mortahty, upon the crater's edge."

IV. THE SOPHISTS

It is a reproof to those who think of Greece as synonymous with Athens, that none of the great Hellenic thinkers before Socrates belonged to that city, and only Plato after him. The fate of Anaxagoras and Socrates indicates that religious conservatism was stronger in Athens than in the colonies, where geographical separation had broken some of the bonds of tradition. Perhaps Athens would have remained obscurantist and intolerant to the point of stupidity had it not been for the growth of a cosmopolitan trading class, and the coming of the Sophists to Athens.

The debates in the Assembly, the trials before the beliaca, and the rising need for the altility to think with the appearance of logic and to speak with clarity and persuasion, conspired with the wealth and curiosity of an imperia, society to create a demand for something unknown in Athens before Pericles-formal higher education in letters, oratory, science, philosophy, and statesmanship. The demand was met at first not by the organization of universities but by wandering scholars who engaged lecture halfs, gave there their courses of instruction, and then passed on to other cities to repeat them. Some of these men, like Protagoras, called themselves sophistate i.e., teachers of wisdom." The word was accepted as equivalent to our 'university professor," and bore no derogatory connotation until the conflict between religion and philosophy led to conservative attacks upon the Sophists, and the commercialism of certain of them provoked Plato to darken their name with the imputations of venal sophistry that now cling to it. Perhaps the general public entertained a vague dislike for these reachers from their first appearance, since their costly instruction in logic and rhetoric could be bought only by the well to do, and gave these an advantage in trying their cases before the courts." It is true that the more famous Sophists, nke most skilled practitioners in any field, charged all that their patrons could be persuaded to pay, this is the final law of prices everywhere. Protagoras and Gorgias, we are told, demanded ten thousand drachmas (\$10,000) for the education of a single pupil. But lesser Sophists were content with reasonably moderate fees, Prodicus, famous throughout Greece, asked from one to fifty drachmas for admission to his courses."

Protagoras, the most renowned of the Sophists, was born in Abdera a

generation before Democratus. In his lifetime he was the better known of the two, and the more influential, we surmise his repute from the furore created by his visits to Athens." I ven Plato, who was not often intentionany fair to the Sophists, respected him, and described him as a man of high character. In the Platonic dialogue that is named after him Protagoras makes a much better showing than the argumentative young Socrates, here it is Socrates who tasks like a Sophist, and Protagoras who behaves like a gentleman and a philosopher, never losing his temper, never jealous of another's bruliance, never taking the argument too scriously, and never anxious to speak. He admits that he undertakes to teach his pupils prudence in private and public matters, the orderly management of home and family, the art of therone or persuasive speaking, and the ability to understand and direct affairs of state." He defends his high tees by saying that it is his custom, when a pupil objects to the sum asked, to agree to receive as adequate whatever attours the pupil may name as just in a solemn statement before some sacred shrine a rash procedure for a teacher who doubted the existence of the gods. Diogenes Laernus accuses hum of being the first to "arm disputants with the weapon of sophism," a charge that would have pleased Socrates, but Diogenes adds that Protagoras "was also the first to invent that sort of argument which is called Socratic which might not have pleased Sucrates.

It was but one of his many distinctions that he founded I uropean grammar and philology. He treated of the right use of words, says Parto," and was the first to distinguish the three genders of mouns, and certain tenses and misids of verbs." But his chief significance by in this, that with him, rather than with Socrates, began the subjective standpoint in philosophy Unlike the lonians he was less interested in things than in thought-i.e., in the whole process of sensation, perception, understanding, and expression. Whereas Parmenides rejected sensition as a guide to truth, Protagoras, tike Locke, accepted it as the only means of knowledge, and refused to admit any transcendental suprasensual-reality. No absolute truth can be found, said Protagoris, but only such truths as bold for given men under given conditions, contradictory assertions can be equally true for different persons or at different times." All truth, goodness, and beauty are relative and subjective, "man is the measure of all things-of those that are, that they are, and of those that are not, that they are not " To the historical eve a whole world begins to tremble when Protagoras announces this sinple principle of humanism and relativity, all established truths and sacred

^{*} These prohably occurred in 431 43, 432, 4-2, and 415 "

principles crack, individualism has found a voice and a philosophy, and the supernatural bases of social order threaten to melt away.

The far-reaching skepticism implicit in this famous pronouncement might have remained theoretical and safe had not Protagoras applied it for a motioent to theology. Among a group of distinguished men in the home of the unpopular freeth nker, I implies, Protagoras read a treatise whose first sentence made a stir in Athens. "With regard to the gods I know not whether they exist or not, or what they are like. Many things prevent our knowing: the subject is obscure, and brief is the span of our mortal life." The Athenian Assembly, frightened by that ominous prelude, banished Protagoras, ordered all Athenians to surrender any copies they might have of his writings, and burned the books in the market place. Protagoras fled to Sixily, and, story tells us, was drowned on the way."

Gorgias of Leonius carried on this skeptical revolution, but had the good sense to spend most of his life outside of Athens. His career was typical of the union between philosophy and statesmanship in Greece. Born about 484, he studied ph losophy and thetoric with I mpedocles, and became so famous in Sicily as an orator and a teacher of oratory that in 427 he was sent by Leontonias an ambassador to Athens. At the Olympic games of 408 he captivated a great crowd by an address in which he appealed to the warring Greeks to make peace among themselves in order to face with unity and confidence the resurrected power of Persu. Traveling from city to city, he expounded his views in a style of oratory so euphinstically ornate, so symmetrically annithencal in idea and phrase, so desicately poised between poetry and prose, that he had no difficulty in attracting students who offered him a hundred minas for a course of instruction. His book On Nature sought to prove three starting propositions (1) Nothing casts, (1) if anything existed it would be unknowable, and (3) if anything were knowable the knowledge of it could not be communicated from one person to another ** Nothing else remains of Gorgias' writings. After emoying the hospitality and fees of many states he seerled down in Thessals, and had the wisdom to consume most of his great fortune before his death." He lived, as all authorities assure us, to at least one hundred and five, and an ancient writer tells us that "though Gorgias atrained to the age of one hundred and eight, his body was not weakened by old age, but to the end of his life he was in sound combining, and his senses were those of a youth."

These propositions, and ing to discredit the transcendents ion of Parmen less meant (1). Nothing exists beyond the senses of the familiary and beyond the senses it would be unknown defor all knowledge concess that ogt the senses, it is distributed as presentation were known to the knowledge of it would be incommunicable, since all communication is through the united.

If the Sophists together constituted a scattered university, Hippias of Elis was a university in hunself, and typined the polymath in a world where knowledge was not yet so vast as to be clearly beyond the grasp of one mind. He taught astronomy and mathematics, and made original contributions to geometry, he was a poet, a musician, and an orator, he lectured on literature, morals, and politics, he was an historian, and laid the foundations of Greek chronology by compiling a lest of victors at the Olympic games, he was employed by Elis as an envoy to other states; and he knew so many arts and trades that he made with his own hands all his clothing and ornaments." His work in phisosophy was slight but important he protested against the degenerative artificiality of city life, contrasted nature with law, and called law a tyrant over mankind." Producus of Coos carried on the grammatical work of Protagoras, fixed the parts of speech, and pleased the elders with a fable in which he represented Heracles choosing laborious Virtue instead of easy Vice. Other Sophists were not so pious Antiphon of Athens followed Democratus into materialism and atheism, and defined justice in terms of expediency, Thrasymachus of Chalcedon (if we may take Plato's word for it) identified right with might, and remarked that the success of villains cast doubt upon the existence of the gods."

All in all, the Sophists must be ranked among the most viral factors in the history of Greece. They invented grammar and logic for Europe, they developed diatectic, analyzed the forms of argument, and raught men how to detect and practice fatlacies. Through their stimulus and example reasoning became a ruling passion with the Greeks. By applying logic to language they promoted clarity and precision of thought, and facilitated the accurate transmission of knowledge. Through them prose became a form of literature, and poetry became a vehicle of philosophy. They apphed analysis to everything; they refused to respect traditions that could not be supported by the evidence of the senses or the logic of reason, and they shared decisively in a rationalist movement that finally broke down, among the intellectual classes, the ancient faith of Hellas. "The common opinion" of his time, says Plato, derived "the world and all animals and plants . . . and manimate substances from . some spontaneous and unintelligent cause." Lysus tells of an atheistic society that called itself the kakodamnomoras, or Devis' Club, and deliberately met and dined on holydays set apart for fasting " Pindar, at the opening of the fifth century, accepted the oracle of Delphi piously, Aeschylus defended it politically; Herodotus, about 450, criticized it timidly. Thucydides, at the end of the century, openly rejected it. Enthyphro complained that when in the Assembly he spoke of oracles, the people laughed at him as an antiquated fool."

The Sophists must not be blamed or credited for all of this, much of it was in the air, and was a natural result of growing wealth, leisure, travel, research, and speculation. Their role in the deterioration of morals was likewise contributory rather than basic, wealth of itself, without the aid of philosophy, puts an end to puritanism and stoicism. But within these modest limits the Sophists unwittingly quickened disintegration. Most of them, barring a thoroughly human love of money, were men of high character and decent life, but they did not transmit to their pupils the traditions or the wisdom that had made or kept them reasonably virtuous despite their discovery of the secular origin and geographical murability of morals. Their colonial derivation may have led them to underestimate the value of custom as a peaceful substitute for force or law in maintaining morality. and order. To define morality or human worth in terms of knowledge, as Proragoras did a generation before Socrates," was a heady stimulus to thought, but an unsteadying blow to character, the emphasis on knowledge raised the educational level of the Greeks, but it did not develop intelligence as rapidly as it liberated intel cer. The announcement of the relativity of knowledge did not make men modest, as it should, but disposed every man to consider hunself the measure of all things, every clever youth goold now feel houself ht to sit in judgment upon the moral code of his people. reject it if he could not understand and approve it, and then be free to cationalize his desires as the virtues of an emancipated soul. The distinction between "Sature" and convention, and the willingness of minor Sophists to argue that what "Nature" permitted was good regardless of custom or law, supped the ancient supports of Greek morality, and encouraged many experiments in living. Old men mourned the passing of domestic simplicity and fidelity, and the pursuit of pleasure or wealth unchecked by reagious restraints." Plato and Thicydides speak of thinkers and public men who rejected morals as superstations, and acknowledged no right but strength. This unscrupulous individualism turned the logic and thetone of the Sephists into an instrument of legal chicanery and political demagogy, and degraded their broad cosmopolitanism into a cautious reluctance to detend their country, or an unprejudiced readiness to sell it to the highest badder. The religious peasantry and the conservative anstocrats began to agree with the common citizen of the urban democracy that philosophy had become a danger to the state.

Some of the philosophers themselves joined in the attack upon the Soph-

for making error specious with logic and persuasive with rhetoric, and scorned them for taking fees. He excused his ignorance of grammar on the ground that he could not afford the fifty-drachma course of Prodicus, but only the one-drachma course, which gave merely the rudiments. In an ungenial moment he used a merciless and revealing comparison

It is believed among us. Antiphon, that it is possible to dispose of beauty or of wisdom alike honorably or dishonorably, for if a person sells his beauty for money to anyone that wishes to purchase it, men call him a male prostitute but if anyone makes a friend of a person whom he knows to be an honorable and worthy admirer, we regard him as prudent. In like manner those who sell their wisdom for money to any that will buy, men call sophists, or, as it were, prostitutes of wisdom, but whoever makes a friend of a person whom he knows to be deserving, and teaches him all the good that he knows, we consider him to act the part which becomes a good and honorable citizen.

Plato could afford to agree with this view, being a rich man. Isocrates began his career with a speech Agamst the Sophists, became a successful professor of thetoric, and charged a thousand drachmas (\$1000) for a course. Aristotle continued the attack, he defined a Sophist as one who "is only eager to get rich off his apparent wisdom." and accused Protagoras of "promising to make the worse appear the better reason."

The tragedy was deepened by the fact that both sides were right. The complaint about fees was unjust short of a state subsidy no other way was then open to finance higher education. If the Sophists criticized traditions and morals it was, of course, with no evil intent, they thought that they were liberating slaves. They were the intellectual representatives of their time, sharing its passion for the free intellect, like the Fines clopedists of Fulightenment France they swept away the dying past with magnificent elan, and did not live long enough, or think far enough, to establish new institutions in place of those that loosened reason would destroy. In every civilization the time comes when old ways must be re-examined if the society is to readjust itself to irresistable economic change, the Sophists were the instrument of this re-examination, but failed to provide the statesmanship for the readinstment. It remains to their credit that they powerfully stimulated the putsuit of knowledge, and made it fashionable to think. From every corner of the Greek world they brought new ideas and challenges to Athens, and aroused her to philosophical consciousness and maturnty. Without them Socrates, Plato, and Aristotle would have been impossible.

V. SOCRATES

1. The Mask of Silenus

It is pleasant to stand at last face to face with a personality apparently so real as Socrates. But when we consider the two sources upon which we must rely for our knowledge of Socrates we find that one of them, Plato, writes imaginative dramas, that the other, Xenophon, writes historical novels, and that neither product can be taken as history. "They say," writes Diogenes Laertius, "that Socrates having heard Plato read the Lyin, cried out, 'O Heracles' what a number of his the young man has told about me" For Plato had set down a great many things as savings of Socrates which he had never said "" Plato does not pretend to limit himself to fact, probably it never occurred to him that the future might have scant means of distinguishing, in his work, magination from biography. But he draws so consistent a picture of his master throughout the Dialogues, from Socrates' youthful timidity in the l'armenides and his insolent loquacity in the Protagorar to the subdued piety and resignation of the Phaedo, that if this was not Socrates, then Plato is one of the greatest character creators in all literature. Aristotle accepts as authentically Socratic the views attributed to Socrates in the Protagoras." Recently discovered fragments of an Alcibiates written by Aeschines of Sphettos, an ininiediate disciple of Socrates, tend to confirm the portrait given in the earlier dialogues of Plato. and the story of the philosopher's attachment to Meduades.14 On the other hand, Aristotle classes Xenophon's Memorabina and Banquet as forms of fiction, imaginary conversations in which Socrates becomes, more often than not, a mouthpiece for Xenophon's ideas.** If Xenophon honestly played Eckermann to Socrates' Goethe we can only say that he has carefully collected the master's safest platitudes, it is incredible that so virtuous a man should have upset a civilization. Other ancient writers did not make the old tage into such a samt. Amstoxenus of Tarentum, about 318, reported, on the testimony of his father-who claimed to have known Socrates that the philosopher was a person without education, "ignorant and debauched"," and Eupolis, the comic poet, rivated his rival Aristophanes

^{*} So an Book III of the Mentorabilis Socrates is trade to expound the principles of malitary arrangy.

in abusing the great gadfly.¹⁰⁰ Making due discount for polemic virriol it is at least clear that Socrates was a man, hated and loved beyond any other figure of his time.

His father was a sculptor, and he himself was said to have carved a Hermes, and three Graces that stood near the entrance to the Aeropolis." His mother was a midwife it was a standing joke with him that he merely continued her trade, but in the realm of ideas, helping others to deliver themselves of their conceptions. One tradition describes him as the son of a slave," it is improbable, for he served as a hoplite (a career open only to citizens), inherited a house from his father, and had seventy minas (\$7000) invested for him by his found Crito," for the rest he is represented 25 poor." He paid much attention to the training of the body, and was usually in good physical condition. He made a reputation for himself as a soldier during the Peloponnesian War in 432 he fought at Pondaga, in 414 at Delium, in 422 at Amphipolis. At Potidaea he saved both the life and the arms of the young Alcibiades, and gave up in the youth's favor his claim to the prize for valor; at Delium he was the last Athenian to give ground to the Spartans, and seems to have saved himself by glaring at the enemy; even the Sparrans were frightened. In these campaigns, we are told, he exceded all in endurance and courage, bearing without complaint hunger, fatigue, and cold." At home, when he condescended to stay there, he worked as a stonecurter and statuary. He had no interest in travel, and seldom went outside the city and its port. He married Xanthippe, who berated him for neglecting his family, he recognized the justice of her compaint," and defended her gallantly to his son and his friends. Marmage disturbed him so little that he seems to have taken an additional wife when the mortality of males in the war led to the temporary legalization of polygamy."

All the world knows the face of Socrates. Judging precariously from the bust in the Museo delle Terme at Rome, it was not typically Greek," its spacious spread, its flat, broad nose, its thick lips, and heavy heard suggest rather Solon's friend of the steppes, Anacharsis, or that modern Seythian, Tolstoi, "I say," Alcibiades insists, even while protesting his love, "that Socrates is exactly like the masks of bilenus, which may be seen sitting in the statuaries' shops, having pipes and flutes in their mouths, and they are made to open in the middle, and there are images of gods inside them. I say also that he is like Marsyas the satyr. You will not deny, Socrates, that your face is that of a satyr "" Socrates raises no objection; to make

matters worse he confesses to an unduly large paunch, and hopes to reduce

it by dancing.**

Plato and Xenophon agree in describing his habits and his character. He was content with one sample and shabby robe throughout the year, and liked bare feet bester than sandals or shoes. He was incredibly free from the acquisitive fever that agitates mankind. Viewing the multitude of articles exposed for sale in the market place, he remarked, "How many things there are that I do not want!"—and felt himself rich in his poverty. He was a model of moderation and self-control, but all the world away from a saint. He could drink like a gentleman, and needed no rimid ascencism to keep him straight. He was no recluse, he liked good company, and let the rich entertain him now and then, but he made no obeisance to them, could get along very well without them, and rejected the gifts and invitations of magnates and kings. All in all he was fortunate, he lived without working, read without writing, tanght without routine, drank without dizzmess, and died before sendity, almost without pain.

His morals were excellent for his time, but would hardly satisfy all the

good people who prase him. He "rook fire" at the sight of Charmdes, but controlled himself by asking if this handsome lad had also a "noble soul". Plato speaks of Socrates and Alcibiades as lovers, and describes the philosopher "in chase of the fair youth "". Though the old man seems to have kept these amours for the most part Platonic, he was not above giving advice to homosexuals and herairai on how to attract lovers. "He gallantly promised his help to the courtesan Theodota, who rewarded him with the invitation. "Come often to see me." His good humor and kindiness were so unfailing that those who could stomach his polatics found it simple to put up with his morals. When he had passed away Xenophon spoke of him as "so just that he wronged no man in the most trifling affair... so temperate that he never preferred pleasure to virtue, so wise that he never erred in distinguishing better from worse.

whom I have ever known."

others, and of exhorting them to virtue and honor, that he seemed to be such as the best and happiest of men would be." Or, as Plato put it, with moving simplicity, he "was truly the wisest, and justest, and best of all the men

^{*&}quot;So far as drinking is concerned. Xenophou makes Sociates as: "wine does of a critib 'moster the soul and full our griefs to deep. But I impect that men a bodies fare I ke those of parits. When God gives the plants water in floods to drink they cannot stand up straight or let the breezes blow through them, but when they drink only as much as shey enjoy they grow up straight and tall, and come to full and abundant fruitage."

2. Portrait of a Gadfly

Being curious and disputations he became a student of philosophy, and was for a time fascinated by the Sophists who invaded Athens in his youth. There is no evidence that Plato invented the fact as well as the content of Socrates' meetings with Parmenides, Protagoras, Gorgias, Producis, Hippies, and Thrasymachus, it is likely that he saw Zeno when the latter came to Athens about 400, and that he was so infected with Zeno's dialectic that it never left him." Probably he knew Anaxagoras, if not in person then in doctrine, for Archelaus of Miletus, pupil of Anaxagoras, was for a time the teacher of Socrates. Archelaus began as a physicist and ended as a student of morals, he explained the origin and basis of morals on rationalistic lines, and perhaps turned Socrates from science to ethics." By all these avenues bocrates came to philosophy, and thencetorth found his "greatest good in daily converse about virtue, examining myself and others; for a life unscrutinized is unworthy of a man "* So he went prowling among men's beliefs, prodding them with questions, demanding precise answers and consistent views, and making himself a terror to all who could not think clearly. Even in Hades he proposed to be a gaddy, and "find out who is wise, and who pretends to be wise and is not." He protected himself from a similar cross-examination by announcing that he knew nothing, he knew al, the questions, but none of the answers, he modestly called lumself an "amateur in philosophy "" What he meant, presumably, was that he was certain of nothing except man's fallbalaty, and had no bard and fast system of dogmas and principles. When the oracle at Delphs, to Chaerephon's alleged inquiry, "Is any man wiser than Socrates?" gave the alleged reply, "No one " Socrates ascribed the response to his profession of ignorance.

From that moment he set himself to the pragmatic task of getting clear ideas. "For himself," he said, "he would hold discourse, from time to time, on what concerned mankind, considering what was prom, what impious; what was just, what unjust, what was samity, what insanity, what was courage, what cowardice, what was the nature of government over men, and the qualities of one skilled in governing them, and touching on other subjects... of which he thought that those who were ignorant might justly be deemed no better than slaves." To every vague notion, easy generalization, or secret prejudice he pointed the challenge, "What is it?" and asked for precise definitions. It became his habit to rise early and go to the market place, the gymnastims, the pilacetras, or the workshops of artisans, and

^{*} De merceatos bios on biotos anthropo Pinto, Apology, 37.

engage in discussion any person who gave promise of a stimulating intelligence or an aniusing stupidity. "Is not the road to Athens made for conversation?" he asked." His method was simple he called for the definition of a large idea, he examined the definition, usually to reveal its incompleteness, its contradictoriness, or its absurdary, he led on, by question after question, to a fuller and juster definition, which, however, he never gave. Sometimes he proceeded to a general conception, or exposed another, by investigating a long series of particular instances, thereby introducing a measure of induction into Greek logic, sometimes, with the famous Soerane from, he unveiled the ridiculous consequences of the defination or opition he wished to destroy. He had a passion for orderly thinking, and liked to classify individual things according to their genits, species, and specific difference, thereby preparing for Aristotle's method of definition as well as for Plato's theory of Ideas. He liked to describe dialectic as the art of careful distinctions. And he salted the weary wastes of logic with a humor that died an early dearly in the history of philosophy.

His opponents objected that he tore down but never built, that he rejected every answer but gave none of his own, and that the results demoralized morals and paraivzed thought. In many cases he left the idea that he had set out to clarify more obscure than before. When a resolute fellow like Crimas tried to question hun be turned his reply into another question, and at once recaptured the advantage. In the Protagoras he offers to answer instead of asking, but his good resolution lasts but a moment, whereupon Protagoras, being an old band at the game of logic, quietly withdraws from the argument." Thoppus rages at Socrates' clusiveness. "By Zeus!" he cries, "you shall not hear [my answer] until you yourself declare what you think justice to be, for it is not enough that you laugh at others, questioning and confuting everybody, while you yourself are unwilling to give a reason to any body, or to declare your opinion on any subject " To such taunts Socrates replied that he was only a midwife like his mother. "The reproach which is often made against me, that I ask questions of others and have not the wit to answer them inviself, is very just. The reason is that the god compels me to be a midwife, but forbids me to bring forth" -a deut ex machina worthy of his friend Furipides.

In many ways he resembled the Sophists, and the Athenians applied the name to him without hesitation, and usually without reproach. Indeed, he was often a Sophist in the modern sense he was rich in crafty dodges and argumentative tricks, slyly changed the scope or meaning of terms, drowned the problem in loose analogies, quibbled like a schoolboy, and

beat the wind bravely with words." The Athenians might be excused for giving him hemlock, since there is no pest like a conscious logician. In four points he differed from the Sophists he despised rhetoric, he wished to strengthen morality, he did not profess to teach anything more than the art of examining ideas, and he refused to take pay for his instruction—though he appears to have accepted occasional help from his rich friends." With all his irritating faults his students loved him deeply. "Perhaps," he says to one of them, "I may be able to assist you in the pursuit of honor and virtue, from being mutually disposed to love; for whenever I conceive a liking for persons I devote myself with ardor, and with my whole mind, to love them, and be loved by them in return, regretting their absence and having mine regretted by them, and longing for their society while they long for mine."

Aristophanes' Clouds represents the pupils of Socrates as forming a school with a regular meeting place, and a passage in Xenophon lends some color to this conception." Usually he is pictured as teaching wherever he found a pupil or a listener. But no common doctrine united his followers; they differed so widely among themselves that they became the leaders of the most diverse philosophical schools and theories in Greece Platonism, Cymcism, Stoicism, Epicureanism. Skepticism. There was the proud and humble Antisthenes, who took from his master the doctrine of simplicity in life and needs, and founded the Cyruc school, perhaps he was present when Socrates said to Antiphon "You seem to think that happiness consists in luxury and extravagance, but I think that to want nothing is to resemble the gods, and that to want as little as possible is to make the nearest approach to the gods " There was Aristoppus, who derived from Socrates' placid acceptance of pleasure as a good the doctrine which he later developed at Cyrene, and which I picurus would preach at Athens. There was Eucleides of Megara, who sharpened the Socratic dialectic into a skepticism that denied the possibility of any real knowledge. There was the young Phaedo, who had been reduced to slavery, and had been ransomed by Crito at the behest of Socrates, Socrates loved the lad, and 'made him a philosopher "" There was the restless Xenophon who, though he gave up philosophy for soldiering, testified that "nothing was of greater benefit than to associate with Socrares, and to converse with hun, on any occasion, on any subject whatever." There was Piato, upon whose vivid imagination the sage made so lasting an impression that the two minds are mingled forever in philosophical history. There was the neh Crito, who "looked upon Socrates with the greatest affection, and took care that he should never be in want

of anything." There was the dashing young Alcibiades, whose infidelities were to discredit and endanger his reacher, but who now loved Socrates with characteristic abandon, and said:

When we hear any other speaker, even a very good one, his words produce absolutely no effect upon us in comparison, whereas the very fragments of your words, Socrates, even at second hand, and however imperfectly reported, amaze and possess the souls of every man, woman and child who comes within hearing of them. . . I am conscious that if I did not shut my ears against him and fly from the voice of the siren, he would detain me until I grew old sitting at his feet . . . I have known in my soul, or in my heart . . . that greatest of pangs, more violent in ingenuous youth than any serpent's tooth, the pang of philosophy . . And you, Phaedrus, you, Agathon, you, Pryximachus, you, Pausanias, you, Aristodemas, you, Aristophanes, all of you, and I need not say Socrates himself, have all hind experience of the same madness and passion for philosophy."

There was the oligarchic leader Critiss, who enjoyed Socrates' quips against democracy, and helped to incriminate him by writing a play in which he described the gods as the invention of clever statesmen who used them as night watchnien to frighten men into decency." And there was the son of the democratic leader Anytus, a lad who preferred to hear Socrates discourse rather than to attend to his Lusiness, which was dealing in leather. Anytus complained that Socrates had ansertled the boy with skepticism, that the boy no longer respected his parents or the gods; moreover, Anytus resented Socrates' criticisms of democracy." "Socrates," says Anytus, "I think you are too ready to speak evil of men, and if you will take my advice. I would recommend you to be careful. Perhaps there is no city in which it is not easier to do men harm than to do them good; and this is certainly the case at Athens." Anytus bided his time.

3. The Philosophy of Socrates

Behind the method was a philosophy, clusive, tentative, unsystematic, but so real that in effect the man died for it. At first sight there is no Socratic philosophy, but thus is largely because Socrates, accepting the relativism of Protagoras, refused to dogmatize, and was certain only of his ignorance.

^{*} Possible as Platarch and Athenaeus assure us, Anyrus loved Alcibrades, who rejected him for Socratus.***

Though condemned for irreligion, Socrates gave at least lip service to the gods of his city, participated in its religious ceremonies, and was never known to utter an impious word." He professed to follow, in all important negative decisions, an unior darmonion which he described as a sign from heaven. Perhaps this spirit was another play of the Socratic irony, if so, it was remarkably well sustained, and it is but one class of many appeals, in Socrates, to oracles and dreams as messages from the gods " He argued that there were too many instances of amazing adaptation and apparent design to allow us to ascribe the world to chance or any unintelligent cause. On immortality he was not so definite, he pleads for it tenaciously in the Phaedo, but in the Apology he says, "Were I to make any claim to he syiger than others, it would be because I do not think that I have any sufficient knowledge of the other word, when in fact I have none " In the Cratilus be applies the same agnosticism to the gods. "Of the gods we know nothing "" He advised his followers not to dispute of such matters, like Confucius, he asked them did they know human affairs so well that they were ready to module with those of newen?" The best thing to do, he felt, was to acknowledge our ignorance, and meanwhile to obey the oracle at Delphi, which, when asked how one should worship the gods, answered, "Accurding to the law of your country."

Fle applied this skepticism even more rigorously to the physical sciences. One should study them only so far as to goide his life, beyond that they are an inscrutable maze, each mystery, when solved, reveals a deeper mystery. In his youth he had studied science with Archelaus, in his maturity he turned from it as a more or less plausible myth, and interested himself no longer in facts and origins but in values and ends. "He discoursed," says Xenophon, "always of human affairs." The Sophists had also "turned around" from natural science to man, and had begun the study of sensation, perception, and knowledge, Socrates went further inward to study human character and purpose. "Tell me, Furhydemus, have you ever gone to Delphia". "Yes, twice." "And did you observe what is written on the temple wall. Know thyself?" "I did." "And did you take no thought of that enscription, or did you attend to it, and try to examine yourself,

and ascertain what sort of character you are?" "

Philosophy, therefore was for Socrates neither theology nor metaphysics nor physics, but ethics and politics, with logic as an introduction and a means. Coming at the close of the Sophistic period, he perceived that the Sophists had created one of the most critical situations in the history of any culture, the weakening of the supernatural basis of morals. Instead of a

frightened return to orthodoxy, he moved forward to the profoundest question that ethics can ask is a natural ethic possible? Can morality survive without supernatural behef? Can philosophy, by molding an effective secular moral code, save the civilization which its freedom of thought has threatened to destroy? When, in the Euthyphro, Socrates argues that the good is not good because the gods approve of it, but that the gods approve of it because it is good, he is proposing a philosophical revolution. His conception of good, so far from being theological, is earthly to the point of being utilitarian. Goodness, he thinks, is not general and abstract, but specufic and practical, "good for something". Goodness and beauty are forms of usefulness and human advantage, even a dung basker is beautiful if it is well formed for its purpose." Since (Socrates thought) there is nothing else so useful as knowledge, knowledge is the highest virtue, and all vice is ignorance" though "virtue" (arere) here means excellence rather than sinlessness. Without proper knowledge right action is impossible, with proper knowledge right action is mevitable. Men never do that which they know to be wrong-i.e., unwise, injurious to themselves. The highest good is happiness, the highest means to it is knowledge or intelligence.

If knowledge is the highest excellence, Socrates argues, aristocracy is the best form of government, and democracy is nonsense. "It is absurd," says Xenophon's Socrates, "to choose magistrates by lot where no one would dream of drawing lots for a pilot, a mason, a flute player, or any craftsman at all, though the shortcomings of such men are far less harmful than those that disorder our government." He condemns the bugiousness of the Athenians, their noisy envy of one another, the bitterness of their political factions and disputes. "On these accounts," he says, "I am constantly in the greatest fear lest some evil should happen to the state too great for it to bear." Nothing could save Athens, he thought, except government by knowledge and ability, and this was no more to be determined by voting than the qualifications of a pilot, a musician, a physician, or a carpenter. Nor should power or wealth choose the officials of the state, tyranny and plutocracy are as bad as democracy; the reasonable compromise is an aristocracy in which office would be restricted to those mentally fit and trained for it.10 Despite these criticisms of Athenian democracy Socrates recognized its advantages, and appreciated the liberties and opportunities that it gave him. He smiled at the rendency of some followers to preach a "return to Nature," and adopted towards Antisthenes and the Cynics the same attitude that Voltaire would take towards Rousseau-that with all its

faults civilization is a precious thing, not to be abandoned for any primeval

smiphcity."

Nevertheless the majority of the Athenians looked upon him with uritated suspicion. The orthodox in religion considered him to be the most dangerous of the Sophists; for while he observed the amenities of the ancient faith he rejected tradition, wished to subject every rule to the scrutiny of reason, founded morality in the individual conscience rather than in social good or the unchanging decrees of heaven, and ended with a skepticism that left reason itself in a mental confusion unsettling to every custom and belief. To him, as well as to Protagoras and Europides, praisers of the past like Aristophanes attributed the irreligion of the age, the disrespect of the young for the old, the loosened morals of the educated classes, and the disorderly individualism that was consuming Athenian life. Though Socrates refused to support the obgarchic faction, many of its leaders were his pupils or his friends. When one of them, Crimas, led the obgarchs in a rich man's revolution and a ruthless terror, democrats like Anytus and Meletus branded Socrates as the intellectual source of the oligarchic reaction, and determined to remove him from Athenian life.

They succeeded, but they could not destroy his ammense influence. The dialectic he had received from Zeno was passed down through Plato to Aristotle, who turned it into a system of logic so complete that it remained unaltered for nineteen hundred years. Upon science his influence was injurious, students were turned away from physical research, and the doctrine of external design offered no encouragement to scientific analysis. The individualist and intellectualist ethic of Socrates had a modest share, perhaps, in undermining Athenian morals, but its emphasis on conscience as above the law became one of the cardinal tenets of Christianity. Through his pupils the many suggestions of his thought became the substance of all the major philosopmes of the next two centuries. The most powerful element in his influence was the example of his life and character. He became for Greek history a martyr and a saint; and every generation that sought an exemplar of simple living and brave thinking turned back to noursh its ideals with his memory. "In contemplating the man's wisdom and notality of character," said Xenophon, "I find it beyond my power to forger han, or, in remembering him, to refrain from praising him. And if, among those who make virtue their ann, any one has ever been brought into contact with a person more helpful than Socrates, I count that man worthy to be called most blessed."

The Literature of the Golden Age

L. PINDAR

ORMALLY the philosophy of one age is the literature of the next: the ideas and issues that in one generation are fought out on the field of research and speculation provide in the succeeding generation the background of drama, fiction, and poetry. But in Greece the Literature did not lay behind the philosophy; the poets were themselves philosophers, did their own thinking, and were in the intellectual vanguard of their time. That same conflict between conservatism and radicalism which agitated Greek religion, science, and philosophy found expression also in poetry and drama, even in the writing of history. Since excellence of artistic form was added, in Greek letters, to depth of speculative thought, the literature of the Golden Age reached heights never touched again until the days of Shakespeare and Montaigne.

Because of this hurden of thought, and the decay of royal or aristocratic patronage, the fifth century was less rich than the sixth in lyric poetry as an independent art. Pindar is the transition between the two periods he inherits the lyric form, but fills it with dramatic magnificence, after him poetry breaks through its traditional limits, and, in the Dionystan drama, combines with religion, music, and the dance to make a greater vehicle for the splendor and passion of the Golden Age,

Pindar came of a Theban family that traced its lineage back to primitive times, and claimed to include many of the ancient heroes commemorated in his verse. His uncle, an accomplished flutist, passed down to Pindar much of his love for music, and something of his skill. For advanced musical instruction the parents sent the boy to Athens, where Lasus and Agathoeles taught him choral composition. Before he was twenty—i.e., by 602—he returned to Thebes, and studied with the poetess Coruna. Five times he competed against Coruna in public song, and five times was beaten, but Coruna was very pleasing to behold, and the judges were men. Pindar called her a sow, Simonides a crow, himself an eagle. Despite this myopia his repination rose so high that his fellow Thebans soon concocted a story that told how once, as the young poet slept in the fields, some bees had settled upon his lips, and had left their honey there. Soon he was handsomely commissioned to write odes in honor of princes and rich men; he was the guest of noble families in Rhodes, Tenedos,

Corinth, and Athens, and for a time lived as royal bard at the courts of Alexander I of Macedon, Theron of Acragas, and Hieron I of Syracuse. Usually his songs were paid for in advance, very much as if a city should in our days engage a composer to celebrate it with an original composition for chorus and dance, and to conduct the performance himself. When Pindar returned to Thebes, towards his forty-tourth year, he was acclaimed as Boeotia's greatest gift to Greece.

He worked painstakingly, composing the music for each poem, and often training a chorus to sing it. He wrote hymns and paeaus for detites, dirhyrambs for the festivals of Dionysus, parthenna for maidens, enkoma for celel rities, skalia for banquets, threna or direct, for funerals, and epinikia, or songs of victory, for winners at the Panhedense competitions. Of all these only forty-five odes remain, named after the games whose heroes they honored. Of these odes, again, only the words survive, none of the music in judging them, we are in the position of some future historian who, having the libretros of Wagner's operas but nothing of the scores, should list him as a poer rather than a composer, and should tank him by the words that once attended upon his harmonies. Or if we picture some Clunese scholar, unfamiliar with Christian story, reading in one evening, in lame translation ten Bach chorals divorced from their music and ritual, we shall measure our justice to Pindar. When read today, ode after ode, in the silence of the study, he is beyond comparison the dreamest outpost in the classical landscape.

Only the analogy of music can explain the structure of these poems. To Pindar, as to Smoondes and Bacchylides, the form to be followed in an epinician ode was as compulsors as sonata form in the sonatas and symphonics of modern Europe First came the statement of the theme, the name and story of the athiere who had gained the prize, or of the nobleman whose horses had drawn their charget to victory. In general Pindar celebrates "the wisdom of man, and his beauty, and the spiendor of his fame. In truth he was not much interested in his formal subject, he sang in praise of runners, courtesans, and kings, and was willing to accept any promptly paying ry rant as a patron samt if the occasion gave scope to his tich magination and his proposity introcate verse. His topic niight be anything from a male race to the glory of Greek civilization in ad its variety and spread. He was lovel to Thebes, and not more inspired than the Delphie oracle when he detended Theban neutrality in the Persian War, but later he was ashamed of his error, and went out of his way to praise the leader of the Greek defense as "renowned Athens, rich, violet crowned, worthy of song, halwark of Hellas, god-protected enty." The Athenians are said to have given him ten thousand drachmas (\$10,000) for the dithyrambs, or processional song, in which these lines occurred.' Thebes, we are less reliably informed, fined him for his implied reproof, and Athens paid the fine."

The second part of a Pindaric ode was a selection from Greek mythology. Here Pinder was discouragingly lavish, as Corinna complained, he "sowed with the whole sack rather than with the hand." He had a high conception of the gods, and honored them as among his best clients. He was the favorite poet of the Delphic priesthood, during his life he received many privileges from them, and after his death his spare was, with Caledonian generosity, invited to share in the first fruits offered at Apollo's shrine." He was the last defender of the orthodox faith, even the pious Aeschyhis seems wilday heretical beside him, Pindar would have been horrified by the blasphennes of Prometheus Bound Sometimes he rises to an almost it on theistic conception of Zeus as "the All, governing all things and seeing all things." He is a friend of the Mysteries, and shares the Orphic hope of paradise. He preaches the divine origin and destiny of the individual soul," and offers one of the earliest descriptions of a Last Judgment, a Heaven, and a Hell. "Immediately after death the lawless spirits suffer punishment, and the sins committed in this realin of Zeus are judged by One who passeth sentence stern and inevitable."

But in sunshine ever fair

Abide the good, and all their nights and days

An equal splendor wear.

And never as of old with thankless toil

For their poor empty needs they yex the soil,

And plough the watery seas;

But dwelling with the glorious gods in ease

A tearless life they pass,

Whose joy on earth it was

To keep their plighted word. But, far from these,

Turments the rest sustain too dark for human gaze."

The third and concluding section of a Findanic ode was usually a word of moral counsel. We must not expect any subtle philosophy here. Pindar was no Athenian, and had probably never met or read a Sophist, his interlect was consumed in his art, and no force remained for origina, thought. He was satisfied to urge his victorious athletes or princes to be modest in their success, and to show respect for the gods, their fellow men, and their own best selves. Now and then he mingled reproof with praise, and dared to warn Hieron against greed," but neither was he atrial to say a kind word for that most mongried and loved of all goods—money. He althoried the revolutionists of Stelly, and warned them almost in the words of Confucius. "Even for the feeble it is an easy thing to shake a city to its foundation, but it is a sore strengtle to set it in its place again." He liked the moderate democracy of Athens after Salamis, but sincerely believed aristocracy to be the least harmful of all forms of government. Ability, he thought, hes in the blood rather than in schooling, and

tends to appear in families that have shown it before. Only good blood can prepare a man for those rate deeds that ennoble and ment's human life. "Things of a day? What are we and what not? A dream about a shadow is man, yet when some god-grich spleador falls, a glory of light comes over him, and his life is sweet."

Pindar was not popular in his lifetime, and for some centuries yet he will continue to enjoy the lifeless immortality of those writers whom all men praise and no one reads. While the world was moving forward he asked at to stand still, and it left him so far behind that though younger than Aeschylus he seems older than Aleman. He wrote a poetry as compact, involved, and devious as Tacitus' prose, in an artificial and deliberately archaic dialect of his own, in meters so elaborate that few poets have ever cared to follow them," and so varied that only two of the forty-five odes have the same metrical form. He is so obscure, despite the naivere of his thought, that grammarians spend a lifetime unraveling his Tentonic constructions, only to find, beneath them, a mine of sonorous platitudes. If despite these faults, and his frigid formality, and turgid metaphors, and tiresome mythology, some curious scholars are still persuaded to read him, it is because his narratives are swift and vivid, his simple morality is sincere, and the splendor of his language lifts to a passing grandeur even the humblest themes.

He lived to the age of eighty, secure in Thebes from the turnoil of Athenian thought. "Dear to a man," he sang, "is his own home city, his comrades and his kinsmen, so that he is well content. But to foolish men belongeth a love for things afar "" Ten days before his end (442), we are told, he sent to ask the oracle of Ammon, "What is best for man?"—to which the Egyption oracle answered, like a Greek, "Death," Athens put up a statue to him at the public cost, and the Rhodians inscribed his seventh Olympian ode a panegy ne of their island—in letters of gold upon a temple wall. When, in 345, Alexander ordered rebellious Thebes to be burned to the ground he commanded his soldiers to leave unharmed the house in which Pindar had lived and died.

II. THE DIONYSIAN THEATER

The story is told in the Lexicon of Suidas" that during the performance of a play by Pratinas, about 500 B.C., the wooden benches upon which the auditors sat gave way, injuring some, and causing such alarm that the Athenians built, on the southern slope of the Acropolis, a theater of stone,

^{*} A nomble exception is Dryden's Alexander's Feast.

which they dedicated to the god Dionysus.* In the next two centuries similar theaters rose at Fretria, Epidaurus, Argos, Mantinea, Delphi, Tauromenium (Taormina), Syracuse, and elsewhere in the scarrered Greek world But it was on the Di. nysian stage that the major tragedies and comedies were first played, and fought out the bitterest phase of that war, between the old theology and the new philosophy, which binds into one vast process of thought and change the mental history of the Periclean age.

The great theater is, of course, open to the sky. The fifteen thousand seats, rising in a fanlike semicircle of tiers toward the Parthenon, face Mr. Hymetrus and the sea, when the persons of the drama invoke the earth and the sky, the sun and the stars and the ocean, they are addressing realities which most of the audience, as it listens to the speech or chant, can directly see and feel. The seats, originally of wood, later of stone, have no backs, many people bring cushions, but they sit through five plays in a day with no other known support for their spines than the unaccommodating knees of the auditors behind them. In the front rows are a few marble seats with backs for the local high priests of Dionysus and the officials of the city † At the foot of the auditorium is an orchestra, or dancing space, for the chorus. At the rear of this is a small wooden building known as the skene, or scene, which serves to represent now a palace, now a temple, now a private dwelling, and probably also to house the players while off stage \$ There are such simple "properties" altars, furniture, etc -as the story may require, in the case of Aristophanes' Birds there are important adjuncts of scenery and costume," and Agatharchus of Samos paints backgrounds in such a way as to produce the illusion of distance. Several mechanical devices help to vary the action or the place § To show an action that has transpired within the skene, a wooden platform (ekkyklema) may be wheeled out, and have human figures arranged on it in a tableau suggestive

[•] This was not the Theater of Dionyon that toutists see today, the surviving structure was built under the direction of the Finance Al nuster Lycurgus about 338. Some parts of it are conjecturally reseed back to 421, some others appear to have been added in the first and third centuries after Christ.

it I has and the remarks about the stage presume that the theater built by Lycurgus followed the general plan of the structure that it replaced.

Whether the action took place on the roof of the thene, or upon the prostenion, or prosecution before it is universal a perhaps the action moved from one level to the other as the location of the story changed.

I A drop currain was used in the Roman period, being lowered into a crevice at the beginning of a scent, and taised at the end, our our extant years from the fifth century give no evidence of this, and apparently rely on choral interfodes to serve the purpose of a currain between the "acts."

of what has occurred, so a corpse may be on it, with the murderers holding bloody weapons in their hands, it is against the traditions of the Greek drama to represent violence directly on the stage. At either side of the proscenium is a large, trangular, upright prism that turns on a pivot, each face of the prism has a different scene painted on it, and by revolving these periaktor the background can be altered in a moment. A still stranger apparatus is the mechane, or machine, a crane with pulley and weights, it is placed upon the thene at the left, and is used to lower gods or heroes from heaven down to the stage, or to take them back to heaven, or even to exhibit them suspended in the air. Euripides in particular is fond of using this mechanism to let down a god—a deur ex machina, as the Romans put it—who piously unities the knot of his agnostic plays.

The tragic drama at Athens is not a secular or perennial affair, but part of the annual celebration of the feast of Dionysus." From among many plays offered to the archon a few are selected for performance. Each of the ten tribes or demes of Attica chooses one of its rich citizens to serve as choragus, i.e., director of the chorus, it is his privilege to pay the cost of training the singers, dancers, and actors, and to meet the other expenses of presenting one of the compositions. Sometimes a choragus spends a fortune upon scenery, costumes, and "ralent" in this way every play financed by Nicias obtains a prize, "some other choragi economize by hiring second-hand robes from dealers in the atrical costumes." The actual training of the

chorus is usually undertaken by the dramatist himself.

The chorus is in many ways the most important as well as the most costly part of the speciacle. Often it gives its name to the drama, and through it, for the most part, the poet expresses his views on religion and philosophy. The history of the Greek theater is a losing struggle of the chorus to dominate the play at first the chorus is everything, in Thespis and Aeschylus its role diminishes as the number of actors increase; in the drama of the third century it disappears. Usually the chorus is composed not of professional singers but of amateurs chosen from the civic roster of the tribe. They are all men, and number, after Aeschylus, fifteen. They dance as well as sing, and move in digrafied procession across the long and marrow stage, interpreting through the poetry of motion the words and moods of the play.

Music holds in the Greek drama a place second only to the action and the poetry. Usually the dramatist composes the music as well as the

Plays were also presented during the lesser Diouvez, or Lennes, usually at the Piraciu; and at various times in the local theaters of the Aron towns.

words." Most of the dialogue is spoken or declaimed, some of it is chanted in recitative, but the leading roles contain lyrical passages that must be sung as solos, duets, trios, or in unison or alternation with the chorus." The singing is simple, without "parts" or harmony. The accompaniment is usually given by a single flute, and accords with the voices note for note, in this way the words can be followed by the audience, and the poem is not drowned out in the song. These plays cannot be judged by reading them silently, to the Greeks the words are but a part of a complex art form that weaves poetry, music, acting, and the dance into a profound and moving unity."

Nevertheless the play is the thing, and the prize is awarded less for the music than for the drama, and less for the drama than for the acting; a good acror can make a success of a middling play." The acror who is always a male is not disdained as in Rome, but is much honored, he is exempt from monary service, and is allowed safe passage through the unes in time of war. He is called hypokrites, but this word means answerer-i.e., to the chorus, only later will the actor's rele as an impersonator lead to the use of the word as meaning hypocrite. Actors are organized in a strong union or guild called the Dionysian Artists, which has members throughout Greece. Troupes of players wander from city to city, composing their own plays and music, making their own costumes, and setting up their own stages. As in all times, the incomes of leading acrors are very high, that of secondary acroes precariously low," and the morals of both are what might be expected of men moving from place to place, fluctuating between luxery and poverty, and too ligh-strung to be capable of a stable and normal life.

In both tragedy and comedy the actor wears a mask, fitted with a resonant mouthpiece of brass. The acoustics of the Greek theater, and the visibility of the stage from every seat, are remarkable, but even so it is found advisable to remtorce the voice of the actor, and help the eve of the distant spectator to distinguish readily the various characters portrayed. All subtle play of vocal or facial expression is sacrificed to these needs. When real individuals are represented on the stage, like the Furipides of the Eccle-

^{*}Music continued to play a central role in the culture of the classic period (480-323). The great name among the fifth century composers was Immunes of M letus, he wrote notices in which the notice dominated the poetry and represented a story and an action. His extension of the Greek lyre to cleven strong, and his experiments in complex and elaborate styles, provoked the conservatives of Athens to much demonstration that Immortate, we are trial, was about to take his own life when Europides conformed him, collaborated with him, and correctly prophesied that all Greece would soon be at his feet.**

reasure, their actual features. The masks have come down into the drama from religious performances, in which they were often instruments of terror or humor, in comedy they continue this tradition, and are as grotesque and extravagant as Greek fancy can make them. Just as the actor's voice is strengthened and his countenance enlarged by the mask, so his dimensions are extended with padding, and his height is enhanced by an onkos, or projection on his head, and by kothornos, or thick soled shoes, on his feet. Ail in all, as Lucian puts it, the ancient actor makes a "hideous and

appalling spectacle."

The audience is as interesting as the play. Men and women of all ranks are admirted," and after 420 all citizens who need it receive from the stare the two obols required for entrance. Women sit apart from men, and courtesans have a place to themselves, custom keeps all but the looser ladies away from comedy." It is a lively audience, not less or more mannerly than such assemblages in other lands. It eats nurs and fruit and drinks wine as it listens; Aristotle proposes to measure the failure of a play by the amount of food eaten during the presentation. It quarrels about seats, claps and shouts for its favorites, bisses and groans when it is displeased, when moved to more vigorous protest it kicks the benebes beneath it, if it becomes angry it may frighten an actor off the stage with olives, figs, or stones." Aeschines is almost stoned to death for an offensive play, Aeschylus is nearly killed because the audience believes that he has revealed some secrets of the Eleusinian Mysteries. A musician who has borrowed a supply of stones to build a house promises to repay it with those that he expects to collect from his next performance." Actors sometimes hire a claque to drown out with applause the bisses they fear, and come actors may throw nuts to the crowd as a bribe to peace." If it wishes, the audience can by deliberate noise prevent a drama from commung, and compel the performance of the next play," in this way a long program may be shortened within bearing.

There are three days of drama at the city Dionysia, on each day five plays are presented three tragedies and a sayer play by one poet, and a comedy by another. The performance begins early in the morning and continues till dask. Only in exceptional cases is a play performed twice in the Theater of Dionysis, those who have missed at there may see it in the theaters of other Greek cases, or with less spiendor on some rural stage in Attica. Between 480 and 380 some two thousand new dramas are performed at Athens." In early times the prize for the best tragic tribagy was a goat, for

the best comedy a basket of figs and a jug of wine, but in the Golden Age the three prizes for tragedy and the single prize for comedy take the form of grants of money by the state. The ten judges are chosen by lot in the theater itself on the first morning of the competition, out of a large list of candidates nominated by the Council. At the end of the last play each of the judges writes his selections for first, second, and third prizes upon a tablet, the tablets are placed in an urn, and an archon draws out five tablets at random. These five judgments, summed up, constitute the final award, and the other five are destroyed unread, no one, therefore, can know in advance who the judges are to be, or which of them will really judge. Despite these precautions there is some corruption or intimudation of judges." Plato complains that the judges, through fear of the crowd, almost always decide according to the applause, and argues that this "theatrocracy" is debasing both the dramatists and the audience." When the contest is over the victorious poet and his choragus are crowned with ivy, and sometimes the victors set up a monument, like the choragic monument of Lysicrates, to commemorate their triumph. Even kings compete for this crown.

The size of the theater and the traditions of the festival determine in large measure the nature of the Greek drama. Since miantees cannot be conveyed by facial expression or vocal inflection, subtle character portraits are rare in the Dionysian theater. The Greek drama is a study of fate, or of man in conflict with man, the modern drama is a study of action, or of man in conflict with man, the modern drama is a study of character, or of man in conflict with himself. The Athenian audience knows in advance the destiny of each person represented, and the issue of each action, for religious custom is still strong enough in the fifth century to limit the theme of the Dionysian drama to some story from the accepted myths and legends of the early Greeks.* There is no suspense and no surprise, but, instead, the pleasures of anticipation and recognition. Dramatist after dramatist tells the same tale to the same audience, what differs is the poetry, the music, the interpretation, and the philosophy. Even the philosophy, before Euripides, is determined in large measure by tradition, throughout

There were a few dramas about later honors of these the only extant example as Acsolylas Person Roman. About 49, Phrymodus presented The Fall of Mactus but the Athematic were so record to great by contemplating the capture of their daughter only by the Persons that they fined Phrymodum a thousand brachmas for his innovation, and forbade any experiment of the play. There are some indications that Themstocles had secretly arranged for the performance as a means of starting up the Athematic to active war against Person.

Aeschylus and Sophocles the prevailing theme is the nemesis of punishment, by jealous gods or impersonal fate, for insolent presumption and irreverent pride (hybrit), and the recurring moral is the wisdom of conscience, honor, and a modest moderation (hador). It is this combination of philosophy with poetry, action, music, song, and dance that makes the Greek drama not only a new form in the history of literature, but one that almost at the outset achieves a grandeur never equaled again.

III. AESCHYLUS

Not quite at the outset, for as many talents, in heredity and history, prepare the way for a genius, so some lesser playwrights, who may here be forgotten with honor, intervened between Thespis and Aeschylus, Perhaps it was the successful resistance to Persu that gave Athens the pride and stimulus necessary to an age of great drama, while the wealth that came with trade and empire after the war provided for the costly Diony sian contests in dithyrambic singing and the choral play. Aeschylus felt both the stumuous and the pride in person. Lake so many Greek writers of the fifth century, he lived as well as wrote, and knew how to do as well as to speak. In 400, at the age of twenty-six, he produced his first play, in 400 he and his two brothers fought at Marathon, and so bravely that Athens ordered 2 painting to commemorate their deeds, in 484 he won his first prize at the Dionysian festival, in 480 he fought at Artemisium and Salamis, and in 479 at Plataea, in 476 and 470 he visited Syracuse, and was honored at the court of Hieron I, in 468, after dominating Atheman literature for a generation, he lost the first prize for drama to the youthful Sophocles, in 467 he recaptured supremacy with his Seven against Thebes; in 458 he won his last and greatest victory with the Oresteia trilogy, in 456 he was again in Sicily, and there, in that year, he died

It took a man of such energy to mold the Greek drama into its classic form. It was Aeschylus who added a second actor to the one drawn out from the chorus by Thespis, and thereby completed the transformation of the Dionysian chant from an oratorio into a play. He wrote seventy (some say ninety) dramas, of which seven remain. Of these, the earliest

^{*}Though to Aeschylus the actors were only two, the soles they played in a drama were limited only to the sense that no more than two characters con d be on the stage at once. The leader of the chorus was sometimes individualized into a third actor. Minor characters—attendants, soldiers, etc.—were not counted as actors.

three are minor works " the most famous is the Prometbeus Bound; the

greatest make up the Orestera trilogy.

The Prometheus Bound, too, may have been part of a miogy, though no ancient authority voucnes for this. We hear of a sarry play by Aeschylus called Prometheus the Fire Bringer; but it was produced apart from the Prometheus Bound, in a quite different combination." Fragments survive of a Prometheus Unbound by Aeschylus, these are well-nigh meaningless, but anxious scholars assure as that if we had the full text we should find Aeschylus answering satisfactorily all the heresies which the estant play puts into the hero's lines. Even so it is noteworthy that an Arheman audience, at a religious festival, should have put up with the Tuan's blasphemies. As the play opens we find Prometheus being chained to a rock in the Caucasus by Hephaestus at the command of a Zeus trate because Prometheus has taught men the art of fire. Hephaestus speaks.

High-thoughted son of Themis, who is sage!
Thee loath I loath must river fast in chains
Against this rocky height uncloud by man,
Where never human voice nor face shall find
Out thee who loy'st them, and thy beauty's flower,
Scorched in the son's clear heat shall fade away.
Night shall come up with garmture of stars
To comfort thee with shadow, and the sun
Disperse with retrickt beams the morning frosts,
But through all dangers sense of present woe
Shall yex thee sore, because with none of them
There comes a hand to free Such fruit is plucked
From love of man! . . . For Zeus is stern,
And new-made kings are cruel.*

Hanging helpless on the erag. Prometheus harls defiance to Olympus, and recounts proudly the steps by which he brought enviloation to primitive men, who till then

lived like silly ants beneath the ground. In hollow caves unsunned. There came to them No steadfast sign of winter, nor of spring. Flower-perfumed, nor of summer full of fruit;

^{*} The Suppliant Women is of the pressure type, in which the chorus predor mates, The Pernant is two mostly closes, and evenly describes the brule of Salains, the Seten against Tuches was the in rd play in a trilligs that told the stary of King Laus and his queen Jocasta the partience and meest of their son Oedipus, and the conflict between the som of Oedipus for the Theban throne.

But blindly and lawlessly they did all things, Until I taught them how the stars do rise And set in invitery, and devised for them Number, the inducer of philosophies, The synthesis of letters, and besides, The artificer of all things, memory That sweet muse-mother I was first to yoke The servile beasts. . . . And none but I originated ships.

Who did devise for mortals all these arts, Have no device left now to save myself."

The whole earth mourns with him. "There is a cry in the waves of the sea as they full together, and a groaming in the deep, a wail comes up from the cavern realms of death." All the nations send their condolences to this political prisoner, and bid him remember that suffering visits all "Grief walks the earth, and sits down at the feet of each by turns." But they do nothing to free him. Oceanus advises him to yield, "seeing that who reigns, reigns by cruelty instead of right", and the chorus of Oceanids, daugmers of the sea, wonder whether humanity deserves to be suffered for with such a crucifixion. "Nay, thine was a helpless secrifice, O beloved . . . Daist thou not see the race of men, how lattle in effort and energy, dreamers bound in chains?" Nevertheless they so admire him that when Zeus threatens to harl han down into Tartarus they stay by him, and face with him the thunderbolt that blasts them and Prometheus into the abyss. But Prometheus, being a god, is denied the easement of death. In the lost conclusion of the trilogy he is raised up from Tartarus to be again chained to a mountain rock, and a vulture is commissioned by Zeus to gnaw our the Titan's heart. The heart grows by might as fast as the vulture consumes it by day, in this way Prometheus suffers through thirteen generations of men. Then the kindly giant Heracles kills the vulture, and persuades Zeus to free Prometheus The Titan repents, makes his peace with Omnipotence, and places upon his finger the iron ring of necessity.

In this simple and powerful trilogy Aeschylus set the theme of Greek drama -the struggle of human will against inescapable destiny and the theme of the life of Greece in the fifth century-the conflict between rebellious thought and traditional belief. His conclusion is conservative, but he knows the case for the rebel, and gives it all his sympathy, not even in Europides shall we find so critical a view of Olympus. This is another Paradise Lost in which the Fallen Angel, despite the poet's piety, is the hero of the tale. Probably Milton often recalled Aeschylus' Titan when he composed such eloquent speeches for Satan. Goethe was fond of this play, and used Prometheus as a mouthpiece in irreverent youth, Byson made him the model of nearly all his serves, and Shelley, always at odds with fate, brought the story back to life in Prometheus Unbound, where the rebel never yields. The legend hides a dozen allegories: suffering is the fruit of the tree of knowledge, to know the future is to gnaw one's heart away, the liberator is always crucified; and in the end one must accept limits, man muss entragen, must accomplish his purpose within the nature of things. This is a noble theme, and he.ps the majestic language of Aeschylus to make the Prometheus a tragedy in the "grand style." Never has the war between knowledge and superstmon, enlightenment and obscurantism, genus and dogma, been more powerfully pictured, or lifted to a higher reach of symbol and atterance. "The other productions of the Greek tragedians," said Schlegel, "are so many tragedies, but this is Tragedy herself."

Nevertheless the Oresteia is greater still-by common consent the finest achievement in Greek drama, perhaps in all drama." It was produced in 458, probably two years after Prometheus Bound, and two years before the author's death. The theme is the fateful breeding of violence by violence, and the mescapable punishment, through generation after generation, of insolent pride and excess. We call it a legend but the Greeks, perhaps rightly, called it history. The story, as told by each of the greater dramatists of Greece, mag it be called The Children of Tantalus, for it was he, the Phrygian king so recklessly proud in his wealth, who began the long chain of crime, and called down the vengeance of the Furies, by stealing the nectar and ambrosia of the gods, and giving the divine food to Pelops, his son, in every age some men acquire more wealth than befits a man, and use it to spoil their children. We have seen how Pelops, by foul means, won the throne of I lis, slew his accomplice, and married the daughter of the king whom he had deceived and killed. By Hippodameia he had three children: Thyestes, Aerope, and Atreus. Thyestes seduced Aerope, Atreus, to avenge his sister, served up his brother's children to him at a banquet, whereupon Aegisthus, son of Thyestes by Thyestes' daughter, vowed vengeance upon Atreus and his line Arreus had two sons, Agamemnon and Menelaus. Agamemnon married Clytaemnestra, and had by her two daughters, Iphigenia and Electra, and one son, Orestes. At Aulis,

where his ships were becalmed on the way to Troy, Agamemnon, to the horror of Caytaemnestra, sacrificed lphagenia to induce the winds to blow. While Agamemnon besieged Troy, Agaisthus courted his brooding wife, won her, and plotted with her to kill the King. It is at this point that Aeschylus takes up the tale.

The news has come to Argos that the war is over, and proud Agamemnon "robed in steel, and armies trembled at his wrath"—has landed on Peloponnesian shores, and is approaching Mycenae. A Chorus of Elders appears before the royal palace, and in ominous chant recalls Agamemnon's abandonment of Iphigena:

In that which Must Be he armed him slowly,
And a strange wind within his bosom tossed,
A wind of dark thought, unclean, unboly,
And he rose up, daring to the intermost.
For men are boldened by a Blindness, straying
Toward base desire, which brings grief hereafter,
Yea, and itself is grief.
So this man hardened to his own child's slaying,
As help to avenge him for a woman's laughter,
And bring his ships relief.

With violence and a curb's voiceless wrath
Her stole of saffron to the ground she threw,
And her eye with an arrow of pity found its path
To each man's heart that slew:
A face in a picture, striving amazedly,
The little maid who danced at her father's hoard,
The innocent voice man's love came never nigh,
Who joined to his her little pacan-cry
When the third cup was poured."

Agamemnon's herald enters to announce the coming of the King. Aeschylus realizes with fine imagination the joy of the simple soldier as he sets foot, after a long absence, upon his native soil, now, says the herald, "I am ready, if God will, to die." He describes to the Chorus the terror and filth of the war, the rain that sent a moisture into the bones, the vermin that multiplied in the hair, the breathless heat of Ilion's summer, and the winter so cold that all the birds fell dead. Clytaemnestra comes from the palace, somber, nervous, and yet proud, and orders rich hangings to be strewn for Agamemnon's path. The King enters in the royal chariot,

escorted by his troops, and erect in the pride of victory. Behind him is another chariot, bearing the darkly beautiful Cassandra, Trojan princess and prophetess, the resentful slave of Agamemnon's lust, who bitterly predicts his punishment, and gloomily foresees her own death. With clever speech Clytaenmestra recounts to the King her years of longing for this return. "For you indeed the rushing fountains of my tears have run dry, and there is no drop left. But in my eyes, worn with lare watching, you may see how I sorrowed for the signals of your victory that ever tarried; and in my disturbed sleep I started at the faint buzzing of the grat's wing, for I dreamt of you long tales of wee, crowded into a short moment of repose." He suspects her sincerity, and reproves her dourly for the lavish outlay of broidered hangings under his horses' feet, but he follows her into the palace, and Cassandra resignedly accompanies him. Through an intense pause in the action the Chorus intones softly a song of evil premomtion. Then from within comes the cry towards which every line of the drama has moved, the death cry of Agamemnon slain by Aegisthus and Clytaemnestra. The portals open, Clytaemnestra is shown with ax in hand and blood on her brow, standing triumphant over the corpses of Cassandra and the King, and the Chorus chants the end

Would God that suddenly,
With no great agony.
No long sick-watch to keep,
My hour would come to me,
My hour, and presently
Bring the eternal, the
Unwaking Sleep,
Now that my Shepherd, he
Whose love watched over me,
Lies in the deep.

The second play in the trilogy, the Choephoroe, or Libation Bearers, takes its title from the chorus of women who bring offerings to the grave of the King. Givtaemnestra has sent her young son Orestes to be reared in distant Phoeis, hoping that he may forger his father's death. But old men there teach him the ancient law of vengeance. "The shed drop doth crave new blood", the state, in those dark days, left the punishment of murder to the dead man's kin, and men believed that the soul of the slain would know no peace till he had been avenged. Orestes, haunted and horrified with the thought of his mission, to kill his mother and Aegisthus—comes secretly to Argos with his comrade Pylades, seeks out his father's tomb.

and lays upon it a lock of his hair. Hearing the approach of the Libation Bearets, the young men withdraw, and listen in fascination as Electra, Orestes' brooding sister, comes with the women, stands over the grave, and calls upon Agamemnon's spirit to arouse Orestes to avenge him. Orestes reveals himself, and from her bitter heart she pours into his simple mind the thought that he must kill their mother. The youths, disguised as merchants, proceed to the royal palace, Clytaemnestra softens them with hospitality, but when Orestes tests her by saying that the boy she sent to Phocis is dead, he is shocked to see a secret joy hiding in her grief. She calls Aegisthus to share with him the news that the avenger whom they feared is no more. Orestes slays him, drives his mother into the palace, and comes out a moment later already half insane with the consciousness that he is a matricide.

While I am still not mad I here declare To all who love me, and confess, that I Have slain my mother."

In the third play Orestes is pursued, in the poet's externalization of the boy's wild fancy, by the Frinnyes, or Furies, whose task it is to punish crinic, and from their cuphenistic, deprecatory title, the Fumenides, or Well-Wishers, the play derives its name. Orestes is an outcast, shunned by all men, wherever he goes the Furies hang over him as black gliosts crying our for his blood. He flings himself upon the alter of Apollo at Delphi, and Apollo comforts him, but the shade of Clytaemnestra rises from the earth to urge the Furies not to desist from torturing her son. Orestes goes to Athens, kneels before Athena's shrine, and eries out to her for deliverance. Athena hears hun, and calls him "perfect by suffering," When the Frances protest she summons them to try Orestes' case before the Council of the Areopagus, the concluding scene shows this strange trial, symbolical of the replacement of blood revenge with law. Athena, goddess of the city, presides, the Furies state the case for vengeance against Orestes, and Apollo defends him. The court divides evenly. Athena casts the deciding ballot in favor of Orestes, and declares him free. She solemnly establishes the Council of the Arcopagus as henceforth the supreme court of Attica, whose swift condemnation of the murderer shall free the land from feuds, and whose wisdom will guide the state through the dangers that beset every people. The goddess by her fair speech appeases the disappointed Funes, and so wins them that their leader says, "This day a new Order is born."

After the Iliad and the Odyssey, the Oresteia is the highest achievement in Greek aterature. Here is a breadth of conception, a unity of thought and execution, a power of dramatic development, an understanding of character, and a splendor of style which in their sum we shall not find again before Shakespeare. The trilogy is as closely knit as the three acts of a well-designed drama, each part foreshadows and requires the next with logical inevitability. As play succeeds play the terror of the theme grows until we begin dimly to realize how deeply this story must have moved the Greeks. It is true that there is too much talk, even for four murders, that the lytics are often obscure, their metaphors exaggerated, their language sometimes heavy and rough and strained. Nevertheless these chorals are supreme in their kind, ful, of grandeur and tenderness, eloquent with their plea for a new religion of forgiveness, and for the virtues of a political order that was passing away.

For the Orestein is as conservative as the Prometheus is radical, though only two years seem to have separated them in time. In 462 Fpainles deprived the Areopagus of its powers, in 46: he was assassinated, in 458 Aes, bylus offered in the Orestera a defense of the Council of the Areopagus as the wisest body in the Athenian government. The poet was now full of years, and could understand the old more easily than the young, like Aristophanes he longed for the virtues of the men of Marathon Athenaeus would have us believe that Aeschylus was a great drinker," but in the Oresteia he is a Puritan preaching a sermon in buskins on sin and its punishin ent, and the wisdom born of suffering. The law of by brit and nemesis is another doctrine of karma, or of original sin, every evil deed will be found out, and be avenged in one life or another. In this way Greek thought made its trial at reconciling evil with God all suffering is due to sin, even if it is the sin of a generation that is dead. The author of Promethem was no naive pietist, his plays, even in the Oreneia, are studded with heresies; he was attacked for revealing ritual secrets, and was saved only by the intercession of his brother Ameinias, who bared before the Assembly the wounds he had received at Salamis." But Aeschylus was convinced that morality, to hold its own against unsocial impulse, required supernatural sanctions, he hoped that

> One there is who heareth on high— Some Pan or Zeus, some seer Apollo— And sendeth down, for the law transgressed, The Writh of the Feet that follow.

—i.e., the Funes of conscience and retribution. Therefore he speaks with a solemn reverence for religion, and makes an effort to reach beyond polytheism to the conception of one God.

Zeus, Zeus, whate'er He be, If this name He love to hear, This He shall be called of me. Searching earth and sea and air Refuge nowhere can I find Save Him only, if my mind Will cast off, before it die, The burden of this vanity."

He identifies Zeus with the personified Nature of Things, the Law or Reason of the World, "The Law that is Fate and the Father and All-comprehending are here met together as one."

Perhaps these concluding lines of his masterpiece were his last words as a poet. Two years after the Oresteta we find him again in Siedy. Some believe that the audience, being more radical than the judges, did not like the trilogy, but this hardly accords with the fact that the Athenians, a few years later, and directly contrary to custom, decreed that his plays might be repeated in the Theater of Dionysus, and that a chorus should be granted to anyone who offered to produce them. Many did, and Aeschylus continued to win prizes after his death. Meanwhile in Sicily, says an old story, an eagle had kaled him by dropping a tortoise upon his bald head, mistaking it for a stone. There he was borred over his own epitaph, so strangely suent about his plays, so humanly proud of his sears:

Beneath this stone has Aeschylas; Of his noble prowess the grove of Marathon can speak, Or the long-haired Persian, who knows it well.

IV. SOPHOCLES

The first prize for tragedy was won from Aeschylus in 468 by a new-comer, aged twenty-seven, and bearing a name that meant the Wise and Honored One. Sophocles was the most fortunate of men, and almost the darkest of pessimists. He came from Colonus, a suburb of Athens, and was the son of a sword manufacturer, so that the Persian and Peloponnesian Wars, which impoverished nearly all Athenians, left the dramatist a comfortable income. In addition to wealth he had genius, beauty, and good

health. He won the double prize for wrestling and music-a combination that would have pleased Plato, his skill as a ballplayer and a harpist enabled him to give public performances in both fields, and after the battle of Salamis it was he who was chosen by the city to lead the nude youths of Athens in a dance and song of victory." Even in later years he was handsome, the Lateran Museum statue shows him old and bearded and rounded, but still vigorous and tall. He grew up in the happiest age of Athens, he was the friend of Pericles, and held high offices under him, in 441 he was Imperial Treasurer; in 440 he was one of the generals who commanded the Athenian forces in Peneles' expedition against Samos-though it should be added that Pericles preferred his poetry to his strategy. After the Athenian debacle in Syracuse he was appointed to the Committee of Public Safety," and in this capacity he voted for the oligarchical constitunon of 411. The character pleased the people more than his politics, he was genial, witry, unassuming, pleasure-loving, and endowed with a charm that atoned for all his errors. He had a fancy for money" and boys," but in his old age he turned his favor to courtesans." He was very pious, and

occasionally filled the office of priest."

He wrote 113 plays; we have only seven, and do not know the order in which they were produced. Eighteen tunes he won the first award at the Dionysian, twice at the Lenaean, festivals, he received his first prize at twenty-five, his last at eighty-five, for thirty years he ruled the Athenian stage more completely than Pericles contemporaneously ruled Athens. He increased the number of actors to three, and played a role himself until he lost his voice. He (and after him Furipides) abandoned the Aeschylean form of trilogy, preferring to compete with three independent plays. Aesehylus was interested in cosmic themes that overshadowed the persons of his drama, Sophoeles was interested in character, and was almost modern in his flair for psychology. The Trachiman Women is on its surface a sensational melodrama Deianeira, jealous of her husband and Heracles' love for lola, sends him unwittingly a poisoned robe, and, when it consumes him, kills herself, what draws Sophocles here is not the punishment of Heracles, which would have seemed central to Aeschylus-nor even the passion of love, which would have attracted Euripides-but the psychology of jealousy. So in the Ajax no attention is paid to the mighty deeds of the hero; what lures the author is the study of a man going mail. In the Philoctetes there is almost no action, but a frank analysis of injured sumplicity and diplomatic dishonesty. In the Electra the story is as slight as it is old, Aeschylus was fascinated by the moral issues involved, Sophocles almost ignores them in his eagerness to study with psychoanalytic ruthlessness the young woman's hatred of her mother. The play has given its name to a neurosis once widely discussed, as *Oedique the King* has provided a name for another.

Oedepus Tyramus is the most famous of Greek dramas. Its opening scene is impressive a motley throng of men, women, boys, girls, and infants sit before the royal palace in Thebes, carrying boughs of laurel and olive as symbols of supplication. A plague has failer upon the city, and the people have gathered to beg King Oedipus to offer some appearing sacrifice to the gods. An oracle announces that the plague will leave Thebes with the unknown assassin of Laius, the former king. Oedipus lays a hitter curse upon the murderer, whoever he may be, whose crime has brought such misery to Thebes. This is a perfect instance of that method which Horace advised, of plunging in medias res, and letting explanations enter afterward. But the audience, of course, knew the story, for the tale of Laius, Oed,piis, and the Sphinx was part of the folklore of the Greeks. Tradition said that a curse had been laid upon Lains and his children because he had introduced an unnatural vice into Hellas;" the consequences of this sin, running generation after generation, formed a typical theme for Greek tragedy. Laius and his queen Jocasta, said an oracle, would have a son who would slay his father and marry his mother. For once in the world's history two parents wanted a girl for their first child. But a son came, and to avoid fulfillment of the oracle he was exposed on the hales. A shepherd found him, called him Occupus from his swollen feet, and gave him to the king and queen of Corinth, who reared him as their son. Grown to manhood, Oedipus learned, again from the oracle, that he was destined to kill his father and marry his mother. Believing the king and queen of Cornth to be his parents, he fled from that city and took the road to Thebes. On the way he met an old man, quarreled with him, and slew him, not knowing that the old man was his father Nearing Thebes he encountered the Sphinx, a creature with the face of a woman, the tail of a lion, and the wings of a bird. To Oedipus the Sphinx presented its renowned riddle. 'What is that which is four-footed, threefooted, and two-footed?" All who failed to answer correctly were destroyed by the Sphinx, and the terrified Thebans, longing to clear the lughway of this monster, had vowed to have as their next king whoever should solve the riddle, for the Sphinx had agreed to commit suicide if anyone answered it. Oedipus replied: "Man, for as a child he crawls on four feet, as an adult he walks on two, and as an old man he adds a cane " It was

a lame answer, but the Sphinx accepted it, and loyally plunged to its death. The Thebans hailed Oedipus as their savior, and when Laius failed to return they made the newcomer king. Obeying the custom of the land, Oedipus married the queen, and had by her four children. Anogone, Polynices, Treocles, and Ismene. In the second scene in Sophocles' play, the most powerful scene in Greek drama an old high priest, commanded by Oedipus to reveal, if he can, the identity of Lanis' murderer, names Oedimus himself. Nothing could be more tragic than the King's reluctant and terrified realization that he is the slaver of his father and the mate of his mother. Jocasta refuses to believe it, and explains it away as a Freudian dream: "It has been the lot of many men in dreams," she reassures Oedipus, "to think themselves partners of their mother's bed, but he passes through life most easily to whom these things become trifles." When the identification is complete she hongs herself, and Occupies, mad with remorse, gouges out his own eyes, and leaves Thebes as an exile, with only Antigone to help him.

In Oedipus at Colomis, the second play of an unintentional trilogy,* the former king is a white haired outcast learning upon his Jaughter's arm and begging his bread from town to town. He comes in his wandering to shady Colomis, and Sophiceles takes the opportunity to sing to his native village, and its faithful olive groves, an untranslatable song which ranks

high in Greek poetry:

Stranger, where thy feet now rest
In this land of horse and rider,
Here is earth all earth excelling,
White Colonus here doth shine.
Oftenest here, and homing best
Where the close green coverts hide her,
Warbling her sweet mournful tale,
Sings the melodious nightingale . . .
Fresh with heavenly dews, and crowned
With earliest white in shining cluster,
Fach new morn the young narcissus
Blooms. . . .

And a marvelous herb of the soil grows here, Whose march I never had heard it sung in the Dorian Isle of Pelops near Or in Asia far hath spring.

[·] Oediput the King, Oedipus at Calantu, and Antigone were produced separately,

Tis a plant that flourishes unsubdued,
Self-engendering, self-renewed,
To her armed foes' dismay:
That never so fair but in this land bloomed,—
With the grey-blue silvery leaf soft plained,
Her nurturing Olive-Spray,
No force, no ravaging hand shall raze it,
In youth so rash or in age so wise,
For the orb of Zeus in neaven surveys it,
And blue-grey light of Athena's eyes."

An oracle has foretold that Oedipus will die in the precincts of the Eumen des, and when he learns that he is now in their sacred grove at Colonus the old man, having found no loveliness in life, thinks that here it would be sweet to die. To Theseus, King of Athens, he speaks lines that sum up with clairvoyant insight the forces that were weakening Greece—the decay of the soil, of faith, of morals, and of men

Only to gods in heaven

Comes no old age, nor death of anything;
All else is turmoiled by our master Time

The earth's strength fades, and manhood's glory fades,
Fasth thes, and unitath blossoms tike a flower.

And who shall find in the open streets of men,

Or secret places of his own heart's love,

One wind blow true forever?

Then, seeming to hear the call of a god, Ocd pus bids a tender farewell to Antigone and Ismene, and walks into the dark grove. Theseus alone accompanying him.

Going on

A little space we rurned. And lo, we saw
The man no more, but he, the King,* was there,
Holding a hand to shade I is eves, as one
To whom there comes a vision drear and dread
He may not bear to look upon....

What form of death

He died, knows no man but our Theseus only ... But either some one whom the gods had sent To guide his steps, or else the abves of earth In friendly mood had opened wide its jaws

^{*} Theorem.

Without one pang. And so the man was led With naught to mourn for—did not leave the world As worn with pain and sickness, but his end, If any ever was, was wonderful.*

The last play in the sequence, but apparently the first of the three to be composed, carries the faithful Antigone to her grave. Hearing that her brothers Polynices and Eteocles are warring for the kingdom, she hurries back to Thebes in the hope of bringing peace. But she is ignored, and the brothers fight to their death. Creon, ally of Eteocles, seizes the throne, and, as punishment for Polynices' rebellion, forbids his burial. Antigone, sharing the Greek belief that the spirit of the dead is tortured so long as the corpse is not interred, violates the ethet and buries Polynices. Meanwhile the chorus sings one of the most renowned of Sc phoeles' odes.

Many wonders there be, I it rought more wondrous than man. Over the surging sea, with a whitening south wind wan, Through the foam of the firth man makes his peritous way; And the eldest of deities, batth that knows not toil or decay, Ever he furrows and scores, as his team, year in year out. With breed of the yoked horse the ploughshare turneth about.

The light-witted birds of the air, the beasts of the weald and the wood,

He traps with his woven snare, and the brood of the briny flood. Master of chaning her the savage buil, and the hart Who roams the mountain free, are tauted by his infinite art; And the shaggy rough-maned steed is broken to bear the bit.

Speech, and the wind swift speed of counsel and civic wit, He hath learned for himself all these, and the attowy rain to fly, And the nipping airs that freeze, 'neath the open winter sky. He hath provision for all, fell plague he hath learned to endure; Safe whate'er may befall, yet for death he hath found no cure."

Antigone is condemned by Creon to be buried alive. Creon's son Haemon protests against the awful sentence, and, being repulsed swears to his father "thou shalt never more set eyes upon my face." Here for a moment love plays a part in a Sophoclean tragedy and the poet intones to Eros a hymn long remembered in antiquity:

Love resistless in fight, all yield at a glance of thine eye; Love who pillowed all night on a maiden's cheek doth lie; Over the upland folds thou roamest, and the trackless sea. Love the gods captive holds, shall mortals not yield to thee?

Haemon disappears, and in search for him Creon orders his soldiers to open the cave in which Antigone has been entombed. There they find Antigone dead and beside her Haemon, resolved to die.

We looked, and in the cavern's vaulted gloom I saw the maiden lying strangled there, A noose of linen twined about her neck; And hard beside her, clasping her cold form, Her lover lay bewaiting his dead bride . . . When the King saw him, with a terrible groan He moved towards him, crying, "O my son, What hast thou done? What ailed thee? What mischance Has reft thee of thy reason? Oh, come forth, Come forth, my son, thy father supplicates." But the son glated at him with tiger eyes, Spat in his face, and then, without a word, Drew his two-hilted sword and smore, but Missed his father flying backwards. Then the boy, Wroth with himself, poor wretch, incontinent, Foll on his sword and drove it through his side Home, but, ver breathing, clasped in his lax arms The maid, her palled cheek incarnadized With his expiring gasps, So there they lay Two corpses, one in death."

The dominant qualities of these plays, surviving time and translation, are beauty of style and mastery of technique. Here is the typically "classic" form of urterance polished, placid, and screne, vigorous but restrained, dignified but graceful, with the strength of Pheidas and the smooth delicacy of Pranteles. Classic too is the structure, every line is relevant, and moves towards that moment in which the action finds its climax and its significance. Each of these plays is built like a temple, wherein every part is carefully finished in detail, but has its proper and subordinate place in the whole, except that the Philocetees lazily accepts the deus ex machina (which is a jest in Furipides) as a scrious solution of a knowly plot. Here, as in Aeschylus, the drama moves upward towards the hybris of some crowning insolence (as in Oedipus' butter curse upon the unknown murderer), turns around some anagnorism or sudden recognition, some peripeteia or reversal of fortune, and moves downward toward the nemeric

of inevitable punishment. Aristorle, when he wished to illustrate perfection of dramatic structure, always referred to Oedipus the King, and the two plays that deal with Oedipus illustrate well the Aristotelian definition of tragedy as a purging of pity and terror through their objective presentation. The characters are more clearly drawn than in Aeschylus, though not as realistically as in Furipides. "I draw men as they ought to be drawn," said Sophocles, "Euripides draws them as they are "as if to say that drama should admit some idealization, and that art should not be photography. But the influence of Euripides appears in the argumentativeness of the dialogue and the occasional exploitation of sentiment, so Oedipus wrangles unrovally with Terresias, and, blinded, gropes about touchingly to feel the faces of his daughters. Aeschylus, contemplating the same situation, would have forgotten the daughters and thought of some eternal law.

Sophocles, too, is a philosopher and a preacher, but his counsels rely less than those of Aeschylus upon the sanctions of the gods. The spirit of the Sophists has touched him, and though he maintains a prosperous orthodoxy, he reveals himself as one who might have been Furipides had he not been so fortunate. But he has too much of the poet's sensitivity to excuse the suffering that comes so often undeserved to men. Says Lylius, over

Heracles' writhing body:

We are blameless, but confess That the gods are philess. Children they beget, and claim Worship in a father's name, Yet with apathetic eye Look upon such agony."

He makes Jocasta laugh at oracles, though his plays turn upon them creakingly. Creon denounces the prophets as "all a money-getting tribe"; and Philocretes asks the old question. "How justify the ways of Heaven, finding Heaven unjust?" Sophocles answers hopefully that though the moral order of the world may be too subtle for us to understand it, it is there, and right will triumph in the end." Following Aeschylus, he identifies Zeus with this moral order, and comes even more closely to monotheism. Like a good Victorian he is uncertain of his theology, but strong in his moral faith, the highest wisdom is to find that law which is Zeus, the moral compass of the world, and follow it.

Oh, may my constant feet not fall, Walking in paths of righteousness. Sinless in word and deed,
True to those eternal laws
That scale forever the high steep
Of heaven's pure other, whence they sprang.
For only in Olympus is their home,
Nor mortal wisdom gave them birth,
And howsoc'er men may forget,
They will not sleep."

It is the pen of Sophocles, but the voice of Aeschylus, faith making the last stand against unbekef. In this piety and resignation we see the figure of Job repentant and reconciled, but between the lines we catch premomitions of Euripides.

Lake Solan, Sophocles counts that man most blessed who has never been born, and him next appaiest who dies in infancy. A modern pessamist has taken pleasure in translating the somber lines of the chorus on the death of Oedapiis, lines that reflect a world-weariness brought on by old age, and the bitter fratricide of the Peroponnesian War.

What man is he that yearneth
For length unmeasured of days?
Folly mine eye discerneth
Encompassing all his ways.
For years over-running the measure
Shall change thee in evil wise:
Grief draweth nigh thee, and pleasure,
Behold it is had from those eyes.
This to their wage have they
Which overlive their day....

Thy portion esteem I highest
Who wast not ever begot;
Thme next, being born, who diest
And straightway again art not.
With follies light as the feather
Doth Youth to man befall;
Then evils gather together,
There wants not one of them all—
Weath, envy, discard, strife,
The sword that seeketh life.
And scaling the sum of trouble
Doth tottering Age draw nigh,
Whom friends and kinsfolk fly;

Age, upon whom redouble
All sorrows under the sky....

And he that looseth from labor
Doth one with other befriend,
Whom bride nor bridesmen attend,
Song, nor sound of the tabor,
Death that maketh an end."

Every scholastic gossip knows that Sophocles consoled his old age with the herara Theoris, and had offspring by her "His legitimate son lophon, fearing, perhaps, that the poet would bequeath his wealth to Theoris' child, brought his father to court on a charge of financial incompetence. Sophocles read to the jury, as evidence of his mental clarity, certain choruses from the play which he was writing, probably the Oedipus at Colonis; whereupon the judges not only acquitted him, but escorted him to his home." Born many years before l'uripides, he lived to put on mourning for him, and then, in that same year 406, he too died. Legend rebs how, as the Spartans besieged Athens, Dionysus, god of the drama, appeared to Lysander and obtained a safe-conduct for the friends of Sophoeles, who wished to bury him in the sepulcher of his fathers at Decelcia. The Greeks rendered him divine honors, and the poet Simmias composed for him a quiet epitaph:

Creep gently, ivy, ever gently creep,
Where Sophocles sacets on in calm repose,
Thy pale green tresses o'er the marble sweep,
While all around shall bloom the purple rose.
There let the vine with rich full clusters hang,
Its fair young tendrils flung around the stone,
Due meed for that sweet wisdom which he sang,
By Muses and by Graces called their own.

V. EURIPIDES

1. The Plays

As Giorto tough-hewed the early path of Italian painting, and Raphael subdued the act with a quiet spirit into technical perfection, and Michelangelo completed the development in works of tortured genius; as Bach with incredible energy forced open a broad road to modern music, and

Mozart perfected its form in melodious simplicity, and Beethoven completed the development in works of unbalanced grandeur; so Aeschylus cleared the way and set the forms for Greek drama with his harsh verse and stern philosophy. Sophocles fashioned the art with measured music and placid wisdom, and I unpides completed the development in works of passionate feeling and rurbulent doubt. Aeschylus was a preacher of almost Hebraic intensity. Sophocles was a "classic" artist clinging to a broken faith, Euripides was a romantic poet who could never write a perfect play because he was distracted by philosophy. They were the Isaiah, Job, and Ecclesiastes of Greece.

Europides was born in the year some say on the day—of Salamis, probably on the island itself, to which, we are told, his parents had fled for refuge from the invading Medes." His father was a man of some property and prominence in the Attic town of Physa, his mother was of noble family, "though the hostile Aristophanes insists that she kept a grocer's shop and hawked fruit and flowers on the street. In later life he lived on Salamis, loving the solitude of its hills, and its varied prospects of blue sea. Plato wished to be a drainatist and became a philosopher, Euripides wished to be a philosopher and became a drainatest. He "took the entire course of Anaxagoras," says Strabo," he studied for a while with Prodicus, and was so intimate with Socrates that some suspected the philosopher of having a hand in the poet's plays." The whole Sophistic movement entered into his education, and through him captured the Dionysian stage. He became the Voltaire of the Greek Enlightenment, worshiping reason with destructive innuendo in the midst of dramas staged to celebrate a god.

The records of the Dionysian Theater credit him with seventy-five plays, from The Daughters of Pelias in 455 to The Bacebae in 406, eighteen survive, and a medley of fragments from the rest.* Their subject marter tells again the legends of the early Greeks, but with a note of skeptical protest sounding timidly and then boldly between the imes. The Ion presents the reputed founder of the Ionian tribes in a delicate dilemma: the oracle of Apollo declares Xuthus to be his father, but Ion discovers that he is the son of Apollo, who seduced his mother and then palmed her off on Xuthus; can it be, Ion asks, that the noble god is a har? In Heracles and Alcestis the mighty son of Zeus and Alcenena is described as a good-natured drunkard, with the appetite of Gargantua and the brains of Louis XVI. The

The major plays appeared in approximately the following order Attenta, 438, Medea, 431, Happolynia, 428, Andromache 422, Hermbs, ca 425, Lectra, ca 46, The Troum Women, 415, Iphigenia in Fauru ca 414, Orestet, 406, Iphicems in Anlis, 406, The Boo chae, 406.

Alcests recounts the unprepossessing story of how the gods, as a condition of allowing further life to Admetus (king of Thessaian Pherae), required that some other should consent to die in his stead. His wife offers herself as a sacrifice, and bids him a hundred-line farewell, which he hears with magnanimous patience. Alcestis is carried out for dead, but Heraeles, between solitary drinking hours and banquets, goes forth, argues and browbeats Death into relinquishing Alcestis, and brings her back alive. The play can be understood only as a subtle attempt to make the legend ridiculous.*

The Hippolyrus applies with more finesse and grace the same method of reduction to the absurd. The handsome hero is a youthful lumisman who vows to Attems, virgin goddess of the chase, that he will always be faithful to her, will ever shun women, and will find his greatest pleasure in the woods. Aphrodite, incensed by this insulting celibacy, pours into the heart of Phaedra, Theseus' wife, a mad pass on for Hippolytus, Theseus' son by the Amazon Antiope. Here is the first love tragedy in extant literature, and here at the outset are all the symptoms of love at the crisis of its fever: Phaedra, rejected by Hippolytus, languishes and fades to the point of death. Her nurse, staddenly become a philosopher, muses with Humletlike skepticism about a life beyond the grave.

Yet ail man's life is but ailing and dim,
And rest upon the earth comes never.
But if any far-off state there be,
Dearer than life to mortality.
The hand of the Dark linth hold thereof,
And met is under and mist above.
And some are sick for life, and cling
On earth to this nameless and shining thing,
For other life is a fountain scaled,
And the deeps below us are unrevealed,
And we drift on legends forever."

The nurse bears a message to Hippolytus that Phaedra's hed will welcome him, he, knowing that she is his father's wife, is horrified, and bursts into one of those passages that earned Furipides a reputation for misogyny:

Oh God, why hast thou made this gleaning snare, Woman, to dog us on the happy earth?

It was presented in 418 as the fourth play in a group by Furmides, perhaps it was intended
as a haif-serious satur play rather than as a half-corne tragedy in Balancion's Adventure
Browning, with generous amplicity, has taken the play at its face value.

Was it thy will to make man, why his birth Through love and woman?"

Phaedra dies; and in her hand lier husband finds a note saying that Hippolytus seduced her. Theseus wildly calls upon Poseidon to slay Hippolytus. The youth protests his unocence, but is not believed. He is driven out of the land by Theseus, and as his chariot passes along the shore a sea lion emerges from the waves and pursues him, his horses run away, upset the chariot, and drag the entangled Hippolytus (i.e., "torn by horses") over the rocks to a mangled death. And the chorus cries out, in lines that must have startled Athens,

Ye gods that did snare him, Lo, I cast in your faces My hate and my scorn!

In the Medea I oripides forgets for a while his war against the gods, and transforms the story of the Argenauts into his most powerful play. When Jason reaches Colclus, the royal princess Medea falls in love with him, helps him to get the Golden Fleece, and, to shield him, deceives her father and kals her brother. Jason vows eternal love to her, and takes her back with him to loleus. There the almost savage Medea poisons King Pelias to secure the throne that Pelias promised to Jason. Since the law of Thessaly forbids him to marry a foreigner, Jason lives with Medea in unwedded love, and has two children by her. But in time he tires of her barbarian intensity, looks about him for a legal wife and heir, and proposes to marry the daughter of Creon. King of Corinth. Creon accepts him, and exiles Medea. Medea, brooding upon her wrongs, speaks one of the famour passages of Euripides in defense of woman.

Of all things upon earth that bleed and grow, A herb most bruised is woman. We must pay Our store of gold, hoarded for that one day, To buy us some man's love, and lo, they bring A master of our flesh! There comes the sting Of the whole shame. And then the teopardy, For good or ill, what shall that master be ... Home never taught her that show best to guide Toward peace the thing that sleepeth at her side. And she who, laboring long, shall find some way Wherely her lord may bear with her, nor fray His yoke too fiercely, hessed is the breath That woman draws! Else let her pray for death.

Her lord, if he be weared of her face
Within doors, gets him forth, some merrier place
Will ease his heart, but she waits on, her whole
Vision enchained on a single soul.
And then they say 'tis they that face the cail
Of war, while we sit sheltered, hid from all
Peril! False mocking! Sooner would I stand
Three times to face their battles, shield in hand,
Than bear one child."

Then follows the terrible story of her revenge. She sends to her rival, in pretended reconciliation, a set of costly robes, the Corinthian princess puts one on, and is consumed in fire, Creon, trying to rescue her, is burned to death. Medea kills her own children and drives off with their dead bodies before Jason's eyes. The chorus chants a philosophic and:

Great treasure halls hath Zeus in heaven,
From whence to man strange dooms he given,
Past hope or fear.
And the end men looked for cometh not,
And a path is there where no man thought
So hath it fallen here.

The remaining plays turn for the most part upon the tale of Troy. In Helen we get the revised version of Stesichorus and Herodotus:" the Spartan queen does not clope with Paris to Troy; she is carried against her will to Egy pt, and chastery awares her master there; all Greece, huripides suggests, has been hoodwinked by the legend of Helen in Troy. In Iphigenia in Aulis he pours into the old story of Agamemnon's sacrifice a profusion of sentiment new to the Greek drama, and a Lucretian horror of the crunes to which the ancient faith persuaded men. Aeschylus and Sophoeles had also written on this theme, but their plays were soon forgotten in the brilliance of this new performance. The arrival of Clytaemnestra and her daughter is visioned with Euripidean tenderness; Orestes, "yet a wordless balie," is present to witness the superstitious murder that will dictate his destiny. The girl is all shyness and happiness as she runs to greet the King.

Iphig Fain am I, father, on thy breast to fall,
After so long. Though others I outrun—
For oh, I yearn for thy facel—be not wroth...
So glad to see me—yet what troubled look.

Agam. On kings and captains weightth many a care.

Iphig. This hour be mine—this one. Yield not to care?

Agam. Yea, I am all thine now, my thoughts stray not...

Iphig. And yet—and yet—thine eyes are welling tears?

Agam. Yea, for the absence ver to come is long

Iphig. I know not, know not, dear my sire, thy meaning.

Agam. Thy wise discernment stirs my grief the more

Iphig. So I may please thee, folly will I talk."

When Achules comes she finds that he knows nothing of their supposed marrage; instead she learns that the army is impatient for her sacrifice. She throws herself at Agamemnon's feet, and begs for her life.

I was thy first-born-first I called thee Sire,
And sat, thy child, upon thy knees the first;
And we exchanged sweet charties of afe.
And this was thy discourse with me—"My child,
Shad I behold thee happy in the home
Of thy fiege lord and husband, as befits?"
And nestling in the beard which now I clasp
A suppaint, I made answer unto thee
"I too will welcome thre, when grey with years,
In the sweet shelter of my home, my Sire,
And write fund fostering recompense thy love."
Such were our words, which I remember well,
But thou forgettest, and wouldst take my hie."

Clytaemnestra denounces Agamemnon's surrender to a savage ritual, and utters a threat that common many tragedies—"Constrain me not to turn traitress to thee." She encourages Achilles' attempt to rescue the girl, but Iplugenia, changing her mood, refuses to escape.

Hear the thing that flashed upon me, mother, as I thought hereon:
Lo, I am resolved to die, and fam am I that this be done
Glorioush—that I thruse ignoble thoughts away....
Unto me all mighty Helias looks; I only can bestow
Boons upon her—sailing of her galleys, Phrygia's overthrow,
Safety for her daughters from barbarians in the days to come,
That the ravisher no more may snatch them from a happy home,
When the penalty is paid for Paris' outrage, Helen's shame.
All this great deliverance I in death shall compass, and my name,
As of one who gave to Helias freedom, shall be blessing-crowned.

When the soldiers come for her she forbids them to touch her, and moves of her own accord to the sacrificial pyre.

In the Heenba the war is over; Troy has been taken, and the victors are apportioning the spoils. Heenba, widow of King Priam, sends her youngest son Polydorus with a treasure of gold to Priam's friend Polymnestor, King of Thrace. But Polymnestor, thirsting for the gold, slays the hoy and throws his corpse into the sea, it is east up on the shores of likon, and is brought to Heenba. Meanwhile the shade of dead Achilles holds the winds from blowing the Greek fleet homeward till he has received in human sacrifice the fairest of Priam's daughters, Polyxena. The Greek herald, Talthybius, comes to take the girl from Heenba. Finding her prostrate, disheveled, and distraught who had so recently been a queen, he utters some lines of Furipidean doubt.

What shall I say, Zeus? - that then look'st on men? Or that this fancy false we vainly hold. For raught, who deem there is a race of gods, While chance controlleth all things among men?"

The next act of the composite drama takes the form of The Trojan Women It was produced in 415, shortly after the Athenian destruction of Melos (416), and almost on the eve of the expedition that aimed to conquer Sichy for the Athenian Impire. It was at this moment that Furmides, shocked by the massacre in Melos and by the british imperialism of the proposed attack upon Syracuse, dared to present a powerful plea for peace, a brave portrayal of victory from the standpoint of the defeated, "the greatest denunciation of war in ancient lacrature," He begins where Homer ends after the capture of Troy. The Trojans he dead after a general slaughter, and their women, bereaved to madness, pass down from their rumed city to be the concub nes of the victors. Hecuba enters with her daughters Andromache and Cassandra. Polyxena has already been sacrificed, and now Taithybus comes to lead Cassandra to Agamemnon's tent. Hecuba falls to the ground in grief. Andromache rries to console her, but she too breaks down, as clasping the little prince Astyanax to her breast, she thinks of his dead father

And I... long since I drew my bow
Straight at the heart of good fame, and I know
My shaft hit, and for that am I the more
Fallen from peace. Ad that men praise us for,
I loved for Hector's sake, and so ught to win.
I knew that always, be there burt therein
Or utter innocence, to roam abroad

Hath ill report for women; so I trod
Down the desire thereof, and walked my way
In mme own garden. And light words and gay
Parley of women never passed my door.
The thoughts of mine own heart—I craved no more—
Spake with me, and I was happy. Constantly
I brought fair silence and a tranquil eye
For Hector's greeting, and watched well the way
Of living, where to guide and where obey . . .

One night aye, men have said it—maketh tame. A woman in a man's acms. O shame, shame! What woman's hips can so forswear her dead, And give strange kisses in another's bed? Why, not a dumb beast, not a colt will run. In the yoke untroubled, when her mate is gone . . . O my Hector! best beloved.

That, being issue, wast all in all to me,
My prince, my wise one. O my majesty
Of valuance. No man's toucls had ever come
Near me, when thou from out my father's home
Didst lead me and make me thine. And thou are dead,
And I war-fluing to slavery and the bread
Of shame in Helias, over bitter sens!

Hecuba, dreaming of some distant revenge, bids Andromache accept her new master graciously, that he may allow her to rear Astyanax, and that Astyanax may some day restore the house of Priam and the splendor of Troy. But the Greeks have thought of this too, and Talthybius comes to announce that Astyanax must die "'Tis their will thy son from this crested wall of Troy be dashed to death.' He tears the child from its mother's arms, and Andromache, holding it for a last moment, bids it an hysterical farewell.

Go, die, my best beloved, my chenshed one, In herce men's hands, leaving me here alone. Thy father was too valuant, that is why They slay thee. . . . And none to pity thee! . . . Thou hittle thing That curlest in my arms, what sweet scents ching All round thy neck' Beloved, can it be All nothing, that this bosons eradied thee And fostered, all the weary nights wherethrough

I watched upon thy sickness, till I grew
Wasted with watching? Kiss me. This one time;
Nor ever again. Put up thine arms, and climb
About my neck, now kiss me, lips to lips...
Oh, ye have found an anguish that outstrips
All tortures of the East, we gentle Greeks!..
Quick, take him; drag him, east him from the wall,
If east we will! Tear him, we beasts, be swift!
God hath undone me, and I cannot lift
One hand, one hand, to save my child from death.

She becomes delirious, and swoons, soldiers carry her away. Menelaus appears, and bids his soldiers bring Helen to him. He has sworn that he will kill her, and Hecuba is coinforted at the thought that punishment is at last to find Helen.

I bless thee, Menelaus, I bless thee, If thou wilt slay her! Only fear to see Her visage, lest she snare thee and thou fall!

Helen enters, untouched and unafraid, proud in the consciousness of her beauty.

As Helen and Menelaus leave, Talthybius returns, bearing the dead body of Astyanax.

Talth. Andromache. . . hath charmed these tears into mine eyes, Weeping her fatherland, as o'er the wave.

She gazed, speaking words to Hector's grave.

Howheit, she prayed us that due rites be done

For burial of this babe. . . . And in thine hands

She bade me lay him, to be swathed in bands

Of death and garments . . . (Hecuba takes the body.) Hecuba. Ah, what a death bath found thee, little one! ... Ye tender arms, the same dear mold have ye As his. ... And dear proud his, so full of hope, And closed forever! What false words ye said At daybreak, when ye exept into my hed, Called me kind names, and promised, "Grandmother, When thou are dead, I will cut close my hair And lead out ail the captains to ride by Thy tomb." Why didst thou cheat me so? 'Tis I, Old, homeless, childless, that for thee must shed Cold tears, so young, so miserably dead. Dear God! the pattering welcomes of thy feet, The nursing in my lap, and oh, the sweet Falling asleep together! All is gone. How should a poet carve the funeral stone To tell thy story true? "There lieth here A babe whom the Greeks feared, and in their fear Slew him." Aye, Greece will bless the tale it tellst Oh, vain is man,

Who glorieth in his joy and bath no fears, White to and fro the chances of the years

Dance like an (that in the wind) . . . (She wraps the child in the burial garments.)

Glory of Phrugian raiment, which my thought Kept for the bridal day with some far-sought Queen of the East, folds thee for evermore...."

In the Electra the ancient theme is far advanced. Agamemnon is dead, Orestes is in Phocis, and I lectra has been married off by her mother to a peasant whose simple fidelity, and awe of her royal descent, survive her brooking negogence of him. To her, wondering will Orestes never find her, Orestes comes, bidden by Apollo himself (Euripides drives this point home) to avenge Agamemnon's death. Electra stirs him on, if he will not kill the marderers she will. The lad finds Aegisthus and slays him, and then turns upon his mother. Clytaeimnestra is here a subdued and aging woman, gray-haired and fruit, haunted by the memory of her crimies, at once fearing and loving the children who hate her, asking, but not begging, for mercy, and half reconciled to the penalty of her sins. When the killing is over Orestes is overcome with horror.

Sister, touch her again, Oh, weil the body of her, Shed on her raiment fair,
And close that death-red stain.—
Mother! And didst thou hear,
Bear in thy bitter pain,
To life, thy murderer?**

The final act of the drama, in Furipides, is called Iphigenia in Taurisi.e., Iphigenia among the Lauri. Artemis, it now appears, substituted a deer for Agamemnon's daughter on the pyre at Aulis, snatched the girl from the flames, and made her a priestess at the shrine of Artemis among the half-savage Tauri of the Crimea. The Tauri make it a rule to sacrifice to the goddess any stranger who sets foot unasked upon their shores, and Iphigenia is the unbappy, brooding manatrant who consecrates the victims. Lighteen years of separation from Greece and those she loved have dulled her mind with grief. Meanwhile the oracle of Apollo has promised Orestes peace if he was capture from the Tauri the sacred monge of Artems, and bring it to Atrica. Orestes and Pylades set sail, and at last reach the land of the Tauri, who gladly accept them as gifts of the sea for Artemis, and hirry them off to be sain at her after. Orestes, exhausted, falls in an epileptic fit at lphigema's feet; and though she does not recognize him, slie is overwhelmed with piev as she sees the two comrades, in the fairest years of youth, faced with death.

Iphig. To none is given To know the coming nor the end of wee, So dark is God, and to great darkness go His paths, by blind chance muzed from our ken. Whence are ye come, O most unhappy men? . . . What mother then was yours, O strangers, say, And father? And your sister, if you have A sister bith at once, so young and brave To leave her brotherless. . . . Orestes. Would that my sister's hand could close mine eyes! Iping. Alas, she dwelleth under distant skies, Unhappy one, and your is all thy prayer. Yet, ch, thou art from Argos, all of core That can be I will give, and fail thee not. Rich rannent to thy hartel shall be brought. And oil to cool thy pyre in golden floods, And sweet that from a thousand mountain buds The murmuring bee hath garnered, I will throw To die with thee in fragrance.

She promises to save them if they will carry back to Argos the message which she hids them store in their memories.

Iphig. Say, "To Orestes, Agamemnon's son, She that was sizin in Aulis, dead to Greece Yet quick, Iphigema, sendeth peace." Orestes, Iphigema! Where? Back from the dead? Iphig. 'Tis I, But speak not, lest thou break my thread. "Take me to Argos, Lrother, etc I die."

Orestes wishes to clasp her in his arms, but the attendants forbid it, no man may touch the priestess of Artenus. He declares himself Orestes, but she cannot believe him. He convinces her by recalling the tales Electra told them.

Ipbig. Is this the babe I knew,
The little babe, light-litted like a bird?...
O Argos land, O hearth and holy flame
That old Cyclopes lit,
I bless ye that he lives, that he is grown,
A light and strength, my brother and more own;
I bless your name for it.

They offer to rescue her, and in turn she helps them to capture the image of Artemis. By her subtle ruse they reach their ship safely, and carry the statue to Brauron, there lphigenia becomes a priestess, and there, after her death, she is worshiped as a deity. Orestes is released from the Furies, and knows some years of peace. The thirst of the gods is sated, and the drama of The Chudren of Tantalus is complete.

2. The Dramatist

We must agree with Aristotle that these plays, from the viewpoint of dramatic technique, fall short of the standards set by Aeschylus and Sophocles." The Medea, the Hippolytus, and The Baechae are well planned, but even they cannot compare with the structural integrity of the Oresteia, or the complex unity of Oedipus the King Instead of plunging at once into the action, and explaining its antecedents gradually and naturally in the course of the story. Euripides employs the artificial expedient of a pedagogical prologue, and, worse still, puts it sometimes into the mouth of a god. Instead of showing us the action directly, which is the function of drama, he too often introduces a messenger to describe the action, even

when no violence is involved. Instead of making the chorus a part of the action he transforms it into a philosophical aside, or uses it to interrupt the development with lytics always beautiful, but often irrelevant. Instead of presenting ideas through action, he sometimes displaces action with ideas, and turns the stage into a school for speculation, rhetoric, and argument. Too often his plots depend upon coincidences and "recognition"—though these are well arranged and dramatically presented. Most of the plays (Idea few by his predecessors) end with intervention by the dear ex machina, the god from the crane—a device that can be forgiven only on the assumption that for Euripides the real play ended before this theophany, and the god was let down to provide the orthodox with a virtuous conclusion to what would otherwise have been a scandalous performance." With such prologues and epilogues the great humanist won the privilege of presenting his heresies on the stage.

The material, like the form, is a medley of genus and artifice. Furipides is above all sensitive, as every poet must be, he feels the problems of mankind miensely, and expresses them with passion, he is the most tragit, and the most human of all drainatists. But his feeling is too frequently sentimentality, his "droppings of warm tears" are too easily released, he loses no chance to show a mother parting from her children, and wrings all possible pathos out of every situation. These scenes are always moving, and sometimes are described with a power unequaled in tragedy before or since, but they descend occasionally to melodrama, and a surfeit of violence and horror, as at the close of the Medea. Furnides is the Byron and Shelley and Flugo of Greece, a Romantic Movement in himself.

He easily surpasses his rivals in the delineation of character. Psychological analysis replaces with him, even more than with Sophocles, the operation of destiny, he is never weary of investigating the morals and motives of human conduct. He studies a great variety of men, from Flectra's peasant husband to the kings of Greece and Troy, no other dramatist has drawn so many types of women, or drawn them with such sympathy, every shade of vice and virtue interests him, and is realistically portrayed. Aeschylus and Sophocles were too absorbed in the universal and eternal to see the temporal and the particular clearly; they created profound types, but Euripides creates living individuals, neither of the older men, for example, realized Electra so vividly. In these plays the drama of the conflict with fate yields more and more to the drama of situation and character, and the way is prepared by which, in the following centuries, the Greek stage will be captured by the comedy of manners under Philemon and Menander.

3. The Philosopher

But it would be foolish to judge Euripides chiefly as a playwright; his ruling interest is not dramatic technique but philosophical inquiry and political reform. He is the son of the Soplasts, the poet of the Enlightenment, the representative of the radical younger generation that laughed at the old myths, flitted with socialism, and called for a new social order in which there should be less exploitanton of man by man, of women by men, and of all by the state. It is for these rebel souls that Euripides writes, for them he adds his skeptical innuendoes, and inserts a thousand heresies between the lines of supposedly religious plays. He covers his tracks with pious passages and patriotic odes, he presents a sacred myth so literally that its absurdity is manifest and yet his orthodoxy cannot be impeached, he gives the body of his plays over to doubt, but surrenders the first and last words to the gods. His subtlety and brilliance, like those of the French Encyclopedists, is due in some part to the compulsion hid upon him to speak his mind while saving his skin.

His theme is that of Lucretius-

Tantum religio potiut suadere malorum

-so great are the evils to which religion has led men, orneles that breed violence upon violence, myths that exalt immorality with divine example, and shed supernatural sanctions upon dishonesty, adultery, theft, buman sacrifice, and war. He describes a southsayer as "a man who speaks few truths but many lies"," he calls it "sheer folly" to chart the future from the entrails of birds," he denounces the whole apparatus of oracles and divination." Above all he resents the immoral implications of the legends

Men shall know there is no God, no light
In heaven, if wrong to the end shall conquer right...,
Say not there be adulterers in heaven,
Nor prisoner gods and guolest long ago
My heart hath named it vile, and shall not alter...
These toles be false, false as those feastings wild
Of Tantahis, and gods that tare a child.
This land of murderers to its gods bath given
Its own lust. Evil dwelleth not in heaven....

All these

Are dead unhappy tales of minstrelsy

Sometimes such passages are softened with hymns to Dionysus, or psalms

of pantheistic piety; but occasionally a character extends the Europidean doubt to all the gods:

Doth some one say that there be gods above? There are not, no, there are not. Let no fool, Led by the old false fable, thus deceive you. Look at the facts themselves, yielding my words. No undue credence, for I say that kings. Kill, rob, break oaths, lay cities waste by fraud, And doing thus are happier than those. Who live calm pions lives day after day.

He begins his lost Melamppe with a startling couplet

O Zeus, if there be a Zeus, For I know of him only by report—

whereupon the audience, we are told, rose to its feet in protest. And he concludes:

The gods, too, whom mortals deem so wise,
Are nothing clearer than some winged dream,
And all their ways, like man's ways, but a stream
Of turmoil. He who cares to suffer feast,
Not bland as fools are blanded by a priest.
Goes straight... to what death, those who know him know.**

The fortunes of men, he thinks, are the result of natural causes, or of aimless chance, they are not the work of intel igent supernatural beings. He suggests rational explanations of supposed miracles. Alcestis, for example, did not reality die, but was sent off to burial while still alive, Heracles caught up with her before she had time to die. He does not clearly tell us what his belief is, perhaps because he feels that the evidence does not lend itself to clear belief, but his most characteristic expressions are those of the vague pantheism that was now replacing polytheism among the educated Greeks.

Thou deep Base of the World, and thou high Throne Above the World, whos'er than art, unknown And hard of surmise, Chain of Things that be, Or Reason of our Reason; God to thee I lift my praise, seeing the silent road. That bringeth justice ere the end be trod. To all that breather and dies.³⁴

Social justice is the minor theme of his songs; like all sympathetic spirits he longs for a time when the strong will be more chivalrons to the weak, and there will be an end to misery and strife. Even in the midst of war, with all its computation to a partionic belligerency, he presents the woes and horrors of war with unsparing reason.

How are ye blind,

Ye treaders down of enties, ye that east Temples to desolation, and lay waste Tombs, the untrodden sanctuaries where he The ancient dead, yourseaves so soon to die.**

He graws his heart out at the sight of Athenians fighting Spartans for half a century, each enslaving the other, and both killing off their best, and he indites in a late play a touching apostrophe to peace:

O Peace, thou givest plenty as from a deep spring, there is no beauty like unto thine, no, not even among the biessed gods. My heart yearnest within me, for mon tarriest, I grow old and thou returnest not. Shall wearness overcome mine eyes before they see thy bloom and thy comeliness? When the lovely sungs of the dancers are heard again, and the thronging feet of them that wear garlands, shall grey hairs and sorrow have destroyed me utterly? Return, thou holy one, to our city, alide not far from us, thou that quenchet's wrath. Strife and litterness shall deport if thou art with us, madness and the edge of the sword shall flee from our dances.**

Almost alone among the great writers of his time he dares to attack slavery, during the Peloponnes an War it became obvious that most slaves were such not by nature but by the accidents of life. He does not recognize any natural anstocracy, environment rather than heredity makes the man. The slaves in his dramas play important parts, and often speak his finest lines. With the imaginative sympathy of a poet he considers women. He knows the faults of the sex, and exposes them so realistically that Atistophanes was able to make him out a misogynist, but he did more than any other playwright of antiquity to present the case for women, and to support the dawning movement for their emancipation. Some of his plays are almost modern, post lisen studies in the problems of sex, even of sexual perversion. He describes men with realism, but women with gallantry; the terrible Medea gets more compassion from him than he accords to the heroic but unfaithful Jason. He is the first dramatist to make a play

turn upon love; his famous ode to Eros in the lost Andromeda was mouthed by thousands of young Greeks:

> O Love, our Lord, of gods and men the king. Either teach not how beautoons beauty is, Or help poor lovers, whom like elay thou moldest, Through toil and labor to a dappy end "

Euripides is naturally a pessimist, for every romantic becomes a pessimist when reality impinges upon romance. "Life," said Horace Waipole, "is a comedy to those who think, a tragedy to those who feel." "Long ago," says our poet,

Hooked upon man's days, and found a grey
Shadow. And this thing more I surely say
That those of all men who are counted wise,
Strong wits, devisers of great policies,
Do pay the beterest toll. Since life began
Hath there in God's eye stood one happy man?

He wonders at the greed and cruelty of men, the resourcefulness of evil, and the obscene indiscriminateness of death. At the beginning of the Alcestra Death says, "Is it not my function to take the doamed?"—to which Apollo answers, "No, only to dispatch those who have ripened into full old age." When death comes after life has been fully lived it is mitural, and does not offend us. "We should not lament our fate if, like the harvests that follow each other in the passage of the years, one generation of men after another flowers, fades, and is carried off. So it is ordered in the course of Nature, and we must not be dismayed by anything that is readered inevitable by her laws." His conclusion is stoicism. "Do those endure as men must, chaffing not." Now and then, following Anaximenes and anticipating the Stoics, he consoles himself with the thought that the spirit of man is part of the divine Air or pneuma, and will, after death, be preserved in the Soul of the World."

Who knows if that be life which we call death, And life be dving?—save alone that men Living hear grief, but when they yield their breath They have no sorrow then, and grave no more."

4. The Exile

The man whom we picture from these plays resembles sufficiently the sitting statue in the Louvre, and the busts at Naples, to let us believe that these are faithful copies of authentic Greek originals. The bearded face is handsome, but overwrought with meditation, and softened with a tender melancholy. His friends agreed with his enemies that he was gloomy, almost morose, not given to convivality or laughter, and spending his later years in the seclusion of his island home. He had three sons, and derived some happiness from their childhood." He found solace in books, and was the first private entitien in Greece, so far as we know, to collect a substantial library *18 He had excellent friends, including Protagoras and Socrates, the latter, who ignored other dramas, said that to see a play by Europides he would want to the Piracus-a serious matter for a stout philosopher. The younger generation of emane pated souls looked up to him as their leader. But he had more enemies than any other writer in Greek history. The judges, who fest themselves bound, presumably, to protect religion and morals from his skeptical arrows, crowned only five of his efforts with victory, even so it was liberal of the archon basileus to admit so many I unpidean plays to a religious stage. Conservatives in all fields looked upon the dramatist as responsible with Socrates for the growth of unbelief among Athenian youth. Aristophanes declared war upon him at the outset in The 2h Farmans, satirized him with hilanous carieature in The Thesmophoriazurae, and, in the year after the poet's death, continued the attack in The Frogs, nevertheless, we are told, the tragic and the comic dramatist were on friendly terms to the end." As for the audionce, it denounced his heresies and crowded to his plays. When, at line 612 of the Hippulytus, the young hunter said, "My tongue bath sworn, but my mind remains unbound," the crowd protested so loudly against what seemed to be an outrageously immoral proposition that I aripides had to rise in his seat and comfort them with the assurance that Hippolytus would suffer edifyingly before the story closed-a safe promise for almost any character in Greek tragedy.

^{*}There had already been royal or smore histories in Greece, as we have seen, and such collections in Egypt can be reaced back— he boards Dy tasts. A Greek brary consumed of scrolls arranged in pageonhams in a chest. Publication means that so anthor had allowed his manuscript to be copied, and the copies to be circulated thereafter further copies could be made without permission or copyright. Copies of popular works were numerous, and not costly. Plato tells us in the Apology that Aparagoris treatise On Nature could be bought for a drachora (\$4). Athens, in the age of hampides, became the chief center of the book trade in Greece.

About 410 he was indicted on a charge of implety; and soon afterward Hygiaonon brought against him another suit, involving much of the poet's fortune, and adduced Hippolytus' line as proof of Faripides' dishonesty. Both accusations failed, but the wave of public resentment that met The Trojan Women led Furipides to feel that he had hardly a friend left in Athens. Even his wife, it is said, turned against him because he could not from in the martial enthusiasm of the city. In 408, at the age of seventy-two, he accepted the invitation of King Archelaus to be his guest in the Macedonian capital. At Pella, under the protection of this Frederick—who had no fears for the orthodoxy of his people—Euripides found peace and comfort, there he wrote the almost idvice Iphagema in Autis, and the profound religious play, The Bacebae. Fighteen months after his arrival he died, attacked and dismembered, said pious Greeks, by the royal hounds.²⁰

A year later his son produced the two dramas at the city Dionyma, and the judges gave them the first prize. Even modern scholars have thought that The flacebae was I impides' apology to Greek religion," and yet the play may have been intended as a bitter allegory of Furipides' treatment by the public of Athens It is the story of how Pentheus, King of Thebes, was torn to pieces by a mob of female Dionysian orgiasts, led by his own mother Agave because he had denounced their wild superstition and intruded upon their revelry. It was no invention, the tale belonged to the religious tradition; the dismemberment and sacrifice of an animal, or of any man who dared to attend the ceremomes, was part of the Dionysian rite, and this powerful drama, by returning for its plot to the legend of Dionysus, bound Greek tragedy at its culmination with Greek tragedy at its birth. The play was composed among the Macedonian mountains which it describes in syries of unfailing power, and perhaps it was intended for performance in Pella, where the Bacchie cult was especially strong, Europides enters with surprising insight into the mood of religious eestasy. and puts into the mouths of the Bacchantes psalms of passionate devotion, it may indeed be that the old poet had gone to the limits of rationalism and beyond it, and recognized now the fruity of teason, and the persistency of the emotional needs of women and men. But the story does dubious honor to the Dionysian religion, its theme is once more the evils that may come of superstitious creeds.

The god Dionysus visits Thebes in disguise as a Bacchus, or incarnation of himself, and preaches the worship of Dionysus. The daughters of Cadmus reject the message, he hypnotizes them into pious ecstasy, and they

go up into the hills to worship him with wild dances. They clothe themselves with the skins of animals, girdle themselves with snakes, crown themselves with ky, and suckle the young of wolves and deer. The Theban king Pentheus opposes the cult as hostile to reason, morals, and order, and imprisons its preacher, who bears his punishment with Christian gentleness. But the god in the preacher asserts himself, opens the prison walls, and uses his miraculous power to hypnotize the young ruler. Under this influence Pentheus dresses himself as a woman, climbs the hills, and joins the revelers. The women discover that he is a man, and tear him lamb from limb, his own mother, drunk with "possession," earnes Pentheus' severed head in her hands, to nking it the head of a lion, and sings a song of triumph over it. When she comes to her senses and sees that it is the head of her son, she is revolted with the cult that intoxicated her, and when Dionysus says, "Ye mocked me, being God, this is your wage," she answers, 'Should God be like a proud man in his rage?" The last lesson is the same as the first, even in his dying play the poet remained Europides.

After his death he achieved popularity even in Athens. The ideas for which he had fought became the dominant conceptions of the following centuries, and the Hellenistic age looked back to him and to Socrates as the greatest intellectual stumuh that Greece had ever known. He had dealt with fiving problems rather than "dead tales of minstrelsy," and it took the ancient world a long time to forget han. The plays of his predecessors slipped into oblivion while his own were repeated in every year, and wherever the Greek world had a stage. When, in the collapse of that expedition to Syracuse (4)5) whose failure had been forecast in The Trojan Women, the captive Athenians faced a living death as channel slaves in the quarries of Sicily, those were given their freedom (Plurarch tells us) who could recite passages from the plays of Euripides." The New Comedy molded uself upon his dramas, and grew out of them, one of its leaders, Philemon, said, "If I were sure that the dead have consciousness, I would hang myself to see Europides. " The revival of skepticism, liberalism, and humanitarianism in the eighteenth and moetecuth centuries made Furindes almost a contemporary figure, more modern than Shakespeare. All in all, only Shakespeare has equaled him, and Goethe did not think so "Have all the nations of the world since Furipides," asked Goethe of Lekermann, "produced one dramatist worthy to hand him his slippers?" Not more than one.

VI. ARISTOPHANES

1. Aristophanes and the War

Greek tragedy is more somber than the Flizabethan, because it seldom employs that principle of come relief by which, through a humorous interruption of the tragical, the auditor's tolerance for tragedy is increased. The Greek playwright preferred to keep his tragic drama on a persistently high plane, and relegated comedy to a "satyr" play which carried no settous import, but allowed the excited emotions of the audience to subside into humor and ease. In the course of time the comic drama declared its independence of tragedy, and a day was allotted to it, at the Dionysian festivals, when the entire program consisted of three or four comedies, written by different authors, played in succession, and competing for a separate prize.

Comedy, like oratory, had as first Greek bloom in Sicily. About 484 there came to Syracuse from Cos a philosopher, physician, poet, and dramatist, Epicharmus, who expounded Pythagoras, Heracleitus, and rationalism in thirty-five comedies, of which only occasional quotations remain. Twelve years after Epicharmus' arrival in Sicily the Athenian archon allowed its first choras to comedy. The new art developed rapidly under the stimulus of democracy and freedom, and became the principal medium, in Athens, of moral and political satire. The wide license of speech permitted to comedy was a tradition of the Dionysian phallic procession. The abuse of this freedom led in 440 to a law against personal attacks in comedy, but this probabilition was repealed three years later, and full freedom of criticism and abuse communed even during the Peloponnesian War. The Greek comedy took the place, as political critic, of a free press in modern democracies.

We hear of many comic dramatists before Aristophanes, and the great Rabelais of antiquity even condescended to praise some of them when the smoke of his battles with them had cleared away. Cramus was the mouthpiece of Cimon, and made rabid war against Pericles, whom he called "the squill-headed God Almighty"," merciful time has spared us the necessity of reading him. Another forerunner was Pheretrates, who, about 420, saturized, in The Wild Men, those Athenians who professed to dishke civilization and to long for a "return to nature", so old are the brave innovations of our youth. The ablest competitor of Aristophanes was Fupolis, they at first co-operated, then quarreled and parted, after which they saturized each other vigorously, but still agreed in attacking the demo-

cratic party. If comedy throughout the fifth century was hostile to democracy, it was partly because poets like money and the aristocracy was rich, but chiefly because the function of Greek contedy was to amuse with enticism, and the democracic party was in power. Since the leader of the democracy, Pericles, was sympathetic to new ideas like the emancipation of woman and the development of a rationalist philosophy, the comic dramatists ranged themselves, with suspicious unununity, against all forms of radicalism, and caned for a return to the ways and reputed morals of the "Men of Marathon". Aristophanes became the voice of this reaction, as Socrates and I unpides were the protagonists of the new ideas. The conflict between reagion and philosophy captured the come stage.

Aristophanes had some excuse for blong anstocracy, since he came of a cultured and prospercus family, and appears to have owned land in Aegina. His very name was a patent of nobinity, meaning "the best made mainfest". Born about 400, he was in the springture of life when Athens and Sparta began that war which was to be a bitter theme of his plays. The Spartan invasion of Attica compelled him to abandon his country estate and come to live in Athens. He disliked city life, and resented the sudden demand upon him to hate Megarians, Corinthians, and Spartans, he denounced this conflict of Greek knoing Greek, and called, in play

after play, for peace.

After the death of Pencles in 429 supreme power in Athens passed into the hands of the rich tanner, Cleon, who represented those commercial interests that wanted a 'knock-out blow"-ie, the utter destruction of Sparta as a competitor for the mastery of Greece. In a lost play, The Babylomans (426). Anstophanes subjected Cleon and his policies to such stanging redicule that the burly strategos prosecuted him for treason, and had him fined. Two years later Austophanes revenged himself by presenting The Knights Its leading character was Demos (i.e., the People), whose major-domo was called the Tanner, everyone understood the transparent allegory, including Cleon, who saw the play. The sattre was so sharp that no actor would play the part of the Tanner for fear of political musfortune, whereupon Aristophanes took the role himself. Nicias (the name of the superstitious leader of the obgarchic faction) announces that an oracle has told him that the next ruler of Demos' house will be a sausageseller. Such a huckster comes along, and the slaves had him as "Chief that shall be of our glorious Athens'" "Prithce," says the Sausage Seller, "let me go wash my tripes . . . you make a fool of me " But one Demosthenes assures him that he has just the qualifications for ruling the people-is he

not a rascal, and free from all education? The Tanner, fearing that he is to be deposed, protests his services and his loyalty to Demos, no one except the hariots, he urges, has done so much for Demos as he. There is the usual Aristophanic burlesque, the Sausage-Seller belabors the Tanner with tripe, and primes himself for an oratorical contest in the Assembly by eating garhe. A contest in adulation crisies, to see which of the candidates can praise Demos the more lavishly, and "deserve better of Demos and his belly." The rivals bring a feast of good things and lay them before Demos like a platter of pre-election promises. The Sausage-Seller proposes that as a test of their honesty each candidate's locker shall be searched. In the Tanner's locker a heap of succulent dainnes is found, in particular a massive cake, from which he has cut only a tiny slice for Demos (a reference to a current charge that Cleon had embezzled state funds). The Tanner is dismissed, and the Sausage-Seller becomes the ruler of Demos' house.

The Wasps (412) continues the saure on democracy in a milder and weaker vein; the chorus is composed of idle entizens dressed as wasps—who seek to make an obol or two every day by serving as jurymen, in order that they may, by listening to "sycophants" and levying confiscatory fines, vote the money of the rich into the coffers of the state and the pockets of the poor. But Aristophanes' ruling interest in these early plays is to indicule war and promote peace. The hero of The Acharmani (425) is Diceopolis ('Honest Catizen''), a farmer who complains that his land has been devastated by armies, so that he can no longer live by squeezing wine from his vinevards. He sees no reason for war, and is clear that he himself has no quarrel with the Sportans. Tired of waiting for the generals or the politicians to make peace, he signs a personal treaty with the Lacedaemonians, and when a chorus of war-patriotic neighbors denounces him he replies:

Well, the very Spartans even, I've my doubts and scruples whether They've been totally to blame, in every instance, anogether.

Chorus Not to blame in every instance? Villain, vagabond, how dare ye,

Talking treason to our faces, to suppose that we will spare ye?

He agrees to let them kill him if he cannot prove that Athens is as much to blame for the war as Sparta. His head is laid upon a chopping block, and he begins his argument. Presently an Athenian general enters, defeated, blustering, and profune, the Chorus is disgusted with him, and releases Diceopolis, who pleases all by selling a wine called Peace. It was a play

of considerable audacity, possible only among a people trained to hear the other side. Taking advantage of the parabasis or digression in which the custom of comedy allowed the author to address the audience through the chorus or one of the characters, Aristophanes explained his function as a conuc gadily among the Athenians

Never since our poet presented comedies has he praised himself upon the stage. . . But he maintains that he has done you much that it good. It you no longer allow yourselves to be too much hood-winked by strangers or seduced by flattery, if in pouries you are no longer the names you once were, it is thanks to him. Formerly, when delegates from other critics wanted to deceive you, they had but to style you "the people crowned with violets", at the word "violets" you at once sat erect on the tips of your burns. Or if, to takke your vanity, some one spoke of "rich and sleek Athens," he would get all, because he spoke of you as he would have of anchovies in oil. In cautioning you against such wiles, the poet has done you great service."

In The Peace (411) the poet was triumphant-Cleon was dead, and Nicias was about to sign for Athens a treaty pudging peace and friendship with Sparta for fifty years. But a few years after hostilities were resumed, and in 411 Aristophanes, abandoning hope in his fellow citizens, invited the women of Greece to end the bloodshed. As the Lysistrata opens, the ladies of Athens, while their men are still asleep, gather at dawn in council near the Aeropolis. They agree to withhold the comforts of love from their spouses until these come to terms with the enemy, and they send an embassy to the women of Sparta to invite their co-operation in this novel campaign for peace. The men, awake at last, call to the women to come home, when these refuse, the men besiege them, but the attackers are repulsed with pails of but water and torrents of speech. Lysistrata ("Dissolver of Armies") reads the men a lesson.

During the wars of old we hore with you. . . But we observed you carefully, and oftentimes, when we were at home, we used to hear that you had decided some matter badly. When we inquared about it, the men would answer, 'What's that to you? Be silent." And we asked, 'How is it, husband, that you men manage these affairs so foolishly?"

The leader of the men answers that women must keep out of public matters because they cannot manage the treasury. (As they debate, some of the women steal away to their husbands, muttering Aristophanic excuses.)

Lysistrata replies, "Why not? The wives have long had the management of their hisbands' purses, to the great advantage of both." She argues so well that the men are finally persuaded to call a conference of the warring states. When the delegates are gathered, Lysistrata arranges that they shall have all the wine they can drink. Soon they are in a happy mood, and the long-delayed treaty is signed. The chorus ends the play with a paean to peace.

2. Aristophanes and the Radicals

Behind the disintegration of Athensan public life, in the view of Aristophanes, lay two basic evils democracy and irreligion. He agreed with Socrates that the sovereignty of the people had become a sovereignty of politicians, but he was convinced that the skepticism of Socrates, Anaxagoras, and the Sophists had helped to loosen those moral bonds which had once made for social order and personal integrity. In The Clouds he made uproarious fun of the new philosophy. An old-fashioned gentleman by the name of Strepsiades, who is looking for an argument that may justify him in repudiating his debts, is delighted to hear that Socrates operates a Thinking Shop where one may learn to prove anything, even if it is false. He finds his way to the "School of Very Hard Thinkers." In the middle of the classroom he sees Socrates suspended from the ceiling in a basket, engrossed in thought, while some of the students are bent down with noses to the ground.

Strep. What are those people doing, stooping so oddly?

Student They are probing the secrets that he deep as Tartarus.

Strep. But why—excuse me, but their hind quarters—why are they stuck up so strangely in the are?

Stud. Their other ends are studying astronomy (Strepnades arks Socrates for lessons.)

Socr. By what gods do you swear? For the gods are not a current com with us. (Points to the chorus of clouds.) These are the real gods.

Strep. But come, is there no Zeus?

Soer. There is no Zeus.

Strep. But who makes it rain, then?

Socr These clouds. For have you ever seen run without clouds? But if it were Zeus he ought to run in fine weather as well as when clouds appear. . . .

Strep. But tell me, who is it that thunders? This makes me tremble.

Socr. These clouds, as they roll, thunder.

Strep. How?

Socr. When they are full of water, and are driven along, they fall heavily upon each other, and burst with a clap.

Strep. But who drives them? Is it not Zeus?

Soor Not at all, the ethereal Vortex drives them on.

Strep. So the greatest of gods is Vortex. But what makes the

clap of thunder?

Socr I will reach you from your own case. Were you ever, after being stuffed with broth at a festival, later disturbed in your stomach, and did a tumult suddenly rumble through you?

In another scene Pheidippides, son of Strepsiades, meets in personification Just Argument and Unjust Argument. The first tells him that he must imitate the stoic virtues of the men of Marathon, but the other preaches to him the new morality. What good, asks Unjust Argument, have men ever gamed by justice, or virtue, or moderation. For one honest successful and respected man there can always be found ten dishonest successful and respected men. Consider the gods themselves: they lied, stole, murdered, and committed adultery, and they are worshiped by all the Greeks, When Just Argument doubts that most successful men have been dishonest, Unjust Argument asks him

Come now, from what class do our lawyers spring?

J. A. Weil-from the blackgnards.

U. A. Surely. Tell me, again, what are our tragic poets?

J. A. Blackguards.

U. A. And our public orators?

J. A Blackguards all.

U. A. Now look about you. (Turning and pointing to the audience.) Which class among our friends here seems the most numerous?

(J. A. gravely examines the audience.)

J A. The blackguards have it by a large majority.

Phendippides is so apt a pupil of Unjust Argument that he beats his father, on the ground that he is strong enough to do it and enjoys it, and besides, he asks, "Did you not beat me when I was a boy?" Strepsiades begs for mercy in the name of Zeus, but Phendippides informs him that Zeus no longer exists, having been replaced by Vortex. The enraged father runs out into the streets, and calls upon all good critizens to destroy this new

philosophy. They attack and burn down the Thinking Shop, and Socrates barely escapes with his life.

We do not know what part this comedy played in the tragedy of Socrates. It was brought out in 423, twenty-four years before the famous trial. Its good humored satire does not seem to have offended the philosopher, we are rold that he stood throughout the performance," to give his enemies a better shot. Plato pictures Socrates and Aristophanes as friends after the performance, Plato himself recommended the play to Dionysius I of Syricuse as a pilk extravaganza, and maintained his own friendship with Aristophanes even after his master's death." Of the three accusers of Socrates in 100 one, Meletus, was a child when the cornedy was presented, and another Anytus, was on friendly terms with Socrates after the play. "Probably the latter circulation of the play as literature did the sage more harm than its original performance, Socrates himself, in Plato's report of his defense, referred to the play as one of the minor sources of that bad reputation which was prejudicing his case with the jurors.

There was another target in Athens at which Aristophanes aimed his satire, and in this case the mood was one of implacable hostility. He districted the skepticisms of the Sophists, the moral, economic, and political individualism that was undermining the state, the sentimental feminism that was agricting the women, and the social sin that was arousing the slaves. Al, these civils he saw at their cearest in Lumpides, and he resolved to destroy with laughter the influence of the great dramatist upon the mind of Greece.

He began in 411 with a play which he called The Thermophoriezusae, from the women who celebrated in sexual exclusiveness the feast of Demeter and Persephone. The assembled devotees discuss the latest quips of Luripides against their sex, and plan revenge. Luripides gets wind of the proceedings, and persuades his father-in-law. Mnesilochus to dress as a woman and enter the meeting to defend him. The first complainant alleges that the tragic dramatist has deprived her of a living formerly she made wreaths for the temples, but since I timpides has shown that there are no gods, the temple business has been rouned. Aliestlochus defends Furipides on the ground that his worst savings about women are visibly and audibly true, and are mild compared with what women themselves know to be their faults. The ladies suspect that this traducer of the sex cannot be a woman, they tear off Mnesilochus' disguise, and he saves himself from dismemberment only by stratching a babe from a woman's arms and

threatening to kill it if they touch him. As they nevertheless attack him, he unwraps the child, and finds that it is a wineskin disguised to escape the collector of internal revenue. He proposes to cut its throat just the same, timeh to the distress of its owner. "Spare my darling! "she cries, "or at least bring a bowl, and if it must die, let us catch its blood." Mnesilochus solves the problem by drinking the wine, and meanwhile sending an appeal to Euripides for rescue. Furipides appears in various parts from his plays—now as Vienelaus, now as Perseus, now as Echo—and finally arranges Mnesilochus' escape.

The Frogs (405) returns to the assault despite Funpides' death. Diony sus, god of the drama, is dissatisfied with the surviving playwrights of Athens, and Jescends to Hades to bring back l'aripides. As he is ferried over to the lower world a choir of frogs greets him with a creaking chorus that must have provided a month's catchword for young Athenians. Aristophanes pokes much fan at Dionysus in passing, and boldly parodies the Mysteries of Heasis. When the god arrives in Hades he finds Furipides attempting to unsert Aeschyl is as king of all dramatists. Aeschylus accuses Euripides of spreading skepticism and a dangerous casustry, and of corrupting the morals of Athenian women and youth, ladies of refinement, he says, have been known to kill themselves through shame at having heard Furipides' obscenities. A pair of scales is brought in, and each poet throws into it lines from his plays, one mights phrase of Aeschylas there the satire strikes the older poet too) tips the scale against a dozen of I unpides. At last Aesenylus proposes that the younger dramatist shall feap into one scale with wife, children, and baggage, while he will guarantee to find a couplet that will outweigh them all. In the end the great skeptic loses the contest, and Aesel ylus is brought back to Athens as victor. This oldest known essay in literary enticism received the first prize from the judges, and so pleased the audience that another performance of it was given a few days afterward.

In a midding play called The Ecclesizanae (301) i.e. The Assembly-women—Aristophanes turned his laughter upon the radical movement in general. The ladies of Athens disguise themselves as men, pack the Assembly, outvote their husbands, brothers, and sons, and elect themselves rulers of the state. Their leader is a fiery suffragette. Pravagora, who berates her sex as fools for letting themselves be tuled by such dolts as men, and proposes that all wealth shall be divided equally among the cureen, leaving the slaves uncontaminated with gold. The attack upon Utopia takes a

[&]quot;Possibly a reference to the repetition of Acachylus' plays.

more graceful form in Aristophanes' masterpiece, The Birds (414). Two citizens who despair of Athens climb up to the abode of the birds, hoping to find there an ideal life. With the help of the birds they build, between earth and heaven, a Utopian city, Nephelococcygia, or Cloud-Cuckoo-Land. The birds, in a chorus as ly rically perfect as anything in the tragic poets, apostrophize mankind:

Ye children of man, whose life is a span, Protracted with sorrow from day to day, Naked and featherless, feeble and queridous, Sickly calamitous creatures of clay, Attend to the words of the sovereign birds, Immortal, illustrious lords of the air, Who survey from on high, with a merciful eye, Your struggles of misery, labor, and care.

The birds plan to intercept all communication between the gods and men, no sacrifices shall be allowed to mount to heaven, soon, say the reformers, the old gods will starve, and the birds will be supreme. New gods are invented in the image of birds, and those conceived in the image of men are deposed. Finally an embassy comes from Olympus, seeking a truce; the leader of the birds agrees to take as his wife the handinaiden of Zeus, and the play ends in a happy marriage.

3. The Artist and the Thinker

Aristophanes is an unclassifiable mixture of heatity, wisdom, and filth. When the mood is upon him he can write lyrics of purest Greek serene, which no translator has ever yet conveyed. His dialogue is life itself, or perhaps it is swifter, racier, more vigorous than life dares be. He belongs with Rabelais, Shakespeare, and Dickens in the lusty vitality of his style, and like theirs his characters give us more keenly the shape and aroma of the time than all the works of the historians, no one who has not read Aristophanes can know the Athenians. His plots are ridiculous, and are put together with an almost extempore carelessness; sometimes the main theme is exhausted before the play is half through, and the remainder lamps forward on the crutches of burlesque. The humor is generally of a low order; it cracks and groans with facile puns, drags itself out to tragic lengths, and too often depends upon digestion, reproduction, and excretion. In The Acharmani we hear of a character who eases himself continues.

tinuously for eight months," in The Clouds the major forms of human waste are mingled with subtime philosophy," every second page offers us rumps, wind, bosoms, gonads, coitus, pederasty, onamism, everything is here." He charges his old rival, Cratinus, with nocturnal incontinence." He is the most contemporary of ancient poets, for nothing is so timeless as obscenity. Coming to him after any other Greek author—worst of all, after Euripides—he seems depressingly vingar, and we find it difficult to

unagine the same audience enjoying them both.

If we are good conservatives we can stomach all this on the ground that Aristophanes attacks every form of radicalism, and upholds devotedly every ancient virtue and vice. He is the most immoral of all Greek writers known to us, but he hopes to make up for it by attacking immorality. He is always found on the side of the rich, but he denounces cowardice, he hes pititessly about I unpides, living and dead, but he assails dishonesty, he describes the women of Athens as unbelievably coarse, but he exposes humpides for defaming them, he buriesques the gods so boldly " that in comparison with the pious Socrates we must picture him as an hidanous atheist-but he is al. for reagion, and accuses the philosophers of undermining the gods. Yet it took real courage to carresture the powerful Cleon, and to paint the faults of Demos to Demos' face, it took insight to see, in the frend of religion and morals from sophistic skepticism to epicurean individualism, a basic danger to the life of Athens. Perhaps Athens would have fared better if it had taken some of his advice, moderated her imperialism, made an early peace with Sparra, and mitigated with aristocratic leadership the chaos and corruption of post-Penclean democracy.

Aristophanes tailed because he did not take his own counsels seriously enough to observe them himself. His excesses of pornography and abuse were partly responsible for the law forbidding personal sature, and though the law was soon repealed, the Old Comedy of political criticism died before the death of Aristophanes (186), and was replaced, even in his later plays, by the Middle Comedy of manners and romance. But the virality of the Greek comic theater disappeared along with its extravagance and brutality. Photemon and Menander rose and passed and were forgotten, while Aristophanes survived all changes of moral and literary fashions to come down to our own time with eleven of his forty-two plays intact. Even today, despite all difficulties of understanding and translation. Aristophanes is alive, and, if we hold our noses, we can read him with profane

delight.

^{*} Some of the gods, he tells us, keep brothels in heavet. "

VIL. THE HISTORIANS

Prose was not completely forgotten in this heyday of dramatic poetry. Oratory stimulated by democracy and litigation, became one of the passions of Greece. As early as 400 Lorax of Syracuse wrote a treatise, Technic Logon (The Art of Words), to guide the citizen who wished to address an assembly or a jury, here already are the traditional divisions of an oration into introduction, narrative, argument, subsubary remarks, and peroration. Gorgias brought the art to Athens, and Antion in used the ornate style of Gorgias in speeches and pamphlets devoted to oligarchical propaganda. In Lysias Greek oratory became more natural and vivid, but it was only in the greatest statesmen, like Their stocies and Pencies, that the pubhe address rose above all visible artifice, and proved the effectiveness of sample speech. The new weapon was sharpened by the Sophists, and so thoroughly explained by their pupils that when the oligarchic party seized

power in 404 it forbade the further teaching of rhetoric "

The great achievement of Periclean prose was history. In a sense it was the fifth century that discovered the past, and consciously sought for a perspective of man in time. In Herodotus historiography has all the charm and vigor of youth, in Thurwdides fifty years later, it has already reached a degree of maturity which no later age has ever surpassed. What separates and distinguishes these two historians is the Sophist philosophy. Herodotus was the sin pler, perhaps the kindher, certainly the more cheerful spirit He was born in Halicarnissus about 484, of a family exalted enough to participate in political intrigue, because of his uncle's adventures he was exiled at the age of thirty-two, and began those far-reaching travels that supplied the background for his Histories. He passed down through Phoemicia to Fgypt, as far south as Elephantine, he moved west to Cyrene, east to Susa, and north to the Greek cities on the Black Sea. Wherever he went he observed and inquired with the eye of a scientist and the curiosity of a child, and when, about 447, he settled down in Athens, he was armed with a rich assortment of notes concerning the geography, history, and manpers of the Mediterranean states. With these notes, and a little plagranging of Hecataeus and other predecessors, he composed the most famous of all historical works, recording the life and history of Fgypt, the Near Fast, and Greece from their legendary origins to the close of the Persian War-An ancient story tells how he read parts of his book publicly at Athens and Olympia, and so pleased the Athenians with his account of the war,

and their exploits in it, that they voted him twelve talents (\$60,000) -which any historian will consider too pleasant to be true **

The introduction announces the purpose of the book in grand style:

This is a presentation of the Inquiries (Historia) of Herodorus of Haircarnassus, in the end that time may not obstructe the great and marvelous deeds of the Hellenes and the Barbarians, and especially that the causes for which they waged war with one another may not be forgotten.

Since all the nations of the eastern Mediterranean are brought into the natrative, the book is, in a annited sense a universal history," much broader in its scope than the narrow subject of Thucydides. The story is unconsciously unified by the contrast of barbarian despotism with Greek democracs, and moves, though by having steps and confusing digressions, to a foreshadowed and epic end at Salams. The purpose is to record "wondrous deeds and wars," and in truth the tale sometimes recails Cubbon's regrettable misunderstanding of history as 'lattle more than the register of the eraries, forces, and mistortunes of mankind " Nevertheless Herodorus, though he speaks in only the most incidental way of literature, science, ph osophy, and art, finds from for a thousand inveresting illustrations of the dress, numbers, morals, and beliefs of the societies he describes. He tells us how I gyptian eats jump into the fire, how the Danubians get drupk on smells, how the ways of Bahylon were built how the Massagetae ear their parents, and how the proestess of Athena at Pedasus grew a mighry beard. He presents not only kings and queens, but men of all degrees, and women, who are excauded from Thouvel, les, enliven these pages with their scandals, their beauty, their cruelties, and their charm.

There is, as Strabo says, "much nonsense in Herodotus", " but our historian like Aristotic, covers a vast field, and has many opportunities to err. His ignorance is as wide as his learning his credi fity is as great as his wisdom. He thinks that the senion of Ethiopians is black," accepts the legend that the Lacedaeir mains won battles because they had brought the bones of Orestes to Sparta," and reports incredible figures for the size of Xerxes' arms, the casualties of the Persians, and the amost woundless victories of the Greeks. His account is patriotic, but not unjust, he gives both sides of most political disputes," signalizes the heroism of the invaders, and restifies to the honor and chivary of the Persians. When he depends upon

[&]quot;Of the magnitude but excellent discussion of monarchy arabicracy and democracy, in on So-a.

foreign informants he makes his greatest mistakes; to he thinks that Nebuchadrezzar was a woman, that the Alps are a river, and that Cheops came after Rameses III. But when he deals with matters that he has had a chance to observe in person he is more reliable, and his statements are increasingly confirmed as our knowledge grows.

He swallows many superstitions, records many miracles, quotes oracles piously, and darkens his pages with omens and auguries, he gives the dates of Semele, Dionysus, and Heracles, and presents all history, like a Greek Bossuet, as the drama of a Divine Providence rewarding the virtues and punishing the sins, crames, and insolent prosperity of men. But he has his rationalistic moments, perhaps having heard the Sophists in his later years: he suggests that Homer and Hesiod gave name and form to the Olympian desties, that custom determines men's faiths, and that one man knows as much as another about the gods," having accepted Providence as the final arbiter of history, he puts it aside, and looks for natural causes, he compares and identifies the myths of Dionysus and Osiris in the manner of a scientist, he smiles rolerantly at some tales of divine intervention, and offers a possible natural explanation, in and he reveals his general method with a rwinkle in his eye when he says: "I am under obligation to tell what is reported, but I am not obliged to believe it, and let this hold for every narrative in this history "100". He is the first Greek historian whose works have come down to us, and in that sense Cicero may be forgiven for calling him the Father of History. Lucian, like most of the ancients, ranked him above Thucydides."

Nevertheless the difference between the mind of Herodotus and that of Thucy dides is almost the difference between adolescence and maturity. Thucy dides is one of the phenomena of the Greek Entightenment, a descendant of the Sophists as Gibbon was a spiritual nephew of Bayle and Voltaire. His father was a rich Athenian who owned gold mines in Thrace, his mother was a Thracian of distinguished family. He received all the education available in Athens, and grew up in the odor of skepticism. When the Peloponnenan War broke out he kept a record of it from day to day. In 410 he suffered from the plague. In 414, aged thirty-six (or forty), he was chosen one of two generals to command a naval expedition to Thrace. Because he failed to lead his forces to Amphipolis in time to relieve it from siege, he was exiled by the Athenians. He spent the next twenty years of his life in travel, especially in the Peloponnesus, to this direct acquaintance with the enemy we owe something of the impressive impariality

that distinguishes his book. The oligarchic revolution of 404 ended his exile, and he returned to Athens. He died some say by murder in or before 196, leaving untimished his History of the Peloponnesian War.

He begins it simply:

Thucy dides, an Athenian, wrote the history of the war between the Peloponnesians and the Athenians from the moment that it broke out, beneving that it would be an important war, and more worthy of relation than any that had preceded it.

He opens his introductory narrative where Herodotus left off, at the close of the Persian War. It is a pity that the genius of the greatest Greek historians saw nothing worthier of relation in Greek lite than its wars. Herodotus wrote partly with an eye to entertain the educated reader, Thucydides writes to furnish information for future historians, and the guidance of precedent for future statesmanship. Herodotus wrote in a loose and easygoing style, inspired perhaps by the rambling epics of Homer, Thucy dides, like one who has heard the philosophers, the orators, and the dramaturs, writes in a style often involved and obscure because it attempts to be at once brief, precise, and profound, a style occasionally spoiled by Gorgian rhetone and embedishment, but sometimes as terse and vivid as Tacitus, and rising, in the more crucial moments, to a dramatic power as intense as anything in Euripides, nothing in the dramatists can surpass the pages that describe the expedition to Syracuse, the vacillations of Nicias, and the horrors that followed his defeat. Herodotus ranged from place to place and from age to age. Thucy dides forces his story into a rigid chronological frame of seasons and years, sacrificing the continuity of his narrative. Herodotus wrote in terms of personalines rather than processes, feeling that processes operate through personalities, Thucvdides, though he recognizes the role of exceptional individuals in history, and occasionally lightens his theme with a portrait of Pericles or Alcibiades or Nicias, leans rather to impersonal recording and the consideration of causes, developments, and results. Herodotus wrote of far-off events reported to hum in most cases at second or third hand, Thucydides speaks often as an eyewitness, or as one who has spoken with evewitnesses, or has seen the original documents, in several instances he gives the documents concerned He has a keen conscience for accuracy, even his geography has been verified in detail. He seldom passes moralistic judgments upon men or events, he lets his partician scorn of Athenian democracy get the better of him in picturing Cleon, but for the greater part he keeps hunself aloof from his

story, gives the facts with fairness to both sides, and recounts the story of Thucy dides' brief military career as if he had never known, much less been, the man. He is the father of scientific method in history, and is proud of the care and industry with which he has worked. 'On the whole," he says, with a glance at Herodotus,

the conclusions I have drawn from the proofs quoted may. I believe, be safely relied on. Assuredly they will not be disturbed either by the lays of a poet displaying the exaggeration of his craft, or by the compositions of the chroniclers that are attractive at truth's expense the subjects they treat being out of the reach of evidence, and time having robbed most of them of historical value by enthroning them in the region of legend. Turning from these, we can rest satisfied with having proceeded upon the cacarest data, and having arrived at conclusions as exact as can be expected in matters of such antiquity Lie absence of romance in my history will, I fear, detrict so rewhat from its interest, but if it be judged useful by those inquirers who desire an exact knowledge of the past as an aid to the interpretation of the future-which in the course of human affairs, must resemble, if it does not reflect, the past-I shall be content. In fine, I have written my work not as an essay which is to win the appliaise of the moment, but as a possession for all time.14

Nevertheless, he yields accuracy to interest in one particular he has a passion for putting elegant speeches into the mouths of his characters. He frankly admits that these orations are mostly imaginary, but they help him to explain and vivify personalaties, ideas, and events. He claims that each speech represents the substance of an address actually given at the time, if this is true, all Greek statesmen and generals must have studied thetoric with Gorgias, philosophy with the Sophars, and ethics with Thrasymachus. The speeches have all the same style, the same subflety, the same realism of view, they make the laconic Laconian as windy as any Sophistbred Athenian. They put the most undiplomatic arguments and the mouths of diplomats,* and the most compron using honesty into the words of generals. The "Funeral Oration" of Pericles is an excellent essay on the virtues of Athens, and comes with fine grace from the pen of an exile, but Pencles was famous for simplicity of speech rather than for rhetoric, and Plutarch spoils the romance by saying that Pencles left nothing written, and that of his sayings hardly anything was preserved."

^{*} E.g., the speech of Alcibiades at Sparts, vi. 20.89.

Thucydides has defects corresponding to his virtues. He is as severe as a Thracian, and lacks the vivacity and wit of the Athenian spirit, there is no humor in his book. He is so absorbed in "this war, of which Thucy dides is the historian' (a proudly recurring phrase) that he has an eye only for political and military events. He this his pages with martial details, but makes no mention of any artist, or any work of art. He seeks causes sedulously, but seldom sanks beneath political to economic factors in the determination of events. Though writing for future generations, he tells us nothing of the constitutions of the Greek states, nothing of the life of the cities, nothing of the institutions of society. He is as exclusive towards women as towards the gods, he will not have them in his story, and he makes the gallant Perioles, who risked his career for a courtesan advocate of feminine freedom, say that "a woman's best fame is to be as seldom as possible mentioned by nien, either for censure or for praise."" Face to face with the greatest age in the history of culture, he loses himself in the logicchopping fluctuations of military victory and defeat, and leaves unsung the vibrant ate of the Athenian hund. He remains a general even after he has become an historian.

We are grateful for him, nevertheless, and must not complain too much that he did not write what he did not undertake to write. Here at least is an historical method, a reverence for troth, an acuteness of observation, an impartiality of judgment, a passing splendor of language and fascination of style, a mind both sharp and protound, whose ruthless realism is a toric to our naturally romanuc souls. Here are no legends, no myths, and no miracles. He accepts the heroic tales, but tries to explain them in naturalistic terms. As for the gods, he is devastatingly silent, they have no place in his history. He is sareastic about oracles and their safe ambiguity. and scornfully exposes the stupidity of Nicias in relying upon oracles rather than knowledge. He recognizes no guiding Providence, no divine plan, not even "progress", he sees hie and history as a tragedy at once sordid and noble, redeemed now and then by great men, but always relapsing into superstition and war, in but the conflict between religion and philosophy is decided, and philosophy wins.

Plumreh and Athenaeus refer to hundreds of Greek lustorians. Nearly all of them but Herodorus and Thucy dides, in the Golden Age, have been covered up by the silt of time, and of the later historians only paragraphs remain. The case is no different with the other forms of Greek literature. Of the hundreds of tragic dramatisms who won prizes at the Dionysia, we

have a few plays by three; of the many come writers we have one; of the great philosophers we have two. All in all, not more than one-twentieth survives from the enticelly acclaimed literature of fifth-century Greece; and from the earlier and later centuries even less. Most of what we have comes from Athens, the other cities, as we can tell from the philosophers that they sent to Athens, were fertile in genius too, but their confure was sooner engulfed by barbarism from without and from below, and their manuscripts were lost in the disorder of revolution and war. We must judge the whole from the fragments of a part.

Even so it is a rich heritage, if not in quantity (but who has absorbed it all?), surely in form. Form and order are the essence of the classic style in hterature as well as in art: the typical Greek writer, like the Greek artist, is never satisfied with mere expression, but longs to give form and beauty to his material. He cuts his matter down to brevity, rearranges it into elarity, transforms it into a complex simplicity; he is always direct, and seldom obscure, he shims exaggeration and hiss, and even when he is romantic in fee ing he struggles to be logical in thought. This persistent effort to subordinate fancy to reason is the dominant quality of the Greek mind, even of Greek poetry. Therefore Greek hierature is "modern," or rather contemporary; we find it hard to understand Dante or Milton, but Furipides and Thieydides are kin to us mentally, and belong to our age. And that is because, though myths may differ, reason remains the same, and the life of reason makes brothers of its lovers in all times, and everywhere.

CHAPTER EVIII

The Suicide of Greece

1. THE GREEK WORLD IN THE AGE OF PERICLES

ET us, before facing the melancholy spectacle of the Peloponnesian War, glance at the Greek world outside of Attica. Our knowledge of these other states in this period is so fragmentaty that we are left to assume—what we cannot prove—that they shared to a minor degree in the cultural blussoming of the Golden Age.

In 469 Pericles, anxious to control Egyptian grain, sent a great fleet to expel the Persians from Figs pt. The expedition faned, and thereafter Pericles adopted the policy of Themstocles-to win the world by commerce eather than by war. Throughout the fith century Lgypt and Cyprus continued under Persian rule. Rhodes remained free, and the merger of its three cities into one in 408 prepared it to become in the Hellenistic period one of the richest commercial centers in the Mediterranean. The Greek cities of Asia preserved their independence, won at Mycale in 470, until the destruction of the Atheman Empire left then helpless again before the tribute collectors of the Great King. The Greek colonies in Thrace and on the Hellespont, the Propontis, and the Fux ne prospered under Atheman domination, but were impoverished by the Peloponnesian War, Under Archelaus Macedonia passed out of barbarism and became one of the powers of the Greek world, good roads were laid down, a disciplined army was formed out of the hardy mountaineers, a handsome new capital was built at Pella, and many Greek genioses, like Timotheus, Zeuxis, and Enrip des, found welcome at the court. Bosonia in this period produced Pindar, and gave to Greece, in the Bocotian Confederacy, an unappreciated example of how independent states might live in peace and co-operation.

In Italy the Greek ciries suffered from frequent wars, and from Athenian ascendancy in maritime trade. In 443 Pericles sent out a group of Hellenes, gathered from different states, to establish near the site of Sybaris the new colony of Thurn, as an experiment in Panhellenic unity. Protagoras drew up a code of laws for the city, and Hippodamus the architect laid out the streets on a rectangular plan that was to be widely imitated in the following centuries. Within a few years the colonists divided into factions according to their origin, and most of the Athenians, probably including Herodotus, went back to Athens,

Sicily, always turbulent but always fertile, continued to grow in wealth and culture. Sennus and Acragas Luit massive temples, and under Theron Acragas became so rich that Empedie es remarked. "The men of Auragas devote themseives whelly to luxury as if they were to die tomorrow, but they turnish their houses as if they were to live forever " Genon I, when he died in 4-8, left Syracuse a system of administration almost as effective as that which Napoleon bequeathed to modern France. Under his brother and successor, Hieron I, the city became a center not only of trade and wearth, but of literature, science, and are. There, too, fuxury reached duzy heights. Syracusan banquets became a byword for extravagance, and "Cornithum girls" were so numerous in the city that any man who stept at home was considered a saint." The curzens were quick of mind and sharp of tongue, they enjoyed good oratory to their ruin, and crewded to hear, in their magnificent open air theater, the comedies of Epicharmus and the tragedies of Aeschvius. Hieron was a tyrant of bad temper and good will, crues to his enemies and generous to his friends. He opened his court and purse to Simunides, Bacchylides, Pindar, and Aeschylias, and with their help made Syracuse for a moment the intellectual capital of Greece.

But man cannot live on art alone. The Syracusans thirsted for the wine of freedom, and after the death of Flicton they deposed his brother and set up a amited democracy. The other Greek cines in the island took courage and because expelled their dictators, the trading classes overthrew the landowning aristocracies, and established a commercial democracy superimposed upon a system of ruthless slavery. After some sixty years, war ended this interlude of liberry as it had ended another through Goon I. In 400 the Carthagonans, who had kept alive through three genera any the memory of Hamilean's deteat at Himera, invaded Sicial with an arminda of fifteen hundred ships and twenty thousand men under Hamiltar's grandson, Hannit al. He laid siege to Schnus, which had become pacific under prosperity, and had neglected to keep its defenses in repair. The surprised city appealed for help to Aeragas and Syracuse, whose comfortable entrens responded with Spartan leisurchness. Schools was taken, all the survivors were massacred and mutilated, and the city became a part of the Carthagonian Empire. Hannibal proceeded to Himera, captured it with ease, and put three thousand prisoners to torrure and death to appeare the shade of his grandfather. A plague decunated his troops an Etook off Hannibal himself as they besieged Acragas, but his successor mollified the gods of Carthage by Jurrang alive his own son as an offering. The Carthaginians took the city, took Gela and Camarina, and marched on toward Syracuse. The terrined Syracusans, interrupted in their banquets, gave absolute power to their ablest

[•] The theater was probably built under Hieron I (478-67) and rebuilt under Hieron II (470-16). Much of a successes, and many ancient Greek dramas have been staged in it is our contary.

general, Dionysius. But Dionysius made peace with the Carthaginians, ceded to them all southern Sicily, and used his troops to establish a second dictatorship (405). It was not an treachery. Dionys us knew that resistance was useless, he surrendered everything but his army and his city, and resolved to strengthen both until he too, like Gelon, could expel the invaders from Siedy.

II. HOW THE GREAT WAR BEGAN

Just as the simple soul must picture deity in the form of a man, so the simple entizen must conceive the eauses of war to be personal—usually one person. Even Aristophanes, like some gossips of his time, would have it that Perioles brought on the Perioponnesian War by attacking Megara, because Megara had offended Aspasia."

It is probable that Pericles, who had not hesitated to conquer Aegina, had dreamed of completing Athens' control of Greek trade by dominating not only Megara but Cornth, which was to Greece what Istanbul is to the eastern Mediterranean today, a door and a key to half a continent's trade. But the basic cause of the war was the growth of the Athenian Empire, and the development of Athenian control over the commercial and political life of the Aegean. Athens allowed free trade there in time of peace, but only by impenal sufferance, no vessel might sail that sea without her consent. Athenian agents decided the destination of every vessel that left the grain ports of the north, Methone, starving with drought, had to ask Athens' leave to import a little corn.' Athens defended this domination as a vital necessity, she was dependent upon imported food, and was determined to guard the routes by which that food came. In policing the avenues of international trade Athens performed a real service to peace and prosperity in the Aegean, but the process became more and more irksome as the pride and wealth of the subject cities grew. The fands that these had contributed for defense against Persia were being used for the adornment of Athens, even for the financing of Athenian wars upon other Greeks,' Periodically the assessment had been increased until it was now, in 432, some 460 talents (\$2,300,000) per year. Athens reserved to Atheman courts the right to try all cases, arising within the Confederacy, that involved Athenian citizens or major crimes. If any city resisted, it was reduced by force, so Pencles with efficient dispatch suppressed rebellions in Aegina (457), Fuboea (446), and Samos (440). If we may believe Thurwhides, the democratic leaders at Athens, while making liberty the idol of their policy among Athenians, frankly recognized that the Confederacy of free cities had become an empire of force "You should remember," says Thucydides' Cleon to the Assembly (427), "that your empire is a despotism exercised over unwilling subjects who are always conspiring against you, they do not obey in return for any kindness which you do them to your own anjury, but only in so far as you are their master, they have no love for you, but they are held down by farce "The inherent contradiction between the worship of liberty and the despotism of empire co-operated with the individualism of the Greek states to end the Golden Age.

The resistance to Athenian policy came from nearly every state in Greece, Bocotta fought off at Coronea (447) the attempt of Athens to melude it in the Empire. Some subject eities, and others that feared to become subject, appealed to Sparta to check the Athenian power. The Spartans were not eager for war, knowing the strength and valor of the Athenian fleet, but the old racial antipaths between Dorian and Ionian inflamed them, and the Athenian custom of establishing in every city democracies dependent upon the Empire seemed to the landowing obgarchy of Sparta a threat to aristocratic government everywhere. For a time the Spartans contented themselves with supporting the upper classes

in every city, and slowly forging a united front against Athens.

Surrounded by enemies abroad and at home, Pericles worked for peace and prepared for war. The army, be calculated, could protect Attica, or all of Attica's population garbered within Athens' walls, and the navy could keep open the routes by which I uxine or Egyptian grain might enter Athens' walled port. It was his judgment that no real concessions could be made without endangering that supply of food, it seemed to hum, as now to England, a choice between empire and starvation. Nevertheless he sent envoys to all the Greek states, inviting them to an Hellenic Conference which would seek a peaceful solution of the problems that were leading to war. Sparta refused to attend, feeling that her acceptance would be construed as an acknowledgment of Athenian hegemony, and at her secret suggestion' so many other states rejected the invitation that the project fell through. Meanwhile, says Thucydides, in a sentence that explains much history, "The Pelopounesus and Athens were both full of young men whose inexperience made them eager to take up arms."

These basic factors being present, the coming of war awaited some provocative incident. In 435 Corevia, a Corinthian colony, declared itself independent of Corinth, and presently she joined the Athenian Confederacy for protection. Corinth sent a fleet to reduce the island; Athens, ap-

pealed to by the victorious democrats of Corcyra, sent a fleet to help them. An indecisive battle took place, in which the navies of Corcyra and Athens fought against those of Megari and Corinth. In 432 Pondaca, a city in Chalcidice tributary to Athens but Corinthan in blook, attempted to expel the Athenian power. Perioles sent an army to besiege it, but its resistance continued for two years, and weakened the military resources and prestige of Athens. When Niegaria gave further help to Corinth Perioles ordered all Megarian products excluded from the markets of Atrica and the Empire. Megaria and Corinth appealed to Sparta, Sparta proposed to Athens a repeal of this Megarian decree, Perioles agreed on condition that Sparta permit foreign states to trade with Lacoma. Sparta refused, instead, she laid down as a prerequisite to peace, that Athens should acknowledge the full independence of all Greek cities. I.e., that Athens should surrender her Empire. Perioles persuaded the Athenians to reject this demand, and Sparta declared war."

III. FROM THE PLAGUE TO THE PEACE

Nearly all Greece ranged itself on one or the other side. Every state in the Peloponnesus except Argos supported Sparta, so did Corinth, Megara, Boeotia, Locris, and Phocis. Athens, at the outset, had the halt-hearted help of the Ionian and Euxine cities and the Aegean isles. Like the World War of our own time, the first phase of the struggle was a contest between sea power and land power. The Athenian fleet laid waste the coastal towns of the Peloponnesus, while the Spartan army invaded Attica, seized the crops, and ruined the soil. Pericles called the population of Attica within the walls of Athens, refused to let his troops go out to harde, and advised the excited Athenians to bide their time and wait for their navy to win the war.

His calculations were strategically sound, but they ignored a factor that almost decided the conflict. The crowding of Athens led (430) to a plague probably malaria —which riged for nearly three years, killing a fourth of the soldiers and a great number of the civilian population. The people, desperate with the combined sufferings of epidemic and war, accused Pencles of responsibility for both. Cleon and others indicted him on the charge of misusing public funds, since he had apparently employed state money to bribe the Spartan kings to peace, he was unable to give a satisfactory accounting, he was convicted, deposed from office, and fined the

^{*} Cf Lucretius' powerful description of this plague in Dr Revum Natura, vi. 1138-1180.

enormous sum of fifry talents (\$300,000). About the same time (429) his sister and his two legitimate sons died of the plague. The Athenians, finding no leader to replace him, recalled him to power (420), and, to show their esteem for him, and their sympathy in his bereavement, they overtode a law that he himself had passed, and bestowed citizenship upon the son that Aspasia had borne to him. But the aging statesman had himself been infected by the plague, he grew weaker day by day, and died within a few months after his restoration to office. Under him Athens had reached her zenith, but because that height had been attained in part through the wealth of an unwilling Confederacy, and through a power that invited almost universal hostility, the Golden Age was unsound in its foundations, and was doomed to disaster when Athenian statesmanship failed in the strategy of peace.

Perhaps, as Thucydides suggests. Athens might have come through to victory nevertheless, if it had pursued to the end the Fabian policy laid down by Pericles. But his successors were too impatient to carry out a program that required a proud self-control. I be new masters of the democratic party were merchants like Cleon the dealer in leather, I ucrates the rope seller. Hy periodus the lampmaker, and these men demanded an active war on land as well as sea. Cleon was the ablest of them, the most eloquent, unsertipulous, and corrupt. Plutatch describes him as "the first orator among the Athenians that pulled off his cloak and smote his thigh when addressing the people", "Cieon made it a point, says Aristotle, to appear on the rostrum in the garb of a workingman." He was the first in a long line of demagogues that ruled Athens from the death of Pericles to the loss of Athenian independence at Chaeronea (138).

Cleon's ability was proved in 425 when the Athenian fleet besieged a Spartan army on the island of Sphacteria, near Messenian Pylus. No admiral seemed capable of taking the stronghold, but when the Assembly gave Cleon charge of the siege (had hoping that he would be killed in action), he surprised all by carrying through the attack with a skill and courage that forced the Lacedaemonians to an unprecedented surrender. Sparta, humbled, offered peace and alliance in return for the captured men, but Cleon's oratory persuaded the Assembly to reject the offer and continue the war. His hold on the populace was strengthened by a proposal, easily carried, that the Athenians should henceforth pay no taxes to the support of the war, but should finance it by raising the tribute exacted of the subject crites in the Empire (414). In these crites, as in Athens, the policy of Cleon was to get as much money out of the rich as he could find.

When the upper classes of Mynlene rebelled, overthrew the democracy, and declared Lesbos free of allegiance to Athens (429). Cleon moved that all adult males in the disaffected city be put to death. The Assembly-perhaps a mere quorum-agreed, and sent a ship with orders to that effect to Paches, the Athenian general who had put down the revolt. When word of the ruthless ediet got about Athens the steadier heads called for another meeting of the Assembly, secured the repeal of the decree, and dispatched a second ship which reached Paches just in time to prevent a massacre. Paches sent to Athens a thousand ringleaders, who, at Cleon's suggestion, and in accordance with the custom of the age, were all put to death."

Cleon redeemed himself by dying in battle against the Spartan hero Brasidas, who was capturing one after another of the cities subject or allied to Athens in the mainland north. It was in this campaign that Thucydides lost his naval commission and his Athenian residence by coming up too tardily to the relief of Amphipolis, which commanded the gold mines of Thrace. Brasidas having died in the same campaign, Sparta, left leaderless in the face of a threatened Helot revolt, offered peace again, and Athens, for once taking the advice of the objarchic leader, signed the Peace of Nicias (421). The rival cities not only declared the war ended, but signed an alliance for fifty years, and Athens committed herself to go to the help of Sparta should the Helots rise."

IV. ALCIBIADES

Three factors turned this pledge of a half century of friendship into a brief truce of six years, the diplomatic corruption of the peace into "war by other means", the rise of Alcibiades as the leader of a faction that favored renewed hosnities; and the attempt of Athens to conquer the Donan colonies in Sicily. Sparta's albes refused to sign the agreement, they feel away from Sparta as now a weakened state, and transferred their albance to Athens. Alcibiades, while keeping Athens formally at peace, maneuvered them into a war with Sparta, and united them in battle against her at Manunca (418). Sparta won, and Greece relapsed into an angry truce.

Meanwhile Athens sent a fleet to the Doman isle of Melos to demand its entrance as a subject state into the Athenian Empire (4:6). According to Thucvdides, who here probably sinks the historian into the sophistical philosopher or the revengeful exale, the Athenian envoys gave no other reason for their action than that might is right. "Of the gods we believe, and of men we know, that by a necessary law of their nature they rule wherever they can. And it is not as if we were the first to make this law, or to act upon it, we found it existing before, and shall leave it to exist forever after us, all we do is to make use of it, knowing that you and everybody else, having the same power as we have, would do the same as we do." The Melians refused to yield, and announced that they would put their trust in the gods. Later, as irresistible reinforcements came to the Athenian fleet, they surrendered at the discretion of the conquerors. The Athenians put to death all adult males who fed into their bands, sold the women and children as slaves, and gave the island to five hundred Athenian colonists. Athens rejuiced in the conquest, and prepared to illustrate in a living tragedy the theme of her dramatists, that a vengeful nemesis pursues all insolent success.

Alcibiades was one of those who, in the Assembly, defended the resolution condemning the male population of Melos to death." His support for any motion usually sufficed to carry it, for he was now the most famous man in Athens, admired for his eloquence, his good looks, his versatile genius, even his faults and crimes. His father, the rich Clemias, had been killed at the hattle of Coronea, his mother, an Alemaeonid and near relative of Pericles, had persuaded the statesman to bring up Alcibiades in his home. The boy was troublesome, but intelligent and brave, at twenty he fought beside Socrates at Potishea, and at twenty-six at Dehum (424). The phalosopher seems to have felt a warm attachment for the youth, and called him to virtue, says Poutarch, with words that "so overcame Alcibiades as to draw tears from his eyes, and disturb his very soul. Yet sometimes he would abandon himself to flatterers, when they proposed to him varieties of pleasure, and would desert Socrates, who would then pursue him as if he had been a fugitive slave."

The wit and pranks of the young man became the shocked and fascinated gossip of Athens. When Pericles reproved his mimodest dogmatism by saying that he too had talked eleverly in his youth, Alcibiades answered, "Pity I couldn't have known you when your brain was at its best."" Purely to meet the challenge of his fellow roisterers, he publicly strock in the fare one of Athens' richest and most powerful men, Hipponicus. The next morning he entered the house of the frightened magnate, bared his body, and begged Hipponicus to scourge him in purushment. The old man was so overwhelmed that he gave the youth his daughter Hipparete in marriage, with a dowry of ten talents, Alcibrades per-

suaded him to double it, and spent most of it on himself. He lived on a scale of luxury never known in Athens before. He filled his home with costly furniture, and engaged artists to paint pictures on the walls. He kept a stud of racing horses, and often won the chariot race at Olympia; once his entries took the first, second, and fourth prizes in one contest, whereupon he feasted the whole Assembly." He fitted out triremes, and paid the expenses of choruses, and when the state called for war contributors his donations topped at the rest. Free from any inhibition of conscience, convention, or fear, he frolicked through youth and early manhood with such animal spirits that all Athens seemed to enjoy his happiness. He lisped a little, but with a charm that made all fashionable young men isp, he wore a new cut of shoe, and soon all the gilded youth of the city were wearing "Alcibiades shoes." He violated a hundred laws and injured a hundred men, but no one dated bring him before a court. His popularity with the hetairas was so general that he wore on his golden shield an Eros with a thunderbolt, as if to announce his victories in love." His wife, after bearing his intidelities with patience, returned to her father's house, and prepared to sue for divorce, but when she appeared before the archon Alcabrades caught her up in his arms and carried her home through the market place, no one venturing to oppose him. Thereafter she gave him full freedom, and contented herself with the crumbs of his love, but her early death suggests a heart broken by his inconstancy

Entering politics after the death of Pericles, he found only one rival—the rich and pious Nicias. But Nicias favored the aristocracy, and peace, therefore Ascibiades set lamself to favor the commercial classes, and preached an imperialism that touched Athenian pride, the Peace of Nicias was sufficiently discrebited in his eyes by bearing his rival's name. In 420 he was elected one of the ten generals, and began those ambitious schemes that led Athens back into war. When the Assembly acclaimed him Limon the misanthrope rejoiced, predicting great calamities."

V. THE SICILIAN ADVENTURE

It was the imagination of Alcibiades that ruined the work of Pericles. Athens had recovered from the plague and the war, and trade was again bringing her the wealth of the Aegean. But the law of every being is self-development, no ambition, no empire, is ever content. Alcibiades dreamed of carving out a new realm for Athens in the rich cities of Italy and Sicily; there Athens would find grain, materials, and men, there she would control

the foreign food supply of the Peloponnesus, there she might double the tribute that was making her the greatest city in Greece. Only Syracuse could rival her, and that was a thought hard for Athens to hear. If she could take Syracuse all the western Mediterranean would fall into her lap, and a splendor would come to Athens such as even Pericles had not conceived.

In 427 Sicily, unitaring the mainland, had divided into warring camps, one led by Darian Syracuse, the other by Ionian Leontini. Leontini sent Gorgus to Athens to seek help, but Athens was then too weak to respond. Now, in 416, Segesta dispatched envoys to Athens to say that Syracuse was planning to subjugate all Sicily, make the island Dorian in government, and supply food and money to Sparta should the great war be renewed. Aleib ades leaped to his opportunity. He argued that the Sicilian Greeks were hopelessly divided even within each city, that it would be a simple matter given a little courage to annex the whole island to the Empire, that the Empire must continue to grow, or begin to decay, and that a little war now and then was a necessary training for an imperial race." Nicias pled with the Assembly not to listen to any man whose personal extravagance tempted him to wild schemes of aggrandizement, but the eloquence of Alribiades and the imagination of a people now dangerously free from moral scruples won the day. The Assembly declared war against Syracuse, voted funds for a vast armada, and, as if to ensure deteat, divided the command between Alcibiades and Nicias.

Preparations went on with the characteristic fever of war, and the occasion of the fleet's departure was awaited as a patriotic festival. But shortly before this appointed day a strange occurrence shocked a city that had lost much of its piety but none of its superstitions. Some unknown persons, under cover of night, had knocked off the noses, ears, and phalli from the figures of the god Hermes that stood before public buildings and many private dwellings as an emblem of fertility and a guardian of the home. An excited investigator brought forward the unreliable evidence of aliens and slaves that the prank had been perpetrated by a drunken party of Alcibrades' friends, led by Aleibrades himself. The young general protested his innocence, and demanded to be tried at once, that he might be convicted or cleared before the departure of the fleet, but his enemies, foreseeing his acquittal, succeeded in postponing the trial. And so in 415 the great flotilla set sail, led by a timid pacifist who hated war, and by an audacious militarist whose genius of leadership was frustrated by the di-

vided command, and the dread, among the crews, that he had incurred the enmity of the gods.

The fleet had been gone some days when new evidence, as unreliable as before, was brought our to the effect that Alcibiades and his friends had participated in an impious mimiery of the Fleusinian Mysteries. Urged on by an enraged populace, the Assembly sent the swift galicy Salaminia to overrake Aicibiades and bring him back for trial. Alcibiades accepted the summons and went aboutd the Salaminia, but when the vessel stopped at Thurn he secretly made his way to shore, and escaped. The Athenian Assembly harfled, pronounced judgment of exile upon him, with confiscation of all his property, and a decree of death in case the Athenians should ever capture him. Batter at the thought that his plans for empire and glory had been trustrated by a condemnation which he continued to call unjust, Alcibiades took refuge in the Peloponnesus, and, appearing before the Sparran Assembly, proposed to help Sparra deteat. Athens and establish there an aristocratic government. "As for democracy," I bucy dides makes han say "the men of sense among us knew what it wis, and I perhaps as well as any, as I have the more cause to complain of it, but there is nothing new to be said of a parent absurdity." He advised them to send a fleet to help Syracuse and an army to capture Deceleia, an Atric town whose possession should give Sparta manuary command of everything in Artica but Athens. The silver names at Laurium would cease to finance Athenian ceastance and the subject cities, to reseeing the deteat of Athens, would stop their payment of tribute. Sparra took his advice

The intensity of his own resolution appeared in the completeness with which he, so accustomed to luxury, took up the Spartan way of life. He became frugal and reserved, eating coarse tood, wearing a rough tume and no shoes, liathing in the Forotas winter and summer, and observing all Lacedaemonian laws and costoms faithfully. I ven so his good looks and personal fascination ruined his plans. The Queen tell in love with him, bore him a son, and proudly whispered to her friends that he was the father. He excused himself to his intimates on the ground that he could not resist the chance to establish his race as kings over Laconia. King Agis, who had been away with the army, started home, and Alcibiades conveniently secuted a commission in a Spartan squadron that was saving to Asia. The King disowned the child and sent out secret orders for the assassination of Alcibiades, but the latter's triends warned him, and he escaped and joined the Persian admiral Lissaphernes at Sardis.

At the other end of the war front Nicias was encountering a resistance which only Alcibiades' genius for strategy and intrigue could have overcome. Nearly all of Sicily came to the aid of by racuse. In 414 a Spartan fleer under Gylippus helped the Sicilian navy to bottle up the Atheman ships in the harbor of Syracuse, cutting them off from any supply of food. A final chance to escape was lost because of an eclipse of the moon, which frightened Nicias and many of his soldiers into awaiting an opportunity more sansfactory to the gods. On the next day, however, they found themselves surrounded, and were forced to give battle. They were defeated, first on sea and then on land. Nicias, though ill and weak, fought bravely, and at last surrendered to the mercy of the Syracusans. He was at once put to death; and the surviving Athenians, almost all of the citizen class, were sent to die at hard labor in the quarties of Sicily, where they tasted the fate of the men who for generations had worked the mines of Laureum.

VI. THE TRIUMPH OF SPARTA

The disaster broke the spirit of Athens. Nearly half the citizen body was now enslaved or dead, half the women of the citizen class were in effect widows, and the children were orphans. The funds that Pericles had accumulated in the treasury were almost exhausted, in another year the last penny would be gone. Thinking the fall of Athens miniment, the subject cities refused further tribute, most of her allies abandoned her, and many flocked to the side of Sparta. In 413 Sparta, claiming that the "fifty years" peace had been repeatedly violated by Athens, renewed the war. The Lacedaemomans now took and fortified Decelera, the supply of food from Euboca and of silver from Laurium stopped; the slaves in the nines at Laurium revolted, and went over to the Spartans in a body of twenty thousand men. Syracuse sent an army to join in the attack, and the Persian King, seeing an opportunity to avenge Marathon and Salamis, provided funds for the growing Spartan fleet, on the shameful understanding that Sparta would assist Persia in regaining mastery over the Greek eines of Ionia."

It was a proof of Atheman courage, and of the vitality of Atheman democracy, that Athens stood off her enemies for ten years more. The government was put upon an economical footing, taxes and capital levies were collected to build a new fleet, and within a year of the defeat at Syracuse Athens was ready to contest Sparra's new mastery of the sea.

Just as recovery seemed assured, the oligarchic faction, which had never favored the war, and, indeed, looked to a Sparran victory to revive aristocracy in Athens, organized a revoit, seized the organs of government, and set up a supreme Council of Four Hundred (411). The Assembly, cowed by the assassination of many democratic leaders, voted its own abdication. The rich supported the rebenion as the only way of controlling the class war that had crossed the lines of the war between Athens and Sparta much as the struggle of the middle classes against aristocracy united the liberal factions in Ingland and America in the American Revolution. Once in power, the oliginens sent envoys to make peace with Sparta, and secretsy prepared to admit the Spartan army into Athens. Meanwhile Theramenes, leader of a center party of moderate aristocrats, led a counterrevolution, and replaced the Four Hundred - which had ruled some four months with a Council of Five Thousand (411). For a brief while Athens enjoyed that combination of democracy and aristocracy which seemed to Thucy dides and Aristorie" (aristocrats both) to have been the best and farest government that Athens had known since Solon. But the second revolt, like the first, had forgotten that Athens depended for its food and life upon its navy, whose personnel, barring a few leaders, had been disfranchised by both revolutions. Incensed at the news, the sailors announced that unless the democracy were restored they would besiege Athens. The obgarchs waited hopeful v for a Spartan arms, the Spartans as usual were tardy, the new government took to its heels, and the victorious democrats restered the old constitution (411)

Alcibiades had secretly supported the obgarchic revolt, hoping that it might smooth a way for his return to Athens. Now the re-empowered democracy, perhaps ignorant of these introgoes, but knowing how badly Athens had fared since his exite, called him home with a promise of immesty. Deferring his trium I hat Athens, he took charge of the fleet at Samos, and moved into action with a celerity and success that brought Athens a brief moment of happiness. Speeding through the Hellespont, he met and completely destreyed a Spartan fleet at Cyzicus (410). After a year's siege he captured Chalcedon and Byzantinin, and thereby restored Athens' control of the food supply from the Bosporus. Smang back south he encountered another Spartan squadron near the isle of Andros, and defeated it with ease. Returning now (40°) to Athens, he was welcomed with universal acclaim his sins were forgotten, only his genus was remembered, and Athens' desperate need of an able general." But Athens, while celebrating his victories, neglected to send him money for the pay of his crews.

Once again Alcibiades' lack of moral scrople ruined him. Leaving the greater number of his vessels at Notium (near Lphesus) in command of one Antiochia, with strict instructions to stay in port and under no circumstances to give battie, he himself went with a small force to Caria to raise funds for his men by something less than due process of law. Antiochia, itching for fame, left his haven and challenged a Spartan flotilla under Lysander. Lysander accepted the taunt, killed Antiochias in a hand-to-hand fight, and sank or captured most of the Athenian ships (40°). When news of this catastrophe came to Athens the Assembly acted with characteristic haste, it censured Alcibiades for leaving his fleet, and removed him from command. Alcibiades, fearing now both Athens and Sparta, fled to a refuge in Bithynia.

Desperate, the Athenians ordered that the gold and silver in the statues and offerings on the Acropous should be melted down for the building of a new flotilla of 150 triremes, and offered freedom to those slaves, and emzenship to those aliens, who would fight for the city. The new armada defeated a Sparran fleet off the Arginosae Islands (south of Lesbos) in 406, and Athens again thruled with the news of victory. But the Assembly was furious when it learned that its generals* had allowed the crews of twenty-five ships, sunk by the enemy, to drown in a storm. Hotheads professed that these souls, for lack of proper hunal, would wander restlessly about the universe, and accusing the survivors of negligence in not attempting a rescue, they proposed that the eight victorious generals (including the son of Pera les by Aspasia) should be put to death. Socrates, who happened to be a member of the presiding pry tany for the day, refused to put the motion to a vote. It was presented and passed over his protests, and the sentence was carried out with the same precipitation with which it had been decreed. A few days later the Assembly repented, and condemned to death those who had persuaded it to execute the generals. Meanwhile the Sparrans, weakened by the defeat, offered peace again, but the Assembly, moved by the oratory of the drunken Cleophon, refused

Led now by second-rate men, the Athenian fleet sailed north to meet the Spartans under Lysander in the Sea of Marmora. From his hiding place in the tills Alcibiades saw that the Athenian ships had taken up a strategically perilous position at Aegospotami, near Lampsacus. He risked his ufe to ride down to the shore and advise the Athenian admirals to seek a more sheltered place, but they distrusted his counsel, and reminded han that he was no longer in command. On the next day the decisive battle was fought;

^{*} The term strategot was applied to navel as well as maintary commanders.

all but eight of the 208 Athenian ships were scuttled or taken, and Lysander ordered the execution of three thousand Athenian captives." Learning that Lysander had issued orders for his assistination, Alcibrades sought refuge in Phrygia with the Persian general Pharmabarus, who assigned him a castle and a courtesan. But the Persian King, persuaded by Lysander, ordered Pharmabarus to kill his guest. Two assassins beneged Alcibrades in his castle, and set fire to it, he came out naked and desperate, seeking the privilege of fighting for his life, but before his aword could touch his assailants he was pierced by their arrows and javelins. He died at the age of forty six, the greatest genius and most tragic failure in the military history of Greece

Lysander, now absolute master of the Aegean, sailed down from city to city, overthrowing the democracies and setting up offgarchic governments subject to Sparta. Entering the Piraeus unresisted, he proceeded to blockade Athens. The Athenians resisted with their accustomed bravery, but within three months their stock of food was exhausted, and the streets were full of dead or dying men. Lysander gave Athens butter and yet lement terms he would not, he said, destroy a city that had in time past performed such honorable services for Greece, nor would be enslave its population, but he demanded the leveling of the Long Walls, the recail of the offgarchic exists, the surrender of all but eight of the surviving Athenian ships, and a pledge to support Sparta actively in any further war. Athens protested, and yielded.

Supported by Lysander, and led by Critias and Theramenes, the returning ougarchs seried the government and established a Council of Thirty to rule Athens (404). These Greek Bourbons had learned nothing, they confiscated the property and alienated the support of many rich merchants, they plundered the remples, sold for three talents the wharves of the Piraeus which had cost a thousand," exiled five thousand democrats, and put fifteen hundred others to death, they assassinated all Athenians who were distasteful to them politically or personally, they put an end to freedom of teaching, assemblage, and speech, and Critias himself, once his pupil, forbade Socrates to continue his public discourses. Seeking to compromise the philosopher to their cause the Thirty ordered him and four others to arrest the democrat Leon. The others obeyed, but Socrates refused.

All the sins of the democracy were forgotten as the crimes of the oligarchs increased and multiplied. The number of men, even of substantial means, who began to seek an end to this bloody tyranny grew from day to day. When a thousand armed democrats under. Thrasybulus approached the Paraeus, the Thirty found that hardly any but their immediate partisans could be persuaded to fight for them. Critias organized a small army, went out to battle, and was defeated and killed. Thrasybulus entered Athens, and restricted the democracy (403). Under his guidance the Assembly behaved with privanted moderation, it decreed death for only the highest surviving leaders of the revolution, and allowed them to escape this sentence by exact declared a general amnesty to all others who had supported the ongarchs, it even repeat to Sparta the hundred talents that the ephors had lent to the Thorty." These acts of humanity and statesmanship gave to Athens at last the peace that she had not known for a generation.

VII. THE DEATH OF SOCRATES

Strange to say, the only cruelty of the restored democracy was committed upon an old philosopher whose seventy years should have put him beyond the possibility of being a danger to the state. But among the leaders of the victorious faction was the same Anytus who years before had threatened to revenge himself upon Socrates for dialectical slights and the "corruption" of his son. Anytus was a good man he had fought bravely under Thrasybulus, had saved the lives of oligarchs who had been taken captive by his soldiers, had been instrumental in arranging the aninesty, and had left in undistricted enjoyment of his property those to whom it had been sold after confiscation by the Thirty. But his generosity failed when it came to Socrates. He could not forget that when he had gone into exile his son had stayed in Athens with Socrates, and had become a drunkand " It did not appeare Anytus to observe that Socrates had refused to obey the Thirty, and (if we may take Xenophon's word for it) had denounced Critias as a had ruler." To Anyrus it seemed that Socrates, more than any Sophist, was an evil influence both on morals and on politics, he was undermining the religious faith that had supported morality, and his persistent criticism was weakening the belief of educated Athenians in the institutions of democracy. The murderous tyrant Critiss had been one of Socrates' pupils, the immoral and treasonable Alcibiades had been his lover; Charmides, his early favorite, had been a general under Critias, and had just died in battle against the democracy. It seemed fitting to Anytis that Socrates should leave Athens, or die.

The indicrinent was brought forward by Anyrus, Meletus, and Lycon

^{*} Certas and Alc tuddes had left the turbage of Sociates early in his career as a teacher, not laking the restraines which he preached to them.**

in 399, and read as follows: "Socrates is a public offender in that he does not recognize the gods that the state recognizes, but introduces new demonacial beings" (the Socratic damonion), 'he has also offended by corrupting the youth." The trial was held before a popular court, or dikasterion, of some five hundred citizens, mostly of the less educated class. We have no means of knowing how accurately Plato and Xenophon have reported Socrates' defense, we do know that Plato was present at the trial," and that his account of Socrates' "apology" agrees in many points with Xenophon's. Socrates, says Plato, insisted that he believed in the state gods, even in the divinity of the sun and moon. "You say first that I do not believe in gods, and then again that I believe in denigods. . . . You might as well affirm the existence of mules, and deny that of horses and asses." And then he referred sadly to the effects of Aristophanes' sature:

I have had many accusers, who accused me of old, and their false charges have continued during many years, and I am more afraid of them than of Anyrus and his associates. For they began when you were chaoren, and took possession of your mands with their falsehoods, teiling of one Socrates, a wise man, who speculated about the heavens a love, and searched into the earth beneath, and made the worse appear the better cause. These are the accusers I dread, for they are the carculators of this tumor, and their hearers are too apt to fancy that speculators of this sort do not becove in the gods. And they are many, and their charges against me are of succent date, and they made them in days when you were impresstotable in childhood, or perhaps in youth-and the cause when heard went by default, for there was none to answer. And hardest of all, their names I do not know and cannot tell, unless in the chance case of a comic poet. That is the nature of the accusation, and that is what you have seen yourselves in the comedy of Aristophancs.*

He lays claim to a divine mission to teach the good and simple life, and no threat will deter him.

Strange, indeed, would be my conduct, O men of Athens, if I who, when I was ordered by the generals whom you chose to command me at Potidaea and Amphipous and Deaum, remained where

^{*}Conset believed that the real come of the indictment was the hostian of the Athe personn to anyone who cast doubt upon the state gods. One of the chief markets for carrie was provided by the spous who bought the some as to offer to satisface, any decrease in faith a set even this market. Any property this later retained, was the mouthpiece of these persons, before whom his plays, if successful, would be repeated.*

they placed me, like any other man, facing death-if, I say, now when, as I conceive and unagine, God orders me to fulfil the philosopher's mission of searching into myself and other men, I were to desert my post through fear of death . . . If you say to me, Socrates, this time we will let you off, but upon one condition, that you are not to inquire and speculate in this way any more reply. Men of Athens, I honor and love you, but I shall obey God rather than you, and while I have life and strength I shall never cease from the practice and teaching of philosophy, exhurting anyone whom I meet, after my manner, and convincing him, saying O my friend, why do you, who are a citizen of the great and mighty and wise city of Athens, care so much about laying up the greatest amount of money and honor and reputation, and so little about wisdom and truth? Wheretore, O men of Athens, I say to you, do as Anytus bids, and either acquit me or not, but whatever you do, know that I shall never alter my ways, not even if I have to die many times."

The judges appear to have interrupted him at this point, and to have bidden him desist from what seemed to them insolence, but he continued in even haughtier vein.

I would have you know that if you kill such a one as I am, you will injure yourselves more than you will injure me... For if you kill me you will not easily find another like me, who, if I may use such a ladicrous figure of speech, am a sort of gadfly, given to the state by the God; and the state is like a great and noble steed who is tardy in his motions owing to his very size, and requires to be stirred into life.... And as you will not easily find another like me, I would advise you to spare me.

The sentence of guilty was pronounced upon him by the small majority of sixty, had his defense been more concitatory it is likely that he would have been acquirted. He had the privilege of proposing an alternative penalty in place of death. At first he refused to make even this concession, but on the appeal of Plato and other friends, who underwrote his pledge, he offered to pay a fine of thirty minas (\$3000). The second polling of the jury condemned him by eighty more votes than the first."

It still remained open to him to escape from the prison, Crito and other friends (if we may follow Plato) prepared the way with bribery," and probably Anytus had hoped for such a compromise. But Socrates remained himself to the last. He felt that he had but a few more years to live, and

that "he relinquished only the most burdensome part of life, in which all feel their powers of intellect diminished." Instead of accepting Crito's proposal he examined it from an ethical point of view, discussed it dialectically, and payed the game of logic to the end." His disciples visited him daily an his cell during the month between his trial and his execution, and he seems to have discoursed with them calinly usual the final hour Plato pictures him as fonding the hair and head of the young Phaedo, and saying. I omorrow, Phaedo, I suppose that these fair locks will be cut '— in mourning." Xantiuppe came in teats, with their youngest child in her arms, he comforted her, and asked Crito to have her escorted home. "You die undeservedly," said an aritent disciple, "Would you, then," Socrates answered, "have me deserve death?"

After he was gone, says Diodorus," the Athenians regretted their treatment of him, and put his accusers to death. Suidas makes Meletus die by public storing. Plutatch varies the tale, the accusers became so unpopular that no critzen would light their tires, or answer their questions, or bathe in the same water with them, so that they were at last driven in despair to hang themselves." Diogenes Laernius reports that Meletus was executed, Anytus exiled, and a bronze statue put up by Athens in memory of the philosopher." We do not know if these stories are true."

The Gollen Age ended with the death of Socrates. Athens was exhausted in body and soul only the degradation of character by prelonged war and desperate suffering could explain the rutaless treatment of Melos. the bitter sentence upon Mytilene, the execution of the Arginusae generals, and the sacrotice of Socrates on the altae of a dving turb. All the foundations of Athenian life were disordered, the soil of Artica had been devastated by the Spartan raids, and the slew growing otive trees had been burned to the ground, the Athenian has y had been destroyed, and control of trade and the food supply had been lost, the state treasury was empty, and private fortunes had been raved almost to extinction, two thirds of the entiten hody had been killed. The damage done to Greece by the Persian invasions could not compare with the destruction of Greek life and properry by the Peloponnesian War. After Salamis and Plataea Greece was left. poor, but evalred with courage and pride, now Greece was poor again, and Athens had suffered a wound to her spirit which seemed too deep to be healed.

Gente" donors there and they are rendered dotte or by the efforts of Plato and Xrms; hon to defend Societies reputst in the these are subtracted generally accepted in any participality of Termilan and Augustine") and accord admirably with the habits of the Athenians.

Two things sustained her: the restoration of democracy under men of judgment and moderation, and the consciousness that during the last sixty years, even during the War, she had produced such art and literature as surpassed the like product of any other age in the memory of man. Anaxagoras had been exiled and Socrates had been put to death, but the stimulus that they had given to philosophy sufficed to make Athens henceforth, and despite herself, the center and summit of Greek thought. What before had been formless tentutives of speculation were now to mature into great systems that would agreate Europe for centuries to come; while the haphazard provision of higher education by wandering Sophists was to be replaced by the first universities in history-universities that would make Athens, as Thucydides had prematurely called her, "the school of Hellas." Through the bloodshed and turmoil of conflict the traditions of art had not mute decayed; for many centuries yet the sculpturs and architects of Greece were to carve and build for all the Mediterranean world. Out of the despair of her defeat Athens lifted herself with startling virility to new wealth, culture, and power, and the autumn of her life was bountiful.

L. THE SPARTAN EMPIRE

SPARTA now assumed for a spell the naval mastery of Greece, and offered to history another tragedy of success brought low by pride. Instead of the freedom which she had promised to the cities once subject to Athens, she levied upon them an annual tribute of a thousand talents [\$6,000,000], and established in each of them an aristocratic rule controlled by a Lacedaemonian harmost, or governor, and supported by a Spartan garrison. These governments, responsible only to the distant ephors, practiced such corruption and tyranny that soon the new empire was hated more intensely than the old.

In Sparra itself the influx of money and gifts from oppressed cities and obsequirus obgerebs strengthened the internal forces that had long been leading to decay. By the fourth century the ruling caste had learned how to add private luxury to public simplicity, and even the ephors had ceased, except in outward show, to observe the Lycurgean discipline. Much of the land, by downes and be jaests, had faller into the hands of women, and the wearth so accumulated gave to the Sparran ladies, free from the care of male children-an ease of life and morals hardly befitting their name. The repeated division of some estates had impoverished many families to a point where they could no longer contribute their quota to the public mess, and therefore lost the rights of citizenship, while the formation of large properties through intermatriage and legacies had created in the few remaining "I quals" a provocative concentration of wealth " "Some Spartans," Aristotle writes, "own domains of vast extent, the others have nearly nothing, all the land is in the hands of a few, " The disfranchised gentry, the excluded Periocci, and the resentful Helots made a population too restless and hostile to permit the government to engage, on any large scale of space or time, in those external military operations which imperial rule required.

Meanwhile civil war among the Persians was affecting the fortunes of

^{*} The homotos, or Equals, numbered eight thousand in 480, two thousand in 171, seven hundred in 341.*

Greece In 401 the younger Cyrus rebelled against his brother Artaxerxes II, enlisted Sparta's aid, and recruited an army from the thousands of Greek and other mercenaries left idle in Asia by the sudden termination of the Peloponnesian War. The two brothers met at Cunaxa, between the converging Tigris and Euphrates, Cyrus was defeated and slain, and all of his army was captured or destroyed except a contingent of twelve thousand Greeks whose quickness of mind and foot enabled them to escape into the interior of Babylonia. Hunted by the King's forces, the Greeks chose, in their rough democratic way, three generals to lead them to safety. Among these was Xenophon, once a pupil of Socrates, now a young soldier of fortune, destined to be remembered above all by the Anabasis, or Ascent, in which he later described with engaging simplicity the long "Retreat of the Ten Thousand" up along the Tigris and over the hills of Kurdistant and Armenia to the Black Sea. It was one of the great adventures in human history. We are amazed at the mexhaustible courage of these Greeks, fighting their way on foot, day by day for five months, through two thousand miles of enemy country, across hot and foodless plains, and over perilous mountain passes covered with eight feet of snow, while armies and guerrilla bands attacked them in the rear and in front and on either flank, and hostile natives used every device to kill them, or mislead them, or har their way. As we read this fascinating story, made so dull for us in yourh by the compulsion to translate it, we perceive that the most important weapon for an army is food, and that the skill of a commander lies as much in finding supplies as in organizing victory. More of these Greeks died from exposure and starvation than from battle, though the battles were as numerous as the days. When at last the 8600 survivors sighted the Fuxue at Trapezus (Trebizond), their hearts overflowed.

As soon as the vanguard got to the top of the mountains, a great cry went up. And when Xenophon and the rear guard heard it they imagined that other enemies were attacking in front for enemies were following behind them... They pushed ahead to lend aid, and in a moment they heard the soldiers shouting, "The sea! the sea!" and passing the word along. Then all the troops of the rear guard likewise broke into a run, and the pack animals began racing ahead... And when all had reached the summit, then mideed they fell to embracing one another, and generals and captains as well, with tears in their eyes."

For this was a Greek sea, and Trapezus a Greek city; they were safe now, and could test without fear of death surprising them in the night. The

news of their exploit resounded proudly through old Hellas, and encouraged Philip, two generations later, to believe that a well-trained Greek force could be relied upon to defeat a Persian army many times its size.

Unwittingly Xenophon opened the way for Alexander.

Perhaps this influence was already felt by Agesilaus, who in 399 had succeeded to the throne of Sparta. Persia might have been persuaded to overlook Sparra's aid to Cyrus. But to the abiest of the Spartan kings a war with Persia seemed only an interesting adventure, and he set out with a small force to free all Greek Asia from Persian rule. When Armxerxes Il learned that Agesdaus was easily deteating all Persian troops sent against him, he dispatched messengers with abundant gold to Athens and Thebes to bribe these cities into declaring war upon Sparta.' The effort readily succeeded, and after nine years of peace the conflict between Athens and Sparta was renewed. Agestians was recalled from Asia to meet, and barely defeat, the combined forces of Athens and Thebes at Coronea, but in the same month the united fleets of Athens and Persia under Conon destroyed the Spartan navy near Chidus, and put an end to Sparta's brief domination of the seas. Athens rejoiced, and set to work energencally, with funds supplied by Persia, to rebuild her Long Walls. Sparta defended herself by sending an envoy, Antaleidas, to the Great King, offering to surrender the Greek cities of Asia to Persian rule if Persia would enforce among the mainland Greeks a peace that would protect Sparta. The Great King agreed, withdress his financial support from Athens and Thelies, and compelled all parties to sign at Sardis (387) the "Peace of Antalcidas," or the "King's Peace" Lemmos, Imbros, and Sevros were conceded to Athens, and the major Greek states were guaranteed autonomy, but all the Greek cities of Asia, along with Cyprus, were declared the property of the King. Athens signed under protest, knowing that this was the most disgraceful event in Greek history. For a generation all the fruits of Marathon were lost, the Greek states of the mainland remained free in name, but in effect the power of Persia had engulfed them. All Greece looked upon Sparta as a tractor, and waited eagerly for some nation to destroy her.

IL EPAMINONDAS

As if to strengthen this feeling, Sparta assumed the authority to interpret and enforce the King's Peace among the Greek states. To weaken Thebes

[&]quot;In what respect," he saked, "as the 'Great King' greater than I, unless he is more upright and self-restrained)."

she insisted that the Boeotian Confederacy violated the autonomy clause of the treary, and must be dissolved. With this excuse the Spartan army set up in many Boeotian cities oligarchic governments favorable to Sparta and in several cases upheld by Spartan garrisons. When Thebes protested, a Lacedaemic nish force captured her citadel, the Cadmeia, and established an oligarchy subject to Spartan domination. The crisis aroused Thebes to unwonted heroism. Pelopidas and six companions assassinated the four "Lacontring" dictators of Thebes, and reasserted Theban liberty. The Confederacy was reorganized, and named Pelopidas its leader, or hocotarch. Pelopidas called to his aid his friend and lover I paramondas, who trained and led the army that reduced Sparta to her ancient isolation.

Fpare nondes came of a distinguished but impoverished family which proudly traced its origin to the drigon's teeth sown by Cadmus a thousand years before. He was a quict man, of whom it was said that no one talked less or knew more. His modesty and integrity, his almost ascetic life, his devotion to his friends, his prodence in counsel, his courage and yet self-restraint in action, endeared him to all the Thebans despite the military discipline to which he subjected them. He did not love war, but he was convinced that no nation could lose all marrial spirit and habits and yet maintain its freedom. Elected and many times re elected bocotarch, he warned those who proposed to vote for him. "Bethink yourselves once more, for if I am made general you will be compelled to serve in my army." Under his command the lax Thebans were drilled into good soldiers even the "Greek lovers" who were so numerous in the city were formed by Pelopidis into a "Sacred Band" of three hundred hophtes, each of whom was pledged to stand by his friend, in battle, to the death.

When a Spartan army of ten thousand troops under King Cleombrorus invided Bocoria. Epaininondas met it at Leoctra, near Plataea, with six thousand men, and won a victory that influenced the political listory of Greece and the mineary methods of Europe. He was the first Heliene to make a careful study of factics, he counted on facing odds in every battle, and concentrated his best fighters upon one wing for offense, while the remainder were ordered to follow a policy of detense, in this way the enemy, advancing on the center, could be disordered by a flank attack on its left. After Leuctra I panintonials and Peli pidas marched into the Peloponnesis, freed Messenia from its century-long vassalage to Sparta, and founded the city of Megalopolis as a stronghold for all Arcadians. Even into Laconia the Theban army descended, an event without precedent for hundreds of years past. Sparta never recovered from her losses in this

campaign. "She could not stand up against a single defeat," says Aristotle, "but was ruined through the small number of her citizens."

Winter coming, the Thebans withdrew to Bocotia. Epaminondas, over-reaching himself in typical Greek style, began to dream now of establishing a Theban Empire to replace the unity that Athenian or Spartan leadership had once given to Greece. His plans involved him in a war with the Athenians, and Sparta, thinking to rehabilitate herself, made an alliance with Athenia. The hostile armies met at Mantinea in 162. I paminondas won, but was killed in action by Gryllus, son of Xenophon. The brief hegemony of Thebes left no permanent boon to Helias, it liberated Greece from the despotism of Sparta, but failed, like its predecessors, to create beyond Bocotia a coherent unity, and the conflicts that it engendered left the Greek states disordered and weakened when Phuip came down upon them from the north.

III. THE SECOND ATHENIAN EMPIRE

Athens made a final attempt to forge such a unity. Through her rebuilt walls and fleet, the dependability of her comage, her long-established facilities for finance and trade she slowly won back commercial supremacy in the Aegean. Her former subjects and allies had learned from the wars of the last half century the need for a larger security than individual sovereignty could bring, and in 3-8 the majority of them combined again under Athens leadership. By 3-10 Athens was once more the greatest power in the eastern Mediterranean.

Industry and trade were now the substance of her economic life. The soil of Attica had never been propinous to common tiliage; patient labor had made it fruitful through tending the olive tree and the vine; but the Spartans had destroyed these, and few of the peasants were willing to wait half a generation for new olive orchards to yield. Most of the farmers of prewar days were dead, many of the survivors were too discouraged to go back to their ruined holdings, and sold them at low prices to absentee owners who could afford long-term investments. In this way, and through the eviction of peasant debtors, the ownership of Attica passed into a few families, who worked many of the large estates with slaves." The mines at Laurium were reopened, fresh victims were sent into the pirs, and new riches were transmuted out of silver ore and human blood. Aenophon' proposed a genial plan whereby. Athens might replenish her treasury through the purchase of ten thousand slaves and their lease to the con-

tractors at Laurium. Silver was mined in such abundance that the supply of the metal outran the production of goods, prices rose faster than wages, and the poor bore the burden of the change.

Industry flourished. The quarmes at Pentelicus and the porteries in the Ceramicus had orders from al, the Aegean world. Fortunes were made by having cheap the products of domestic handieraft or small factories, and selling them dear in the home market or abroad. The growth of commerce and the accumulation of wealth in money instead of in land rapidly multiplied the number of bankers in Athens. They received cash or valuables for satck-eping, but apparently paid no interest on deposits. Soon discovering that under normal conditions not all deposits were reclaimed at once, the bankers began to lend funds at substantia, rates of interest, providing, at first, money instead of credit. They acted as bail for clients, and made collections for them, they and money on the security of land or precious articles, and helped to finance the ship it ent of goods. Through their aid, and even more through speculative loans by private andividuals, the merchant might hare a slup, transpert his goods to a foreign market, and buy there a return cargo-which, on reaching the Piracus, remained the property of the lenders until the loan was repaid. As the fourth century progressed, a real credit system developed, the bankers, instead of advancing eash, issued letters of credit, money orders, or cheeks, wearn could now pass from one chent to another merely by entries in the banker's books." Businessmen or bankers issued bonds for mercantile loans, and every large inheritance included a number of such bonds. Some bankers, like the exslave Pasion, developed so many connections, and acquired by a discrommating honesty so widespread a reputation for rebal day, that their bond was honored throughout the Greek world. Pasion's bank had many departments and employees, mostly stayes, it kept a complex set of books, in which every transaction was so carefully recorded that these accounts were usually accepted in court as indisputable evidence. Bank failures were not uncommon, and we hear of "panies" in which bank after bank closed its doors." Scrious charges of malfeasance were brought against even the most prominent banks, and the people looked upon the bankers with that same mixture of envy, admiration, and dolike with which the poor favor the rich in all ages,"

The change from landed to movable wealth produced a feverish struggle for menty, and the Greek language had to invent a word, pleonexia, to denote this appetite for 'more and more," and another word, el rematistike, for the busy pursuit of riches. Goods, services, and persons were increasingly judged in terms of money and property. Fortunes were made and unmade with a new rapidity, and were spent in lavish displays that would have shocked the Athens of Perices. The nour enterm retes (the Greeks had a name for them neoplates) but It pands houses bederked their women with costly tubes and lewels, spealed them with a dozen servants, and made it a principle to feed their guests with noise but expensive drinks and foods."

In the midst of this wealth poverty increased, for the same variety and freedom of exchange that enalyed the elever to make money allowed the simple to lose it faster than before. Under the new mercantile economy the poor were relatively poorer than in the days of their serfdom on the land. In the country side the peasants laboriously turned their sweat into a little oil or wine, in the towns the wages of free labor were kept down by the competition of slaves. Hundreds of citizens depended for their maintenance upon the fees paid for attendance at the Assembly of the courts, thousands of the population had to be fed by the temples or the state. The number of voters anot to speak of the general population) who had no property was in 411 some forty-five per cent of the electorate, in 355 it had insunted to fifty-seven per cent. The middle classes, which had provided by their aggregate number and power a balance between the aristocracy and the commens, had lost much of their wealth, and could no anger mediate between the rich and the paor, between an unyulding conservatism and a utopian radiculism, Athenian society divided uself into Pato's 'two cities"- 'one the city of the poor, the other of the rich, the one at war with the other "." The poor schemed to despoil the rich by legislation or revolution, the rich organized themselves for protection against the poor. The members of some organic clubs, says Aristotle, took a solerun outh. "I will be an adversary of the people" (1 e., the commons), "and in the Council I will do it all the evil that I can "" "The rich have become so unsocial," writes Isocrates, about 166, "that those who own property had rather throw their possessions into the sea than lend aid to the needy, while those who are in poorer circumstances would less gladly find a treasure than seize the possessions of the rich."

In this conflict more and more of the intellectual classes took the side of the poor." They disdained the merchants and bankers whose weath seemed to be in inverse proportion to their culture and taste, even rich men among them, like Plato, began to thirt with communistic ideas. Pencles had used colonization as a satery valve to reduce the intensity of the class struggle," but Dionysius controlled the west, Macedonia was expand-

ing in the north, and Athens found it ever more difficult to conquer and settle new lands. Finally the poorer entitiens captured the Assembly, and began to vote the property of the rich into the coffers of the state, for redistribution among the needy and the voters through state enterprises and fees." The politicians strained their ingeniuty to discover new sources of public revenue. They doubled the indirect taxes, the customs dues on imports and exports, and the hundredth on real-estate transfers, they continued the extraordinary taxes of war time into peace; they appealed for "voluntary" contributions, and laid upon the rich ever new opportunities ("liturgies") to finance public enterprises from their private funds, they resorted every now and then to confiscations and expropriations, and they broadened the field of the property income tax to include lower levels of wealth." Any man burdened with a laurgy could by law compel another to take it over if he could prove that the other was wealthier than he, and had borne no liturgy within two years. To facilitate the collection of revenue the taxpayers were divided into a hundred "symmones" (cosharets); the richest members of each group were required to pay, at the opening of each tax year, the whole tax due from the group for the year, and were left to collect during the year, as best they could, the shares due from the other members of the group. The result of these imposts was a wholesale hiding of wealth and income. I vasion became universal, and as ingenious as taxation. In 355 Androticin was appointed to head a squad of police empowered to search for hidden income, collect arrears, and imprison tax evaders. Houses were entered, goods were seized, men were thrown into pail. But the wealth still hid itself, or melted away. Isocrates, old and rich, and furious at being saddled with a laurgy, complained in 3031 "When I was a boy, wealth was regarded as a thing so secure as well as admirable that almost everyone affected to own more property than he actually possessed

. Now a man has to be ready to detend hunself against being rich as if it were the worst of crimes. In other esties the process of decentralizing wealth was not so legal, the debtors of Mytilene massacred their creditors en masse, and excused themselves on the ground that they were hungry; the democrats of Argos (170) suddenly fell upon the rich, killed twelve hundred of them, and confuscated their property. The moneyed families of otherwise hostile states leagued themselves secretly for mutual aid against popular revolts. The middle classes, as well as the rich, began to distrust democracy as empowered envy, and the poor began to distrust it as a sham equality of votes stultified by a gaping inequality of wealth. The increasing bitterness of the class war left Greece internally as well as internation-

ally divided when Philip pounced down upon it, and many rich men in the Greek cities welconied his coming as the alternative to revolution."

Moral disorder accompanied the growth of luxury and the enlightenment of the mind. The masses cherished their superstitions and clung to their myths, the gods of Olympus were dving, but new ones were being born, exotic divin ties like los and Ammon, Atys and Bendis, Cybele and Adonis were imported from Lgypt or Asia, and the spread of Orphism brought fresh devotees to Dionysus every day. The rising and half-alien bourgooto, of Athens, trained to practical calculation rather than to mystic feeling had nitle use for the traditional faith, the patron gods of the city won from them only a formal reverence, and no longer inspired them with moral scruples or devotion to the state. Philosophy struggled to find in civic loyalty and a natural ethic some substitute for divine commandments and a surveillant doty, but few cit zens cared to live with the simpacity of Socrates, or the magnitumenty of Aristotle's "great-minded man."

As the state religion lost its held upon the educated classes, the individual freed hunself more and more from the old moral restraints- the son from parental authority, the male from marriage, the woman from motherhood, the entiren from political responsibility. Deubiless Ariste-phanes exaggerated these developments, and though Plato, Aenophon, and Isocrates agreed with him, they were all conservatives who might be reaed upon to tremble at any doings of the gre wing generation. The morals of war improved in the fourth century, and a wave of I alightenment humanitarianism followed the teach ngs of Furindes and Socrates, and the example of Agesitaus." But sexual and political muranty continued to decline. Bachelors and courtesans increased in fashionable co-operation, and free unions gained ground on legal marriage " "Is not a concubine more desirable than a wife?" asks a character in a fourth-century comeds. "The one has on her side the law that compels you to retain her, no matter how displeasing she may be, the other knows that she must hold a man by behaving well, or else look for another " So Praxiteles and then Hypereides lived with Phryne, Anscippus with Lais, Stolpo with Nicarete, Lysias with Metaneira, the austere Isocrates with Lagiscium." "The young men," says Theopompur, with a moralist's exaggeration, "spent all their time among flute-girls and courtesans, those who were a little older devoted themselves to gam-

bling and profl gacy, and the whole people spent more on public banquets and entertainments than on the provision necessary for the well-being of the state.

The voluntary limitation of the family was the order of the day, whether by contraception, by abortion, or by infanticide. Aristotle notes that some women prevent conception "by amounting that part of the words upon which the seed falls with oil of cedar, or omement of lead, or frankincense commanded with obve oil." The old families were dving out, they existed, said Isocrates, only in their tombs, the lower classes were multiplyting, but the citizen class in Attica had fallen from 43,000 in 431 to 22,000 m 400 and 21,000 m 313." The supp v of entrens for military service suffered a corresponding decrease, partly from the dysgenic carning of war, partly from the reduced number of those who had a property stake in the state, pardy from unwillingness to serve, the life of corriotr and domestienty, of business and senolarship, had replaced the Pericean life of exercise marrial discipline, and public office " Arhlenes were professionalized, the entrens who in the sixth century had crowded the palaestra and the gymnus init were now content to exert themselves vicariously by witnessing professional exhibitions. Young men received some grounding, as ephebot, in the arr of war, but adults found a bun fred ways of escaping military service. War uself had become professiona ized by technical complieattons, and required the full time of specially trained men, enteen soldiers had to be replaced with mercenaries- an omen that the leadership of Greece must soon pass from statesmen to warmors. While Plato talked of philosopher kings, soldier kings were growing up under his nose. Greek mercenaries sold themselves impartially to Greek or "barbarian" generals, and fought is often against Greece as for her, the Persian armies that Alexander faced were full of Greeks. Soldiers shed their blood now not for a fatherland, but for the best paymaster that they could find,

Making bonorable exceptions for the archonship of Eucleides (403) and the financial administration of Evengus (438-26), the political corruption and turbulence that had followed the death of Pericies continued during the fourth century. According to the law, bribery was punished with death, according to Isocrates,* it was rewarded with military and political preferment. Persia had no difficulty in bribing the Greek politicians to make war upon other Greek states or upon Macedon, at last even Demos-

^{*} On a similar use of olive oil in our own time, of Himes, Medical History of Contraception, 80.

thenes illustrated the morals of his time. He was one of the noblest of one of the lowest groups in Athens, the thetors or hired orators who in this century became professional lawyers and politicians. Some of these then, like Evenrgus, were reas matily honest, some of them, like Hypereides, were gall into most of them were no better than they had to be. It we may take Aristotle's word for it, many of them specialized in invalidating wills." Several of room laid up great fortunes through political opportunism and reckless den aregy. The therors divided into parties, and tore the air with their campaigns. I ach party organized commutees, invented catchwords, appointed agents, and raised funds, those who paid the expenses of all this frank's confessed that they expected to "remburse themselves doubly "" As politics grew more intense, parriotism waned, the bitterness of faction absorbed public energy and devotion, and left little for the city. The constitution of Ceremenes and the individualism of commerce and phalosophy had weake ted the family and liberated the individual now the free individual, as if to avenge the fanoly rurned around and destroyed the state

lator near 400 the rhumpbant democrats, to insure the presence of the poorer a tizens at the chance and thereby to prevent its domination by the propertied classes, extended state payn ent to attendance at the Assemby At first each citizen received an obol (12 cents), as the cost of living rose this was increased to two obox, then to three, until in Aristode's time at stood at a drachma (\$1) per day. " It was a reasonable arrangement, for the ordinary edition timeards the end of the fourth century, carned a drachina and a half for a day's work, he could not be expected to leave his employ ment without some recon pense. The plan soon gave the poor a majority in the Assembly more and more the well to do despairing of victory, stayed home. It was of no use that a revision of the constitution in 403 confine I the power of egislition to a body of five nomothern, or law makers, selected from the cit-zens thosen by lot for jury service, this new group also inclined to the side of the commons, and its interposition lowered the prestige and authority of the more conservative Council Perhaps in conseq ence of the payment for attendance the level of intelligence in the Assembly seems to have faller in the fourth century shough our authorities for this are pre-aliced reactionanes like Arstophanes and Piato." Isocrates thought that the Assembly should be paid by Athens' energies to meet frequently since it made so many mistakes."

These mistakes cost Athens both her empire and her freedom. The same last for wealth and power that had undermined the first Confederacy now wrecked the second. After the fals of Sparta at Leucera Athens felt that

it might again expand. In organizing the new empire she had pledged herself not to permit the appropriation of land outside of Attica by Athenian subjects." Now she conquered Samos, the Thracian Chersonese, and the cities of Pydna, Potidaea, and Methone on the coasts of Macedonia and Thrace, and colonized them with Athenian citizens. The alied states protested, and many of them withdrew from the Confederation. Methods of coereson and punishment that had been used and had falled in the fitth century were used, and failed, again. In 357 Chies, Cox, Rhi des, and Byzannum declared a "Social War" of rebelsion. When two of Athens' ablest generals. I in others and lphicrates, judged it unwise to give battle in a storm to the rebel fleet in the Hellespont, the Assembly indicted them for cowardice. Timotheus was fined the impossible sum of one hundred talents (\$600,000), and fled, Iphicrates was acquirred, but never served Athens again. The rebels fought off all attempts to subdue them, and in 355 Athens signed a peace acknowledging their independence. The great city was left without allies, without leaders, without funds, and without fnends.

Possibly subtler factors entered into the weakening of Athens. The life of thought endangers every evaluation that it adores. In the earlier stages of a nation's history there is intle thought, action flourishes, men are direct, uninhibited, frankly pugnacious and sexual. As evaluation develops, as customs, institutions, laws, and morals more and more restrict the operation of natural impulses, action gives way to thought, achievement to imagination, directness to subtlety, expression to concealment, cruelty to sympathy, belief to doubt, the unity of character common to animals and primitive men passes away, behavior becomes fragmentary and hesitant, conscious and calculating; the willingness to fight subsides into a disposition to infinite argument. Few nations have been able to reach interlectual refinement and esthetic sensitivity without sacrificing so much in virinty and unity that their wealth presents an irresistible temptation to impecumous batharians. Around every Rome hover the Gauls, around every Athens some Macedon.

IV. THE BISE OF SYRACUSE

Despite a full measure of political turbulence, Syracuse, throughout the fourth century, was one of the richest and most powerful cities in Greece. Dionysius I, unscrupulous, treacherous, and vain, was the most capable administrator of his time. By turning the island of Ortygia into a fortress-

residence for himself, and walling in the causeway that bound it with the mainland, he had rendered his position almost minimum to attack, and by doubling the pay of his southers, and leading them to easy victories, he secured from them a personal loyalty that kept him on the throne for thirty eight years. Having established his government, he changed his early poncy of severity to one of conciliatory mildness, and a kind of egalitarian despotism.* He gave choice tracts of land to his officers and his friends, and (as a military measure) assigned nearly all the residences on Ortygia and the causeway to his souders, all the remaining soil of Syracuse and its environs he distributed equally among the population, free and slave. Under his guidance Syracuse flourished, though he raved the people almost as severely as the Assembly taxed the Athenians. When the women became too ornate Dionysus announced that Demeter had appeared to him in a dream and bidden him order all femonine jewelry to be deposited in her temple. He obeyed the goddess, and the women for the most part obeyed him. Soon afterward he "borrowed" the jewelry from Demeter to huance his campaigns."

For at the bottom of all his plans lay the resolve to expel the Carthaginians from Sains. Invious of Hann balls resort to battering machines in the siege of Searnis, Dionys is gathered into his service the best mechanics and engineers of western Greece, and set them to improve the tools of war. These men invented, aming many new engines of offense and defense, the katapeates, or catapair, for throwing neary stones and sain ar projectiles, this and other mittirs innovations passed from Sieds to Greece, and were taken up by Philip of Macedon. A call was sent out for mercenaries, and the armorers of Syracuse manufactured in unbeard-of quantities weapons and shields to fit the habits and skills of each group of soldiers engaged. Land battles among the Greeks had heretofore been fought by infantry. Dionysias organized a large body of cavarry, and here, too, gave hims to Philip and Alexander. At the same time he poured finish and the building of two hundred ships, mostly quadrateness or quanquereness, in speed and power this was such an armada as Greece had never seen.†

When he condemned the Pythagorean Phytics (less correctly Pythan) to death for considering Phytics asked eave to go busine for a day to settle his affairs. His friend Danton not the many matter of Peticins and Sociatess. Mered buriself as histories and visualities to suffer death in case Plantas should not remon. Phytical retermed and Thompsons, as surprised as Napoleon at any structure friendship, grandoned Phytics, and begged to be admitted into no steadfast a contradem p.*

⁺ A hireme was a galley with two banks or decks of ours, a triefine quadritrene or quan querone probably had not three, four, or five banks of ours, but so many men on each bench, bandling so many cars through one carlock or port.

By 397 all was ready, and Dionysus sent an embassy to Carthage to demand the liberation of all Circel cities in Sicily from Carthaginian rule. Anticipating a refusal, he invited these cities to expel their foreign governments. They did, and still enraged by the memory of Hanniban's massacres, they put to death, with foreign seldom used by Greeks, all Carthaginians who fell into their hands. Dionysus did his best to step the carnage, hoping to sell the captives as slaves. Carthage ferried over a vast army under Hanalcon, and war went on at intervals in 197, 392, 383, and 368. In the end Carthage recovered all that Dionysius had won from her, and after the bloodshed matters stood as before.

Whether through lust for power, or feeling that only a united Sicily could end Carthaguran rule. Dionysias had meanw the turned his arms against the Greek cities in the island. Having subjugated them, he crossed over into Italy, conquered Rhegium, and mastered all southwest Irix. He attacked firming and took a thousand ralents from its temple at Agylla, he planned to plunder the shrine of Apollo at Delphi, but time did not permit. Greece mourned that in the same year (87) liberty had fallen in the west, and in the east had been sold to Persia by the King's Peace. Three years before, Brennus and the Gauls had stood in tramph at the gates of Rome. Everywhere the barbarians on the fringe of the Greek world were growing stronger, and the ravages of Dionyshus in southern italy paved the way for the conquest of its Greek settlements first by the surrounding natives, and then by the had barbarous Romans. At the next Olympic games the orator bysias called upon Greece to denomice the new tyrant. The multitude attacked the tents of Dionysius' embassy, and refused to hear his poetry.

The same despot who, after capturing Rhegnum, offered freedom to its inhabitants if they would bring him nearly als their hearded wealth as ransom, and then, when the wealth had been surrendered, sold them as slaves, was a man of wide culture, not prouder of his sword than of his pen. When the poet Philoxenius, asked by the dictator for his opinion of the royal verses, pronounced them worthless, Dionysius sentenced han to the quarries. The next day the King repented, had Philoxenius released, and gave a banquer in his honor. But when Dienvisus read more of his poetry, and asked Philoxenius to judge it, Philoxenius bade the attendants take him back to the quarries." Despite such discouragements Dionysius patronized interature and the arts, and was pleased for a moment to entertain Plato, who was then (38-) traveling in birdy. According to a wide-spread tradition reported by Diogenes Laertius, the philosopher condemned dictatorship. "Your words," said Dionysius, "are those of an old dotard." "Your language," said Plato, "is that of a tyrant." Dionysius, we

are told, sold him into slavery, but the philosopher was soon ransomed by Anniceris of Cyrene."

The dictator's lite was ended not by any of the assassins whom he feared, but by his own poetry. In 300 his tragedy, The Rantom of Hector, received first prize at the Atherian Lenaca. Dionysius was so pleased that he feasted with his triends, drank much wine, fell into a fever, and died.

The harassed city, which had borne with him as an alternative to subjection by Carthage, accepted hopefully the succession of his son to the throne. Dionysius II was now a youth of twenty-five, weak in body and mind, and therefore, thought the crafty Syracusans, likely to give them a mild and neg igent rule. He had able advisers in Dion his uncle, and Philistius the historian. Dion was a man of wealth, but also a lover of letters and philosophy, and a devicted disciple of Plato. He became a member of the Academy, and lived, at home and abroad, a life of philosophical simplicity. It occurred to him, that the milleable youth of the new dictator offered an opportunity of estal lishing, if not quite the Utopia that Plato had described to him," at least a constitutional regime capable of uniting all Sicily for the expulsion of the Carthaginian power. At Dion's suggestion Dionysius II invited Plato to his court, and submitted himself to Plato's intoring.

Doubtless the young autocrat put his best foot forward, and concealed from his teacher that addiction to drink and lethers" which had drawn from his father the prediction that the dynasty would die with his son. Deceived by the youth's apparent willingness, Plato led him towards philosophy by its most difficult approaches, mathematics and virtue. The ruler was told, as Confuents had tood the Duke of Lu, that the first princeple of government is good example, that to improve his people be must make himself a model of intellience and good will. All the court began to study geometry, and to stand in diplon itie awe over figures traced in the sand. But Philismis, eclipsed by Plato's ascendancy, whispered to the dictator that all this was merely a plot by which the Athenians, who had failed to conquer Syracuse with an army and a fleet, would capture it through a single man, and that Plato, having taken the impregnable citadel with diagrams and dialogues, would depose Dionysius and put Dion on the throne. Thomysius saw in these whispers an excellent escape from geometry. He banished Dion confiscated his property, and gave Dion's wife to a courtier whom she feated. Despite the dictator's profestations of affection, Plato left Syracuse and joined Dion in Athens. Six years later

he returned at the King's invitation, and pled for Dion's recall. Dionysius

refused, and Plato resigned himself to the Academy."

In 307 Dion, poor in funds but rich in friends, recruited in mainland Greece a force of eight hundred men, and sailed for Syracuse. Landing secretly, he found the people eager to aid him. With one battle-in which, though be was now fifty, his own heroic fighting turned the rade-he so completely defeated the army of Dionysus that the frightened youth fled to Iraly. At this juncture, with Greek impulsiveness, the Syracusan Assembly that he had convened removed Dion from command, lest he should make hinself dictator. Dion withdrew peaceably to Leontini, but the forces of Dionysius, liking this turn of events, made a sudden attack upon the popular army, and defeated it. The leaders who had deposed him sent appeals to Dion to hurry back and take charge. He came, won another victory, forgave the men who had opposed him, and then announced a temporary dictatorship as necessary to order. Despite the advice of lus friends he refused a personal guard, being "quite ready to die," he said, "rather than live perpetually on the warch against friends and foes alike." Instead he maintained, amid surroundings of wealth and power, his accustomed modesty of life. For though, says Plutarch,

all things had now succeeded to his wish, yet he deviced not to enjoy any present advantage of his good fortime. . . . He was content with a very frugal and moderate competency, and was indeed the wonder of all men, that when not only Sindy and Carthage but all Greece linoked to him as in the height of prosperity, and no man living greater than he, no general more renowned for valor and success, yet in his guard, his attendance, his table, he seemed as if he rather communed with Plato in the Academy than lived among hired captains and paid soldiers, whose solace of their toils and dangers it is to eat and drink their tail, and enjoy themselves plentifully every day."

If we may credit Plato, it was Dion's aim to establish a constitutional monarchy, to reform Syracusan life and manners on the Spartan model, to rebuild and unify the enslaved or desolate Greek cities of Sicily, and then to expel the Carthaginians from the island. But the Syracusans had set their hearts on democracy, and were no more hungry for virtue than eather Dionysius. A friend of Dion murdered him, and chaos broke loose. Dionysius hurried home, recaptured Ortygia and the government, and ruled with the bitter crossly of a despot deposed and restored.

Undeserved fates come sometimes to individuals, but rarely to nations.

The Syracusans appealed for aid to their mother city, Corinth. The call came at a time when a Corinthian of almost legendary nobleness was waiting for a summons to heroism. I unoleon was an aristocrat who so loved liberty that when his brother Timophanes tried to make himself tyrant of Corinth, Timoleon killed him. Cursed by his mother and brooking over his deed, the tyrannicide withdrew to a woodland retreat, shunning all men. Hearing nevertheless of Syracuse's need, he came out of his reprement, organized a small force of volunteers, salled to Sicily, and deployed his little band with such strategy, that the royal army yielded after a brief taste of his generalship, and without killing any one of his men-Timoleon gave the humbled tyrant money enough to take himself to Corinth, where Dionysius spent the remainder of his life teaching school and sometimes begging his bread." Timoleon re-established democracy, tore down the fortifications that had made Ortygia a buttress of tyrinny, repulsed a Carthaginian invasion, restored freedom and democracy in the Greek cities, and made Sicily for a generation so peaceful and prosperous that new settlers were drawn to it from every part of the Hellenic world. Then, refusing public office, he retared to private lite, but the island democracies, appreciating his wisdom and integrity, submitted ail major matters to his judgment, and frees followed his advice. Two "sycophants" having indicted him on a charge of mulfeasance, he insisted, over the protests of a grateful people, on being tried without favor according to the laws, and thanked the gods that freedom of speech and equality before the law had been restored in Sicily. When he died (337) all Greece looked upon him as one of the greatest of her sons.

V. THE ADVANCE OF MACEDONIA

While Timoleon was restoring democracy for its last respite in ancient Siedy. Philip was destroying it on the mainland. Macedonia, despite the cultural hospitality of Archelaus, was still for the most part a barbarous country of hardy but letterless mountaineers when Philip came to the throne (359); indeed, to the end of its career, though it used Greek as its official janguage it contributed no author, or artist, or scientist, or philosopher, to the life of Greece.

Having lived for three years with the relatives of Epainmondas in Thebes, Philip had imbaled there a modicum of culture and a wealth of mantary ideas. He had all the virtues except those of constation. He was

strong in body and will, athletic and handsome, a magnificent animal trying, now and then, to be an Athenian gentleman. Like his famous son he was a man of violent temper and abounding generosity, loving battle as much, and strong drunk more. Unlike Alexander he was a jovial laugher, and raised to high office a slave who amused him. He liked boys, but liked women better, and married as many of them as he could. For a time he tried monogamy with Olympias, the wild and beautiful Molossian princess who gave him Alexander, but later his fancy traveled, and Olympias broaded over her revenge. Most of all he liked stalwart men, who could risk their lives all day and gamble and carouse with him half the night. He was literarly (before Alexander) the bravest of the brave, and left a part of himself on every bartlefield. "What a man" exclaimed his greatest enemy. Demosthenes. 'For the sake of power and dominion he had an eve struck out, a shoulder broken, an arm and a leg paralyzed " He had a subtle intelligence, capable of patiently awaiting his chance, and of moving resolutely through difficult means to distant ends. In diplomacy he was affable and treacherous, he broke a promise with a light heart, and was always ready to make another, he recognized no morals for governments, and looked upon I es and bribes as humane substitutes for slaughter. But he was lement in victory, and usually gave the deteated Greeks better terms than they gave one another. All who met him-except the obstinate Demosthenes-liked him, and ranked him as the strongest and most interesting character of his time.

His government was an aristocratic monarchy in which the king's powers were inneed by the duration of his superior strength of arm or mind, and by the willingness of the nobles to support him. I ight hundred feudal barons made up the "King's Companions", they were great landowners who despised the life of cities, crowds, and books, but when, with their consent, the king announced a war, they came out of their estates physically fit and drunkenly brave. In the army they served as cavalry, riding the sturdy horses of Macedonia and Thrace, and trained by Philip to fight in a close formation that could change its factics at once and as one at the commander's word. Beside these was an infantry of ragged bunters and peasants, arrayed in "phalanxes" sixteen rows of men pointing their lances over the heads or resting them on the shoulders of the rows ahead of them, making each phalany an iron wall. The lance, twenty-one feet long, was weighted at the rear, so that when held aloft it projected fifteen feet forward. As each row of soldiers marched three feet before the next, the lances of the first five rows projected beyond the phalanx, and the lances

of the first three rows had a greater reach than the six-foot javelin of the nearest Greek hoplite. The Macedonian soldier, after hurling his lance, fought with a short sword, and protected hanself with a briss helinet, a coar of mail, greaves, and a lightweight should. Behind the phalanx came a regiment of old-tishlored archers, who slot their arrows over the heads of the lancers, then came a siege train with catapacts and battering rains. Resolutely and patiently—playing Frederick Wolliam I to Alexander's Frederick. Plus patieled this areas of ten thousand men into the most powerful lighting instrument that I urope had yet known.

With this force he was determined to unity Greece under his leadership, then, with the help of all Hebus, he proposed to cross the Hellespont and drive the Persians out of Greek Asia. At every step toward this end he found himself running counter to the Hellenic love of freedom, and in trying to overcome this resistance he almost forgot the end in the means His first move brought him into conflict with Athens, for he sought to win possession of the caties that Athens had acquired on the Macedonian and Thracian coasts, these cities not only blocked his way to Asia, they also controlled rich gold mines and a taxable trade. While Athens was absorbed in the 'Social War" that ended her second empire. Ph lip seized Amphipolis (357), Pydna, and Potidaea (356), and answered the protests of Athens with fine compliments to Athenian literature and art. In 155 he took Methone, loung an eye in the wege in 34%, after a long cumpaign of cheanery and bravery, he captured Olynthus. He now controlled all the European coast of the nirth Acgest, had an income of a thousand talents a year from the mines of Thrace," and could turn his thoughts to winning the support of Greece.

To finance his campaigns he had sold thousands of captives, many of them Athenians, into slavery, and had lost the good will of Hellenes. It was fortunate for him that during these years the Creek states were exhausting themselves in a second "Sacred War" (366-46) over the spo iation of the Delphie treasury by the Phocians. The Spartans and Athenians fought for the Phocians, the Amphicityonic League-Boeona, Locris, Doris, Thessals, for ght, against them. Losing, the Amphicityonic Council besought the help of Philip. He saw his opportunity, came swiftly down through the open passes, overwhelmed the Phocians (346), was received into the Delphie Amphicityony, was acclaimed as the projector of the shrine, and accepted an invitation to preside over all the Greeks at the Pythian games. He cast his eyes upon the divided states of the Peloponnesus, and felt that he could win all of them except weakened Sparta to accept him as leader

in a Greek Confederacy that might free all Greeks in the east and the west. But Arnens, listening at last to Demosthenes, saw in Philip not a liberator but an enslaver, and decided to fight for the jealous sovereignty of the city state, and the preservation of that free democracy which had made her the light of the world.

VL DEMOSTHENES

The Varieur statue of the great orator is one of the masterpieces of Helicostic realism. It is a careworn face, as if every advance of Philip had cut another furrow into the brow. The body is thin and wearied, the aspect is that of a man who is about to make a final appeal for a cause that he considers lost, the eyes reveal a restless life, and foresee a bitter death.

His father was a manufacturer of swords and bedframes, who bequeathed to him a business worth some fourteen talents (\$84,000). Three executors administered the property for the boy, and squandered it so generously on themselves that when Demosthenes reached the age of twenty (363) he had to sue his guardians to recover the remains of his inheritance. He spent most of this in fitting out a triseme for the Athenian navy, and then settled down to earn his bread by writing speeches for bugants. He could compose herrer than he could speak, for he was weak in body and defective in articulation. Sometimes, says Plutarch, he prepared pleas for both the opposed parties to a dispute. Meanwhile, to overcome his impediments, he addressed the sea with a mouth full of pebbles, or declaimed as he ran up a hill. He worked hard, and his only distractions were courtesans and hovs. "What can one do with Demosthenes?" his secretary complained. "Everything that he has thought of for a whole year is thrown into confasion by one woman in one night." After years of effort he became one of the tichest lawyers at the Athenian har, learned in technicalities, convincing in discourse, and flexible in morals. He defended the banker Phormio against precisely such charges as he had brought against his guardians, took substantial fees from private persons for introducing and pressing legislation, and never answered the accusation of his colleague Hypereides that he was receiving money from the Persian King to stir up war against Philip." At his zenith his fortune was ten times as large as that which his father had left him.

Nevertheless he had the integrity to suffer and die for the views that he

was paid to defend. He denounced the dependence of Athens upon mercenary troops, and insisted that the entirens who received money from the theoric fund should earn it by serving in the army, his courage rose to the point of demanding that this fund should be used not to pay entirens to attend religious ceremonies and plays, but to organize a better force for the defense of the state. He rold the Athenians that they were degenerate slackers who had lost the mintary vartues of their progenitors. He refused to adout that the eny-state had studied itself with faction and war, and that the times called for the unity of Greece, this unity, he warned, was a phrise to conceal the suffingation of Greece to one man. He detected the ambitions of Pholip from their first symptoms, and begged the Athenians to fight to retain their albest and colonies in the north

Against Demosthenes and Hypereides and the parry of war stood Yesco nes and Phocson and the party of peace. Very likely both sides were bribed the one by Pers, a the other by Philip," and both were sincerely moved by their own agitation. Phoeion was by conamon consent the most honest statesman of his time-a Store before Zeno, a philosophical product of Piato's Academy, an orator who so desposed the Assen on that when it applauded rum he asked a friend, "Flave I not unconsciously said something bad? "Forty five times he was chosen irranegor, far surpassing the record of Peneles, he served ably as a general in many wars, but spent most of his life in advocating peace. His associate Aesenines was no store, but a man who had risen from butter powerty to a comfortable income. His youth as a teacher and an actor helped him to become a flirent speaker, the first Greek orator, we are told to speak extempore with success," his rivals wrote out their speeches in advance. Having served with Phocion in several engagements, he adopted Phoer in y policy of compromising with Philip instead of making war, and when Philip paid him for his efforts his enthasiasm for peace became an edifying devotion.

I wice Demosthenes indicted Asselines on the charge of receiving Macedenian gold, and twice failed to convict him. Finally, however, the martial eloquence of Demosthenes, and the southward advance of Philip, persuaded the Athenians to forego for a time the distribution of the theorie fund, and to employ it in war. In 338 an armiv was hastily organized, and marched north to face the phalanxes of Philip at Bocotian Chaeronea. Sparta

[&]quot;The theorie tile specificle first had now been extended to wo cans festivals as almost in pass, since a targe out of the conserve. The Athensis Resolution that talk " cass takes "Lag become a most all benefit success de and go trois one class the wherewilled to support another." The Assembly had made is a capital come operation diversion of this fund to other purposes.

refused to help but Thebes, feeling Philip's fingers at her throat, sent her Sacred Band to fight beside the Athenians. Every one of its three hundred members died on that batrlefield. The Athenians fought almost as bravely, but they had writed too long, and were not equipped to meet so novel an army as the Macedonian. They broke and fled before the sea of lances that nu yed upon them, and Demosthenes fled with them. Alexander, Philip's eighteen-year-old son, led the Macedonian cavalry with reckless cour-

age, and won the honors of a bitter day.

Phup was diplonancially generous in victory. He put to death some of the anti-Macedoman leaders in Thebes, and ser up his partisans there in oligarchic power. But he freed the two thousand Athenian prisoners that he had taken, and sent the charming Alexander and the judicious Antiparer to offer peace on condition that Athens recognize him as the general of all Greece against the common foe. Athens, which had expected harsher terms, not only consented, but passed resolutions showering compliments upon the new Again cinnon. Planp of evened at Cornith a synedrion or assembly, of the Greek states, formed their (except Sparta) anto a federation modeled on the Boeonan, and outlined his plans for the liberation of Asia He was unanimously chosen commander in this enterprise; each state pledged him then and arms, and promised that no Greek anywhere should fight against him. Such sacrifices were a small price to pay for his distance

The results of Chaeronea were endless. The unity that Greece had failed to create for itself had been achieved, but only at the point of a half alien sword. The Peloponnesian War had proved Athens incapable of organizing Hellas, the aftermath had shown Sparta meapable, the Theban begemony in its turn had fared, the wars of the armies and the classes had worn out the city-states, and left them too weak for defense. Under the circumstances they were fortunate to find so reasonable a conqueror, who proposed to withdraw from the scene of his victory, and leave to the conquered a large measure of freedom. In Iced Philip, and Alexander after him, watchfully protected the autonomy of the federated states, lest any one of them, by absorbing others, should grow strong enough to displace Macedon. One great liberry, however, Ph lip took away, the right of revolution. He was a frank conservative who considered the stability of property an indispensable stimulus to enterprise, and a necessary prop to government. He persuaded the synod at Cornth to insert into the articles of fe leration a pledge against any change of constitution, any social transformation, any political reprisals. In each state he lent his influence to the side of property. and put an end to confiscatory taxation.

He had laid his plans well, except for Olympias; in the end his face was determined not by his victories in the field but by his failure with his wife. She frightened him not only by her temper but by participating in the wildest Dionysian rites. One night he found a snake lying beside her in bed, and was not reassured by being told that it was a god. Worse, Olympias informed him that he was not the real father of Alexander, that on the right of their wedding a thunderbolt had fallen upon her and set her afire, it was the great god Zeus-Ammon who had begotten the dashing prince Discouraged by such varied compension, Philip turned his amours to other women, and Olympiss began her revenge by telling Alexander the secret of his divine paternity." One of Philip's generals, Artalus, made matters worse by proposing a toast to Philip's expected child by a second wife, as promising a "legitimate" (i.e., completely Macedonian) heir to the throne. Alexander flung a goblet at his head, crying, "Am I, then, a bastard?" Philip drew his sword against his son, but was so drunk that he could not stand. Alexander laughed at him. "Here," he said, "is a man preparing to cross from Europe into Asia, who cannot step surely from one couch to another." A few months later one of Philip's officers, Pausaruas, having asked redress from Ph bp for an insult from Arralus, and receiving no satisfaction, assassinated the King (336). Alexander, idolized by the army and supported by Olympias,* seized the throne, overcame all opposition, and prepared to conquer the world.

^{*} Who was suspected of having urged on Pausanias.

Letters and Arts in the Fourth Century

I, THE ORATORS

THROUGH all this turmoil literature reflected the declining virility ▲ of Greece Lyneal poetry was no longer the passionate expression of creative individuals, but a polite exercise of salon intellectuals, a learned echo of schoolday tasks. I mortheus of Muetus wrote an epic, but it did not accord with an argumentative age, and remained as unpopular as his early music. Dramatic performances continued, but on a more modest scale and in a lower key. The impoverishment of the public treasury and the weakened partionism of prayate wealth reduced the spiendor and sigmineance of the chorus, more and nore the dramatists contented themselves with unrelated musical intermezzi in place of choruses organically united with the play. The name of the charagus disappeared from public notice, then the name of the poet, only the name of the actor remained. The drama became less and less a prem, more and more a histrionic exhibition, it was an era of great actors and small dramatists. Greek tragedy had been built upon religion and my thology, and required some faith and piety in its auditors, it naturally faded away in the twilight of the gods.

Comedy prospered as tragedy decayed, and took over something of the subtlety, retinement, and subject matter of the Euripidean stage. This Middle Comedy (400-323) lost its taste or courage for political satire precisely when politics most needed a "candid friend", possibly such same was forbidden or the audience was weary of politics now that Athens was ruled by second-rate men. The general retirement of the fourth-century Greek from public to private life inclined his interest from affairs of state to those of the home and the heart. The comedy of manners appeared, love began to dominate the scene, and not always by its virtue, the ladies of the demanded mingred on the boards with fishwives, cooks, and bewildered philosophers, though the honor of the protagonists and the dramatist was saved by a marriage at the end. These plays were not coarsened by Atistophanes' vulgarity and burlesque, but neither were they

vitalized by his exuberance and his imagination. We know the names, and have none of the works, of thirty-nine poets of the Middle Comedy, but we may judge from their fragments that they did not write for the ages. Alexis of Thurn wrote 240 plays, Antiphanes 260. They made hay while the sun shope, and died with its setting.

It was a century of orators. The use of industry and trade turned men's minds to realism and practicality, and the schools that once had taught the poems of Homer now trained their pupils in rhetoric. Isseus, Lycurgus, Hypereides, Demades, Demarchus, Aeschines, Demosthenes were oratorpoliticians, leaders of political factions, masters of what the Germans have called the Advokatemepublik. Similar men appeared in the democratic interludes of Syracuse, the oligarchic states did not suffer them. The Athenian orators were clear and vigorous in language, averse to ornate eloquence, capable, now and then of noble patriotic flights, and given to such dishonesty of argument and abasiveness of speech as would not be tolerated even in a modern compaign. The heterogeneous quality of the Athen an Assembly and the popular courts had a debasing as well as a stimulating effect upon Greek oratory and through it upon Greek literature. The Atheman citizen enjoyed boots of oratorical invective almost as much as he enjoyed a prize fight, when a duel was expected between such word warners as Aeschines and Demosthenes, men came from distant villages and foreign states to bear them. Often the appeal was to pride and prejudice. Plato, who hated oratory as the poison that was killing democracy defined rhetoric as the art of governing men by addressing their feelings and passions.

Even Demosthenes, with all his vigor and nervous intensity, his frequent ascent to passages of patriotic fervor, his withering fire of personal attack, his elever and relieving alternation of narrative and argument, the carefully rhythmic quanty of his language, and the overwhelming torrent of his speech—even Demosthenes strikes us as a little less than great. He laid the secret of oratory in acting (hypocrisis), and so believed this that he rehearsed his speeches patiently, and recited them before a mirror. He dog himself a cave and lived in it for months, practicing secretly, in these periods he kept one half of his face shaved to deter himself from leaving his retreat. On the rostrum he contorted his figure, whirled round and round, had his hand upon his forehead as in reflection, and often raised his voice to a scream. All this, says Platarch, "was wonderfully pleasing to the common people, but by well-educated persons, as, for example, by Demetrius of Phalerum, it was looked upon as mean, humiliating, and

unimanly." We are amused by Demosthenes' histrionics, amazed by his seif-esteem, confused by his digressions, and appalied by his ungracious scurrility. There is fittle wit in him, little philosophy. Only his patriotism redeems lum, and the apparent sincernty of his despairing cry for freedom.

The historic chinax of Greek oratery came in 330. Six years before, Cresiphon had carried through the Council a prehimnary proposal to award Demosthenes a crown or wreath in appreciation not only of his statesmanship but of his many financial gifts to the state. To keep this honor from his rival, Aeschines indicted Ctemphon on the ground (technically correct) of having introduced an unconstitutional proposal. The case of Cresiphon, repeatedly postponed, finally came to trial before a jury of live hundred extrems, It was, of course, a cause célebre; al. who could came, even from afar, to hear it, for in effect the greatest of Athenian orators was fighting for his good name and his positical life. Aeschines spent little time attacking Ctemphon, but turned his assault upon the character and career of Demosthenes, who reputed in kind with his famous speech On the Crown. Every line of the two orations still vibrates with excitement, and is bot with the harred of enemies brought face to face in war. Demosthenes, knowing that offense is better than defense, charged that Philip had chosen the most corruptible of the orators as his monthpieces in Athens. Then he etched in acid a life portrait of Aeschines.

I must let you know who this man really is who embarks upon vituperation so gliply . . and what is his parentage. Virtue? You renegade' what have you or your family to do with virtue' . . . Where did you get your right to raik about education? ... Shall I relate how your father was a slave who kept an elementary school near the Temple of Theseus, and how he wore shackles on his legs and a timber co ar round his neck, or how your mother practiced day light nuprials in an outhouse? . . . You helped your father in the drudgers of a grantmar school, grinding the ink, sponging the benches, sweeping the foom, holding the position of a mental . . . After getting yourself enrolled on the register of your parish-no one knows how you managed it, but let that pass-you chose a most gentlemants occupation, that of clerk and errand-box to minor officials. After committing all the offenses with waich you reproach other people, you were relieved of that on ployment . You entered the service of those famous players, Sing his and Socrates, better known as the Growlers. You played small parts to their lead, picking up figs and prapes and neves, and making a better living out of those massles than by a lithe battles you fought for dear life.

For there was no truce or armstice in the warfare between you

and your audience....

Compare, then, Aeschines, your life and mine You strught reading, I attended school. You danced, I was choragus. . . You were a public scribe, I a public orator. You were a third-rate actor, I a spectator at the piay. You faned in your part, and I hissed you."

It was a powerful speech, not a model of order and courtesy, but so eloquent with passion that the jury acquitted Ctesiphon by a vote of five to one. In the following year the Assembly voted Demosthenes the dapputed crown. Aeschines, unable to pay the fine that was automatically levied upon so unsuccessful a persecution, fled to Rhodes, where he made a precarrous living by teaching rhetoric. An old tradition says that Demosthenes sent him money to adeviate his poverty.*

IL ISOCRATES

This duel of oratory has been loudly landed and devoutly studied in every generation. But in truth it represents almost the nadar of Athenian politics, we cannot see nobinity in this street corner contest in vauperation, this mean quartel for public praise between two secret recipients of foreign gold. Isocrates is a little more attractive, and carries down into the fourth century something of the grandeur of the fitth. Born in 436, he lived till 438, and died with Greek aberty. His father had made a fortune by manufacturing flutes, he gave his son every educational advantage, even sending him to study rhetoric with Gorgias in Thessaly. The Peroponnesian War, and the example of Archiades, ruined the flute business, and destroyed the family fortune. Isocrates had to go forth and earn his inving by the sweat of his pen. He Legan by writing speeches for others, and thought of becoming an orator. But he suffered from shyness and a weak voice, and a strong distaste for the crud ties of political strife. He about nated the demagogoes who had captured the Assembly, and shrank for a time into a quiet pedagogic bite.

In 39t he opened the most successful of Athenian schools of rhetoric. Students came to how from all the Greek world, perhaps their variety of origin and outlook helped to form his Panhe, one philosophy. He thought that oll other teachers were on the wrong track. In a pamphiet Against the Suphisis he denounced both those who protessed to turn any numbership into a pundle for three or four minus, and if ose who, like Plato, hoped to prepare men for government by training them in science and metaphysics. As for himself, he admitted that he could get results only when the student possessed some natural talent. He would not teach metaphysics or science, for these, he argued, were

hopeless inquiries into insoluble mysteries. Nevertheless, he gave the name of philosophy to the instruction provided in his school. The curriculum centered upon the arts of writing and speaking, but these were taught in connection with literature and politics,' Isocrates offered, as we should say, a cultural course as opposed to the mathematical course given in Plato's Academy. The art of speech was the goal, as being then the chief mediam of pid he advancement, the Athenian state was governed by argument. So Isocrates taught his pupils the use of words how to arrange them in the clearest order, in thythina but not metrical sequence, in polished but not ordate diction, in smooth transitions of sound and thought," in balanced clauses and cummative periods, such prose, he believed, would please the refined ear as much as poetry. Out of this school came mains leaders of the Demosthenic age. Timotheus the general, Uphorus and Theopompus the historians, Isacus, I yeurgus, Hypercides, and Aeschines the orators, Speusippus the succession of Plato, and, some say, Aristotle himself."

Isocrates was not content with forming great men, he wished to play some part in the affairs of his time. Unable to be either an orator or a statesman, he became a pamph ereer. He addressed long speeches to the Athenian public, to leaders like Philip, or to the assembled Greeks at the Panhel enic games, instead of delivering these he published them, and thereby unconsciously invented the essay as a literary form. Twenty one of his discourses remain, and rank among the most interesting survivals of Greek antiquity. His first great pronouncement, the Panegyneus, t struck the theme of all his thought -the theme of his old master Gorgias-a call to Greece to forget its little sovereignties, and become a state. Isocrates was a proud Athenian- 'So far has our city distanced the rest of mankind in thought and speech that her pupils have become the teachers of all the world." But he was a prouder Greek, to hun, as to the Hellenstic age, Heltenism meant not membership in a race, but participation in a culture, and that culture, he felt, was the tinest that men had yet created anywhere. But all around this culture were "barbarjans" in Italy, Saidy, Africa, Asia, and what we should now call the Balkans. It saddened hims to see the barbarians becoming stronger, and Persia consolidating her control of Ionia, while the Greek states consumed themselves in civil war

For many as are the sils that are incident to the nature of many we have ourselves invented more than those that nature lass upon us, by engendering wars and factions arong ourselves. . . Ago not these alls no one has ever protested, and people are not ashanied to weep over the catamoties that have been fabricated by the poets,

e So named because addressed to the paneevill, or General Assembly (pan agora) of the Greeks, at the hundredth Olympiad.

^{*}Fig. Inscrites—and most Greek winters after him-counted it a literary ain to end one word, and begin the next, with a yowel.

while they view complacently the real sufferings, the many terrible sufferings, that result from our state of war, and they are so far from feeling pity that they even rejoice more in each other's sorrows than in their own blessings."

If the Greeks must fight, why not fight a real enemy? Why not drive the Persians back to their plateau. A small detachment of Greeks, he prophesied, would deteat a large army of Persians. Such a hely war may that last give unity to Greeke, and the choice was between Greek unity or trial ophant larbarism.

Two years after publishing this appeal (188) Isocrates, turning theory into practice, toured the Acgean with his ex papil Timotheus, and helped to formulate the term is of the second Athenian Confederacy. The rise and tail of this new hope of unity formed one maire disappeintment in his long life. In a brave and vigorous paraphlet On the Peace he condemned Athens for again corrupting an alliance into an en pire, and called upon her to sign a peace that would assure every Greek state against Athenian encroachments. "What we call empire is in reality in sfortune, for by its very nature it deprayes all who have to do with it." Imperialism, he said, had rained democracy by teaching Athenians to live on foreign tribute, losing that, they now wished to live on state contributions, and exalted to the highest offices those who promised them most.

Whenever you deliberate on the business of the state you distrust and dislike men of superior intelligence, and cultivate instead the most depraved of the orators who come before you, you prefer ... those who are drunk to those who are soper, those who are wicless to those who are wise, and those who dole out the public money to those who perform public services at their own expense."

In his next address, the Areopagnieur, he spoke more lemently of democracy. "We sit around in our she ps demonating the present order," says a timeless passage, "but we perceive that even badly construited democracies are responsible for fewer disasters than are objectives." Had not Sparta made a worse mistress for Greece than Athens had been? and, "Have not we also if us, because of the madness of the Thiery, become greater enthusiasts for democracy than those who occupied Phyle? "" flut Athens had rouned itself by carrying to excess the principles of liberty and espairs, by "truining the catizens in such fushion that they looked upon insolence as democracy, lawlessness as liberty, impudence of speech as equality, and license to do what they pleased as happiness." All men are not equal, and should not be equally free to hild office. The institution of the lot, Isocrates felt, had lowered disastrophy the level of Athenian statesmansh p. Better than the most rule, was the timocracy," of Solon and Cleistbenes, for then analytic ignorance and elequent venality had

Thranslands, Anyton, and the other restorers of Jemocracy in 404.

less chance of being raised to leadership; all e men rose naturally to the top, and the Areopagus, receiving them after their term of office, became automatically the mature brain of the state.

In 346, when Athers came to terms with Philip, Isocraes, new ninety, addressed an open letter to the Macedenian Iving. He foresaw that Phibp would make himself master of Greece, and Legged him to use his power not as a tyrant, but as the unifier of autonomous Greek strites in a war for the Heration of Greece from the King's Peace, and of Jonas from Persian rule. The war party denomiced the letter as a surrender to despotism, and for seven years Isocrates held his pen. He spoke once more in 339, addressing his pamphlet to the Greeks who were gathering for the Panathenaic games. The Panathenaicus is a weak and profix repetition of the Panegyrieus, the sty e trendles in the old man's hand, but it is an astomshing performance for one who was only three years short of a century. Then in 338 came Chacronea, Afrens was defested but Isocrates' dream of a smiled Greece was about to come time. A late Greek tradition says that when the news carac he forgot alout Ph lip and unity, and thought only of his native cay hum hated, the days of her glory ended, and that, at the age of ninety-eight, having at last lived long enough, he starved himself to death." We do not know if this is true, but Aristotle tells us that within five days after Chaeronea, Isocrates was dead.

III. XENOPHON

The influence of "the old man eloquent" upon the statesmen of his time is open to doubt, but his influence upon letters was manedate and endiring "It was felt first by the historians. Xenophon and others untated his sketch of Evagoras, and a orgapay became a popular form of Greek literature, culminating in the gossipy masterpieces of P state h. To one of his papils, I phorus of Cyme, isocrates committed the task of writing a general history of Greece—a record not of any one state, but of Greece as a whole. I phorus carried out the assignment so well that his contemporations racked his Contend History with the books of Herodotus. To another pupil, Theopompus of Chos, Isocrates committed the field of recent events. Theo sompus covered it in his Hellimes and Philippica, lively and rhetorical works highly proved by his contemporatics, About 240 Diseaserchus of Messana wrote a history of Greek evaluation under the rate of Bim Hellador—The Life of Greece: so ancient is our present enterprise, even, by chance, to its name.

† The enlightened duratur who had as ported Greek culture into Cyprus, 410-387.

^{*}Cleero, Midron Massillon, Jeremy Taylor, and Fidovaid Burke formed their prose style upon the balanced chasses and long periods of lowerages.

The only one of the fourth-century historians who has survived is Xenophon. Diogenes Lacretius describes him in his youth:

Xenophon was a man of great modesty, and as handsome as can be imagined. They say that Socrates not him in a narrow lane, and pur his stick across it, and prevented him from passing by, asking where all kinds of necessary things were said. And when Nenophon had answered him, he asked, again, where men were made good and virtuous. And as Nenophon did not know, Socrates said, "Following, then, and learn." And from that time forth Nenophon became a follower of Socrates."

He was among the more practical of Socrates' students. He liked his master's fascinating sleight-o'-inind, and loved him as a philosophic saint But he enjoyed action as well as thought, and became a soldier of fortune while some other scholars, as Aristophanes disdamfully put it, were "meastinng the air "" About the age of thirty he took service under the voraiger Cyrus, fought at Cunaxa, and led the Ten I bous and to safety. At Byzanthan he paned the Spartans in their war against Persia, captured a wealthy Mede, accepted a rich ransom for him, and lived on it for the rest of his life. He became a friend and admirer of the Spartan King Agesilius, and made han the subject of a worsh pful biography. Returning to Greece with Agestlaus after Athens had declared war upon Sparta, he chose to be loyal to him rather than to his city, whereupon Athens decreed him an exile, and confiscated his property. He fought on the side of the Lacedaeniomans at Coronea, and received as a reward an estate at Scillus in The, then under Sparran domination. There he spent revents years as a country gentleman, farming, hunting, writing, and bringing up his sons sternly on the Spartan plan."

To his banishment we owe the varied works that lifted him to the front rank among the authors of his time. He wrote as his mood inchned him, about breaking in dogs, managing horses, training a wife educating princes, fighting with Agesilaus, or raising revenues for Athens. In the Analysis, with the fresh style of one who had seen or done the things he described, he told the thrilling (but quite uncorroborated) story of the Ten Thousand's long trick to the sea. In the Hellemen he took up the history of Greece where Thiocy dides had left off, and bringliff it down to the bartle of Mantinea, in which his own son Gryllia died lighting brively after slaying Epaminondas. The book is a dreary chronicle, in which history is conceived as an endiess chain of battles, a vain logic-chapping alternation of victory and defeat. The style is lively, the character sketches are vivid, but

the facts are judiciously chosen to prove the superiority of Spartan ways. Supersonion, which disappeared from history in Thucydides, returns with Xenophon, and supernatural agency is invoked to explain the trajectory of events. With like simplicity or duplicity, the Memorahilia transforms Socrates into a monster of perfection, orthodox in religion, in ethics, in genderless love, in everything except that scorn for democracy which particularly endeated him to the banished and Laconizing Xenophon. Still more unreliable is the Banquet, which reports conversations alleged to have occurred when Xenophon was a child.

In the Oeconomicus, however, Xenophon speaks in his own right, and with such frank conservatism that we are charmed despite ourselves. Asked for instruction in agriculture, Socrates modestly confesses his ignorance, but recalls the advice and example of the rich landowner Ischoniachus. The latter voices the knightly Xenophon's disdain for any occupation except husbandry and war. He expounds not only the secrets of successful tillage, but the art of managing one's property and one's wife. In pages that for a moment rival the grace of Plato, Ischomachus tells how he taught his bride only half his age-the business of caring for the home, keeping all things in place, governing her servants with kindness but without familiarity, and building a good name for herself not through artificial beauty but through a forthful performance of her obligations as wife, mother, and friend. In the view of Ischomachus-Xenophon marriage is an economic as well as a physical association, and decays when the silent partner does all the work. Perhaps the readiness with which the young bride accepts all this is merely the devout wish of a general who won no victories on the domestic bartlefield, but we should be willing to believe everything in the account except the tale of how Ischomachus, with but a moment's reasoning, persuaded his wife to abandon powder and rouge."

Having expounded the art of marriage, Xenophon describes in the Cyropaedia (i.e., The Education of Cyrus) his ideals of schooling and government, as if in answer to Plato's Republic. Cleverly adapting fictitious biography to the uses of philosophy, he gives an imaginary account of the training, career, and administration of Cyrus the Great. He makes the story dramatically personal, enlivens it with dialogue, and decorates it with the oldest romantic love story in extant literature. He almost ignores cultural education, and concentrates upon making the boy a healthy, able, and honorable man; the youth learns the virile sports, the arts of war, the habit of silent obedience, and finally the capacity for effective and persuasive command over subordinates. The best government, Xenophon thinks, is

an enlightened monarchy supported and checked by an aristocracy devoted to agricultural and military pursuits. He admires the laws of Persia for rewarding good as well as punishing evil," and points out to the individualistic Greeks, from the example of Persia, the possibility of uniting many cities and states in an empire enjoying internal order and peace. Xenophon began, like Philip, with a vision of conquest, he ends, like Alexander, captivated by the people whom he thought to conquer.

He is a masterly storyteder, but a middling philosopher. He is an amateur in everything but war, he considers a hundred subjects, but always from the viewpoint of a general. He exaggerates the virtues of order and has not a word to say for liberty; we may judge from this how far disorder had gone in Athens. If antiquity ranked him with Herodotus and Thucydides it must have been because of his style, the fresh charm of its Attie purity, the harmonious flow of a prose that Cicero called "sweeter than honey," the human touches of personality, the transparent simplicity of language that allows the reader to see through the clear medium the thought or subject in hand. Xenophon and Plato stand to Thucy dides and Socrates in the same relation as Apelles and Praxiteles to Polygnotus and Pheidias—the culmination of artistry and grace after an age of creative originality and power.

IV. APELLES

The highest excellence of the fourth century lay not in literature but in philosophy and art. In art, as in politics, the individual tiberated himself from the temple, the state, the tradition, and the school. As patriotic devotion vielded to private lovalues, archaecture took on a more modest scale, and became increasingly secular, the great choral forms of music and dance made way for private performances by professionals, painting and sculpture continued to adorn public buildings with the representation of gods or noble human types, but at the same time they entered upon that service and portrayal of living individuals which characterized the succeeding age. Where cities could still afford to patronize art on a national scale it was because—like Crithis, Habcarnassus, or Ephesus—they had not been deeply touched by war, or, ake Syracuse, had found in natural resources and governmental order the means of a rapid recovery.

On the manland architecture marked time. In 138 Lycurgus rebuilt the Theater of Dionysus, the Stadams, and the Lyceum, and under his administration Philon raised an impressive assertal at the Piracus. As the tendency to delicate refinement increased, the Doric order became less fashionable, and

stern simplicity finding no counterpart in the soul, the Ionic style rose in popularity, and served as an architectural analogue to Praxiteles' elegance and Plato's charm, while the Counthian order made modest conjuests in the Tower of the Winds and the charagic monament of Typerates. At Archdan Tegea Scopas raised a temple of Athena in all three styles—one colourade Doric, another Toric, another Counthian—and beautified it with statuary from his own masculine hand.

Vaster and more famous was the third temple of Artemis at Fphesus. The second temple had burned Jown on the day of Alexander's birth in 456, a comeidence which, says the usually kindly Platarch, Hogesias of Magnesia "made the occasion of a conceit frigid enough to have stopped the conflagration." The new huilding was begun soon afterward, and was completed by the end of the century. Atexander offered to bear the whole cost of the work if his name as donor were recorded on the edifice, but the proper Greeks of I phesus refused for the disarring for possibly satisfiedly reason that hit was not meet for one god to braid a temple to another "Nevertheless, Alexander's favorite architect, Dinocrates, designed the temple on a scale that made it the largest in Hellas. Thirty-six of the columns were carved with bas-reliefs by various sculptors, including the uliquitous Scopis; one sculptured column drain survives in the British Museum, as if to prove by its drapery alone that Greek sculpture was still near the height of its curve. The heads of the figures are not miniobile and idealized types, but individualized faces alive with feeling and character-a premonation of Hellenistic realism.

At the opposite extreme of size the fourth century distinguished itself in terra-cotta statuettes. Bocottan Tanagra made its name synonymous with little figures in baked and unglazed clay, east in generalized types but then molded and painted by hand into a thousand individual shapes quark with the color and variety of common life. As in earlier centuries, painting was called in to aid other aris, but now it acquired an independent status and dignity, and its masters received commissions from all the Circek world. Pampadus of Amphipolis, who taught Apelles, refused to take any pupil for less than twelve years, and charged \$6000 for the course. Minason, dictater of Locatin Flatea, paid ten minas for each of the hundred figures in a battle scene by Aristides of Thebes, making \$100,000 for one pointing, and the same enthusiast gave Asclepiodorus \$160,000 for a panel of the twelve major Olympians. I use its paid \$12,000 for a copy of the portrait that Pausias of Sievon had painted of Menander's mistress Giveera." A picture by Apelles, says Pliny, sold for a sum equal to the treasuries of whole cities."

"Apelles of Cos," says the same enthusiastic amateur, "surpassed all the other painters who either preceded or succeeded him. Singlehanded, he

contributed more to printing than all the others together . Apolles must have been supreme in his day and art, since he could afford the rare extravagance of praising other painters. Learning that his greatest rival, Protogenes, was living in poverty. Apelles sailed for Rhodes to visit him Protogenes, unwarmed was not in his studio when Apelles came. An old woman attendant asked Apel es whom she should name as visitor when her master returned. Apelles repiled only by taking a brush and tracing upon a panel, with one stroke an ontine of exceeding fineness. When Protogenes came back the old woman regretted that she could not tell him the name of his departed visitor, but Protogenes, seeing the outline and noting its delicacy, exclaimed "Only Apelles could have drawn that line." Then he drew a still finer line within that of Apelles, and bide the woman show it if the stranger should return. Apelles came, marveled at the absent Protogenes' skill but drew between the two lines, a third of such stenderness and grace that when Protogenes saw it he confessed himself surpassed, and rushed to the harbor to detain and welcome Apelles. The panel was transmitted as a masterpiece from generation to generation, until it was bought by Julius Caesar and perished in the fire that destroyed his palace on the Palatine Hill Anxious to awaken the Greek world to Protogenes' worth, Apelles asked him what he wanted for some of his paintings, Protogenes mentioned a modest sum, but Apel es effered him, instead, fifty talents (\$300,000), and then circulated a report that he intended to sell these works 25 h.s own. The Rhodians, are used to a better appreciation of their artist, paid Protogenes more than the sum Apelles had named, and kept the pictures among the public treasures of the city."

Apelles meanwhile had captured the plaudits of the Greek world by his painting of Aphrodite Anadromene—i.e., Aphrodite using from the sea. Alexander sent for him, and sat for many pottraits. The voing conqueror was not satisfied with the representation of his horse Bucephalus in one of these pictures, and had the animal brought closer to the panel for comparison. Bucephalus, looking at the picture, whomied, whereupon Apelles remarked. "Your Maissty's horse seems to kin wimore about painting than you do?" On another occasion when the King was holding forth about art in Apelles' studio. Apic as begged him to task of anything else lest the boys who were grinning the colors should laugh at him. Alexander took it good natured voluments to engaged the artist to paint his favorate concubine, and Apelles to an love with her, the King sent her to him as a gift."—Over his finished pictures. Apelles painted a thin coat of variash, which preserved the colors, softened their glare, and yet made them livelier than

before. He worked to the last, and death came upon him while he was once more delineating the eternal Aphrodite.

V. PRANITELES

The sculptural masterpiece of the period was the great mausoleum dedicated to King Mausolus of Halicarnassus. Nominally a satrap of Persia, Mausonis had extended his personal sway over Caria and parts of Ionia and Lyera, and had used his rich revenues to build a fleet and beautify his capiral. When he died (353), his devoted sister and wife, Artemisia, held a famous oratorical contest in his honor, and summoned the best artists of Greece to codaborate upon a fomb that should be a firting memorial to his genius. She was a queen by miture as well as by marriage, when the Rhodians took advantage of the King's death to invade Caria, she defeated them by clever strategy, captured their fleet and their capital, and soon brought the rich merchants to terms." But her grief over the death of Mausolus weakened her, and she died two years after him, before she could see the completed monument that was to give a word to every Western tongue. Slowly Scopas, Leochares, Bryaxis, and Timotheus raised a rectangular tomb of white marble slabs over a base of bricks, covered it with a pyramidal roof, and adorned a with thirty six columns and a wealth of statuary and rebefs. A statue of Mausolus," calm and strong, was found among the ruins of Hahearnassus by the Loglish in 1847. Still more finished in workmanship is a frieze" showing again the struggle of Greeks and Amazons. These men, women, and horses are among the chefs-d'ocurres of the world's bas-reliefs. The Amazons are not n asculine fema es built for battle, they are we men of a voluptuous beauty that should have tempted the Greeks to something gentler than war. The Mausoleum took its place, with the third temple at I paiesus, among the Seven Wonders of the World

In many respects sculpture now reached its apogee. It lacked the stimulus of religion, and fell short of the majestic power of the Parthenon pediments, but it took a new inspiration from ferminne grace, and achieved a loveliness never equaled before or since. The fifth century had modeled nulle men and draped women, the fourth preferred to carve nude women and clithed men. The fifth century had idealized its types, and had east or chiseled the harassed life of man into an emotionless repose, the fourth century tried to realize in stone something of human individuality and

[&]quot; Now in the British Museum.

feeling. In male statuary the head and face took on more importance, the body less, the study of character replaced the idolatry of muscle, portraits in stone became the tashion for any subject who could pay. The body abandoned its stiff, straight pose, and leaned at ease upon a stick or tree, and the surface was modeled to let in the living play of light and shade. Anxious for realism, Lysistratus of Sicyon, apparently first among the Greeks, fitted a plaster mold upon the subject's face, and made a preliminary cast."

The representation of sensious beauty and grace came to perfection in Praxiteles. All the world knows that he courted Phryne, and gave a lasting form to her lovelness, but no one knows when he was born or when he died. He was both the son and father of sculptors named Cephisodotis, so that we picture him as the climax of a family tradition of patient artistry. He worked in bronze as well as marble, and won such repute that a dozen cities competed for his services. About 160 Cos commissioned him to carve an Aphroduc, with Phryne's help he did, but the Coans were scandal zed to find the goddess quite node. Praxiteles mollified them by making another Aphroduc, clothed, while Cindus bought the first. King Nicomedes of Bathynia offered to pay the heavy public debt of the city in return for the statue, but Cindus preferred unmortality. Tourists came from every nook of the Mediterranean to see the work, critics pronounced it the finest statue yet made in Greece, and gossip said that men had been stirred to amorous frenzy by viewing it.

As Chidas achieved fame through the Aphrodite, so the little town of Thespiae in Bocotia, birthplace of Phryne, attracted travelers because Phryne had dedicated there a marble Fros by Praxiteles. For she had asked of him, as a proof of his leve the most beaunful of the works in his studio. He wished to leave the choice to her, but Phryne, hoping to discover his own estimate, ran to him one day with news that his studio was on fire, whereupon he cried out, "I am lost if my Sarve and my Fros are burned."

Phryne chose the Fros and gave it to her native town to Fros, once the creator god of Hesiod, became in Praxiteles' conception a delicate and dreamy youth, symbolizing the power of love to capture the soul, he had not yet become the mischievous and sportise Cupid of Hellemistic and Roman art.

Presumably the Satve of the Capitoline Museum in Rome, known to us

^{*}A Roman copy in the Variean corresponds to the representation of the status on ex-

^{*} New tail it be a ght to Rome where it perished in the conflagration of an 64. The Vatican Capit of Centin rise may be a copy

as Hawthorne's Marble Faun, is a copy of the work that Praxiteles preferred to his Eros. Some have thought that a torso in the Louvre is part of the original itself." The sarys is represented as a well-formed and happy lad, whose only animal element is his long and pointed ears. He is resting lazily against a tree trunk, with one foot crossed behind the other. Seldom has marble conveyed so fully the sense of idle ease, all the charming carelessness of boyhood is in the relaxed lambs and trustful face. Perhaps the limbs are too rounded and soft, Praxiteles looked too long at Phryne to be able to model a man. The Apollo Sauroctonus. Apollo the Lizard-Killer is so feminine that we are half inclined to class him with the hermaphrodites that abound in Hellenistic statuary.

Pausanias remarks with regrettable brevity that among the statues in the Herneum at Olympia was "a stone Hernies carrying Dionysus as a bahe, by Praxiteles " German exeavators digging on the site in 1877 crowned their labors by finding this figure, buried under centuries of rubbish and clay. Descriptions, photographs, and casts miss the quality of the work; one must stand before it in the little museum at Olympia, and clandestinely pass the fingers over its surface, to realize the smooth and living texture of this marble flesh. The messenger god has been entrusted with the task of rescuing the infant Dienysus from the jeasousy of Hera, and taking him to the nymplis who are to rear him in secret. Hermes pauses on the way, leans against a tree, and holds up a cluster of grapes before the child. The infant is crudely done, as if the inspiration of the arrist had been exhausted on the older god. The right arm of the Hermes is gone, and parts of the legs have been restored, the remainder is apparently as it came from the sculptor's hand. The firm limbs and broad chest show a healthy physical development, the head is in itself a masterpiece, with its anstocratic shapeliness, its chiseled refinement of features, and its curly hair, and the right foot is perfect where perfection in statuary is rare. Antiquity considered this a minor work; we may judge from this the artistic wealth of the age.

Another passage in Pausamas" describes a marble group set up by Praxiteles in Mantinea. Excavation has found the base alone, bearing the figures of three Muses, carved probably by the pupils rather than by the master. If we put together the references in extant Greek writings to strikes by Praxiteles, we find some forty major works," and these were doubtless but a part of his abundant production. We miss in the remains the sublimity and strength, the dignity and reverence of Pheidias, the gods have made way for Phryne, and the great issues of national life have been put aside for private love. But no sculptor has ever surpassed the sureness of Praxiteles' technique, the almost miraculous power to pour into hard stone ease and grace and the tenderest sentiment, sensuous delight and woodland joyousness. Pheidias was Doric, Praxiteles is lonic, in him again we have a premonition of that cultural conquest of Europe which was to follow Alexander's victories.

VL. SCOPAS AND LYSIPPUS

Scopas played Byron to Pheidias' Milton and Praxiteles' Keats. We know nothing about his afe except through his works, which are the real biography of any man, but even of his works we know none with certainty. The stocky and pugnacious heads of the statues that are attributed to lum, or of the copies that are ascribed to his originals, stamp him as a man of passionate ind viduality and terce. At Teges, as we have seen, he served as both architect and sculptor, showing a versat bity and power unsurpassed in all the centuries between Pheidias and Michelangelo. Excavations have found only a few tragments of a pediment, chiefly two hadly damaged heads marked by a beachycephalic roundness, and a moody distant look, which are typical of Scopas' work, together with a battered and masculine figure of Atalanta. Strangely like these remains is the Meleager head in the Viva Medier at Rome, here again are the full checks, the sensual lips, the brooding eyes, the slightly projecting ridge of the fore sead above the nose, and the half-disheveled curly hair, perhaps it is a Roman copy of a Meleager set up by Scopas as part of a group representing the Calydonian hant. Another head, in the Metropol tan Museum at New York, is amost surely by Scopas, or copied from him, brunt and powerful, and yet handsome and interligent, it is one of the most characterful remains of Ancient startery.

At Elis, savs Pausanias," Scopas east "a brazen statue of the Pandemian Aphrodate sitting on a I razen Le-goat." At S coon he made a marble Heracles, of which, perhaps, we have a Roman copy in the Lansdowne House at London the body a recapse into Polycleitan stylized misculature, the head small and round as usual, the face almost as refined as in Practices. He paused long enough at Megara, Argos, Thebes, and A hens to make statues that Pausanias saw there five centuries later, and perhaps he had a hand in rehanding the sanctuary at Epidaurus. Crossing the Aegean, he made an Athena and a Dionymus for Chidus, and played a major role in the sculptures of the Mausoleum. Going north he carved one of the column drims of the third temple at Ephesus. At Pergamum he made a colossal seated Arci at Chrysa in the Troad he set up an Apollo Smitheus to scare mice from the fields. He contributed to the fame

of Samothrace with an Aphrodite, and in far-off Byzantium he carved a Baeebame of which the Dresden Astertaium may have a Roman copy in the
Raging Maenad. This math c statuette, though only eighteen inches high, is
worthy of a great arrist powerful in figure, imagination in drapery, unique in
puse, alive with anger, and beautiful from every side. Pliny reters to many
other statues by Scopas, which in his day stood in the pyaces of Rome, an
Apollo probably copied in the Apollo Cabaroc lus of the Vatican, a group of
Poseidon, Theta, Actines, and Nerville "an admirable piece of workmanship,"
says Piny, "even if it had taken a whole life to complete it"; and a "naked
Aphrodite, sufficient to establish the renown of any city."

All in all, these works, if a judgment may be based upon a few hypothetical survivals, suggest for Scopas a rank very near to Praviteles. Here is originality without extravagance, strength without brutality, and a dramatic portraval of impulse, emotion, and mood, without disfigurement by any strained intensity. Praxiteles loved beauty, Scopas was drawn to character. Praviteles wished to reveal the grace and tenderness of womanhood, the bijovant health and gaiety of youth, Scopas chose to portray the pains and tragedies of life, and emobled them with private representation. Perhaps, if we had more of his works, we should place him second only to Pheidias.

Lysippus of Siction began as a humble arrivan in brass. He longed to be an artist, but could not afford a teacher, he took courage, however, when he heard Eupompus the painter ann once that for his part he would mutate nature herself, not any artist." I yappus thereupon turned his face to the study of living beings, and formed a new canon of southward proportions to replace the stern rule of Poly cleans, he made the legs longer and the head shorter, extended the lumbs into the third dimension, and gave the figure more vitality and ease. His Apoxyomenos is a vagrant son of the Diadimienos, Polyclenus' athlete bound a filler above his brow, I vsippus' scrapes the oil and dust from his arm with a bronze strigil, and achieves a greater slenderness and grace. More attractive and asive, if we judge from the martile copy in the Delphi Museum, was his portrait of Agus, a voting Thessalan nobleman. Once free, Lympius struck out into new fields, abandoning the type for the individual, the conventional for the impressionatic," and amost creating portrait sculpture among the Greeks. Philip interrupted his wars and amours to sit for Lysippus, Alexander was so pleased with the artist's busts of him that he made him the official royal semptor, as he had given the exclusive right to Apelies to paint his likeness, and to Pyrgoteles to engrave it upon gens.

Some of the finest sculptural remains of the fourth century are anony-

^{*} Other senses, and I vuppes, in a sentence that would have pleased Manet, made men at they were, while he made them "as they appeared."

moos, the bronze statue of a youth found in the sea near Marathon, an ancient copy of a fourth-century Hermes of Andros, and a modest, pensive, delicate Hygues found at Teges* all three in the Athens Museum; and in the Boston Museum, from Chios, a profoundly beautiful Head of a Gnt. To this period, so fat as we can make out, belong most of the Niohid figures that came to Rome from Asia Minor in the days of Augustus, and are now scattered among the museums of Europe. And perhaps to this age must be assigned the originals of three Aphrodites in the Praxitclean traditions the hesitant Venus of Capua in the Naples Museum, the Vancan's Crouching Venus, and the modest Venus of Arles in the Louvre. Greater than these in mature beauty and quiet depth of feeling is the seated Demerer found at Chidus in 1858, and now among the noblest figures in the British Museum. The subject is uncertain, perhaps it is merely the finest funerary piece that has come down to us from antiquity; perhaps it represents the corn goddess as a mater dolorosa, silently mourning the rape of Persephone. The emotion is conveved with classic restraint; all the tenderness of motherhood, and its salent resignation, are in the face and eyes. This and the Hermes, and not those ingranating Aphrodites, are the living sculptural masterpieces of fourth-century Greece.

[&]quot;This lovely head, which has been used as symbol and first abstration for this volume, was stulen from the little museum at Teges, and after once years scarch, was found in a granary in a village of Arcadis by Alcaandre Philadelphous, the granious curator of the National Museum at Athens Both the subject and the period are uncertain, but the Properties style seem to date it in the fourth century M. Philadelphous considers it "the pearl of the National Museum."

CHAPTER EXI

The Zenith of Philosophy

I, THE SCIENTISTS

OMPARI D with the bold advance of the fifth century, and the revolutionary achievements of the third, source in the fourth marked time, and contented uself, in great part, with recording its accommations. Aenocrates wrote a history of geometry. Theoparistics a history of natural philosophy, Menon a history of medicine, Endomus histories of arithmetic, geometry, and astronomy. The problems of religion, morals, and politics appearing to be more vital and pressing than the problems of nature, men turned with bocrates from the objective study of the material world to a consideration of the soul end the state.

Plato loved mathematics, dipped his philosophy into it deeply, dedicated the Academy to it, almost, in Syracuse, gave a kingdom for it. But arrometic was for him a half-mystical theory of number, geometry was not a measuring of the earth, it was a discipline of pure reason, a portal to the mond of Gold. Pluturch tells of Plato's 'indignation' at Fudoxus and Architas for carrying on experiments in mechanics, 'as the mere corruption and annihilation of the one good of geometry, which was thus shamefully turning its back upon the unembodied objects of pure intelligence to frout to sensation, and to ask help . . . from matter." In this way, Plutarch continues, "Mechanics came to be separated from geometry, and, repudated or neglected by philosophers, took its place as a military art." Nevertheless, in his own at stract way, Plate served mathematics well. He redefined the point as the beginning of a line," formulated a rule for finding square numbers that are the sum of two squares," and invented or developed mathematical analysis'-ie, the proof or disproof of a proposition by considering the results that foot from assuming it the reduction ad absordien is one form of this method. The emphasis on mathematics, in the currentum of the Academy, helped the wience if only by training such creative pupils as Eudoxus of Candus and Heracleides of Pontus,

Plate's friend Archytas, besides being seven times chosen strategor of Taras, and writing several tracts of Pythagorean philosophy, developed the mathematics of music, doubled the cube, and wrote the first known treatise on mechanics. Antiquity credited him with three epochal inventions—the pulley, the screw, and the rattle, the first two laid the foundations of machine industry, the

third, says the grave Aristotle, "gave children something to occupy them, and so prevented them from breaking things about the house." In this same age Dinostratus 'squared the circle by using the quadratus curve. His brother Menaechinus, a pupil of Plato, founded the geometry of come sections," doubled the cube, formulated the theoretical construction of the five regular solids, tadvanced the meory of irrational numbers, and gave the world a famous phrase. "O king," he said to Alexander, "for traveling over the country there are both royal roads and roads for common citizens, but in geometry there is one road for all."!"

The great name in fourth-century science is Eudosus, who helped Prariteles to give Chidus a niche in history. Born there about 408, he set out at the age of twenty-three to study medicine with Philistion at Local, geometry with Archites at Taras, and philistophis with Plato at Athens. He was poor, and lived cheaply at the Piraeus, whence he waiked to the Academy every scholastic day. After a stay in Chidus he went to Fgy pt and spent sixteen months studying astronomy with the priests of Helicipilis. We find him next in Propositine Cyzicus, fecturing on mathematics. At the age of torty he moved with his pupils to Athens, opened there a school of science and philosophy, and for a time rivated Plato. Finally he returned to Candus, set up an observatory, and was entrusted with the task of giving the city a new code of laws."

His contributions to geometry were fundamental. He invented the theory of proportion, and most of the propositions, transmitted to us in the fifth book of Fuelid, and he devised the method of exhaustion which made it possible to calculate the area of the circle and the volume of the sphere, the pyramid, and the cone, without this preliminary work Archanedes would have been impossible. But the absorbing interest of Eudorus was in astronomy. We catch the spirit of the scientist in his remark that he would gladly be consumed like Phaethon if he might thereby discover the nature, size, and form of the sun." The word artrology was then used to include what we call astronomy, but Eudorus advised his pupils to ignore the Chaldean theory that a person's fortune could be told by noting the position of the stars at the time of his burth. He longed to reduce all coestial motions to fixed laws, and in his Phanomena—which actiquity considered its greatest book on astronomy—he laid the foundation for the scientific prediction of the weather.

The Greeks defined con-e-sections as the figures—ellipse parallola, and hyperbola produced by coming an acute angled, a right angled and an obtase angled cone with a plane perpendicular to an element. Makern takes and the categorian three coning lines.

t The tetrahedron (paramed heaphedron cube) octabedron, dislegabedron, and romabedron courses solids one sell's four six of a ruel e un currey regular peasons.

^{*} The Royal Roads, or hongs Hiptim and the effected to the great roads of the Person France The groes is rold asso of the day of Protein 120

I One of his favorite problems was to find the "golden section"—i.e., to divide a line at such a point that the whole line should have the same proportion to the larger part as the larger to the smaller.

His most famous theory was a brilliant failure. He suggested that the universe was composed of twenty-seven transparent and therefore invisible spheres, revolving in diverse directions and at various speeds about the center of the earth, and that the heaven's boshes were fixed upon the periphery or shell of these concentric spheres. The system now seems tantastic, but it was one of the first attempts to give a scientific explanation of celestral behavior. In accord with it budoxus calculated with considerable accuracy (if we may rashly take our present knowledge of these matters as a norm) the synodic and zodiacal periods of the planets. The theory did more than any other in antiquity to stimulate astronomic research.

Fephantus of Syracuse wrote, abour 190. "The earth moves about its own center in an eastward direction." Heracleides of Pontus, one of the great polyniaths of antiquity—the author of famous works on grammar, misse, poetry, rhetoric, history, peometry, logic, and eth es—took up the suggestion, or advanced it independently arguing that instead of the whole universe revolving about the earth, the relevant phenomena can be explained by supposing that the earth itself rotates daity upon its axis. "Venus and Viccury said Heracleides, revolve around the sun. For one brilliant moment, perhaps, Heracleides anticipated Aristatchus and Copernicus, for we read in the fragments of Gennius (ca. 70 n.c.). "Heracleides of Pontus said that, even on the assumption that the earth moves in a certain way, while the sun is in a certain way at rest, the apparent irregularity with reference to the sun can be saved." We shall probably never know just what Heracleides meant.

Meanwhile a modest progress was being made in the sciences. In geography Dicaearchus of Messana, the biographic of Greece, measured the height of mountains, established the circumsterence of the earth at some thirty thousand miles, and noted the influence of the suit upon the tides. In 324 Nearthus, one of Alexander's generaly, sailed from the mouth of the Indus along the southern coast of Asia to the haphrates, his log, partly preserved in Arman's Indica," was one of the classics of ancient geography. Geodesy—the measurement of land surfaces, elevations, depressions, positions, and volumes—had already been christened (geodama) as distinct from geometry. Philistion of Iraaan Lacri, at the beginning of the century, practiced animal dissection, and called the heart the main regulator of life, the seat of the pneuma, or soul. Diocles of

The synodic period of a heavenly body is the time between two successive con uner one of a with the sim as seen from the earth, the andread period is the time between two incressive appearances of a heavenly body in the time pair of the sky as as agreen twisty divided into the two years of the zod as. Euboean Carystus, about 370, dissected the womb of animals, described buman embryos of twenty-seven to forty days, advanced anatomy, embryology, gyne-cology, and obstetries, and scotched a favorite Greek error by announcing that both sexes contribute 'seed' to form the embryo." A second Aspasia became one of the famous physicians of fourth-century Athens, renowned for her work in women's diseases, surgery, and other branches of medicine. And lest medical science should lower the death rate too fast for the means of subsistence, Aeneas Tacticus, the Arcadian, published about 360, in time for Philip and Alexander, the first Greek classic on the art of war.

II. THE SOCRATIC SCHOOLS

1. Aristippus

If it was a middling age in science the fourth century was the heyday of philosophy. The early thinkers had propounded vague cosmologies, the Sophists had doubted everything but rhetoric; Socrates had raised a thousand questions and answered none, now all the seeds that had been planted in two hundred years sprouted into great systems of metaphysical, ethical, and political speculation. Athens, too poor to maintain its state medical service, nevertheless opened private innversities that made it, as Isocrates said, the "school of Hellas," the intellectual capital and arbiter of Greece. Having weakened the old religion, the philosophers struggled to find in nature and reason some substitute for it as a prop of morals and a guide to life.

They explored first the paths opened up by Socrates. While the Sophists relapsed for the most part into the teaching of thetoric, and disappeared as a class, the pupils of Socrates became the storm centers of violently divergent philosophies. Eucleides of Megara, who had often traveled to Athens to hear Socrates, stirred up his native city with "a rage of disputes," as Tunon of Athens phrased it," and developed the dialectic of Zeno and Socrates into an eristic, or art of argument, that questioned every conclusion, and led in the next century to the skepticism of Pyrtho and Carneades. After Eucleides' death his brilliant disciple Stupo led the Megarian school more and more towards the Cyrtic point of view since every philosophy can be refuted, wisdom lies not in metaphysical speculation but in such simple living as will liberate the individual from dependence upon the external factors in well-being. When, after the sack of Megara, Demerrius Pohorcetes inquired how much Stilpo had lost, the

sage replied that he had never possessed anything but knowledge, and no one had taken this away. In his later years he numbered among his students the founder of the State philosophy, so that the Megarian school may be said to have begun with one Zeno, and ended with another

The elegant Aristippus, after Socrates' death traveled to various entes, spent some time with Xenophon at Scillus but more with Lais in Cotinth," and then settled down to found a school of piniosophy in his native Cyrene, on the coast of Atrica. The weath and myury of the upper classes in the halt-Oriental city had formed as habits, and he agreed it ost with that part of his master's doctrine which called happiness the greatest good. Handsonie in figure, refined in manners, elever in speech, he made a way for himself everywhere Shipwreeked and penniless in Rhodes, he went to a gyinnasium, discoursed, and so fascinated the men there that they provided him and his con-panions with all coinforts, whereupon he remarked that parents should be able to swim to land with its owner."

His philosophy was simple and candid. Whatever we do, said Aristipmis, is done through hope of pleasure or fear of pain even when we impoverish ourselves for our friends, or give our lives for our generals. Therefore, by common consent, pleasure is the ultimate good, and everything else including virtue and ph losophy, must be judged according to its capacity to bring us pleasure. Our knowledge of things is uncertain, all that we know directly and sorely is our feelings, wisdem, then, lies in the pursuat not of abstract truth but of pleasurable sensations. The keenest pleasures are not intellectual or moral, they are physical or sensual, therefore the wise man will seek physical delights above all. Nor will be sacrifice a present good to a conjectural future good, only the present exists, and the present is probably as good as the future, if not better, the art of lite lies in placking pleasures as they pass, and making the most of what the moment gives." The use of philosophy is that it may guide us not away from pleasures, but to the most pleasant choice and use of them It is not the ascetic who abstains that is pleasure's master, but rather the man who enjoys pleasures without being their slave, and can prodently distinguish between those that endanger him and those that do not, hence the wise man will show a discriminating respect for public opinion and the laws, but will seek as far as possible "to be neither the master nor the slave of any man."

If it is a credit to a man that he practices what he preaches, Aristippus deserves some honor. He bore poverty and riches with equal grace, but

made no pretense to impartiality between them. He insisted on being paid for his instructions, and did not hesitate to flatter tyrants to gain his end. He smaled patiently when Dionysius I spat upon him "A fisherman," he said, "must put up with more moisture than this to carch even a smaller fish." When a friend reproached him for kneeling before Dionysius he answered that it was not his fault if the King "had his ears in his feet"; and when Dionysius asked him why philosophers haunt the doors of the rich, but the rich do not frequent the presence of philosophers, he replied, "Because the first know what they want but the second do not " Nevertheless he despised men who pursued wealth for its own sake. When the rich Phrygian Simus displayed to him an ornate house paved with marble. Artstippus spat in his face, and when Simus protested he excused himself on the ground that he could not find, amod all this marble, "a more suitable place to spit in." Having made money, he spent it laviship on good food, good clothing, good lodging, and (as they seemed to him) good women. Being reproved for living with a courtesan, he answered that he had no objection to living in a house, or sailing in a ship, that other men had used before him." When his mistress said to him, "I am in a family way by you," he replied, "You can no more tell that it was I, than you could tell, after going through a thicket, which thorn had scratched you."

People aked him despite his honest ways, for he was a person of pleasant manner, refined culture (pace Simus), and kindly heart. Doubtless his blunt hedonism was in part due to his delight in scandalizing the respectable sinners of the town. He gave himself away by reverencing Socrates, loving philosophy,* and confessing that the most impressive spectacle in life is the sight of a virtuous man steadily pursuing his course in the midst of victous people.* Before his death (356) he remarked that the greatest legacy he was leaving to his daughter Arete was that he had taught her "to set a value on nothing that she can do without"*—a strange surrender to Diogenes. She succeeded him as head of the Cyrenaic school, wrote forty books, had many distinguished pupils, and earned from her city an honorable epitaph—"The Light of Hellas."

2. Diogenes

Antisthenes agreed with the conclusion, but not the arguments, of this philosophy, and drew out of the same Socrates an ascetic theory of life.

Those who ome philosophy from their education as d Arstippus, fare like the surrors of Penelope, they ... find it easier to was over the madernants than to marry the mastress."

The founder of the Cyme school was the son of an Athenian citizen and a Thracian slave. He fought bravely at Tanagra in 426. He studied for a time with Gorgias and Prodicus, and then set up his own school, but having heard Socrates discourse, he went over—taking his pupils with him—to learn the wisdom of the older man. Like Fudoxus he fived at the Piraeus, and walked to Athens nearly every day—four or five miles each way. Perhaps he was present when Socrates (or Plato) discussed with a complaisant interlocutor the problem of pleasure.

Socr Do you think that the philosopher ought to care about the pleasures of . . . cating and drinking?

Simmiat. Certainly not.

Socr. And what do you say of the pleasures of love-should he care about them?

Sim. By no means,

Soor And will be think much of the other ways of indulging the body—for example, the acquisition of costly raintent, or sandals, or other adormments of the body. Tostead of caring about these does be not rather despise anything beyond what nature needs?

Sim. I should say that the true philosopher would despise them.

This is the essence of the Cyric philosophy to reduce the things of the flesh to bare necessaties in order that the soul may be as free as possible. Annethenes took the doctrine literally, and became a Greek Franciscan without theology. Aristippus' motto was, "I possess, but am not possessed"; Antisthenes' was, "I do not possess, in order not to be possessed." He had no property," and dressed in so ragged a cloak that Socrates twitted him "I can see your vanity, Antisthenes, through the holes of your cloak " Aside from this his only weakness was the writing of books, of which he left ten, one of them was a history of philosophy. After Socrates died Antisthenes resumed his role as teacher. He chose as his lecture center the gymnasium Cynosarges (Dogfish) because it was maintained for people of low, or alien, or illegitimate birth, the name Cynic became attached to the school rather from the place than from the creed." Antisthenes dressed like a workman, took no pay for his teaching, and preferred the poor for his pupils, anyone unwilling to practice poverty and hardship was driven away by Antisthenes' tongue or his club.

He refused at first to take Diogenes as a pupil, Diogenes insisted, bore insult patiently, was received, and made his teacher's doctrine famous throughout Hellas by living it completely. Antisthenes had been half

slave in origin, Diogenes was a bankrupt banker from Sinope. Diogenes had begged from actual want, and was pleased to learn that this was a part of virtue and wisdom. He adopted the beggar's garb, wallet, and staff, and for a tune made his home in a rub or cask in the court of the temple of Cybele at Athens." He envied the sample life of animals, and tried to mittate it, he slept on the ground, are what he could find wherever he found it, and (we are assured) performed the duties of nature and the rites of love in the sight of all." Seeing a child drink from its hands, he threw away his cup." Sometimes he carried a candle or a lantern, saying that he was looking for a man." He injured no one, but refused to recognize laws, and announced himself, long before the Stoics, a kosmopolites, or Canzen of the World. He traveted tessurely, and we hear of him living for a time in Syracuse. On one of his journeys he was captured by pirates, who sold him as a slave to Xemades of Corinch. When his owner asked him what he could do, he answered, "Govern men." Xentades made him rutor of his sons and manager of his household, in which capacities Diogenes did so well that his master called him "a good genius," and took his advice in many things. Diogenes continued to live his sample life, so consistently that he became, next to Alexander, the most famous man in Greece.

He was something of a poseur, and evidently relished his renown. He had a gift for debate, and his namesake reports that he never tost an argument." He called freedom of speech the greatest of social goods, and made much use of it, with coarse humor and unfailing wit. He rebuked a woman who knelt with head to the ground before a body image. "Are you not afraid," he asked her, "to be in so indecent an attitude, when some god may be behind you, for every place is tall of them?"" When he saw the son of a courtesan throw a stone at a crowd he warned him, "Take care lest you hit your father." He dishled women, and despised men who behaved like them, when a richly dressed and perfumed young Corinthian asked him a question he said, "I will not answer you until you tell me whether you are a boy or a girl " All the world knows the story of how Alexander, at Connth, came upon Diogenes Iving in the sun. "I am Alexander the Great King," said the ruler. "I am Diogenes the dog," said the philosopher. "Ask of the any favor you choose," said the King. "Stand out of the sun," answered Diogenes. "If I were not Alexander," said the young warner, "I would be Diogenes";" but we do not hear that the philosopher returned the compliment. The two men died, we are asked to believe, on the same day in 324: Alexander at Babylon in his thirty-third year, Diogenes at Cornth in his nineties." The Connthians placed a marble dog over his

grave, and Sinope, which had banished him, raised a monument to his memory.

Nothing could be clearer than the Cynic philosophy. It dallied with logic only long enough to dismiss as moonshine that theory of Ideas with which Plato was bewildering the intellectuals of Athens. Metaphysics, too, seemed to the Cyrics a vain game, we should study nature not in order to explain the world, which is impossible, but that we may learn the wisdom of nature as a guide to life. The only real philosophy is ethics. The aim of life is happiness, but this is to be found not in the pursuit of pleasure but in a simple and natural lite independent as possible of all external aids. For though pleasure is legitimate if it results from one's own labor and effort, and is not followed by remorse," yet it so often eludes us in the chase, or disappoints us when captured, that it may more wisely be called an evil than a good. A modest and virtuous lite is the only road to abiding content, wealth destroys peace, and envious desire, like a rust, eats away the soul-Slavery is unjust but unimportant, the sage will find it as easy to be happy in bondage as in freedom, only internal freedom counts. The gods, said Diogenes, gave than an easy existence, but man has complicated it by itching for hituries. Not that the Cypies put much forth in the gods. When a priest explained to Antisthenes how many good things the virtuous will emoy after death, he asked, "Why, then, do you not die?" Dogenes smiled at the Mysteries, and remarked of the offerings set up in Samothrace by those who had survived slapwreck, "The offerings would have been much more numerous if those who were lost had offered them instead of those who were saved " Everything in religion but the practice of virtue seemed to the Cymes superstation. Virtue must be accepted as its own reward and should not depend upon the existence or justice of the gods. Virtue consists in earing possessing and desiring as little as possible, drinking only water, and injuring no one. Asked how to detend oneseif against an adversary. Diogenes answered, "By proving honorable and upright." Only sexual desire seemed reasonable to the Cynics. They avoided marrage as an external bond, but patronized prostitutes. Diogenes advocated free love and a community of wives," and Antisthenes, seeking independence in everything, complained that he could not satisfy his hunger as solitarily as he could assuage his lust." Having accepted sexual desire as normal and natural, like hunger, the Cynics professed themselves unable to understand why men should be ashamed to satisfy the one appetite, like the other, in public." Even in death a man should be independent, choosing for it his own place and time, suicide is legitimate. Diogenes, some say, killed himself by holding his breath."

The Cynse philosophy was part of a "back-to-nature" movement which arose in fifth-century Atnens as a reaction of maladjustment to an irksomely complex civilization. Men are not civilized by nature, and bear the restraints of ordered life only because they tear punishment or solitude. Diogenes stood to Socrates in somewhat the same relation as Rousseau to Voltaire, he thought that civilization was a mistake, and that Prometheus had deserved his crucifixion for bringing it to mankind "The Cynics, like the Stores and Rousseau, idealized "nature peoples"," Diogenes tried to eat meat raw because cooking was unnatural." The best society, he thought, would be one without artifices or laws.

The Greeks smiled upon the Cynics, and tolerated them as medieval soelety tolerated its samts. After Diogenes the Cymics became a religious order without religion, they made a rule of poverty, fived on alms, tempered their celibacy with promiscuity, and opened schools of philosophy. They had no homes, but mught and slept in the street or the temple porticoes. Through Drogenes' disciples. Stilpo and Crates, the Cynic doctrine passed down into the Hellenistic age, and formed the basis of Stoicism. The school disappeared as an entity about the end of the third century; but its influence remained strong in the Greek tradition, and perhaps reappeared in the Essenes of Judea and the monks of early Christian Egypt. How far all these movements were influenced by, or influenced, similar sects in India, scholarship cannot yet say. The "back-to-nature" devotees of our own day are the intellectual descendants of those men and women of Oriental or Greek antiquity who, tired of unnatural and cramping restraints, thought that they could turn and live with the animals. No full life is without a touch of this urban fantasy.

IIL PLATO

1. The Teacher

Even Plato was moved by the Cyme ideal. In the second book of the Republic he describes with relish and sympathy a communistic and naturalistic Utopia. He rejects it, and goes on to portray a "second-best" state, but when he comes to perform this phalosopher-kings we find the Cymic dream—of men without property and without wives, dedicated to plain liv-

ing and high philosophy—capturing the citadel of the finest imagination in Greek history. Plato's plan for a communistic aristocracy was the bril ant endeaver of a neb conservative to reconcile his scorn of democracy with the radical idealism of his time.

He came of a family so ancient that on his mother's side his pedigree went back to Solon, and on his father's side to the early kings of Athens, even to Poseidon, god of the sea." This mother was the sister of Chamodes and the mece of Critias, so that epposition to democracy was almost in his blood. Named Aristocles-"best and renowned" the youth distinguished hunself in almost every field, he excelled in the study of music, mathematics, rhetone, and poetry, he charmed the women, and doubtless the men, with his good looks, he wrestled at the Isthman games, and was nicknamed Platon, or broad, because of his robust frame, he fought in three battles, and won a prize for bravery." He wrote epigrams, amorous verses, and a tragic tetralogy he was hesitating between poetry and politics as a career when, at the age of twenty, he succumbed to the fascination of Socrates. He must have known him before, since the great gadfly had long been a friend of his uncle Charmides, but now he could understand Socrates' reaching, and enjoy the sight of the old man tossing ideas, like an actobat, into the air. and impaling them on the prongs of his questioning. He burned his poems, forgot Furipides, arhlenes, and women, and followed the master as if under an hypnotic spell. Perhaps he took notes every day, feeling with an artist's sensitivity the dramatic possibilities of this grotesque and lovable Silenus.

Then, when Plato was twenty-three, came the tory revolution of 404. led by his own relatives, the tense days of the oligarchic terror, and the brave defiance of the Thirty by Socrates, the death of Critias and Charmides, the resteration of the democracy, the trial and death of Socrates all the world seemed to collapse about the once carefree youth, and he fled from Athens as if it were a haunted city. He found some comfort at Megara in the home of Eucleides, and then at Cyrene, perhaps with Aristippus, thence he appears to have gone to I gypt and studied the mathematical and historical lore of the priests." About 395 he was back in Athens, and a year later fought for the city at Corinth. About 187 he set forth again, studied the Pythagorean philosophy with Archytas at Taras and with Timaeus at Locri, passed over to Sicily to see Mr. Etna, formed a friendship with Dion of Syracuse, was introduced to Dionysus I, was sold into slavery, and was back safe in Athens in 186. With the three thousand drachmas raised to reimburse his ransonier, and which Anniceris refused, Plato's friends now bought for him a suburhan recreation grove named

from its local god Academis." and there Plato founded the university that was destined to be the intellectual center of Greece for nine hundred years."

The Academy was technically a religious fraternity, or thiasos, dedicated to the worship of the Muses. The students paid no fees, but as they came for the most part from upper-class families their parents could be expected to make substantial donations to the institution, rich men, says Suidas, "from time to time bequeathed in their wills, to the members of the school, the means of living a life of philosophic leisure " Dionysius II was reported to have given Plato eighty talents (\$480,000)"- which might explain the philosopher's patience with the King. The comic poets of the time saturated the students as affected in their manners and overnice in their dress-with elegant caps and canes, and a short cloak or academic gown," so old are the manners of I ton, and the black robes of scholarship. Women were admitted to the student body, for Plato remained to this extent a radical, that he was an ardent feminist. The chief studies were mathematics and philosophy. Over the portal was a warning inscription meders ageometretos essuo. "Let no one without geometry enter here", perhaps a considerable measure of mathematics formed a requirement for admission. Most of the mathematical advances of the fourth century were made by men who had studied in the Academy. The mathematical course included arithmene (theory of number), advanced geometry, "spheric" (astronomy), "music" (probably including literature and history), law, and philosophy," Moral and political philosophy came last, if Plato followed the advice which -half justifying Anytus and Meletus he puts into the mouth of Socrates.

Socr You know that there are certain printiples about instance and good which were taught us in chadhood and under their parental authority we have been brought up, obeying and honoring them.

Glaucon. That is true.

Socr And there are also opposite maxims and habits of pleasure which flatter and attract our soul, but they do not influence those who have any sense of right, and who continue to honor the maxims of their fathers and obey them.

Gl. True.

Socr Now, when a man is in this state, and the questioning spirit asks what is fair and honorable, and he answers as the law directs, and

^{*} It was not the first university the Pythagotean 4, hool of Ceytona, as far back as 420, had offered a variety of courses to a united acholastic community, and the school of lacerates annealated the Academy by eight years.

then arguments come and refute the word of the legislator, and he is driven into believing that nothing is fair any more than foul, or just and good any more than the opposite, and the same of all his time honored notions, do you thank that he will still honor and obey them?

Gl. That is impossible.

Socr. And when he ceases to think them honorable and natural as heretofore, and he fulls to discover the true, can he be expected to pursue any life other than that which flatters his desires?

Gl. He cannot.

Socr. And from being an observer of the law he is converted into a lawless person?

Gl. Unquestionably....

Socr. Therefore every care must be taken in introducing our thirty-year-old citizens to dialectic . . . They must not be allowed to taste the dear delight too early, that is one thing specially to be avoided for young men, is you may have observed, when they first get the taste in their mouths, argue for amasement, and are always contradicting and refuting others in anitation of those who refute them, they are like puppy dogs, who delight to tear and pull at all who come near them.

Gl. Yes, that is their great delight.

Soci. And when they have made many conquests and received defeats at the hands of many, they violently and speedily get into a way of not believing anything that they believed before, and hence... philosophy has a had name with the rest of the world.

Gl. That is very true.

Soor But when a man begins to get older, he will no longer be guilty of that sort of insandy, he will follow the example of the reasoner who is seeking for truth, and not of the eristic who is contradicting for the sake of amusement, and the greater consideration of his character will increase and not diminish the honor of the pursuit."

Plato and his aides taught by lecturing, by dialogue, and by setting problems to the students. One problem was to find "the uniform and ordered movements by the assumption of which the apparent motions of the planets can be accounted for"," possibly Eudoxus and Heracleides derived some stumulus from these tasks. The lectures were technical, and sometimes disappointed those who had hoped for practical gain, but pupils like Aristotle, Demosthenes, Lycurgus, Hypereides, and Xenocrates were deeply influenced by them, and in many cases published the notes they had taken. Antiphanes said humorously that just as, in a far northern city, words froze into ice as they were spoken, and were heard in the summer when they thawed, so the words spoken by Plato to his students in their youth were finally understood by them only in their old age."

2. The Artist

Plato himself professed never to have written any technical treatises," and Anstotle refers to the teaching in the Academy as Plato's "unwritten doctrine " How far this differed from the teaching of the Dialogues we do not know. Probably these were undertaken originally as a recreation, and in a half-humorous vein." It is one of the playful ironies of history that the philosophical works most reverenced and studied in European and American universities today were composed in an attempt to make philosophy intelligible to the layman by binding it up with a human personality It was not the first time that philosophical dialogues had been written, Zeno of Figurand several others had used this method," and Sunon of Athens, a leather cutter, had pubashed, in dialogue, a report of the Socratic conversations held in his shop." It was in Plato a literary, not an historical, form, he did not pretend to give accurate accounts of conversations held thirty or fifty years before, nor even to keep his references consistent. Gorgias, as well as Socrates, was asteunded to hear the words that the young dramatist-philosopher had put into his mouth." The Dialogues were written independently of one another, and perhaps at long intervals, we must not be shocked by slips of memory, much less by changes of view. There is no design unifying the whole, except as the continuing search of a visibly developing mind for a truth which it never finds +

The Dialogues are cleverly and yet poorly constructed. They vivify the drama of ideas, and build up a coherent and affectionate portrait of Socrates, but they seldom achieve unity or continuity, they often wander from subject to subject, and they are frequently east into a clumsily indirect mood by being presented as narrative reports, by one man, of other men's

Certain passages in Arist the suggest a deferred understanding of Plato—especially of the theory of Ideas, than that which we get true the Diangues.

The thirty-six Dialogues carried be direct or authoritarily classified. We may artistize it divide them into it an early group chiefly the 4c = 2.7 Cr to 1 at 1, Ion Charmates, Crarelin Finderphine and Factor arms . In Idle group which Greene Protegorar, Phaedo Symposium, Phaedo Symposium, Phaedo and the taster group which Parmendes, Theattern, Sophis, Stateman, Phaedous, Innaeus and I and The first group was probably composed before the age of thirty-four the second before forty, the third after sarry, the success being devoted to the Academy.

conversations. Socrates tells us that he has "a wretched memory," and then recites to a friend, verbatim, fifty-four pages of a discussion which he had carried on in his youth with Protagoras. Most of the Dialogues are weakened by the absence of vigorous interlocutors capable of saving to Socrates something other than "ves" or its equivalent. But these faults are lost in the clear bit hance of the language, the humor of situation, expression, and idea, the living world of varied characters humanly realized, and the frequent opening of windows into a profound and noble mind. We may judge the value that the ancients uncensciously put upon these Dialogues when we consider that they are the most complete product that has come down to us from any Greek author. Their form entitles them to as high a place in the annals of literature as their content has given them

in the history of thought.

The earlier Dulogues are excellent examples of the youthful "eristic" condemned in the passage quoted a while back, but they are redeemed by the charming pictures they give of Athenian youth. The Symposium is the masterpiece of its genre, and the best introducts in to Plato, its dramatic muse on scene ("Imagine," says Agarbon to his servants, "that you are our hosts, and that I and the company are your guests' "), its living picture of Aristophanes, "biccoughing because he had eaten too much," its lively episode of the drunken and scandalous Alcibiades, above all, its subtle combination of narcaless realism in the portraval of Socrates with the loftiest ideansm in his conception of loves these qualities make the Symposium one of the peaks in the history of prose. The Phaedo is more subdued, and more beautiful, here the main argument, however weak, is bonest, and gives its opponents a fair chance, the style flows more smooth y over a scene whose noble calm overcomes as tragedy, making the death of Socrates come as quietly as the turn of a river out of sight around a bend. Part of the dialogue of the Projectrus takes place on the banks of the Ilesus, while Socrates and his pupil are cooling their feet in the stream. Greatest of all dialogues, of course, is the Republic, being the fullest exposition of Plato's philosophy. and in its earner parts a dramatic conflict of personalities and ideas. The Parmender is the worst specimen of empty logic chopping in all brerature, and the bravest example in the history of philosophy of a thinker irrefutably refuting his own most beloved doctrine the theory of Ideas. Then, in the later Dia ogues, the arristry of Plato wines, Socrates fades from the pieture, metaphysics loses its poetry, politics its youthful ideals, until, in the Laws, the weary inheritor of all the culture of many-sided Athens surrenders to the lure of Sparta, and gives up freedom, and poetry, and art, and philosophy itself.

3. The Metaphysician

There is no system in Plato, and if here, for order's sake, his ideas are summarized under the classic heads of logic, metaphysics, ethics, esthetics, and politics, it should be remembered that Plato himself was too intense a poet to shackle his thought in a frame. Because he is a poet he has most difficulty with logic, he wanders about seeking definitions, and loses his way in perilous analogies, "then we got into a laby mith, and, when we thought we were at the end, came out again at the beginning, having still to see as much as ever " He concludes "I am not certain whether there is such a science of science" as logic "at all." Nevertheless he makes a beginning. He examines the nature of language, and derives it from imtative sound." He discusses analysis and synthesis, analogies and fallacies, he accepts induction, but prefers deduction," he creates, even in these popular dialogues, technical terms essence, power, action, passion, generation -which will be useful to later philosophy, he names five of the ren "caregones" that will make up part of Aristotle's fame. He rejects the Sophist view that the senses are the best test of truth, that the individual "man is the measure of all things", if that were so, he argues, any man's, any sleeper's, any madman's, any baboon's report of the world would be as good as any other."

All that the "rabble of the senses" gives us is a Heracleitean flux of change, if we had only sensations, we should never have any knowledge or truth at all. Knowledge is possible through Ideas, through generalized images and forms that mold the chaos of sensation into the order of thought." If we could be conscious only of individual things thought would be impossible. We learn to think by grouping things into classes according to their likenesses, and expressing the class as a whole by a common noun; than enables us to think of all men, table of all tables, light of every light that ever shone on land or sea. These Ideas (idea, eida) are not objective to the senses but they are real to thought, for they remain, and are unchanged, even when all the sense objects to which they correspond are destroyed. Vien are born and die, but man survives, Every individual triangle is only imperfectly a triangle sooner or later passes away, and therefore is relatively unreal, but triangle—the form and law of all triangles

omplete," everything that geometry says of triangles, circles, squares, cubes, spheres would remain true, and therefore "real," even if there had never been, and never would be, any such figures in the physical world. Abstractions also are real in this sense, individual acts of virtue have a brief existence, but virtue remains as a permanent remay for thought, and an instrument of thought, so with beauty, largeness, likeness, and so forth; these are as real to the mind as beautiful, large, or like things are real to the sense." Individual acts or things are what they are by partaking of, and more or less realizing, these perfect forms or Ideas. The world of science and philosophy is composed not of individual things, but of Ideas,†" history, as distinct from biography, is the story of man, biology is the science not of specific organisms, but of life, mathematics is the study not of concrete things but of number, relation, and form independently of things and yet as valid for all things. Philosophy is the science of Ideas.

Everything in Plato's metaphysics turns upon the theory of Ideas. God, the Prime Mover Unmoved, or Sou, of the World," moves and orders all things according to the eternal laws and forms, the perfect and changeless Ideas which constitute, as the Neo-Platonists would say, the Logos, or Divine Wisdom or Min.l of God. The highest of the Ideas is the Good. Sometimes Plato identifies this with God hauself," more often it is the guiding instrument of creation, the supreme form towards which all things are drawn. To perceive this Good, to vision the molding ideal of the creative process, is the loftiest goal of knowledge." Motion and creation are not mechanical, they require in the world, as in ourselves, a soul or principle of life as their originative power."

Only that which has power is real;" therefore matter is not basically real

* In his later years Plata tried to prove the Pythagorean converse, that all Ideas are mathematical format.*

[&]quot;I do not an arrand, by the series of causes and real emblies, a series of rules dual matable things but rather the series of causes and real emblies, a series of rules dual matable things but rather the series of fixed and cremal things. For it would be impossible for human weakness to tollow up the series of individuals, matable things, not only because their manber surpluses all creaming but because the existence of particular things has no connection with the reserver, and is not an exertal truth. The order that the geometry of triangles may be true, it is not necessary that any particular triangle through easier. However, there is no need that we do not dualic stand the set est of individual about any inguiting their essence in only to be found in fixed on laterated things and from the laws mended in these things at their time codes, seen alloys. Which all individual things are reade and arranged." Note that the Plato's theory of Ideas Hericantus and Parmendes are reconciled. Hericities is right, and flux is true in the world of sense, Parmendes is right, and changeless many is true, in the world of Ideas.

(to me on), but is merely a principle of inertia, a possibility waiting for God or soul to give it specific form and being according to some Idea. The soul is the self-moving force in man, and is part of the self-moving Soul of all things." It is pure vitality, incorporeal and immortal. It existed before the body, and has brought with it from antecedent incarnations many memories which, when awakened by new life, are mistaken for new knowledge. All mathematical truths, for example, are innate in this way, teaching merely arouses the recollection of things known by the soul many lives ago." After death the soul or principle of life passes into other organisms, higher or lower according to the deserts it has earned in its previous avatars. Perhaps the soul that has sinned goes to a purgatory or hell, and the virtuous soul goes to the Islands of the Biest." When through various existences the soul has been purified of all wrongdoing, it is freed from remearnation, and mounts to a paradise of everlasting happiness."

4. The Moralist

Plato knows that many of his readers will be skeptics, and for a while he struggles to find a natural ethic that shall sur men's souls to righteousness without relying on heaven, purgatory, and hell. The Dialogues of his middle period turn more and more from metaphysics to morals and politics. The greatest and fairest sort of wisdom by far is that which is concerned with the ordering of states and families. The problem of ethics lies in the apparent conflict between individual pleasure and social good. Plato presents the problem fairly, and puts into the mouth of Callas as strong an argument for selfishness as any immoralist has ever given. He recognizes that many pleasures are good, intelligence is needed to discriminate between good and harmful pleasures, and for fear that intelligence may come too late we must inculcate in the young a habit of temperance, a sense of the golden mean.

The soul or principle of life has three levels or parts -desire, will, and thought, each part has its own virtue—moderation, courage, and wisdom; to which should be added piety and partice—the fulfillment of one's obagations to his parents and his gods. Justice may be defined as the co-operation of the parts in a whole, of the elements in a character, or of the people in a state, each part performing its fittest function properly. The Good

How much of the Herda Pythagorean-Orphic doctrine of invitoriality was protective coloration it is leard to my. Plato presents it half playfully, as if it were merely a useful myth, a positional to decency.**

is neither reason alone nor pleasure alone, but that mingling of them, in proportion and measure, which produces the Life of Reason. The supreme good lies in pure knowledge of the eternal forms and laws. Morally "the highest good... is the power or faculty, if there be such, which the soul has of loving the truth, and of doing all things for the sake of truth. He who so loves truth will not care to return evil for evil, he will think it better to suffer ministice than to do it; he will "go forth by sea and land to seek after men who are incorruptible, whose acquaintance is beyond price... The true votaties of philosophy abstain from all fleshly insts, and when philosophy offers them a purification and release from evil, they feel that they ought not to resist her influence, to her they incline, and whither she leads they follow her."

Plato had burned his poems, and lost his religious faith. But he remained a poet and a worshiper; his conception of the Good was suffosed with esthetic emotion and ascetic piety, phaosophy and religion became one in him, othic and esthetic were fused. As he grew older he became incupable of seeing any beauty apart from goodness and truth. He would censor, in his ideal state, all art and poetry that lought seem to the government to have an immoral or impatriotic tendency, all rhetoric and all nonreligious drains would be barred, even Heirer- seductive painter of an immoral theology—would have to go. The Dorian and Phrygian modes of music nuglit be allowed, but there must be no complicated instruments, no virtuosos making "a heastly noise" with their technical displays, " and no radical novelries.

The introduction of a new kind of music must be shunned as impering the whole state, for styles of music are never disturbed without affecting the most important political institutions. The new style, gradually gaining a lodgment, quiets insimutes itself into manners and customs, and from these it. goes on to attack laws and constitutions, displaying the utmost impudence, until it ends by overturning everything.

Beauty, like virtue, hes in fitness, symmetry, and order. A work of art should be a living creature, with head, trunk, and limbs all vitalized and unified by one idea." True beauty, thinks our passionate puritin, is intellectual rather than physical, the figures of geometry are "eternally and absolutely beautiful," and the laws whereby the heavens are made are fairer than the stars." Love is the pursuit of beauty, and his three stages, according as it is love of the body, or of the soul, or of truth. Love of the body, between man and woman, is legitimate as a means to generation, which is

a land of immortality; "nevertheless this is a rudimentary form of love, intworthy of a philosopher. Physical love between man and man, or woman and woman, is immatural, and must be suppressed as frustrating reproduction." This can be done by sublanding it in the second or spiritual stage of love, here the older man loves the younger because his coincliness is a symbol and reminder of pure and eternal beauty, and the younger loves the older because his wisdom opens a way to understanding and honor. But the highest love is "the love of the everlasting possession of the Good," that love which seeks the absolute beauty of the perfect and eternal ideas or forms." This, and not fleshless affection between man and woman, is "Platonic love"—the point at which the poet and the philosopher in Plato merge in the passionate desire for understanding, an almost mystic longing for the Bearite Vision of the law and structure and afe and goal of the world.

For he, Ademantus, whose mind is fixed upon true being, has no time to look down upon the offairs of men, or to be filled with jealousy and eninity in the strongle against them, his eye is ever directed towards fixed and animutable principles, which he sees neither injuring not in ured by one another, but all in order moving according to reason, these he matutes, and on these, so far as he can, he will mold his life.

5. The Utopian

Nevertheless he is interested in the affairs of men. He sees a social vision too, and dreams of a society in which there shall be no corruption, no poverty, no tyranny, and no war. He is appalled at the bitterness of political faction in Athens, "strife and entity and harred and sospicion forever recurring." Lake a blue blood, he despises the plutocratic oligarchy, "the men of business. I pretending never so much as to see those whom they have already runted, inserting their sting, that is, their money—into anybody else who is not on his guard against them, and recovering the principal sum many times over this is the way in which they make drones and paupers to abound in the state." "And then democracy comes into being after the poor bave conquered their opponents, slaughtering some and banishing some, while to the remainder they give an equal share of freedom and power." The democrats turn out to be as had as the plutocrats, they use the power of their number to vote doles to the people and offices to themselves, they flatter and pamper the multitudes until liberty.

becomes anarchy, standards are debased by omnipresent vulgarity, and manners are coarsened by unbindered insolence and abuse. As the mad pursuit of wealth destroys the oligarchy, so the excesses of liberty destroy democracy.

Socr In such a state the anarchy grows and finds a way into prevate houses, and ends by getting among the anarchs and infecting them . . . The tather gets accust med to descend to the level of his sons . . . and the son to be on a level with his father, having no fear of his parents, and no shame. . . . The master fears and flatters his scholars, and the scholars despise their masters and tutors. . . Young and old are alike, and the young man is on a level with the old, and is ready to compete with hom in word or deed, and old men . . . morate the young. Nor most I forget to tell of the liberty and equality of the two sexes in relation to each other. . . . Truly, the horses and asses come to have a way of marching along with all the rights and dignities of freemen . . all things are just ready to burst with liberty. . . .

Ademantus. But what is the next step? . . .

Soer. The excessive increase of anything often causes a reaction in the opposite direction.... The excess of liberty, whether in states or individuals, seems only to pass into slavery... and the most aggravated form of tyranny arises out of the most extreme form of liberty.**

When liberty becomes license, dictatorship is near. The rich, afraid that democracy will bleed them, conspire to overthrow it; or some enterprising individual seizes power, promises everything to the poor, surrounds lumself with a personal army, kills first his enemies and then his friends ountil he has made a purgation of the state, and establishes a dictatorship. In such a conflict of extremes the philosopher who preaches moderation and mutual understanding is like a man fallen among wild heasts; if he is wise he will reture under the shelter of a wall while the hurrying wind and the storm go by.

Some students, in such crises, take refuge in the past, and write history; Plato takes refuge in the future, and models a otopia. First, he fancies, we must find a good king who will let us experiment with his people. Then we must send away all the adults except those necessary to maintain order and teach the young, for the ways of their elders would corrept the young into an image of the past. To all the young, of whatever sex or class, twenty years of education will be given. It will include the teaching of myths—

not the immoral myths of the old faith, but new myths that may tame the soul into obedience to parents and the state.* At twenty all are to be given physical, mental, and moral tests. I hose that fail was become the economic classes of our state-businessnen, workingmen, farmers, they will have property, and different degrees of wealth (within limits) according to their ability, but there will be no slaves. The survivors of the first test will receive ten further years of edication and truining. At thirty they will be tested again. Those that fail will become soldiers, they shall have no private property, and shall not engage in business, but shall live in a null tary communism. Those that pass the second test will now (and none before) take up for five years the study of "divine ph losophy" in all its branches, from mathematics and logic to politics and law. At thirty-five the survivors, with all their theory on their beads, will be flung into the practical world to earn their living and make themselves a place. At fifty such of them as are still alive shall become, without election, members of

the guardian or ruling class.

They shall have all powers, but no possessions. There will be no laws; all cases and issues will be decided by the philosopher-kings according to a wisdom untrammeled by precedent. Lest they abuse these powers, they shall have no property, no money, no families, no permanent individual wives, the people will hold the power of the purse, the soldiers the power of the sword. Communism is not democratic, it is aristocratic, the common soul is incapable of it, only soldiers and philosophers can bear it. As for marriage, it must in all classes be strictly regulated by the guardians as a eugenic sacrament. "The best of either sex should be united with the best as often as possible, and the interior with the inferior, and they are to rear the offspring of one sort of union, but not of the other, for this is the only way of keeping the flock in prime condition." All children are to be brought up by the state, and given equal educational opportunity, classes are not to be hereditary. Carls shall have an equal chance with boys, and no office in the state shall be clusted to women because they are women. By this combination of individualism, communism, engenies, feminism, and aristocracy Plato thinks that a society night be produced in which a philosopher would be glad to live. And he concludes: "Until philosophers are kings, or the kings and princes of this world have the spirit and power of philosophy . . . caties will never cease from ill, nor the human race."

^{*} Le., Plato concludes that a natural ethic is inadequate.

6. The Lawmaker

He thought that he had found such a prince in Dionysius II. He felt, like Voltaire, that monarchy has this advantage over democracy, that in a monarchy the reformer has only to convince one man. To make a better state "you would assume a dictator young, temperate, quick at learning, having a good memory, courageous, of a noble nature... and fortunate, his good fortune must be that he is the contemporary of a great legislator, and that some happy chance brings them together."

seen, an unhappy chance.

In his declining years, still longing to be a legislator. Plato offered a thirdbest state. The Laws, besides being the earliest extant classic of European jurisprudence, is an instructive study in the senile aftermath of youthful romanticism. The new city, says Plato, must be placed inland, lest foreign ideas undermine its faith, foreign trade its peace, and foreign luxuries its self-contained simplicity " The number of free crizens shall be limited to the conveniently divisible number of 3040, in addition to these will be their families and their slaves. The citizens shall elect 360 guardians, divided into groups of therry, each group administering the state for a month. The 360 shall choose a Noctornal Council of twenty six, which shall meet at night and legislate on all vital affairs." These councilors shall allot the land in equal, indivisible, and inalienable parcels among the citizen families. The guardians "shall provide against the rains doing harm instead of good to the land . . . and shall keep them back by works and duches, and make" irrigation "streams furnish even to the dry places plenty of water." To control the growth of economic inequality, trade is to be held to a minimum, no gold or silver is to be kept by the people, and there shall be no lending of money at interest,12 everyone is to be discouraged from living by investment, and is to be encouraged to live as an active farmer on the land. Any man who acquires more than four times the value of one share of land must surrender the surplus to the state, and severe limits are to be placed upon the power of bequest " Women are to have equal educational and political opportunity with men." Men must marry between thirty and thirty-five, or pay heavy annual fines," and they are to beget children for only ten years. Drinking and other public amisements are to be regulated to preserve the morals of the people.**

To accomplish all this peaceably there must be complete state control of education, publication, and other means of forming public opinion and personal character. The highest official in the state is to be the minister of

education. Authority will replace liberty in education, for the intelligence of children is too undeveloped to excuse us for leaving to them the guidance of their own lives. Literature, science, and the arts are to be under censorship, they will be forbidden to express ideas which the councilors consider hartful to public metals and plety. Since obedience to parents and the laws can be secured only through supernatural sanctions and aids, the state shall determine what gods are to be worshiped, and how, and when. Any current who questions this state religion is to be imprisoned, if he persists he is to be killed.²⁰

A long life is not always a blessing; it would have been better for Plato to have died before writing this indictment of Socrates, these prolegomena to all future Inquisitions. His defense would be that he loved justice more than truth, that his aim was to abolish poverty and war, that he could do this only by strict state control of the individual, and that this required either force or religion. The degenerative Ionian looseness of Athenian morals and politics, he thought, would be cured only by the Dorian discipline of the Sparian code. Through all of Plato's thought times the fear of the abuses of freedom, and the conception of philosophy as the policeman of the people and the regulator of the arts. The Lazir offers the surrender of a dying Athens that had completely lived to a Sparta that, ever since Lycurgus, had been dead. When Athens' most famous philosopher could find so little to say for freedom Greece was tipe for a king.

Looking back over this body of speculation we are surprised to see how fully Plato anticipated the philosophy, the theology, and the organization of medeval Christianity, and how much of the modern Fascist state. The theory of Ideas became the "realism" of the Scholasucs—the objective reality of "universals." Plato is not only a prā-existent Christian as Nietzsche called him, but a pre-Christian Puritan. He distrusts human nature as evil, and thinks of it as an original sin tainting the soul. He breaks up into an evil body and a divine spirit" that unity of body and soul which had been the educated Greek ideal of the sixth and fifth centuries, like a Christian ascetic he calls the body the tomb of the soul. He takes from Py thagoras and Orphism an Oriental faith in transmigration, katma, sin, purification, and "release", he adopts, in his last works, the other worldly tone of a converted and repentant Augustine. One would almost say that Plato was not Greek if it were not for his perfect prose.

He remains the most likable of the Greek thinkers because he had the attractive faults of his people. He was so sensitive that like Dante he could see perfect and eternal beauty behind the imperfect and temporal form;

he was an ascetic because at every moment he had to rein in a rich and impetuous temperament. He was a poet possessed by anagmation, allured by every whimsy of thought, enthralied by the tragedy and comedy of ideas, flushed with the intellectual excitement of the free mental life of Athens. But it was his fate that he was a logician as well as a poet, that he was the most brilliant reasoner of antiquity, subtler than Zeno of Flea or Aristotle; that he loved philosophy more than he loved any woman or any man, and that in the end, like Dostoevski's Grand Inquisitor, he concluded to a suppression of all free reasoning, a conviction that philosophy must be destroyed in order that man may live. He himself would have been the first victim of his Utopias.

IV. ARISTOTLE

1. Wander-Years

When Plato died Aristotle built an altar to him, and gave him almost divine honors, for he had loved Plato even if he could not like him. He had come to Athens from his native Stageirus, a small Greek settlement in Thrace. His father had been court physician to Philip's father, Amyntas II, and (if Galen was not numaken) had raught the boy some anatomy before sending him to Plato." The two rival strains in the history of thought—the mystical and the medical—met and warred in the conjunction of the two philosophers. Perhaps Aristotle would have developed a thoroughly scientific mind had he not listened so long to Plato (some say for twenty years), the doctor's son struggled in him with the Purnan's pupil, and neither side won; Aristotle never quite made up his mind. He gathered about him scientific observations sufficient for an encycli pedia, and then tried to force them into the Platonic mold in which his scholastic mind had been formed. He refuted Plato at every turn because he borrowed from him on every page.

He was an earnest student, and soon caught the eye of his master. When Plato read at the Academy his treatise on the soul, Aristotle, says Diogenes Laertius, "was the only person who sat it out, while all the rest rose up and went away." After Plato's death (347) Aristotle went to the court of Hermeias, who had studied with him at the Academy and had raised himself from slavery to be the dictator of Atameus and Assus in upper Asia Minor. Aristotle married Hermeias' daughter Pythias (344), and was

about to settle in Assus when Hermeias was assassinated by the Persians, who suspected him of planning to help Plulip's proposed invasion of Asia." Aristotle fied with Pythias to near-by Lesbos, and spent some time there in studying the natural history of the island." Pythas died after giving him a daughter. Later Aristotle married, or lived with, the hetaira Herpylas," but he maintained to the end a tender devotion to the memory of Pythias, and at his death asked that his bones be laid beside hers; he was not quite the emotionless bookworm that one might picture from his works. In 343 Philip, who probably had known him as a youth at Amyntas' court, invited him to undertake the education of Alexander, then a wild lad of thirteen. Aristotle came to Pella and labored at the task for four years. In 340 Philip commissioned han to direct the restoration and repeopling of Stagerras, which had been faid waste in the war with Olynthus, and to draw up a code of laws for it, all of which he accomplished to the satisfaction of the city, which commemorated its re-establishment by him in an annual holiday."

In 334 he returned to Athens, and-probably aided by funds from Alexander opened a school of rhetoric and philosophy. He chose as its home the most elegant of Athens' gymnasiums, a group of buildings dedicated to Apollo Lyceus (God of Shepherds), surrounded with shady gardens and covered walks. In the morning he taught advanced subjects to regular srudents, in the afternoon he lectured to a more popular audience, probably on thetoric, poetry, ethics, and politics. He collected here a large library, a zoological garden, and a museum of natural history. The school came to be called the Lyceum, and the group and its philosophy were named Periparetic from the covered walks (peripator) along which Aristotle liked to move with his students as he discoursed." A sharp rivalry developed between the Lyceum, whose students were mostly of the middle class, the Academy, which drew its membership largely from the anstocracy, and the school of Isocrates, which was frequented chiefly by colonial Greeks. The rivalry was eased in time by the emphasis of Isocrates on rhetoric, of the Academy on marhematics, metaphysics, and politics, and of the Lyceum on natural science. Aristotle set his pupils to gathering and co-ordinating knowledge in every field, the customs of barbarians, the constitutions of the Greek cities, the chronology of victors in the Pythan games and the Atheman Dionysia, the organs and habits of animals, the character and distributton of plants, and the history of science and philosophy. These researches became a treasury of data upon which he drew, sometimes too confidently, for his varied and innumerable treatises

For the layman he wrote some twenty-seven popular dialogues, which Cicero and Quintilian considered equal to Plato's, it was chiefly by these that he was known in antiquity "These dialogues were among the casualties of the barbarian conquest of Rome. What remains to us is a mass of technical, highly abstract, and inimitably dull works rarely referred to by ancient scholars, and apparently composed, in the last twelve years of his lafe, of notes made for his lectures by himself, or from his lectures by his pupils. These technical compendiums were not known outside the Lyccom until they were published by Andronicus of Rhodes in the first century \$1.0." Forty of them survive, but Diogenes Lacrius mentions 360 more—probably brief monographs. In these ashes of scholarship we must seek the once living thought that in later ages won for Aristotle the title of The Philosopher. We must approach him expecting no brilliance like Plato's and no wit like Diogenes', but only a rich argosy of knowledge, and such conservative wisdom as befits the friend and pensioner of kings."

2. The Scientist

Anstotle has traditionally been considered as primarily a philosopher. Perhaps this is a mistake. Let us, if only for a fresh view, consider him chiefly as a scientist.

His curious mind is interested, to begin with, in the process and technique of reasoning, and so acutely does he analyze these that his "Organon," or Instrument—the name given after his death to his logical treatises—hecame the textbook of logic for two thousand years. He longs to think clearly, though he seldom, in his extant works, succeeds, he spends half his time defining his terms, and then feels that he has solved the problem. Definition itself he defines definitively as the specification of an object or idea by naming the genus or class to which it belongs ("man is an animal")

^{*} The most apportune of the extant treatises may be arranged under six heads

and the specific difference that distinguishes it from all other members of that class ("man is a rational animal"). It is characteristic of his methodical way that he arranged in ten "categories" the basic aspects under which anything may be considered substance, quantity, quality, relation, place, time, position, possessain, activity, passivity a classification that some writers have found an aid in the amplification of their flagging thought.

He accepts the senses as the only source of knowledge. Universals are generalized ideas, not innate but formed from many perceptions of ake objects, they are conceptions, not things." He lays down resolutely, as the axiom of all logic, the principle of contradiction. "It is impossible for the same attribute at once to belong and not to belong to the same thing in the same relation " He exposes the fallacies into which sophists fall of lure us. He criticizes his predecessors for having drawn the universe, or their theories of it, our of their heads, instead of devoting themselves to patient observation and experiment." His ideal of deductive reasoning is the syllogism a trio of propositions of which the third follows necessarily from the others, but he recognizes that a syllogism, to avoid begging the question, must presuppose a wide induction to make its major premise probable. Though in his philosophical treatises he too often loses himself in deductive reasoning, he lauds induction, accumulates in his scientific works a mass of specific observations, and occasionally records his own or others' experiments.* With all his errors he is the father of scientific method, and the first man known to have organized co-operative scientific research.

He takes up science where Democritis left it, and dares to enter every field. He is weakest in mathematics and physics, and confines himself there to a study of first principles. He seeks in the Physics not new discoveries but clear definitions of the terms used matter, motion, space, time, continuous, infinite, coange, end. Motion and space are continuous, they are not made up, as Zeno assumed, of small indivisible moments or parts; the "infinite" exists potentially, but not actually "The feels, though he does nothing to solve, the problems that were to arouse Newton inertia, gravity, motion, velocity, he has some idea of the parallelogram of forces, and states the law of the lever- "The moving weight will more easily move" (the object) "the farther away it is from the fulcrum"

He argues that the heavenly bodies-certainly the earth-are spherical, for only a spherical earth could explain the shape of the moon when it is

^{*}Fig. in the Reproduction of domate in 6.10 he refers to the regrowth of the eyes when experimentally cut out to a using both and he rejects the theory that the right testace produces male and the reference female offspring his showing that a man whose right testace had been removed had committed to have clindren of either sex.

eclipsed by the intervention of the earth between it and the sun. He has an admirable sense of geological time, periodically but imperceptibly, he tells us, the sea is replaced by land and land by the sea, countiess nations and civilizations have appeared and disappeared, whether through swift catastrophe or slow time. Probably every art and philosophy has been repeatedly developed to the utmost and has perished again. He hazards explanations of clouds, fog., dew., frost, rain, snow, bail, wind, thunder, lightning, the rainbow, and meteors. His theories are often bizarre, but the epochal importance of the little treatise on meteorology is that it invokes no supernatural agencies, but seeks to account for the apparent whims of the weather through natural causes operating in certain sequences and regularities. Natural science could go no further until invention gave it instruments of greater scope and precision in observation and measurement

It is in biology that Aristotle is most at home, observes most widely and abundantly, and makes the most mistakes. The consolidation of previous discoveries in the final establishment of this vital science is his supreme achievement. With the help of his pupils, he gathered data on the faina and flora of the Aegean countries, and brought together the first scientific collections of animals and plants. If we may follow Pliny, "Alexander gave orders to his hunters, gamekeepers, fishermen, and others to supply Aristotle with whatever species and information he might request. The philosopher apologizes for his interest in lowly things. "In all natural objects there has some marvel, and if any one despises the contemplation of the lower animals, he must despise himself."

He classifies the animal kingdom into enamia and manna—blooded and bloodiess approximately corresponding to our "vertebrates" and "invertebrates." He subdivides the bloodless animals into testaceans, crustaceans, mollusks, and insects; the sanguineous into fishes, amphibians, birds, and manimals. He covers an impressively vast and varied field organs of digestion, excretion, sensation, locomotion, reproduction, and defense, the types and ways of fishes, birds, reptiles, apes, and hundreds of other groups, their pairing seasons and their methods of bearing and rearing their young, the phenomena of puberty, menstruation, conception, pregnancy, abortion, heredity, twins, the habitats and migrations of animals, their parasites and diseases, their modes of sleep and hibernation. . . He gives an excellent account of the life of the bee. He is full of queer incidental observations that the blood of oxen coagulates more rapidly than that of most other ani-

mals, that some male animals, especially the goat, have been known to give milk, that "in both sexes the horse is the most salacious of animals after man."

He is particularly interested in the reproductive structures and habits of animals, and marvels at the multiplicity of ways in which nature achieves the continuance of species, "preserving the type when she is unable to preserve the individual "," in this field his work remained unequaled until the last century. The life of amouals moves about two foci-eating and procreation." The female has an organ which must be regarded as an ovary, for it contains that which at first is undifferentiated egg, and which becomes by differentiation many eggs "t". The female element contributes to the embryo material and food, the male element contributes energy and movement; the female is the passive element, the male is the activating agent " Aristotle rejects the opinions of I mpedocles and Democritus, that the sex of the embryo is determined by the temperature of the womb, or by the preponderance of one reproductive element over the other, and then reformulates the theories as his own "Whenever the formative (male) principle fais to gain the upper band, and from deficient warmth fails properly to cook the material and so fashion it into its own shape, then will this material pass over into ... the female "" "Sometimes," he adds, "women bring forth three or even four chadren, especially in certain parts of the world. The largest number ever brought forth is five, and such an occurrence has been witnessed on several occasions. There was once upon a time a woman who had twenty children at four births, and most of them grew up.""

He anticipates many theories of nineteenth-century biology. He believes that the organs and characteristics of the embryo are formed by tiny particles (the "gemmules" of Darwin's 'pangenesis") that pass from every part of the adult into the reproductive elements. Like Von Baer he teaches that in the embryo the characters belonging to the genus appear first, those belonging to the species second, those belonging to the individual third. He states a principle on which Herbert Spencer prided himself, that the fertility of organisms, by and large, varies inversely as the complexity of their development. His description of the chick embryo shows him at his best.

References in the History of Anomals indicate that Acustone prepared a volume of anatomical sketches, and that some of their were reproduced on the walls of the liverum, his text uses letters, in modern style, to refer to various organs or points in the drawings.

[†] Armode failed to distinguish between overies and uterus; but his description was not instatually bettered before the work of Stenson in 1660.

If you wish, try this experiment. Take twenty or more eggs and let them be incubated by two or more hens. Then each day, from the second to that of hatching, remove an egg, break it, and examine it... With the common hen the embryo becomes first visible after three days.... The heart appears like a speck of blood, beating and moving as though endowed with life, and from it two veins with blood in them pass in a convoluted course, and a membrane carrying bloody fibers from the vein-docts now envelops the yolk. ... When the egg is ten days old, the chick and all its parts are distinctly visible.

The human embryo, Aristotle believes, develops like the clinck. "In the same way the infant hes within its mother's womb..., for the nature of the bird can be likened to that of man "* His theory of analogous organs enables him to see the animal world as one. "A nail is the analogue of a claw, a hand of a crab's supper, a feather of a fish's scale." At times he comes close to a doctrine of evolution:

Nature proceeds hitle by little from things lifeless to animal life in such a way that it is impossible to determine the exact line of demarcation. . . Thus, next after lifeless things in the upward scale comes the genus of plants, relatively ateless as compared with animals, but alive as compared with corporeal of jects. There is in plants a continuous scale of ascent towards the animal. There are certain objects in the sea concerning which one would be at a loss to determine whether they be animal or vegetable. . . The sponge is in every respect like a vegetable. Some animals are rooted, and perish if detached. In regard to sensibility, some animals give no sign of it, others indicate it obscurely. And so throughout the animal scale there is a graduated differentiation.

Fie considers the ape an intermediate form between man and other viviparous animals." He rejects Empedocles' notion of the natural selection of accidental mutations, there is no fortuity in evolution, the lines of development are determined by the inherent urge of each form, species, and genus to develop itself to the fullest realization of its nature. There is design, but it is less a guidance from without than an inner drive or "entelecthy" by which each thing is drawn to its natural fulfillment.

Intermingled with these brilliant suggestions there are (as might be expected from the hindsight of twenty-three centuries) errors so numerous, and some so gross, that we are warranted in suspecting that the zoological works of Aristotle have suffered some admixture of his own notes with

From echo, I have-telor, my goal or purpose-en, within.

those of his students." The History of Animals is a mine of mistakes. We learn there that mice die if they drink in summer; that elephants suffer from only two diseases-catarch and flatulence, that all animals but man develop rabies when bitten by a mad dog; that eels are generated spontaneously, that only men have palpitation of the heart; that the yolk of several eggs shaken together collects into the middle; that eggs float in strong brine." Aristorle knows the internal organs of animals better than those of men, for neither he nor Hippocrates seems to have overridden religious taboos and practiced human dissection ** He thinks that man has only eight ribs, that women have fewer teeth than men," that the heart lies higher than the lungs, that the heart and not the brain is the seat of sensation, " that the function of the brain is (literally) to cool the blood." Finally he (or some ponderous proxy) carries the theory of design to depths that make the judicious smue "It is evident that plants are created for the sake of animals, and animals for the sake of men " "Nature has made the buttocks for repose, since quadrupeds can stand without farigue, but man needs a seat." And yet even this last passage reveals the scientist the author takes it for granted that man is an animal, and seeks natural causes for the anatomical differences between beasts and men. All in all, the History of Anonals is Asistotle's supreme work, and the greatest scientific product of fourth-century Greece. Biology waited twenty centuries for its equal.

3. The Philosopher

Whether through a sincere piety, or through a cautious respect for the opinions of mankind. Aristotle becomes less of a scientist and more of a metaphysician as he turns to the study of man. He defines the soul (psyche), or vital principle as "the primary entelective of an organism"—i.e., the organism's inherent and destined form, its urge and direction of growth. The soul is not something aided to, or residing in, the body, it is coextensive with the body; it is the hody uself in its "powers of self-mountainment, self-growth, and self-decay", it is the sum of the functions of the organism, it is to the body as vision to the eye." Nevertheless, this functional aspect is basic, it is the functions that make the structures, the desires that mold the organis, the soul that forms the body. "All natural bodies are organs of the soul.")

The soul has three grades-nurraive, sensitive, and rational. Plants share

[&]quot;His was masted by the assentativity of cerebral timus to direct samulus,

t "The soul" Aristotle alids in a starting ideature aside, "is in a currant way all entings things; for all things are either perceptions or thoughts." Having bowed to Berkeiev, Aristotle also hours to Hume. "Morel is one and continuous in the strike in which the process of thinking is so, and thinking is identical with the thoughts which are its parts."

with animals and men the nutritive soul—the capacity for self-nourishment and internal growth, animals and men have in addition the sensitive soul—the capacity for sensation, the higher animals as well as men have the "passive rational" soul—the capacity for the simpler forms of intelligence, man alone has the "acrive rational" soul—the capacity to generalize and originate. This last is a part or emanation of that creative and rational power of the universe which is God, and as such it cannot die. But this immortality is impersonal, what survives is the power, not the personality, the individual is a unique and mortal compound of mirrative, sensitive, and rational faculties; he achieves immortality only relatively, through reproduction, and only impersonally, through death.

Just as the soul is the "form" of the body, so God is the "form" or "entelectiv" of the world its inherent nature, functions, and purposes,† All causest at last go back to the First Cause Uncaused, all motions to the Prime Mover Unmoved, we must assume some origin or beginning for the mation and power in the world, and this source is God. As God is the sum and source of all motion, so he is the sum and goal of all purposes in nature, he is the final, as well as the First, Cause. Everywhere we see things moving to specific ends, the front teeth grow sharp to cut food, the molars grow that to grand it, the eyelid winks to protect the eye, the pupil expands in the dark to let in more light, the tree sends its roots into the earth, its shoots toward the sun . As the tree is drawn by its inherent nature, power, and purposes toward the light, so the world is drawn by its inherent nature, power, and purposes, which are God God is not the creator of the material world, but its energizing form, he moves it not from behind, but as an inner direction or goal, as something beloved moves the lover. Finally, says Aristotle, God is pure thought, rational soul, contemplating itself in the eternal forms that constitute at once the essence of the world, and God.

The purpose of art, like that of metaphysics, is to capture the essential form of things, it is an anitation or representation of life," but no mechanical copy, that which it imitates is the soul of the matter, not the body or matter itself; and through this intuition and mirroring of essence even the representation of an ugly object may be beautiful. Beauty is unity, the

^{*}Other interpretations of Arstrole's contradictory pronouncements on this point are possible. The text follows the Cambrulge Ancient Hunory, VI, 345, Grote, Arutode, II, 233, and Rohde Psyche, 493

[†] The essential aspect of anything in Arsonic as in Plato, is the "form" (cidor), not the matter which is formed, the matter is not the "real being" but a negative and passive potentiality which acquains specific existence only when accounted and determined by form.

there effect, says Armode is produced by four estates material (the component stuff), efficient the agent or his act, formal othe nature of the thing, and final (the goal). He gives a peculist example "What is the material cause of a man? The menser" (i.e., the provision of an ovum). "What is the efficient cause? The semen" (i.e., the set of insemination). "What is the formal cause? The mature" (of the agents involved). "What is the final cause? The purpose in view."

co-operation and symmetry of the parts in a whole. In drama this unity is primarily a unity of action, the plot must concern itself with one action chiefly, and may admit other actions only to advance or illuminate this centrat tale. If the work is to be of high excellence the action must be noble or heroic "Tragedy," says Aristotle's celebrated dennition, "is a representation of an action that is before and complete and of a certain magnitude, by means of language enriched with all kinds of ornament ... it represents men in action, and does not use narrative, and through pity and fear it brings rehef to these and similar emotions." By arousing our profoundest feelings, and then quieting them through a subsiding denouement, the tragge drama offers us a harmless and yet soul-deepening expression of emotions that might otherwise accumulate to neurosis or violence, it shows us pains and sorrows more awful than our own, and sends us home discharged and cleansed. In general there is a pleasure in contemplating any work of true act, and it is the mark of a civilization to provide the soul with works worthy of such contemplation. For "nature requires not only that we should be properly employed, but that we should be able to enjoy our leisure in an honorable way.

What, then, is the good life? Aristotle answers, with frank simplicity, that it is the happy life, and he proposes to consider, in his Ethics," not (like Plato) how to make men good, but how to make them happy. All other things than happiness, he thinks, are sought with some other end in view, happiness alone is sought for its own sake " Certain things are necessary to lasting happiness good birth, good health, good looks, good luck, good reputation, good friends, good money, and goodness." "No man can be happy who is absolutely ugly "" "As for those who say that he who is being fortured on the wheel, or falls into great misfortunes, is happy provided only he be good, they talk nonsense." Aristotle quotes, with a candor rare in philosophers, the answer of Simonides to Hieron's wife, who had asked whether it was better to be wise or to be rich. "Rich, for we see the wise spending their time at the doors of the rich " But wealth is merely means, it does not of itself satisfy anyone but the miser; and since it is relative, it seldom satisfies a man long. The secret of happiness is action, the exercise of energy in a way suited to a man's nature and circumstances. Virtue is a practical wisdom, an intelligent appraisal of one's own good." Usually it is a golden mean between two extremes, intelligence is needed

The Vicomachem Februs (so called because edited by Arsa rile's son Norma, bus) and the Polines were originally one mode. The plant of closest is established in polinical were used by the Greek editors to suggest the treatment of various mars, and polinical problems, and these forms have been retained in the English adoption of the words.

to find the mean, and self-control (enkratera, inner strength) to practice it. "He who is angry at what and with whom he ought," says a typically Aristotelian sentence, "and further, in right manner and time, and for a proper length of time, is praised." Virtue is not an act but a habit of doing the right thing. At first it has to be enforced by discipline, since the young cannot judge wisely in these matters, in time that which was the result of compulsion becomes a habit, "a second nature," and almost as pleasant as desire.

Aristotle concludes, quite contrary to his initial placing of happiness in action, that the best life is the life of thought. For thought is the mark or special excellence of man, and "the proper work of man is a working of the soul in accordance with reason." "The most fortunate of men is he who combines a measure of prosperity with scholarship, research, or contemplation, such a man comes closest to the life of the gods." "Those who wish for an independent pleasure should seek it in plutosophy, for all other pleasures need the assistance of men."

4. The Statesman

As ethics is the science of individual happiness, so politics is the science of collective happiness. The function of the state is to organize a society for the greatest happiness of the greatest number. "A state is a collective body of citizens sufficient in themselves for all the purposes of life." It is a natural product, for "man is by nature a political animal" i.e., his instincts lead him to association. "The state is by nature prior to the family and the individual", man as we know him is born into an already organized

society, which molds him in its image.

Having collected and studied, with his students, 148 Greek constitutions,* Aristotle divided them into three types: monarchy, aristocracy, and timocracy—government respectively by power, by birth, and by excellence. Any one of these forms may be good according to time, place, and circumstance. "Though one form of government may be better than others," reads a sentence which every American should memorize, 'yet there is no reason to prevent another from being preferable to it under particular conditions." Each form of government is good when the ruling power seeks the good of all rather than its own profit, in the contrary case each is bad. Fach type, therefore, has a degenerate analogue when it becomes government for the governors instead of for the governed, then monarchy

^{*} Only one of these studies survives—the Athenaeon Politeia, found in 1891. It is an admitable constitutional history of Athens.

lapses into despotism, aristocraev into obgarchy, timocraey into democraev in the sense of rule by the common man. When the single ruler is good and able, monarchy is the best form of government, when he is a selfish autocrat we have tyranny, which is the worst form of government. An aristocratic government may be beneficial for a time, but aristocracies tend to deteriorate. Noble character is now seldom found among those of noble birth, most of whom are good for nothing. Highly gifted families often degenerate into manuacs, as, for example, the descendants of Alcibiades and the elder Dionysius, those that are stable often degenerate into fools and dollards, like the descendants of Cimon, Pericles, and Socrates. When aristocraey decays it is usually replaced by a plutocratic oligately, which is government by wealth. This is better than the despotism of a king or a mob, but it gives power to men whose souls have been cramped by the petty calculations of trade, or the villamous taking of interest," and issues, as like as not, in the conscienceless exploitation of the poor.

Democracy which bere means government by the demos by the common cirizen-is just as dangerous as obgatchy, for it is based upon the passing victory of the poor over the rich in the struggle for power, and leads to a suicidal chaos. Democracy is at its best when it is dominated by peasant proprietors, it is at its worst when ruled by the urban rabble of mechanics and tradesmen." It is true that the "multitude pidge of many things better than any one person, and that from their mombers they are less hable to corruption, as water is from its quantity. One But government requires special ability and knowledge, and "it is impossible for one who lives the life of a mechanic or hired servant to acquire excellence" i.e., good character, training, and judgment. All men are created unequal, "equality is just, but only between equals"," and the upper classes will as readity make seditions if an unnatural equality is enforced, as the lower classes will rebel when inequality is unnarurally extreme *** When a democracy is dominated by the lower classes the neh are taxed to provide funds for the poor. "The poor receive it and again want the same supply, while the giving it is like pouring water into a sieve "" And yet a wise conservative will not let people starve. "The true patriot in a democracy ought to take care that the majority are not too poor he should endeavor that they may emoy perpetual plenty, and as this is also advantageous to the rich what can be saved out of the public money should be divided among the poor in such quantity as may enable each of them to buy a little field ""

Even slavery is fegitimate. Aristoric thinks as it is right that the mind should rule the body to it is just that those who excel an artelagence should rule those who excel only at arrength.

Having thus given back almost as much as he took away. Aristotle offers some modest recommendations, not for a moderately better society.

We proceed to inquire what form of government and manner of life is best for communities in general, not adapting it to that superior virtue which is above the reach of the common people, or that education which only every advantage of nature and fortune can furnish, nor to those imaginary pians which may be formed at pleasure, but to that mode of life which the greater part of mankind can attain to, and that government which most cities may establish." . . Whoever would establish a government upon community of goods ought to consult the experience of many years, which would plainly enough inform him whether such a scheme is useful, for almost all things have already been found out . . . What is common to many is taken least care of, for all men have greater regard for what is their own than for what they possess in common with others." ... It is necessary to begin by assuring a principle of general appareation, viz., that the part of the state which desires the continuance of the new constitution ought to be stronger than that which does not." . . It is pean, then, that those states are best instituted wherein the middle classes are a larger and more formidathe part than either the rich or the poor. . Whenever the number of those in the middle state has been too small, those who were the more numerous, whether the rich or the poor, always overpowered them, and assumed to themselves the administration of public affairs. . . . When either the rich get the better of the poor, or the poor of the rich, neither of them will establish a free state."

To avoid these illiberal dictatorships from above or below. Aristotle proposes a 'maxed constitution' or "timocracy"—a combination of aristocracy and democracy, in which the suffrage will be restricted to landowners, and a strong middle class will be the balance wheel and pivot of power. "The land ought to be divided into two pairs, one of which should belong to the community in general, the other to the individuals separately." All the critizens will own land, they "are to eat at public tables in certain companies", and only they shall vote or bear arms. They will constitute a small minority—ten thousand at most—of the population. "None of them should be permitted to exercise any mechanic employment or live by trade, for these are ignoble, and destroy excellence."—But "neither should they be liusbandmen, . . . the husbandmen should be a separate order of people"—presumably slaves. The citizens will elect the public officials, and hold each

to account at the end of his term. "Laws, properly enacted, should define the issue of all cases as far as possible, and leave as little as possible to the discretion of the judges..." "It is better that law should true than any individual... He who entrusts any man with the supreme power gives it to a wild beast, for such his appetites sometimes make him, passion influences those who are in power, even the very best of men, but law is reason without desire." The state so constructed shall regulate property, industry, marriage, the family, education, morals, music, literature, and art. "It is even more necessary to take care that the increase of the people should not exceed a certain number . . . to neglect this is to bring certain poverty upon the citizens." "Nothing imperfect or maimed shall be brought up." Out of these sound foundations will grow the flowers of civilization and tranquillity. "Since the highest virtue is intelligence, the pre-emment duty of the state is not to train the citizens to military excellence, but to educate them for the right use of peace."

It is unnecessary to sit in judgment upon Aristotle's work. Never before, so far as we know, had anyone reared so impressive an edifice of thought, When a man covers a vast field many errors may be forgiven him if the result adds to our comprehension of life. Aristotle's faults-or those of the volumes that we perhaps wrongly count as the considered product of his pen-are too obvious to need retailing. He is a logician, but is quite eapable of bad reasoning, he lays down the laws of rhetoric and poetry, but his books are a jungle of disorder, and no breath of imagination stars their dusty leaves. And vet, if we penetrate this verbiage we find a wealth of wisdom, and an intellectual industry that opened many paths in the country of the mind. He did not quite found biology, or constitutional history, or literary enneism-there are no beginnings-but he did more for them than any other ancient whom we know. To him science and philosophy owe a multitude of terms that in their Latin forms have facilitated learned communication and thought-principle, maxim, faculty, mean, category, energy. motre e, habit, end . . . He was, as Pater cailed him, "the first of the Schoolmen"; and his long ascendancy over philosophical method and speculation suggests the fertility of his ideas and the depth of his insight. His treatises on ethics and politics stand above every rival in fame and influence. When all deductions have been made he still remains "the master of those who know," an encouraging testimony to the elastic range of the human intellect, and a comforting inspiration to those who labor to bring man's scattered knowledge together into perspective and understanding.

Alexander

1. THE SOUL OF A CONQUEROR

THE intellectual career of Aristotle, after he left his royal pupil, paralleled the military career of Alexander, both lives were expressions of conquest and synthesis. Perhaps it was the philosopher who instilled into the mind of the youth that ardor for unity which gave some grandeur to Alexander's victories, more probably that resolve descended to him from his father's ambitions, and was fused into a passion by his maternal blood. If we would understand Alexander we must always remember that he bore in his veins the drunken vigor of Philip and the barbaric intensity of Olympias. Furthermore, Olympias claimed descent from Achilles. Therefore the *Iliad* had a special fascination for Alexander, when he crossed the Hellespont he was, in his interpretation, retracing the steps of Achilles, when he conquered Hither Asia he was completing the work that his ancestor had begun at Troy. Through all his campaigns he carried with him a copy of the *Iliad* annotated by Aristotle, often he placed it under his pillow at hight beside his dagger, as if to symbolize the instrument and the goal.

Leonidas, an austere Molossian, trained the boy's body. Lysiniachus taught him letters, Aristotle tried to form his mind. Philip was anxious that Alexander should study philosophy, "so that," he said, "you may not do a great many things of the sort that I am sorty to have done." To some extent Aristotle made a Hellene of him, through all his life Alexander admired Greek literature, and envied Greek civilization. To two Greeks sitting with him at the wild banquet at which he slew Cleitus he said, "Do you not feel like demigods among savages when you are sitting in com-

puny with these Macedonians?"

Physically, Alexander was an ideal youth. He was good in every sport a swift runner, a dashing horseman, a brilliant fencer, a practiced bowman, a fearless hunter. His friends wished him to enter the foot races at Olympia; he answered that he would be willing, if his opponents were kings. When all others had failed to tame the giant horse Bucephalus, Alexander succeeded, seeing which, says Plutarch, Philip acclaimed him with prophetic words. "My son, Macedonia is too small for you, seek out a larger empire,

worthier of you." Even on the march his wild energy found vent in shooting arrows at passing objects, or in alighting from, and remounting, his chanot at full speed. When a campaign lagged he would go hunting and, unaided and on foot, face any animal in combat, once, after an encounter with a hon, he was pleased to hear it said that he had fought as though it had been a duel to decide which of the two should be king. He liked hard work and dangerous enterprises, and could not bear to rest. He laughed at some of his generals, who had so many servants that they themselves could find nothing to do. "I wonder," he told them, "that you with your expenence do not know that those who work sleep more soundly than those for whom other people work. Have you yet to learn that the greatest need after our victories is to avoid the vices and the weaknesses of those whom we have conquered?" He grudged the time given to sleep, and said that 'sleep and the act of generation chiefly made him sensible that he was mortal " He was abstenuous in eating and, until his last years, in drinking, though he loved to linger with his friends over a giblet of wine. He despised rich foods, and refused the fame us chefs who were offered him, saving that a night march gave him a good appetite for breakfast, and a light breakfast gave him an appetite for dinner. Perhaps in consequence of these habits his complexion was remarkably clear, and his body and breath, says Plutarch, "were so fragrant as to perfume the clothes that he wore " Discounting the flattery of those who painted or carved or engraved his likeness, we know from his contemporaries that he was handsome beyond al. precedents for a king, with expressive features, soft blue eyes, and luxuriant auburn hair. He helped to introduce into Europe the custom of shaving the beard, on the ground that whiskers offered too ready a handle for an enemy to grasp." In this little item, perhaps, lay his greatest influence upon history.

Mentally he was an ardent student, who was too soon consumed with responsibilities to reach maturity of mind. Like so many men of action, he mourned that he could not be also a thinker. 'He had," says Plutarch, "a violent thirst and passion for learning, which increased as time went on. He was a lover of all kinds of reading and knowledge," and it was his desight, after a day of marching or highning, to sit up had the right conversing with scholars and scientists. "For my part," he wrote to Aristotle "I had rather surpass others in the knowledge of what is excellent, than in the extent of my power and dominion." Possibly at Aristotle's suggestion he sent a commission to explore the sources of the Nile, and he gave funds generously for a variety of scientific inquines. Whether a longer life would

have brought him to Caesar's clear intelligence, or the subtle understanding of Napoleon, is to be doubted. Royalty found him at twenty, after which warfare and administration absorbed him, in consequence he remained uneducated to the end. He could talk brilliantly, but fell into a hundred errors when he wandered from politics and war. With all his campaigns he seems never to have gained such acquaintance with geography as the science of his time could have given him. He rose at times above the narrowness of dogma, but remained to the last a slave to superstmon. He put great confidence in the soothsavers and astrologers that crowded his court, before the battle of Arbela he spent the night performing magic ceremonies with the magician Aristander, and offered sacrifices to the god Fear, he who faced all men and beasts with a very ecstasy of courage was "easily alarmed by portents and prodigies," even to changing important plans." He could lead many thousands of men, could conquer and rule millions, but he could not control his own temper. He never learned to recognize his own faults or limitations, but aboved his judgment to be snaked and drowned in praise. He lived in a frenzy of excitement and glory, and so loved war that his mind never knew an hour of peace.

His moral character hovered between similar contradictions. He was at bottom sentimental and emotional, and had, we are told, "melting eyes", he was moved sometimes beside himself by poetry and music, he played the harp with great feeling in his early youth. Teased about this by Philip. he abandoned the instrument, and thereafter, as if to overcome himself, refused to listen to any but martial airs." Sexually he was almost virtuous. not so much on principle as by preoccupation. His incessant activity, his long marches and frequent battles, his con plex plans and administrative burdens, used up his resources, and left him little appente for love. He took many waves, but as a sacrance to statesmanship, he was gallant to ladies, but preferred the company of his generals. When his aides brought a beaumful woman to his tent late at night he asked her, "Why at this time?" "I had to wait," she replied, "to get my husband to bed." Areaander dismissed her, and rebuked his servants, saving that because of them he had narrowly escaped becoming an adulterer." He had many of the qualities of a homosexial, and loved Hephaestion to madness, but when Theodorus of Taras offered to sell him two boys of great beauty he sent the Tarentine packing, and begged his friends to tell him what baseness of soul he had shown that any one should make such a proposal to him." He gave to friendship the tenderness and solicitude that most men give to love No statesman known to us, much less any general, ever surpassed hun in

simple trustfulness and warmheartedness, in open sincerity of affection and purpose, or in generosity even to acquaintances and enemies." Plurarch remarks "upon what slight occasions he would write letters to serve friends." He endeared himself to his soldiers by his kindliness; he risked their lives, but not heedlessly, and he seemed to feel all their wounds. As Caesat forgave Brutus and Cicero, and Napoleon Fouche and Talley rand, so Alexander forgave Harpalus, the treasurer who had absconded with his funds and had returned to beg forgiveness, the young conqueror reappointed him treasurer to all men's astonishment, and apparently with good results." At Tarsus, in 133, Alexander being ill, his physician Philip offered him a purgative drink. At that moment a letter was brought to the King from Parmenio, warning him that Philip had been bribed by Daries to poison him. Alexander handed the letter to Philip, and as the latter read it, Alexander drank the draught-with no ill effect. His reputation for generosity helped him in his wars, many of the enemy allowed themselves to be taken prisoner, and cities, not fearing to be sacked, opened their gates at his coming.-Nevertheless, the Molossian ngress was in him, and it was his bitter fate to be runed by his occasional paroxysms of crucity. Having taken Gaza by siege and assault, and inturiated by its long resistance, Alexander caused the feet of Batis, its herose commandant, to be bored, and brazen rings passed through them, then, intoxicated with memories of Achilles, he dragged the now dead Persian, ned by cords to the royal chariot, at full speed around the city." His increasing resort to drink as a means of quieting his nerves led him more and more frequently, in his last years, to outbreaks of blind ferocity, followed by brooding fits of violent remorse.

One quality in him dominated all the rest, ambition. As a youth he had fretted over Philip's victories. 'Father,' he complained to his friends, "will get every thing done before we are ready, and will leave me and you no chance of doing anything great and important." In his passion for achievement he assumed every task, and faced every risk. At Chaeronea he was the first man to charge the Theban Sacred Band, at the Granicus he indulged to the full what he called his "eagerness for encountering danger." This, too, became an uncontrollable passion, the sound and sight of bartle intoxicated him, he forgot then his duties as a general, and plunged ahead into the thickest of the fight; time and again his soldiers, fearful of losing him, had to plead with him to go to the rear. He was not a great general, he was a brave soldier whose obstinate perseverance marched on, with boyish heedlessness of impossibilities, to imprecedented victories. He supplied the inspiration, probably his generals, who were able men, contributed organi-

zation, training, tactics, and strategy. He led his troops by the brilliance of his imagination, the fire of his unstudied oratory, the readiness and sincerity with which he shared their hardships and griefs. Without question he was a good administrator, he ruled with kindness and firmness the wide domain which his arms had won, he was loyal to the agreements which he signed with commanders and cities, and he tolerated no oppression of his subjects by his appointees. Amid all the excitement and chaos of his eampaigns lie kept clearly at the center of his thoughts the great purpose that even his death would not defeat, the unification of all the eastern Mediterranean world into one cultural whole, dominated and clevated by the expanding civilization of Greece.

IL. THE PATHS OF GLORY

On his accession Alexander found himself at the head of a tottering empire. The northern tribes in Thrace and Illyria revolted, Actoba, Acarnania, Phocis, Elis, Argolis renounced their abegiance, the Ambraciotes expelled the Macedonian gartison, Arraverses III boasted that he had instigated the kiding of Philip, and that Persia now had nothing to fear from the immature stripling of twenty who had succeeded to the throne. When the glad tidings of Philip's death reached Athens, Demosthenes donned festal garb, placed a garland of flowers upon his head, and moved in the Assembly that a crown of honor should be voted to the assassin Pausanias." Within Macedonia a dozen factions conspired against the young King's life.

Alexander rose to the situation with a decisive energy that ended all internal opposition, and set the tempo of his career. Having arrested and decapitated the cluef plotters at home, he marched south into Greece (336), and within a few days reached Thebes. The Greek states hastened to renew their allegiance. Athens sent him a profuse apology, voted him two crowns, and conterred upon him divine honors. Alexander, appeased, declared all dictatorships abolished in Greece, and decreed that each city should live in freedom according to its own laws. The Amphiers onic Council confirmed him in all the rights and honors that it had given to Philip, and a congress of all Greek states except Sparta, meeting at Corinth, proclaimed him captain general of the Greeks, and promised to contribute men and supplies for the Asiatic campaign. Alexander returned to Pella, put the capital in order, and then marched north to suppress the rebellion of the barbarian tribes (335). With Napoleomic swiftness he led his troops as far as the modern Bucharest, and planted his standards upon the northern bank

of the Danube. Then, hearing that the Illymans were advancing upon Macedonia, he marched two hundred inites through Serbia, surprised the invaders in the rear, defeated them, and drove the remnant back to their mountains.

But in the meantime a rumor had stirred Athers that Alexander had been killed in fighting on the Danube. Demosthenes called for a war of independence, and felt justified in accepting large sums from Persia to further his plans. At his instigation Thebes revolted, killed the Macedi man officials left there by Alexander, and besieged the Macedonian garrison in the Cadmeia. Athens sent help to Thebes, and invited Greece and Persia to join in an alliance against Macedon. Alexander, furious over what seemed to him not a passion for freedom but the crudest ingratitude and treachery, marched his weary troops down again into Greece. Reaching Thebes after thirteen days, he defeated the arms sent out against him. He left the fate of the defenseless city to her ancient enemies. Plataea, Orchomenos, Thespiae, and Phoeis, they voted that Thebes should be burned to the ground, and her inhabitants sold as slaves. Hoping to give other reliels a lesson, Alexander signed the order, but stipulated that the victorious troops should spare the home of Pindar, and the lives of priests and priestesses, and of all Thebans who could prove that they had opposed the revolt. Later he looked back with shame upon this violent revenge, and "was sure to grant without the least difficulty wharsoever any Theban asked of him " He atoned in part by his lemency with Athens, he forgave her violation of the pledges made to him a year before, and did not press his demand for the surtender of Demosthenes and the other anti-Macedonian leaders. To the end of his afe he maintained an artitude of respect and affection for Athens, he dedicated on the Aeropolis various spoils from his Asiatic victories, sent back to Athens the Tyrannicide statues that Xerxes had taken away, and remarked, after an arduous campaign, "O ve Athemans, will you believe what dangers I meur to ment your praise?"

Having received again the alleganite of all the Greek states except Sparta, Alexander returned to Macedonia, and prepared for the invasion of Asia. He found his state treasury almost empty, with a deficit of five hundred talents (\$3,000,000) as a legacy from Philip's reign." He borrowed eight hundred talents, and set out to conquer not the world but his debts. He had hoped to fight Persia as the champion of all Hellas, but he knew that half of Greece was praying that he would soon be killed. It was reported that the Persians could muster a million men. Alexander's expeditionary force did not exceed thirty thousand infantry and five thousand cavaley

Nevertheless the new Achilles, leaving rwelve thousand soldiers under Antipater to guard Macedonia and watch Greece, set out in 334 upon the most daring and romantic enterprise in the history of kings. He would live eleven years more, but would never see home or Europe again. While his army crossed the Heliespoint from Sestes to Abydos, he himself chose to land at Cape Suguent, and retrace what he believed to have been Agamention's path to Troy. At every step he quoted to his comrades passages from the Iliad, which he knew almost by heart. He anointed the reputed tomb of Achilles, crowned it with garlands, and ran naked around it according to the custom of anniquity. Happy Achilles!" he exclaimed, "to have had in life so faithful a friend, and, after his death, so famous a poet to celebrate him." He vowed now to carry through to a successful end that long

struggle, between Europe and Asia. which had begun at Troy.

It is not necessary to our purpose to tell again the story of his victories. He met the first Persian contingent at the river Granicus, and overwhelmed it. There Clearus saved his late by severing the arm of the Persian who was about to strike Alexander from behind; a whimsical student might build apon such events an accidental interpretation of history. After giving his men a rest he marched down into Ionia, offering the Greek cities democratic self-government under his protectorate. Most of them opened their gates without resistance. At Issus he met the main force of the Persians, 600,000 men, under Danus III. Once more he won by using his cavalry for attack, his infantry for defense. Darnis fled, leaving his purse and his family belund him, to be treated the one with gratifude, the other with chivalry. After peaceally taking Damascus and Sidon Alexander laid siege to Tyre, which was harboring a large Phoenician squadron in the pay of Persia. The ancient city resisted so long that when at last he captured it Alexander lost his head and allowed his men to massacre eight thousand. Tyrians, and to sell thirty thousand as sieves. Jerusaiem surrendered quierly, and was well treated, Gaza fought tall every man in the city was dead and every manual raped.

The triumphant march of the Macedonians was resumed through the Sinai desert into Egypt, where, when he showed a factful respect for the country's gods, Alexander was welcomed as a divinely sent liberator from Persian rule. Knowing that religion is stronger than politics, he crossed another desert to the oasis of Siwa, and paid his respects to the god Ammon—his very father if Olympias could be believed. The pliant priests crowned him Pharaoh with the ancient rites, and so eased the way for the Ptolemaic dynasty. Returning to the Delta, Alexander conceived or ap-

proved the idea of building a new capital at one of the Nile's many mouths, perhaps the Greek merchants at near-by Naucratis suggested it as providing a more convenient depot for the enlarged Greek trade that might now be expected between Egypt and Greece. He marked out the orbit of the walls of Alexandria, the outline of the principal streets, and the sites for temples to the Egyptian and Greeian gods, further details he left to his architect, Dinocrates.*

Marching back into Asia, he met the vast polyglot army of Danus at Gaugamela, near Arbeia, and was dismayed by their multitude, he knew that one defeat would cancel all his victories. His soldiers comforted him. "Be of good cheer, Sate, do not fear the great number of the enemy, for they will not be able to stand the very smell of goat that chings to us." He spent the night in reconnuctering the ground on which he was to give battle, and in offering sacrifices to the gods. His victory was decisive. The disorderly hosts of Damus could make no headway against the pharantes, and knew not how to detend themselves against the swift and incalculable dashes of the Macedonian cavalry, they broke and fled, and Darius was not the last to go. While Darius' generals assessinated him as a coward, Alexander received the submission of Babylon, partook of its wealth, distributed some of it to his soldiers, but charmed the ciry by making obe sance to its gods, and decreeing the restoration of its sacred shrines. By the end of the year (331) he had reached Susa, whose population, still remembering the ancient glory of Ham, welcomed him as a deliverer. He protected the city from pillage, but comforted his troops by dividing among them some of the fifty thousand ralents (\$100,000,000) that he found in Darius' vaults. To the people of Plataea he sent a substantial sum because they had so bravely resisted the Persians in 480, and to the Greek cines of Asia he appears to have remitted the "donations" that he had elicited from them at the outset of his campaign." And he announced proudly to the Greeks of the world that they were now completely free from Persian rule.

Hardly stopping to rest at Susa, he marched over mountains in the depth of winter to seize Persepolis, and so rapidly did he move that he was in Darius' palace before the Persians could conceal the royal treasury. Here again his good judgment left him, and he burned the magnificent city to the ground. His southers looted the houses, ravaged the women, and killed

^{*}Dinocrates had pleased Alexander by proposing to carve Mr. Atton-six thousand feet high into a figure of Alexander standing wast deep in the sea, holding a city in one hand and a harbor in the other * The project was never carried out.

the men. Perhaps they had been infuriated by seeing, on their approach to the town, eight hundred Greeks who, for various reasons, had suffered mutuation at the hands of Persians by the cutting off of legs, arms, or ears, or the gouging out of the eyes. Alexander, moved to teats by the sight, gave them lands, and assigned dependents to work for them.

Still insatiate, he attempted now what Cyrus the Great had failed to accomplish—the subjugation of the tribes that hovered on the eastern borders of Persia. Perhaps in his simple geography he hoped to find, beyond that mystic hast the ocean that would serve as a natural frontier for his conquered realm. Entering Sogdiana, he came upon a village inhabited by the descendants of those Branchidae who, in 480, had surrendered to Xerxes the treasures of their temple near Miletus. Fevered with the thought that he was revenging the pillaged god, he ordered all the inhabitants slain, including the women and children-visiting the sins of the fathers upon the fifth generation. His campaign in Sogdiana, Ariana, and Bactriana was bloody and bootless, he achieved some victories, found some gold, and left enemies everywhere behind him. Near Bokhara his men captured Bessus, who had slain Darius. Alexander, suddenly making himself the avenger of the Great King, had Bessus whopped almost to death, had his nose and ears cut off, and then sent him to Febatana, where he was executed by having his arms tied to one, and his legs to the other, of two trees that had been drawn together by ropes, so that when the ropes were cut the trees pulled the body to pieces." At every new remove from Greece Alexander was becoming less and less a Greek, more and more a barbarian king

The year 327 found him passing over the Himalayas into India. Vanity conspired with curiosity to lead him into such distant territory, his generals advised against it, his army obeyed him unwidingly. Crossing the India, he defeated King Porus, and announced that he would commue to the Ganges. But his soldiers refused to go farther. He pied with them, and for three days, like a secon of Achilles, pouted in his tent, but they had had enough. Sadly he turned back, loath to face west again, and forced his way through hostile tribes with such personal bravery that his soldiers wept at their mability to realize all his dreams. He was the first to scale the walls of the Malaians, after he and two others had leaped into the city the ladders broke, and they found themselves alone amidst the enemy. Alexander fought till he sank exhausted by his wounds. Meanwhile his troops had made their way into the town, and so dier after soldier sacrificed his life to protect the fallen King. When the battle was over Alexander was carned to his tent, and his veterans kessed his garments as he passed. After three

months of convalescence he renewed his march along the Indus, and at last reached the Indian Ocean. There he sent on part of his forces by water under Nearchus, who skillfully accomplished the long voyage in unfamiliar seas. Alexander himself led the rest of his army northwest along the coast of India and through the desert of Gedrosia (Baluchistan), where the sufferings of his men rivaled those of Napoleon's army on the return from Moscow. Heat killed thousands, thirst killed more. A little water was found, and was brought to Alexander, but he deliberately poured it out upon the ground." When the remnants of his force reached Susa some ten thousand had died, and Alexander was half insane.

III. THE DEATH OF A GOD

He had now spent nine years in Asia, and he had changed the continent by his victories less than it had transformed him by its ways. He had been told by Aristotle to treat Greeks as freemen, "barbarians" as slaves. But he had been surprised to find among the Persian aristocrats a degree of refinement and good manners not often seen in the turbulent democracies of Greece; he admitted the manner in which the Great Kings had organized their empire, and wondered how his rough Alicedonians could replace such governors. He concluded that he could give some permanence to his conquests only by reconciling the Persian nobles to his leadership, and using them in administrative posts. More and more charmed by his new subjects, he abandoned the iden of ruling over them as a Macedonian, and conceived himself as a Greeo-Persian emperor governing a realm in which Persians and Greeks would be on an equal footing, and would peaceably mingle their culture and their blood. The long quarrel of Europe and Asia would end in a wedding feast.

Already thousands of his soldiers had married native women, or were living with them, should he not do likewise, marry the daughter of Darius, and reconcile the nations by begetting a king who would unite both dynasties in his veins? He had already married Roxana, a Bactrian princess, but this was a negligible impediment. He broached the plan to his officers, and suggested that they, too, should take Persian wives. They smiled at his hopes of uniting the two nations, but they had been a long time away from home, and the Persian ladies were beautiful. So in one great nuprial at Susa (324) Alexander married Statica, daughter of Darius III, and Paryssats, daughter of Artaxerxes III, attaching hinself in this way to both

branches of Persian royalty, while eighty of his officers took Persian brides. Thousands of similar marriages were soon afterward celebrated among the soldiers. Alexander gave each officer a substantial dowry, and paid the debts of the marrying soldiers—which amounted (if we may believe Artian) to twenty thousand talents (\$120,000,000). To further this union of peoples he opened lands in Mesopotamia and Persia to Greek colonists, thereby reducing the pressure of population in some of the Greek states, and mingating the class war, now began those Hellenized Asiane cities which were to be a vital part of the Sciencid Empire. At the same time he drafted thirty thousand Persian youths, had them educated on Greek knes,

and taught them the Greek manual of war.

Possibly his wives had something to do with his rapid adoption of Oriental ways, possibly it was a failure of modesty, or a part of his plan. "In Persia," says Plutarch, "he first put on the barbaric" (i.e., foreign) "dress, perhaps with the view of making the work of civiloring the Persians easier, as nothing gains more upon men than a conformity to their customs. . . . However, he followed not the Median fashion . . . but taking a middle way between the Persian mode and the Macedonian, so contrived his habit that it was not so flaunting as the one, and vet more pompous and magnificent than the other." This soldiers saw in this change the conquest of Alexander by the Orient, they felt that they had lost him, and they mournfully missed the signs of solicitude and affection which he had once showered upon them. The Persians made every obeisance to him, and flattered him to his heart's content, the Macedonians, themselves softened by Oriental luxury, grumbled at the tasks that he laid upon them, forgot his beneficence, murmured of desertion, and even plotted against his life. He began to prefer the society of the Persian grandees.

His culminating apostasy, or diplomacy, was his announcement of his own divinity. In 324 he sent word to all the Greek states except Macedonia (where the insult to Philip might have aroused resentment) that he wished hereafter to be publicly recognized as the son of Zeus-Ammon. Most of the states complied, feeling it to be merely a form, even the obstinate Spartans agreed, saying, "Let Alexander be a god if he wants to." It was not so much for a man to be a god in the Greek sense of the term; the chasm between humanity and deny was not as wide then as it was to become in modern theology, several Greeks had overleaped it, like Hippodameia. Oedipus, Achilles, Iphigenia, and Helen. The Egyptians had always thought of their Pharaohs as gods, if Alexander had neglected to rank himse, I similarly the Egyptians might have been disturbed by so bold

a violation of precedent. The priests at Siwa, Didvma, and Babylon, who were believed to have special sources of information in this field, had all assured him of his divine origin. That (as Grote thought") Alexander actually beneved himself to be a god in a more than metaphorical sense is quite unlikely. It is true that after his self-deification he became increasingly tritable and arrogant, that he sat on a golden throne, wore sacred vestments, and sometimes adorned his head with the horns of Ammon." But when he was not playing his divinity for world stakes he smiled at his own honors. Being injured by an arrow, he remarked to some friends, "This, you see, is blood, and not such ichor as flows from the wounds of the Immortals." That he had not taken too seriously his mother's tale of the thunderbolt appears from his flaming anger at Attalus' imputations on his burth, and his remark about the need of sleep as distinguishing man from the gods. Even Olympias laughed when she heard that Atexander had made her legend official. "When," she asked, "will Alexander stop slandering me to Hera?" Despite his godhead Alexander continued to offer sacrifice to the gods-an unheard-of thing for a divinity. Plutarch and Arrian, able to judge the marter as Greeks, took it for granted that Alexander deified himself as a means to easier rule over a superstitious and heterogeneous population." Doubtless he felt that the task of unifying two hostile worlds would be facilitated by the reverence which the common people would give him if his claims to divinity were accepted by the upper classes. Perhaps, indeed, he thought to overcome the disruptive diversity of faiths in his empire by providing, in his own person, the beginning of a sacred mythand a common unifying faith.

The Macedonian officers could not fathom Alexander's policy. The Greek spirit had touched them to the point of mental emancipation, but not to the point of philosophical toleration, they found it humiliating to prostrate themselves, as he now demanded in approaching the King. One of his bravest officers, Philotas, son of his ablest and most favored general, Parmento, entered into a conspiracy to kill the new god. Alexander got wind of it, had Philotas arrested, and writing from him by torture a confession implicating his own tather. Philotas was forced to repeat the confession before the soldiers, who, in accord with their custom in such cases, at once stoned him to death, Parmento was executed by messenger as prob-

^{*}Income gives the ancient view in one of his Discourses of the Dead. "Philip You cannot denviting you are my son. Alexander if you used been Antionnessor you done died and have died. After I knew at the time if I you were a later I set as not done statement of the oracle because I thought it was good points. Which the barbarant is night they had a good to deal with, they gave up the struggle with black door complex an east matter."

ably guilty, and in any case a presumptive enemy. From that moment to the end, the relations between Alexander and his army became increasingly strained the troops ever more discontent, the King ever more suspicious, sovere, and lonely.

His solitary exaltation and the growing multitude of his cares inclined him to seek forgetfulness in heavy draughts of wine. At a banquet in Samarkand Cleitus, who had saved his life at the Granicus, drank hunself into such candor as to tell Alexander that his victories had been won by his soldiers rather than by him, and that Philip's achievement had been much greater. Alexander, equally drunk, rose to strike him, but Ptolemy Lagus (soon to be ruler of Egypt) hurned Cleitus away. Cleitus, however, had more to say; he escaped from Prolemy, and went back to finish his tirade. Alexander hurled a lance at him and killed him. Overcome with remorse, the King secluded lumself for three days, refused to ear, fell into hysteria, and tried to end his own life. Soon afterward Hermolaus, a page whom Alexander had unjustly purished, formed another conspiracy against him. The boy was apprehended, and under torrure made a confession incriminating Aristotle's nephew Callisthenes. The latter, who was accompanying the expedition as official historian, had already offended the King by refusing to prostrate lumself before him, openly criticizing him for his Oriental ways, and bossing that Alexander would be known to posterity only through Callisthenes the historian. Alexander had him put in prison, where, seven months later, he died. This incident pur an end to the friendship between Alexander and Aristotle, who had for years been risking his life to defend Alexander's cause in Athens.

In the end the discontent in the army verged on open mumpy. When the King announced that he would send back to Macedon the oldest of the soldiers, each richly paid for his services, the was shocked to hear many muttering that they wished he would dismiss them all, since, being a god, he had no need of men to realize his purposes. He ordered the leaders of the sedition executed, and then addressed to his troops an affecting (but probably apocryphal) speech" in which he reminded them of all that they had done for him, and he for them, and asked which of them could show more scars than he, whose body bore the marks of every weapon used in war. Finally he gave them all permission to go home "Go back and report

^{*}There are conflicting worses about his guilt and his death.* He left three main works. Hellemes, a lustory of Greece from 387 to 33", a History of the Sacred Wer, and a History of thexauder.

t Each of them. Arrian assures us, received a tilent in addition to his pay-which continued till he reached his home.**

that you deserted your king and left him to the protection of conquered fore.guers." Then he retired to his rooms, and refused to see anyone. His soldiers, stricken with remoise, came and lay down before the palace, saying that they would not leave till he had forgiven them and reaccepted them into his army. When at last he appeared they broke into tears and insisted on kissing him; and after being reconciled with him they went back to their camp shouting a song of thanksgiving.

Deceived by this show of affection, Alexander dreamed now of further campaigns and victories, he planned the subjugation of hidden Arabia, sent a mission to explore the Caspian regions, and thought of conquering Europe to the Pillars of Hercules. But his strong frame had been weakened by exposure and drink, and his spirit by the conspiracies of his officers and the murmes of his men. While the army was in Echarana his dearest companion, Hephaestion, fell sick and died. Alexander had loved him so much that when Darius' queen, entering the conqueror's tent, bowed first to Hephaestion, thinking him Alexander, the young King said, graciously, "Hephaestion is also Alexander" as if to say that he and Hephaestion were one. The two often shared one tent, and drank from one cup; in battle they fought side by side. Now the King, feeling that half of him had been torn away, broke down in uncontrolled grief. He lay for hours upon the corpse, weeping; he cut off his hair in mourning, and for days refused to take food. He sentenced to death the physician who had left the sick youth's side to attend the public games. He ordered a giganue funeral pile to be erected in Hephaestion's memory, at a cost, we are told, of ten thousand talents (\$60,000,000), and sent to inquire of the oracle of Ammon whether it was permitted to worship Hephaestion as a god. In his next campaign a whole tribe was slain, at his orders, as a sacrifice to Hephaestion's ghost. The thought that Achilles had not long survived Patroclus haunted him like a sentence of death,

Back in Babylon, he abandoned lumself more and more to drink. One night, reveling with his officers, he proposed a drinking match. Promachus quaffed twelve quarts of wine, and won the prize, a talent, three days later he died. Shortly afterward, at another banquet, Alexander drained a goblet containing six quarts of wine. On the next night he drank heavily again, and cold weather suddenly setting in, he caught a fever, and took to his bed. The fever raged for ten days, during which Alexander continued to give orders to his army and his fleet. On the eleventh day he died, being in the thirty-third year of his age (323). When his generals asked him to whom he left his empire he answered, "To the strongest."

Like most great men he had been unable to find a successor worthy of him, and his work fell unfinished from his hands. Even so his achievement was not only immense, but far more permanent than has usually been supposed. Acting as the agent of historical necessity, he put an end to the era of city-states, and, by sacrificing a substantial measure of local freedom, created a larger system of stability and order than Europe had yet known. His conception of government as absolutism using religion to impose peace upon diverse nations dominated Europe until the rise of nationalism and democracy in modern times. He broke down the barners between Greek and "barbarian," and prepared for the cosmopolitanism of the Hellenistic age; he opened Hither Asia to Greek colonization, and established Greek settlements as far east as Bactria; he united the eastern Mediterranean world into one great web of commerce, liberating and stimulating trade. He brought Greek literature, philosophy, and art to Asia, and died before he could realize that he had also made a pathway for the religious victory of the East over the West. His adoption of Oriental dress and ways was the beginning of Asia's revenge.

It was just as well that he died at his zenith, added years would almost surely have brought him disillusionment. Perhaps if he had lived he might have been deepened by defeat and suffering, and might have learned-as he was beginning-to love statesmanship more than war. But he had undertaken too much, the strain of holding his swollen realm together, and watching all its parts, was probably disordering his brilliant mind. Energy is only half of genrus, the other half is harness, and Alexander was all energy. We miss in him-though we have no right to expect the calm marurity of Caesar, or the subtle wisdom of Augustus. We admire but as we admire Napoleon, because he stood alone against half the world, and because he encourages us with the thought of the incredible power that lies potential in the individual soul. And we feel a natural sympathy for him, despite his superstitions and his cruelties, because we know that he was at least a generous and affectionate youth, as well as incomparably able and brave; that he fought against a maddening heritage of barbarism in his blood; and that through all battles and all bloodshed he kept before his eyes the dream of bringing the light of Athens to a larger world.

IV. THE END OF AN AGE

When the news of his death reached Greece, revolts against the Macedonian authority broke our everywhere. Theban exiles in Athens organized a force of patriots, and besieged the Macedonian garrison in the Cadmeia. In Athens itself, where many had prayed for an end to Alexander, the anti-Macedonian party, feeling that its prayers had been heard, crowned themselves with garlands and feasted over the death of him whom they had courted as a god—singing, says Plutarch, "triumphane songs of victory, as if by their own valor they had vanquished him."

For a moment Demosthenes was in his glory. He had not fared well during Alexander's eampaigns: he had been convicted of accepting a heavy bribe from Harpalus, and had been flung into jail, he had been allowed to escape, and had aved nine months of fretting exile in Troczen. Now he was recalled, and was sent as envoy to the Peloponnesus to raise allies for Athens in a war of liberation. A united force marched north, mer Annipater at Crannon, and was destroyed. The old soldier, who lacked Alexander's sensitivity to Athenian culture, laid the most arduous terms upon the city, requiring it to pay the cost of the war, to receive a Macedonian garrison, to abandon its democratic constitution and courts, to disfranchise and deport to colonial settlements all citizens (12,000 out of 21,000) possessing less than two thousand drachmas' worth of property, and to surrender Demosthenes, Hypereides, and two other anti-Macedonian orators. Demonthenes fled to Calauma and took refuge in a temple sanctuary. Surrounded by Macedonian pursuers, he drank a phial of poison, and died before he could drag himself out of the sacred court.

The same tragic year saw the end of Aristotle. He had long been unpopular in Athens, the Academy and the school of Isocrates disliked him as a critic and a rival, while the patriots looked upon him as a leader of the pro-Macedonian party. Advantage was taken of Alexander's death to bring an accusation of impiery against Aristotle, heretical passages from his books were brought in as evidence, he was charged with having offered divine honors to the dictator Hermeias, who, being a slave, could not have been a god. Aristotle quietly left the city, saying that he would not give Athens a chance to sin a second time against philosophy." He withdrew to the home of his mother's family in Chaicis, leaving the Lyceum in the care of Theophrastus. The Athenians passed sentence of death upon him, but had neither opportunity nor need to execute it. For either through 2 stomach illness aggravated by his flight, or, as some say," by taking poison, Aristotle died a few months after leaving Athens, in the sixty-third year of his age. His will was a model of kindly consideration for his second wife, his family, and his slaves.

The death of Greek democracy was both a violent and a natural death, in which the fatal agents were the organic disorders of the system, the sword of Macedon merely added the final blow. The city-state had proved incapable of solving the problems of government it had failed to preserve order within, and detense without, despite the appeals of Gorgias, Isocrates, and Plate for some Doman discipline to tame lonian freedom, it had discovered no way of reconciling local autonomy with national stability and power, and its love of liberty had seldom interfered with its passion for empire. The class war had become bitter beyond control, and had turned democracy into a contest in legislative looting. The Assembly, a noble body in its better days, had degenerated into a mob hating all superiority, rejecting all restraint, ruthless before weakness but eringing before power, voting itself every favor, and taxing property to the point of crishing initiative, industry, and theift. Philip, Alexander, and Antipater did not destroy Greek freedom, it had destroyed itself, and the order that they forged preserved for centuries longer, and disseminated through I gypt and the Fast, a civilization that might otherwise have died of its own tyrannous

And yet, had obgatchy or monarchy done any better? The Thirty had committed more atrocities against life and property in the few months of their power than the democracy in the preceding hundred years." And while democracy was producing chaos in Athens, monarchy was producing chaos in Macedonia a dozen wars of succession, a hundred assassinations, and a thousand interferences with freedom—with no redeeming glory of literature, science, philosophy, or art. The weakness and smallness of the state in Greece had been a boon to the individual, if not in body, certainly in soul, that freedom, costly though it was, had generated the achievements of the Greek mind. Individualism in the end destroys the group, but in the interim it stimulates personality, mental exploration, and artistic creation. Greek democracy was corrupt and incompetent, and had to die. But when it was dead men realized how heautiful its heyday had been; and all later generations of antiquity looked back to the centuries of

Pericles and Plato as the zenith of Greece, and of all history.

Greece and Macedon

I. THE STRUGGLE FOR POWER

H ISTORIANS divide the past into epochs, years, and events, as thought divides the world into groups, individuals, and things, but lustory, like nature, knows only continuity amid change bistoria non facit salnan-history makes no leaps. Hellemstic Greece did not feel Alexander's death as "the end of an age", it looked upon him as the beginning of "modern" times, and as a symbol of vigorous youth rather than a factor in decay, it was convinced that it had now entered upon its richest maturity, and that its leaders were as magnificent as any in the past except the incomparable young King himself. In many ways it was right. Greek civilization did not die with Greek freedom, on the contrary it conquered new areas and spread in three directions as the formation of vast empires broke down the political barriers to communication, color zation, and trade, Still enterprising and alert, the Greeks moved by hundreds of thousands into Asia and I gypt, Epirus and Macedon, and not only did Ionia flower again, but Helleme blood, language, and culture made its way into the interior of Asia Minor, into Phoemeia and Palestine, through Syria and Babylonia, across the Luphtares and the Ligris, even to Baerria and India. Never had the Greek spirit shown more zest and courage, never had Greek letters and arts won so wide a victory

Perhaps that is why historians are wont to end their histories of Greece with Alexander, after him the extent and complexity of the Greek world baffle any unified view or continuous narrative. There were not only three major monarchies—Macedonia, Seleucia, and Egypt, there were a hundred Greek city-states, of all degrees of independence, there was a maze of alliances and leagues there were half-Greek states in Fparis, Judea, Pergamum, Byzantium, Bahyma, Cappadocia, Galaria, Bactria, and in the west were Greek Italy and Siedy, torn between aging Carthage and youthful Rome. Alexander's rootless empire was too loosely bound together by language, communication, customs, and faith to survive him. He had left not one but several strong men behind him, and none could be content with less than sovereignty. The size and diversity of the new realm dis-

missed all thought of democracy, self-government, as the Greeks understood it, presupposed a city-state whose citizens could come periodically to a common meeting place, and besides, had not the philosophers of democratic Athens denounced democracy as the enthronement of ignorance, envy, and chaos? Alexander's successors—who were therefore termed Diadochi—had been Macedoman chieftams, long accustomed to rule by the sword, democracy, except as the occasional consultation of their aides, never entered their beads. After some minor trials at arms which disposed of lesser contenders, they divided the empire into five parts (321)—Antipater taking Macedoma and Greece, Lysanachus Thrace, Antigonus Asia Minor, Seleucus Babylonia, and Ptolemy Fgypt. They did not bother to call a confirming synod of the Greek states. From that moment, except for some fitful interludes in Greece, and the aristocratic republic of Rome, monarchy ruled Europe until the French Revolution.

The basic principle of democracy is freedom inviting chaos; the basic principle of monarchy is power inviting tyranny, revolution, and war. From Philip to Perseus, from Chaerones to Py dna (338-168), the foreign and civil wars of the city states were supplemented by the external and internal wars of the kingdoms, for the perquisites of government tempted a hundred generals to contests for thrones. Violence was as popular, condottien as numerous and bradant, in Hellensine Greece as in Renaissance Italy. When Ampater died Athens revolted again, and put to death old Phocion, who had ruled it as justly as possible in Antipater's name. Cassander, Antipater's sun, recaptured the city for Macedon. (118), widehed the franchise to halders of a thousand drachmas, and left as his regent the philosopher, scholar, and dilectance Denictrus of Philorum, who gave the city ten years of prosperity and peace. Meanwhile Antigonus I ("Cyclops") dreamed of uniting ail of Alexander's empire under his one eye, he was defeated at Ipsus (301) by a coalition, and lost Asia Minor to Seleucus I. His son Demetrius Poliorcetes ("Taker of Cities") averated Greece from Macedoman rule, gave Athens twelve years more of democracy, was lodged as the grateful city's guest in the Parthenon, brought courtesans to live with him there," drove some young men to desperation by his amon us attentions, won a brilliant naval victory over Ptolemy I at Cyprus (308), besieged Rhodes for six years with new siegt instruments but without success, made himself king of Macedon (204), ended Athenian liberty with a garrison, fell into ever new wars, was defeated and captured by Seleucus, and drank himself to death.

Damocles, rought out everywhere by Donetrina and at last about to be captured, killed himself by planging into a culdrent of boding water.* We must not misjudge the Athemani from one such instance of virue.

Four years later (279), taking advantage of the disorder brought on by the struggle for power in the eastern Mediterranean, a horde of Celis, or "Gauls," under Brennus* marched down through Macedonia into Greece. Brennus, says Pausanias, "pointed out the weak state of Greece, the immense wealth of her caues, the votive offerings in the temples, the great quantities of silver and gold," At the same time a revolution broke our m Macedonia under the leadership of Apollodorus, part of the army joined in, and helped the angry poor in their periodical revenge of despoiling the rich. The Gauls, doubtless guided by a Greek, found their way through secret passes around Thermopy lac, killed and plundered indiscriminately, and advanced upon the rich temple at Delphi. Repulsed there by a Greek force and a storm that in Greek belief was Apollo's defense of his shrine, Brennus retreated and killed hunself in shame. The surviving Gauls crossed over into Asia Minor. "They butchered all the males," writes Pausanias,

and likewise old women, and babes at their mothers' breasts, they drank the blood, and teasted on the flesh of infants that were fat. High-spirited women, and mindens in their flower, committed suicade . . . those that survived were subjected to every kind of outrage. ... Some of the women rushed upon the swords of the Gauls, and voluntarily courted death, to others death came from absence of food or sleep, as these merciless barbarrans ravished them in turn, and wreaked their lists upon them whether dying or dead.ts

After suffering years of such devastation, the Greeks of Asia bought off the invaders, and persuaded them to retire into northern Phrygia (where their settlements become known as Galatia), Thrace, and the Balkans. For two generations the Gauls levied fear tribute from Seleveus I and the Greek cities of the Asiatic coasts and the Black Sea, Byzantium alone paid them \$240,000 a year !" As the emperors and generals of Rome were to be occupied, in the third century after Christ, in repelling barbarian inroads, so the kings and generals of Pergamom, Seleucia, and Macedonia gave much of their resources and energies, in the third century before Christ, to driving back the recurring waves of Centic invasion. Throughout its history oncrent en dization had on the edge of a sea of barbarism that repeatedly threatened to mundate it. The stoic conrage of entirens perpenially pre-

^{*} Not the Breums who had muster Italy in 190 84. If We have no Gallie version of these matters, not any "barbanan" account of Greek invagions into Asia Iraly, or Sicily

In the following pages, to allow for the rise of prices in the Hellenistic age, the talent wall be reckoned as equivalent to \$3000 ut the United States of 1939.

pared had once kept back the peril; but stoicism was dying in Greece precisely at the time that devised its classic formulation and its name.

Anugonus II, son of Demetrius Pohorcetes and called "Gonatas" for reasons now unknown, drove the Gauls out of Macedonia, put down the revolt of Apollodorus, and ruled Macedonia with ability and moderation for thirty-eight years (277-39). He gave generously to literature, science, and philosophy, brought poets like Aratus of Soli to his court, and formed a lifelong friendship with Zeno the Stole; he was the first of that very discontinuous line of philosopher-kings which ended in Marcus Aurelius. Nevertheless it was during his reign that Athens made a last bid for freedom. In 267 the nationalist party came into power under the leadership of 2 young pupil of Zeno's, Chremonides. It secured the aid of Egypt, ousted the Macedonian troops, and announced the liberation of Athens. Antigonus came down at his leisure and recaptured the city (262), but dealt with it as became one who respected philosophy and old age. He established garrisons in the Piraeus, on Salarnis, and at Sumitim, and enjoined Athens from engaging in alliances or wars; for the rest he left the city completely free.

Other Greek states were solving in other ways the problem of reconciling liberty with order. About 279 little Aerolia, peopled like Macedon with half-barbarous and never-conquered mountaineers, began to organize the cines of northern Greece—chiefly those of the Delphic Amphictyony—into the Aerolian League; and about the same time the Achaean League of Patrac, Dyme, Pellene, and other towns attracted to its membership many cines of the Peloponnese. In either league the constituent municipalities kept control of all local government, but surrendered their armed forces and foreign relations to a federal council, and a strategos, elected by such of the critizens as could attend the annual assembly at Aegum in Achaea, or at Thermus in Aerolia. Each league maintained peace, and established common-measures, weights, and comages throughout its area—an achievement in co-operation that makes the third century in some ways politically

superior to the age of Pericles.

The Achaean League was transformed into a first-class power by Aratus of Sicyon. At the age of twenty this new Themistocles freed Sicyon from its dictator by a might attack with a handful of men. By elequence and subtle negotiation he persuaded all the Peloponnesus except Sparta and Elis to join the League, which chose him as its strategot annually for ten years (245-35). With a few hundred men he secretly entered Corinth, scaled the almost inaccessible Acrocorinthus, routed the Macedonian troops, and re-

stored the city to freedom. Passing on to the Paraeus, he bribed the Macedonian garrison to surrender, and announced the liberation of Athens. From that moment to the Roman conquest Athens enjoyed a unique self-government militarily powerless, but left inviolate by the Hellenistic states because her universities had made her the intellectual capital of the Greek world. Athens turned to philosophy, and contentedly disappeared from

polineal history.

Now at the height of their power, the two leagues began to weaken themselves by war with each other and class war within. In 220 the Actoban League, with Sparts and Elis, fought the bitter "Social" War against the Achaean League and Macedon. Aratus, the defender of freedom, was also the protector of wealth, in each city the League supported the party of property. The poorer citizens complained that they could not afford to attend the distant assemblies of the League, and were thereby in effect disfranchised, they were skeptical of a liberty that meant the full privilege of the clever and the strong to exploit the simple and the weak, more and more they gave their applause to demagogues who called for a redistribution of the land. Like the rich of a century before, the poor began to favor

Macedonia against their own governments.

Macedonia, however, was runted by the honesty of Antigonus III. He had assumed power as regent for his stepson, Philip, and had promised to surrender the throne upon Philip's coming of age. The cymics of the time called him "Doson"-the Promiser-apparently because they took it for granted that he was lying. But he kept his word, and in 221 Philip V, aged seventeen, began a long reign of intrigue and war. He was a man of courage and capacity, but of unscrupulous subtlety. He seduced the wife of Ararus' son, poisoned Ararus, killed his own son on suspicion of conspiracy, and arranged banquets of poisoned wine for those who stood in the way of his plans.' He enlarged and enriched Macedonia, and left it more populous and prosperous than for one hundred and fifry years past. But in 215, fearful of the growing power of Rome, he made the historic mistake of allying himself with Hannibal and Carthage. A year later Rome declared war upon Macedonia, and began the conquest of Greece.

II. THE STRUGGLE FOR WEALTH

Athenaeus, who is as reliable as any gossip, tells us that Demetries of Phalerum, about 310, took a census of Athens, and reported 21,000 citizens. 10,000 metics or aliens, and 400,000 slaves." The last figure is incredible,

but we know nothing that contradicts it. Very probably the number of rural slaves had grown, estates were becoming larger, and were being worked more and more by slaves under a slave overseer managing for an absentee landlord.* Under this system a more scientific agriculture developed, Varro knew fifty Greek manuals of the art. But the processes of erosion and deforestation had already gutted much of the land. Even in the fourth century Plato had expressed the belief that rain and flood, in the flow of time, had carried away much of the arable surface of Attica; the surviving falls, in his metaphor, were a skeleton from which the flesh had been washed away." Many areas of Attiea were in the third century so denuded of topsoil that their ancient farms were abandoned. The forests of Greece were vanishing, and tumber, like food, had to be brought in from abroad." The mines at Laurium were worn out and almost described; silver could be gotten more cheaply from Spain, and the gold nunes of Thrace, which had once poured their wealth into Athens, now enriched the treasury and beautified the comage of Macedon.

While the source of a virile and independent citizenty was drying up in the villages, industry and the class war were progressing in the towns. Small factories, and the slaves in them, were growing in number at Athens, as in all the larger cities of the Hellenstie world. Slave dealers accompanied the armies, bought unransomed captives, and sold them at three or four minas (\$150 or \$200) a head in the great slave markets of Delos and Rhodes. Some scruples, moral or economic, were felt about this ancient institution. A humanitarian sentiment arose as a by-product of philosophy; the cosmopolitan spirit of the age was negligent of racial distinctions; and casual hired labor, which could be thrown upon public relief whenever it ceased to be privately profitable, was in many circumstances cheaper than slave labor that had to be continuously maintained. Towards the close of this period there was a substantial rise in manumissions.

Commerce languished in the older cities, but flourished in the new. The Greek ports of Asia and Egypt grew at the expense of the Piracus; and even on the mainland it was Chalcis and Corinth that caught the swelling currents of Hellenistic trade. Through these strategically situated and well-equipped centers, as through Antioch, Seleucia, Rhodes, Alexandria, and Syracuse, a busy stream of merchants flowed, spreading a cosmopolitan and skeptical point of view. Bankers multiplied, and lent not only to traders and proprietors but to cities and governments." Some cities, like Delos and Byzantium, had public or national banks holding government funds and managed by state officials." In 324 Antimenes of Rhodes organized the

first known system of insurance by guaranteeing owners, for a premium of eight per cent, against loss from the flight of their slaves." The release of Persian accumulations and the quickened circulation of capital reduced the rate of interest to ten per cent in the third century and seven per cent in the second. Speculation was widespread, but not organized. Some manipulators sought to raise prices by limiting production, there were advocates of restricting crops to keep up the purchasing power of the farming community." Prices in general were high, again because of the Achaemenid treasuries that Alexander had poured into the currency of the world, but at the same time, and partly by the same cause, trade was facilitated, production was stimulated, and prices gradually fell back to a normal range. The wealth of the wealthy grew beyond any precedent in Greek history. Homes became palaces, furniture and carriages more sumptious, servants more numerous, dinners became orgies, and women became

show windows of their hisbands' prosperity "

Wages lagged behind rising prices, and rapidly followed their fall. They could support a single man only, and made for cehbacy, pauperism, and depopulation, they left a diminishing economic distance between free worker and slave. Employment was irregular, and thousands of men abandoned the mainland cities for mercenary soldiering abroad, or to hide their poverty in rural isolation." The Athenian government relieved the destitute with grants of corn, the rich amused them with free tickets to celebrations and games. The wealthy stinted in wages but were generous in charity, often they lent money to their cities without interest, or rescued them from bankruptey with large gifts, or built public works our of their private funds, or endowed temples or universities, or paid handsomely for the statues or the poems that published their features or their largess. The poor organized themselves into unions for mutual aid, but they could do little against the power and eleverness of the rich, the conservatism of the peasants, and the readiness of otherwise rival governments and leagues to exchange armed assistance in suppressing revolts." The freedom of unequal ability to accumulate or starve brought on again, as in Solon's days, an extreme concentration of wealth. The poor lent readier ear to socialistic gospels; their spokesmen called for the cancellation of debts, the redivision of the land, and the confiscation of large fortunes; the boldest now and then proposed the liberation of the slaves

The decay of religious belief promoted the growth of compensatory utopias: Zeno the Stoic described an ideal communism in his Republic (ca. 300), and his follower lambulus (ca. 250) inspired Greek rebels with

a romance in which he described a Blessed Isle in the Indian Ocean (perhaps Ceylon), there, he reported, all men were equal, not only in rights but in ability and intelligence, all worked equally, and shared equally in the product, all took equal part, turn by turn, in administering the government, neither wealth nor poverty existed there, nor any war of the classes; nature produced fruit abundantly of her own accord, and men lived in harmony and universal love.

Some governments nationalized certain industries: Priene took over the saltworks, Miletus the textile factories, Rhodes and Chidus the potteries; but the governments paid as low wages as the private employer, and squeezed all possible profit from the labor of their slaves. The gulf between rich and poor widened," the class war became bitterer than before. Every city, young or old, echoed with the hatred of class for class, with uprisings, massacres, suppressions, banishments, and the destruction of property and life. When one faction won it exiled the other and confiscated its goods; when the exiles returned to power they revenged themselves in kind, and slaughtered their enemies, imagine the stability of an economic system subject to such decerebrations and disturbances. Some ancient Greek cities were so devastated by class strife that industry and men fled from them, grass grew in the streets, cattle came there to graze. Polybius, writing about 150 n.c., describes certain timeless phases of the war from the viewpoint of a rich conservative:

When they (the radical leaders) have made the populace ready and greedy to receive bribes, the virtue of democracy is destroyed, and it is transformed into a government of violence and the strong hand. For the mab, habituated to feed at the expense of others, and to have its hopes of a livelihood in the property of its neighbors, as soon as it has found a leader sufficiently ambitious and daring, ... produces a reign of violence. Then come turnalruous assemblies, massacres, banishments, redivisions of land."

It was war and class war that weakened mainland Greece to the point of being easily overcome by Rome. The bitter ruthlessness of the victors—the destruction of crops, vinevards, and orchards, the razing of farmhouses, the selling of captives into slavery ruined one locality after another, and left an empty shell for the ultimate enemy. A land so wasted by strife, by erosian, deforestation, and the listless tiliage of impoverished tenants or slaves, could not compete with the alluvial plains of the Orontes, the Euphrates, the Tigris, and the Nile. The northern cities were no longer

on the great routes of trade, they had lost their navies, and could not control the sources and avenues of the grain supply that Athens and Sparta had mastered in their imperial days. The centers of power, even of literary and artistic creation, passed back again to Asia and Egypt, from which, a thousand years before, Greece had humbly learned her letters and her arts.

III. THE MORALS OF DECAY

The failure of the city-state accelerated the decay of the orthodox religion; the gods of the city had proved helpless to defend it, and had forfeited benef. The population was intermingled with foreign merchants who had no share in the city's civic or religious life, and whose amused skepticism spread among the citizens. The mythology of the ancient local gods survived among the peasantry and the simple townsfolk, and in the official rices, the educated used it for poetry and art, the half-liberated attacked it bitterly, the upper classes supported it as an aid to order, and discountenanced open atheism as bad taste. The growth of large states brought on a sympolity of the gods and made for a vague monotheism, while philosophers strove to formulate pantheism for the literate in a manher not too obviously incompatible with orthodox belief. About 100 Euhemerus of Messana in Sicily published his Hiera Anagrapha (hterally Holy Scriptures, or Records), in which he argued that the gods were either person fied powers of nature, or, more often, human heroes deified by popular magination or gratitude for their benefits to mankind; that myths were allegories, and that religious ceremonies were originally exercises in commenioration of the dead. So Zous was a conqueror who had died in Crete, Aphrodite was the founder and patroness of prostitution. and the story of Cronus earing his children was only a way of saying that cannibalism had once existed on the earth. The book had a sharply atheistic effect in third-century Greece. ***

Skepticism, however, is uncomfortable, it leaves the common heart and imagination empty, and the vacuum soon draws in some new and encouraging creed. The victories of philosophy and Alexander cleared the way for novel cults. Athens in the third century was so disturbed by exotic faiths, nearly all of them promising heaven and threatening hell, that Epicurus, like Lucretius in first-century Rome, felt called upon to denounce religion as hostile to peace of mind and joy of life. The new temples, even

^{*} Perhaps it reflected and aided the Hellenstic deification of lings.

in Athens, were now usually dedicated to Isis, Serapis, Bendis, Adonis, or some other ahen deity. The Eleusiman mysteries flourished, and were untated in Egypt, Italy, Siedy, and Crete, Dionysus Eleutherios—the Liberator—remained popular until he was absorbed into Christ. Orphism won fresh devotees as it renewed contact with the Fastern faiths from which it had spring. The old religion had been aristocratic, and had excluded foreigners and slaves, the new Oriental cults accepted all men and women, ahen or hond or free, and held out to all classes the promise of eternal life.

Superstition spread while science reached its apogee. Theophrastis' portrait of the Superstitious Man reveals how frail was the film of culture even in the capital of enlightenment and philosophy. The number seven was unspeakably holy, there were seven planets, seven days of the week, seven Wonders, seven Ages of Man, seven heavens, seven gates of hell. Astrology was rejuvenated by commerce with Babylonia, people took it for granted that the stars were gods who ruled in detail the destines of individuals and states; character, even thought, was determined by the star or planet under which one had been born, and would therefore be joinal, or mercurial, or saturance; even the Jews, the least superstitious of all peoples, expressed good wishes by saying Mazzol-too—"May your planet be favorable." Astronomy fought for its life against astrology, but finally succumbed in the second century A.D. And everywhere the Hellenistic world worshiped Tyche, the great god Chance.

Only an act of persistent imagination, or a gift for observation, can enable us to realize what it means to a nation to have its traditional religion die. Classie Greek civilization had been built upon a patriotic devotion to the city-state, and classic morality, though routed in folkways rather than in faith, had been powerfully reinforced by supernatural behef. But now neither faith nor patrionsm survived in the educated Greek, civic frontiers had been erased by empires, and the growth of knowledge had secularized morals, marriage, parentage, and law. For a time the Periclean Enlightenment helped murality, as in modern Europe; humanitarian feelings were developed, and aroused aneffectually a keener resentment against war, arbitration grew among cities and men. Manners were more polished, argument more urbane; courtesy trickled down, as in our Middle Ages, from the courts of the kings, where it was a matter of personal safety and royal prestige; when the Romans came Greece was amazed at their bad manners and blunt ways. Life was more refined, women moved about in it more freely, and stimulated the males to unwonted elegance. Men shaved now, especially in Byzantium and Rhodes, where the laws forbade it as effermnate." But the pursuit of pleasure consumed the adult life of the upper classes. The old problem of ethics and morals—to reconcile the natural epicureanism of the individual with the necessary stoicism of the state

-found no solution in religion, statesmanship, or philosophy.

Education spread, but spread thin; as in all intellectual ages it stressed knowledge more than character, and produced masses of half-educated people who, uprooted from labor and the land, moved about in implaced discontent like loosened cargo in the ship of state. Some cities, like Miletus and Rhodes, established public—i.e., government-supported schools, at Teos and Chios boys and girls were educated together, with an impartiality that only Sparta had shown." The gymnasium developed into a high school or college, with classrooms, lecture hall, and library. The palaestra flour-shed, and proved popular in the Fast, but public games had degenerated into professional contests, chiefly boxing, in which strength counted for more than skill, the Greeks, who had once been a nation of athletes, became now a nation of spectators, content to witness rather than to do.

Sexual morality was relaxed even beyond the loose standards of the Penelean age. Homosexualism remained popular, the youth Delphis "is in love," says Theoeritus' Simaetha, "but whether for a woman or for a man I cannot say "The courtesan still reigned. Demetrius Poliorectes levied a tax of two hundred and fifty talents (\$750,000) upon the Athemans, and then gave it to his mistress Lamia on the ground that she needed it for soap, which led the angry Athemans to remark how unclean the lady must be." Dances of naked women were accepted as part of the mores, and were performed before a Macedonian king." Athenian life was portrayed in Menander's plays as a round of triviality, seduction, and adultery

Greek women participated actively in the cultural pursuits of the time, and contributed to letters, science, philosophy, and art. Aristodama of Smyrna gave recitals of her poetry throughout Greece, and received many honors. Some philosophers, like Epicurus, did not heatate to admit women into their schools. Literature began to stress the physical loveliness of woman rather than her worth and charm as a mother, the hterary cult of feminine beauty arose in this period alongs de the poetry and fiction of romantic love. The partial emancipation of woman was accompanied by a revolt against wholesale maternity, and the limitati in of the family became the ourstanding social phenomenon of the age. Abortion was punishable only if practiced by a woman against the wish of her finishand, or at the instigation of her seducer. When a child came it was in many cases exposed Only one family in a hundred, in the old Greek cities, reared more than one daughter. "Even a rich man," reports Poseidippus, "always exposes a daughter." Sisters were a rarity. Families with no child, or only one, were

numerous. Inscriptions enable us to trace the festility of seventy nine families in Miletus about 200 B.C.: thirty-two had one child, thirty-one had two, altogether they had one hundred and eighteen sons and twenty-eight daughters." Ar Erettia only one family in twelve had two sons; hardly any had two daughters. Philosophers condoned infanticide as reducing the pressure of population, but when the lower classes took up the practice on a large scale, the death rate overtook the birth rate. Religion, which had once finglitened men into fertility lest their dead souls be untended, no longer had the power to outweigh considerations of comfort and cost. In the colon es immigration replaced the old families; in Artica and the Peloponnesus immigration trickled down to a negligible figure, and population declined. In Macedonia Philip V forbade the limitation of the family, and in thirty years raised the man power of the country fifty per cent;" we may judge from this how widespread the practice of limitation had become, even in half-primitive Macedon. "In our time," wrote Polybius about 150 B.C.,

the whole of Greece has been subject to a low high rate and a general decrease of the population, owing to which exics have become deserted and the land has ceased to yield fruit. . . . For as men had fallen into such a state of luxury, avarice, and indofence that they did not wish to marry, or, if they married, to rear the children born to them, or at most but one or two of them, so as to leave these in affluence and bring them up to waste their substance—the evil insensibly but rapidly grew. For in cases where, of one or two children, the one was carried off by war and the other by sickness, it was evident that the houses must have been left empty . . . and by small degrees entires became resourceless and feeble."

IV. REVOLUTION IN SPARTA

Meanwhile that concentration of wealth, which everywhere in Greece was enflaming the eternal conflict of classes, produced in Sparta two attempts at revolutionary reform. Isolated by its mountain barriers, Sparta had maintained its independence, had fought back the Macedonians, and had bravely defeated the immense army of Pyrrhus (271). But the greed of the strong generated from within the rum that enemy forces had failed to bring from without. The Lycurgean laws against alienating the land from the family by sale, or dividing it in bequests, had been abrogated,* and the fortunes made by Spartans in empire or war had gone to buying

^{*} Perhans because the latter had led to family limitation, as in modern France.

up the soil." By 244 the 700,000 acres of Laconia were owned by one hundred families," and only seven hundred men had preserved the rights of citizenship. Even these no longer ate in common; the poor could not make the necessary contribution, while the rich preferred to feast in private. A large majority of the families that had once enjoyed the franchise had sunk into poverty, and called for a cancellation of debts and a redivision of the land.

It is to the credit of monarchy that the attempt to reform this condition came from the Sparma kings. In 242 Agis IV and Leomidas succeeded to the dual throne. Convinced that Lycurgus had meant the land to be equally divided among all freemen, Agis proposed to redistribute it, to annul all debts, and to restore the semicommunism of Lycurgus. Those landowners whose property was mortgaged supported the move for cancellation; but when the measure had been passed they resisted violently the remaining elements of Agis' reforms. At the instigation of Leonidas, Agis was murdered, along with his mother and his grandmother, both of whom had volunteered to surrender their great estates for division among the people. In this royal drama the noblest characters were women. Chilonis, daughter of Leonidas, was the wife of Cleombrotus, who supported Agis. When Leonidas was exiled, and Cleombrotus seized his throne, Chilonis left her triumphant husband to share her father's banishment; when Leonidas recaptured power and exiled Cleombrotus, Chilonis chose exile with her husband.

Leonidas, to get the rich property of Agis' widow into his family, compelled her to marry his son Cleomenes. But Cleomenes fell in love with his wife, and imbibed from her the ideas of the dead king. When he came to the throne as Cleomenes III he resolved to carry out Agis' reforms. Having won over the army by his courage in war, and the people by the sumplicity of his life, he abolished the obgarchic ephorate on the ground that Lyeurgus had never sanctioned it, he killed fourteen resisters, exiled eighty, canceled all debts, divided the land among the free population, and restored the Lycurgean discipline. Not content, he set out to conquer the Peloponnese for the revolution. The proletariat everywhere hailed bim as a liberator, and many towns surrendered to him gladly; he took Argos, Pellene, Phlius, Epidaurus, Hermione, Troezen, at last even rich Counth. The ferment of his program spread in Bocotia the payment of debts was abandoned, and the state appropriated funds to appease the poor; in Megalopolis the philosopher Cercidas pled with the rich to aid tho needy before revolution destroyed all wealth." When Cleomenes invaded Achaea and defeated Aratus all upper-class Greece trembled for its properry. Ararus appealed to Macedonia. Antigonus Doson came down, overwhelmed Cleomenes at Scilasia (111), and restored the oligarchic regime in Lacedaemon. Cleomenes fled to Fgypt, tried and failed to win the help of Ptolemy III, tried and failed to rouse the Alexandrians to revolution, and killed himself."

The class war continued. A generation after Cleomenes the people of Sparts overthrew the government, and set up a revolutionary dictatorship. Philopoemen, who had succeeded Aratus as head of the Achaean League, invaded Laconia, and restored the rule of property. As soon as Philopoemen had gone the people rose again, and set up Nabis as dictator (207). Nabis was a Syrian Semite who had been captured in war and sold into slavery at Megalopolis, smarting under suppressed ability, he had revenged hunself by organizing a revolt among the Helots. Now he gave Spartan citizenship to all freemen, and freed all the Helots with one word. When the rich obstructed him he confiscated their wealth and cut off their heads. The news of his doings went abroad, and he found it a simple matter, with the help of the poorer classes, to conquer Argos, Messenia, Elis, and part of Arcadia. Everywhere he nationalized large estates, redistributed the land, and abolished debts." The Achaean League, unable to overthrow him, appealed to Rome for aid. Flamminus came, but Nabis offered so resolute a resistance that the Roman accepted a truce by which Nabis was to release the imprisoned each, but would retain his power. At this juncture Nabis was assassinated by an agent of the Actolian League (192)." Four years later Philopoemen marched in again, propped up the oligarchs, abolished the Lyeurgean regimen, and sold three thousand of Nabis' followers into slavery. The revolution was ended, but so was Sparta; it continued to exist, but it played no further part in the history of Greece.

V. THE ASCENDANCY OF RHODES

Frightened by the violence of faction and drawn by the movements of population, trade and capital passed from the mainland and sought new havens in the Aegean. Delos, once eith through Apollo, flourished in the second century as a free port under the protection of Rome and the management of Athens. The little isle was crowded with alien merchants, business offices, palaces and hovels, and the diverse temples of exotic faiths.

Rhodes reached her zenith in the third century, and was then by common consent the most civilized and beautiful city in Helias. Strabo described the great port as "so far superior to all others in harbors, roads, walls, and improve-

ments that I am unable to speak of any other city as equal to it, or even as almost equal to it." Situated at one of the crossroads of the Mediterranean, in a position to take advantage of that expanding trade which Alexander's conquests had made possible between Europe, Egypt, and Asia, Rhodes' spacious harbors replaced Tyre and the Piraeus as a port of reshipment for goods, and as a clearing-house for the organization and financing of commerce in the eastern sea. Her merchants established a profitable reputation for honesty, her banks and her government for stability, in a world of treachery and change, her powerful fleet, manned by her citizens, cleared the Aegean of pirates, maintained an equal security for the merchant vessess of all nations, and established a code of maritime law so alsly devised and so widely accepted that it governed Mediterranean trade for centuries, and passed down into the marine law of Rome, Constantinople, and Venice.

Having freed herself from Macedoman domination by her heroic resistance to Demetrius Poliorcetes (305). Rhodes steered successfully through the troubled poaties of the age by maintaining a wise neutrality, or by going to war only to check the growth of an aggressor state, or to preserve the freedom of the seas. She united many of the Aegean cities in an "Island League," and exercised her presidency so fairly that no one questioned her right to lead. Her government—an aristocracy testing on a democratic base as in republican Rome—ruled the synoccized cities of Lindus, Comirus, lalvsus, and Rindes with skill and comparative justice, gave to alien residents such privileges as Athens had never yielded to her metics, protected a large population of slaves so well that when in danger it dated to aim them, and laid upon the rich men of the city the obligation to take care of the poor." The state incr its expenses by a two per cent tax upon imports and exports. It lent money generously, sometimes without interest, to cities in distress.

When Rhodes herself was physically ruined by an earthquake (225), all the Greek world came to her aid, for everyone recognized that her disappearance from the Aegean would lead to commercial and financial chaos. Hieron II sent one hundred gold talents (\$100,000), and set up in the restored city a statuary group showing the people of Rhodes being crowned by the people of Syracuse. Processy III sent three hundred talents* of silver, Antigonias III sent three thousand, together with great quantities of timber and pitch for building, his queen Chryseis gave three thousand talents of lead, and 150,000 bushels of corn. Seleucus III sent 300,000 bushels of corn and ten fully equipped quinquerenes. "As for the towns that contributed each according to its means," says Polybius, "it would be difficult to enumerate them." It was a bright interlude in the dark annals of political history, one of the rare occasions when all the Greek world thought and acted as one.

[&]quot;A Greek talent weighed fifty-eight pounds avoirdispos.

CHAPTER XXIV

Hellenism and the Orient

I. THE SELEUCID EMPIRE

As we move from the mainland through the Aegean into the Greek settlements in Asia and Egypt we are surprised to find a fresh and flourishing life, and we perceive that the Hellenistic age saw not so much the decay as the dissemination of Greek civilization. From the end of the Pelaponnesian War a stream of Greek soldiers and immigrants had entered Asia. Alexander's complests widehed this stream by offering new opportunities and avenues to Hellenic enterprise.

Scleucus, called "Nicator" (Victor), was distinguished among Alexander's generals as a man of courage, imagination, and unscrupulous generosity. It was characteristic of him that he gave his second wife, the beautiful Stratonice, to his son Demetrius when he learned that the boy was pining away for love of her. Antigonus I, challenging the allotment of Babylonia to Seleucus, set out to conquer for himself all the Near Fast, Selencus and Ptolemy I defeated him at Gaza in 312. From that moment the house of Seleucus dated the Seleucid Empire, and new era-a mode of reckning that survived in western Asia till Mohammed. Seleucus united under his sceptor the old kingdoms and cultures of Elam, Sumeria, Persia, Babylonia, Assyria, Syria, Phoenicia, and, at times, Asia Minor and Palestine. At Seleucia and Antioch he built capitals richer and more populous than any ever known in mainland Greece. For Sciencia he chose a site near the aged Babylon and the future Baghdad, almost at the junction of the Euphrates and the Tigris, it was conveniently located to attract commerce between Mesopotamia and the Persian Gulf and beyond, within half a century it had a population of 600,000 souls—a motley mass of Asiatics dominated by a minority of Greeks." Antioch was similarly situated on the Orontes, not too far from its mouth to be reached by ocean shipping, yet sufficiently inland to be safe from naval attack, to cap the fertile fields of the river valley, and to draw the Mediterrancan trade of northern Mesopotamia and Syria. Here the later Seleucid emperors established their residence, until under Antiochus IV it became the wealthiest city of Seleucid Asia, adorned with temples, porticoes, theaters, gym-

^{*} On this site Professor Leroy Waterman in 1931 exhumed tablets indicating that one of the righest estigent of Selencia had avoided the payment of trates for twenty-five years.*

nasiums, palaestras, flower gardens, landscaped boulevards, and parks so beautiful that the Garden of Daphne was known throughour Greece for its laurels and cypresses, its fountains and streams.

Seleucus I was assassinated in 281, after thirty-five years of beneficent and popular rule. From his death his empire began to disintegrate, torn with geographical and racial divisions, violent struggles for the throne, and batharian invasions on every side. Antiochus I Soter (Savior) fought gallantly against the Gauls. Antiochus Il Theos (the God) lived in a perpetual intoxication, as if again to illustrate the gamble of hereditary monarchy, his wife Laodice began that chain of intrigue which disrupted and finally ruined the royal house Antiochus III the Great was a man of capacity and culture, his bust in the Louvre shows a Greco-Macedonian with the courage of Macedon and the intelligence of Greece. He recaptured by untiring war most of the territory which the empire had lost since Seleucus 1. He established a library at Antioch, and promoted the literary movement that culminated in Meleager of Gaza at the close of the second century. He preserved the Greek custom of municipal autonomy, writing to the cities that "if he should order anything contrary to the laws they should pay no attention, but assume that he had acted in ignorance." He was rained by ambition, imagination, and a flair for love. In 217 he was defeated by Prolemy IV at Raphia, and lost Phoenicia, Syria, and Palestine, he consoled himself by a victorious expedition into Bactria and India (208), duplicating the explosts of Alexander. Lured by Hannibal into helping him against Rome, he landed an army in Euhoes, fell in love at fifty with a pretty maid of Chalcis, courted her honorably, married her elaborately, forgot the war, and spent the winter enjoying his happiness." The Romans defeated him at Thermopylae, drove him into Asia Minor, and overwhelmed him at Magnesia. Restless, he plunged into another eastern campaign, and died in its course (187), after a reign of thirty-six years.

His son Seleucus IV loved peace, administered the empire with economy and wisdom, and was assassinated in 175. At that time his younger brother was serving as archon at Athens, where he had gone to study philosophy. Hearing of Seleucus' death, he organized an army, marched to Antioch, deposed the assassin, and took the throne (175). Antiochus IV was both the most interesting and the most erratic of his line, a rare mixture of intellect, insanity, and charm. He governed his kingdom ably despite a thousand injustices and absurdices. He allowed his delegates to abuse their power, and gave his mistress authority over three ciries. He was generous and cruel without judgment, often forgiving or condemning by whim, surprising simple foik with costly gifts, and tossing money with a child's ecstasy among the crowds in the street. He loved wine, women, and art, he drank to excess, and left his royal seat, at banquets, to dance naked with the entertainers, or to carouse with wastrels, he was a Bohemian

whose dream of power had come true. He despised the solemnity and trappings of the court, played practical jokes upon his dignituries, and disguised himself to know the hazury of anonymity, it delighted him to mingle with the people and overhear their comments on the King. He liked to wander among the shops of the artisans, watching and studying the work of engravers and jewelers, and discussing with them the technical details of their craft. He felt a sincere eathusiasm for Greek art, literature, and thought. He made Antioch for a century the art center of the Greek world, he paid artists handsomely to set up statuary and temples in other cities of Hellas, he redecorated the shrine of Apollo at Delos, built a theater for Tegea, and financed the completion of the Olympieum at Athens. Having lived fourteen impressionable years in Rome, he had imbibed a taste for repubacan institutions, and as if to foreshadow Augustus, it pleased his humor and policy to clothe his monarchical power in the forms of republican freedom. The chief effect of his passion for things Roman was the introduction of gladiatorial games in Antioch, his capital. The people resented the brutal sport, but Antiochus won them over by lavish and spectacular displays, when they became accustomed to the butchery he considered their degeneration a personal victory. It was characteristic of him that he began as an ardent follower of the Stores, and ended as an easy convert to the Epicureans. He enjoyed his own qualities so keenly that he labeled his coms Antiochus Theos Emphanesthe God Made Manifest. Overreaching himself in the manner of his imaginative kind, he attempted in 160 to conquer Egypt. He was succeeding when Rome, herself a candidate for the Eg) ptian plum, ordered him to retire from African soil. Antiochus asked time to consider, but the Roman envoy, Popilius, drew a circle in the sand around Antiochus, and bade him decide before stepping over its line. Antiochus yielded in fury, plundered the Temple at Jerusalem to restore his treasury, sought glory like his father in a compaign against the eastern tribes, and died in Persia on the way, of epilepsy, madness, or disease,"

II. SELEUCID CIVILIZATION

The function of the Seleucid Empire in history was to give to the Near East that economic protection and order which Persia had provided before Alexander, and which Rome would restore after Caesar. Despite the wars, revolutions, spoliations, and corruption normal to human affairs, that function was performed. The Macedonian conquest broke down a thousand barriers of government and speech, and invited the East and the West to fuller economic exchange. The result was a brilliant resurrection of Greek Asia. While division and strife, the poverty of the soil, and the migrations of trade routes ruined the mainland, the comparative unity and peace preserved by the Seleucids encouraged agriculture, commerce, and industry. The Greek cities of Asia were no

longer free to make revolutions or experiments, homonoia, Harmony, was enforced by the kings, and was hterally worshiped by the people as a god.* Old entes like Miletus, Ephesus, and Smyrna had a second blooming.

The valleys of the Tigris, the Euphrates, the Jordan, the Orontes, the Macander, the Halys, and the Oxus were fertile then beyond the conception of present imagination, obsessed with the vision of the deserts and rocky wastes that cover so much of the Near East after two thousand years of erosion, deforestation, and neglectful tenant tillage. The soil was irrigated by a system of canals maintained under the supervision of the state. The land was owned by the king, or his nobles, or the cities, or the temples, or private individuals, in all cases the labor was performed by serfs transmitted with the soil in bequest or sale. The government considered as national property all the riches contained in the earth, but did little to exploit them. Trades, and even cities, were now highly specialized. Miletus was a busy textile center, Antioch imported raw materials and turned them into finished goods. Some large factories, manned with slaves, achieved a modest degree of mass production for the general market. But domestic consumption lagged behind production, the people were so poor that no adequate home market encouraged large-scale industry.

Commerce was the life of Hellenistic economy. It made the great fortunes, built the great cases, and employed a growing proportion of the expanding population. Money transactions now almost completely replaced the barrer that had survived for four centuries the comage of Croesus. Egypt, Rhodes, Sciencia, Pergamum, and other governments issued currencies sufficiently stable and similar to facilitate international trade. Bankers provided public and private credit. Ships were larger, made four to six knots per hour, and shortened voyages by crossing the open sea. On land the Sciencials developed and extended the great highways left as part of Persia's legacy to the East. Caravan routes converged from inner Asia upon Selencia, and opened out thence to Damascus, Berytus (Beirut), and Antioch. Enriched by trade, and enriching it in turn, populous centers rose there and at Babylon, Tyre, Tarsus, Xanthus, Rhodes, Halicarnassus, Miletus, Ephesus, Smyrna, Pergamum, Byzantium, Cyzicus, Apamea, Heracleia, Amisus, Sinope, Panticapacum, Olbia, Lysimacheia, Abydos, Thessalonica (Salonika), Chalcis, Delas, Corinth, Ambracia, Epidamnus (Duraz-20), Taras, Neapolis (Naples), Rome, Massaha, Emporium, Panormus (Palermo). Symouse, Utica, Carmage, Cyrene, and Alexandria. One busy web of trade bound together Spain under Carthage and Rome, Carthage under Hamilcar, Syracuse under Hieron II, Rome under the Scipios, Macedonia under the Antigonias, Greece under the Leagues, Egypt under the Prolemes, the Near East under the Seleucids, India under the Mauryas, and China under the Hans. The coutes from China passed through Turkestan, Bactria, and Persia, or over the Aral, Caspian, and Black Seas. The routes from India passed through Afghanistan and Persia to Seleucia, or through Arabia and Petra to Jerusalem and Damascus, or across the Indian Ocean to Adana (Aden), then through the Red Sea to Arsinoc (Suez), and thence to Alexandria. It was for control of the last two routes that the Seleucid and Prolemaic dynasties fought those "Syrian Wars" that finally weakened them both to the point of fating vassal to Rome.

The Seleucid monarchy, inaeriting the Asiatic tradition, was absolute; no assembly limited its power. The court was planned on the Oriental style, with chamberlains and lace, eumichs and uniforms, incense and music; only the speech and the inner dress remained Greek. The nobles were not half-independent chieftains as in Macedonia or medieval Europe, but administrative or muttary appointees of the king. It was this structure of monarchy that passed down from Persia through the Seleucids and Sassanids to the Rome of Diocletian and the Byzantium of Constantine. Knowing that their power, in an agen scene, rested upon the loyalty of the Greek population, the Seleucid kings labored to restore the old Greek cities and to establish new ones. Seleucias I founded nine Seleucias, six Antiochs, five Laodiceas, three Apameas, one Stratonice, and his successors instated him to the best of their lesser ability. Cities grew and multiplied as in nineteenth-century America.

Through them the Hellenization of western Asia proceeded, on the surface, at a rapid pace. The process, of course, was old, it had begun with the Great Migration, and the Hellenistic Dispersion was in part the Renaissance of Ionia, a return of Greek civilization to its early Asiatic homes. Even before Alexander Greeks had held high offices in the Persian Empire, and Greek merchants had dominated the trade routes of the nearer East. Now the opening of political, commercial, and artistic opportunities drew from old Greece, Magna Graecia, and Sicily an emigrant flow of adventurers, sertlers, scribes, soudiers, traders, doctors, scholars, and courtesans. Greek sculptors and engravers made statues and coms for Phoenician, Lycian, Canan, Cilician, Bactrian kings. Greek dancing girls became the rage of Asiane ports." Sexual immorality took on a Greek grace, and Greek palaestras and gymnasiums aroused in some Orientals an unwonted devotion to athletics and baths. Cities secured new water supplies and drainage systenis, avenues were paved and cleaned. Schools, libraries, and theaters stimulated reading and literature, collegians (ephebor) and university students roamed the streets and played their ancient pranks upon one another and the populace. No one was counted cultured unless he understood Greek and could enjoy the plays of Menander and Euripides. This imposition of Greek civilization upon the Near East is one of the startling phenomena of ancient history, no change so swift and far-reaching had ever been seen in Asia. We know too little of its details and its results. We are poorly informed about the literature, philosophy, and science of Seleucid Asia, if we find in it few figures of prime magnitude. Zeno the Stoic, Seleucius the astronomer, and, in the Roman period, Meleager the poet and Poseidippus the polymath—we cannot be sure that there were not many more. It was a flourishing culture, full of variety, refinement, and verve, and as fertile in art as any preceding age. Never before, so far as our knowledge goes, had a civilization achieved so wide a spread and such complex unity amid so many diverse environments. For a century western Asia belonged to Europe. The way was prepared for the Pax Romana, and the embracing synthesis of Christendom.

But the Fast was not conquered. It was too deeply and anciently itself to yield its soul. The masses of the people continued to speak their native tongues, to pursue their long-accustomed ways, and to worship their ancestral gods. Beyond the Mediterranean coasts the Greek veneer grew thin, and such Helleme centers as Seleucia on the Tigris were Greek islands in an Oriental sea. There was no such fusion of races and cultures as Alexander had dreamed of, there were Greeks and Greek civilization on the top, and a medley of Asiatic peoples and cultures underneath. The qualities of the Greek intellect made no entry into the Oriental mind, the energy and love of novelty, the zest for workliness and the passion for perfection, the expressiveness and individualism of the Greek effected no change in the Oriental character. On the contrary, as time moved on, Fastern ways of thought and feeling surged up from below into the ruling Greeks, and through them flowed westward to transform the "pagan" world In Baby-Ion the patient Semitic merchant and the temple banker regained ascendancy over the volatile Hellene, preserved the cunciform writing, and forced back the Greek language into second place in the husiness world. Astrology and alchemy corrupted Greek astronomy and physics; Oriental monarchy proved more powerful than Greek democracy, and finally impressed its form upon the West, Greek kings and Roman emperors became gods in the manner of the East, and the Asiatic theory of the divine right of kings passed down through Rome and Constantinople into modern Europe. Through Zeno the East insinuated its quietism and fatalism into Greek philosophy; through a hundred channels it poured its mysticism and its piery into the vacuum left by the decay of the orthodox Greek faith. The Greek readily accepted the gods of the Orient as essentially identical with his own, but as the Greek did not really believe, and the Asiatic did, the Oriental god survived while the Greek god died. Artems of the Ephesians became again an Eastern maternity goddess, with a dozen breasts. Babylonian, Phoenician, and Syrian cults captured great numbers of the invading Hellenes. The Greeks offered the East phitosophy, the East offered Greece religion, religion won because philosophy was a luxury for the few, religion was a consolation for the many. In the rhythmic historic alternation of belief and unbelief, mysticism and naturalism, religion and science, religion returned to power because it recognized the secret help-lessness and loneliness of man, and gave him inspiration and poetry; a distillusioned, exploited, war-wearied world was glad to believe and hope again. The least expected and most profound effect of Alexander's conquest was the Orientalization of the European soul.

III. PERGAMUM

The gradual absorption of the Greeks by Asia weakened the Scleucid power, and generated independent kingdoms on the edge of the Hellenistic world. As early as 180 Armenia, Cappadocia, Pontus, and Bithyma set up their own monarchies, and soon the Greek cities of the Black Sea fell subject to Asiane rule. Bactria and Sogdiana broke away about 250. In 247 Arsaces, chief of the Parni-an Iranian nomed tribe killed the Seleucid governor of Persia and set up the kingdom of Parthia, destined to plague Rome for centuries. In 282 Philataerus, entrusted by Lysimachus with the care of nine thousand talents and the fortified hill of Pergamum in Asia Minor, appropriated the money and declared his independence. His nephew Eumenes I absorbed Pitane and Atameus, and made Pergamum a sovereign monarchy (262). Attalus I carned the gratitude of Greek Asia by driving back the Gauls who had penetrated to his city walls (230), his eldest son, Eumenes II, continued his competent rule, but shocked Greece by calling in the aid of Rome against Antiochus III. After their defeat of Antiochus at Magnesia the Romans gave Fumenes nearly all of Asia Minor. His brother and successor, Attalus II, distrusted the power of his sons to keep Pergamum free, and at his death (130) bequeathed his kingdom to Rome.

The little state did what it could to redeem the treachery of its birth and growth by making itself the rival of Alexandria as a center of art and learning. The wealth that came from the nunes, vines, and cornfields, from the manufacture of woolens, parchments, and perfumes, from the making of bricks and tiles, and the mastery of north Aegean trade went not only to maintain a strong army and navy, but to encourage hterature and art. The Pergamene kings believed that government and private business could

fruitfully compete, supplying a mutual check on inefficiency and greed. The king cultivated large tracts of land with slaves, and operated, though not as monopolies, many factories, quarries, and nunes. Under this unique system wealth increased and multiplied. Pergamum became an ornate capital, famous for its altar to Zeus, its luxurious palaces, its library and theater, its palaestras and baths, even its public lavatories upheld the municipal pride. The library was second only to Alexandria's in the number of its volumes and the repute of its scholars, and the pmakotheka housed, for the public enjoyment, a great collection of paintings. For half a century Pergamum was the finest flower of Hellemic civilization.

Meanwhile the House of Seleucus had fallen into decay. The rise of independent kingdoms amost confined its power to Mesopotamia and Syria. Paethia, Pergamum, Egypt, and Rome patiently labored to weaken the dynasty by supporting pretenders at every succession, and fomenting faction and civil war. In 153, just as Demetrius I was restoring vigor to the Seleucid government, Rome collected mercenames from every quarter to holster up the false claims of a Smyrnean adventurer to the throne. Pergamum and Egypt joined in the attack, Demetrius fought and died heroically, and the Seleucid power fel, into the hands of the worthless Alexander Balas, the pupper of his mistresses and of Rome.

IV. HELLENISM AND THE JEWS

The history of Judea in the Hellenistic age turns on two conflicts, the external struggle between Sciencial Asia and Ptolemaic Egypt for Palestine, and the internal struggle between the Hellenic and the Hebraic ways of life. The first conflict is dead history, and may be briefly dismissed; Matthew Arnold believed the second conflict to be one of the lasting cleavages of human feeling and thought. In the original division of Alexander's empire Judea (i.e., Palestine south of Samana) had been awarded to Ptolemy. The Seleucids never accepted this decision, they saw themselves separated from the Mediterranean, and coveted the wealth that might come from the trade that passed through Damascus and Jerusalem. In the resultant wars Ptolemy I won, and Judea remained subject to the Ptolemies for more than a century (312-198). It paid an annual tribute of eight thousand talents, but despite this burden the land prospered. Judea was left a large measure of self-government under the hereditary high priest of Jerusalem and the Great Assembly. This gerousia, or Council of Elders, which Ezra

and Nehemiah had formed two centuries back, became both a senate and a supreme court. Its seventy or more members were chosen from the heads of the leading families, and from the most learned scholars (Soferm) of the land. Its regulations—the Dibre Soferm set the pattern of orthodox Juda-

ism from the Hellenistic age to our own

The basis of Judaism was religion, the idea of a surveillant and upholding duty entered into every phase and moment of Jewish life. Morals and manners were ordained by the gerousia in strictness and detail. Entertainments and games were few and restrained. Intermarriage with non-Jews was forbidden, so were celibacy and infanneide. Hence the Jews bred abundantly, and reared all their children, despite war and famine their numbers grew throughout antiquity, until in the time of Caesar there were some seven million Jews in the Roman Empire. The bulk of the population before the Maccabean era, was agricultural. The Jews were not yet a nation of traders; even as late as the first century A.D. Josephus wrote: "We are not a commercial people"," the great trading peoples of the age were the Phoemeians, the Arabs, and the Greeks. Slavery existed in Judea as elsewhere, but the class war was relatively huld. Art was undeveloped; only music flourished. The flute, the drum, the cymbal, the "ram's horn" or trampet, the lyre, and the harp were used to accompany the single voice, the folk song, or the so,emn religious antiphons. Jewish religion scorned the concessions of Greek ritual to popular imagination, it would have nothing to do with images, oracles, or birds' entrails, it was less anthropomorphic and superstitious, less colorful and joyful, than the religion of the Greeks. Face to face with the naive polytheism of Hellenic cults, the rabbis chanted the sonorous refrain still heard in every Jewish synagogue. Shanmai Israel, Adonas eleena, Adonas echod-"Hear, O Israel: the Lord is our God, the Lord is one."

into this simple and puritan life the invading Greeks brought all the distractions and temptations of a refined and epicurean civilization. Around Judea was a ring of Greek settlements and cities: Samaria, Neapolis (Shechem), Gaza, Ascalon, Azotus (Ashidod), Joppa (Jaffa), Apollonia, Doris, Sycamina, Polis (Haifa), and Acco (Acre). Just across the Jordan was a leagued decapolis of Greek cities: Damascus, Gadara, Gerasa, Dium, Philadelphia. Pella, Raphia, Hippo, Scythopolis, and Canetha. Each of these had Greek institutions and establishments—temples to Greek goda and goddesses, schools and academies, gymnasiums and palaestras, and nude games. From such cities, and from Alexandria, Antioch, Delos, and Rhodes, Greeks and Jews came to Jerusalem, bringing the infection of

a Hellenism devoted to science and philosophy, art and literature, beauty and pleasure, song and dance, drinking and feasting, athletics and courtesans and handsome boys, along with a gay sophistication that questioned all morals, and an urbane skepticism that undermined all supernatural behief. How could Jewish youth resist these invitations to delight, this easy liberation from a thousand irksome restraints? Young wits among the Jews began to lough at the priests as moneygrubbers, and at their pious followers as fools who allowed old age to come upon them without having ever known the pleasures, luxuries, and subtleties of life. Rich Jews were also won over, for they could afford to yield to temptation. Jews who sought appointment from Greek officials felt it the part of policy to speak the Greek language, to live in the Greek way, even to say a few kind words to the Greek gods.

Against this powerful assault upon both the intellect and the senses three forces defended the Jews: the persecution under Antiochus IV, the protection of Rome, and the power and prestige of a Law believed to be divinely revealed. Like antibodies gathering to attack an infection, the more religious among the Jews formed themselves into a seet called Chasidan—the Pious. They began (about 300 n.c.) with a simple pledge to avoid wine for a given period; later, by the mevitable psychology of war, they went to the extremes of Purctuism, and frowned upon all physical pleasure as a surrender to Satan and the Greeks. The Greeks marveled at them, and classified them with the strange "gymnosophists," or nude ascetic philotophers, whom Alexander's army had come upon in India. Even the common Jew deprecated the severe religiosity of the Chasidim, and sought for some middle way. Perhaps a compromise would have been reached had it not been for the attempt of Antiochus Epiphanes to force Hellenism upon Judea by persuasion of the sword.

In 198 Antiochus III defeated Prolemy V, and made Judea a part of the Seleucid Empire. Tired of the Egyptian yoke, the Jews supported Antiochus, and welcomed his capture of Jetusalem as a liberation. But his successor, Antiochus IV, thought of Judea as a source of revenue; he was planning great campaigns, and needed funds. He ordered the Jews to pay in taxes one third of their grain crops and one half of the fruit of their trees." Ignoring the usual inheritance of the office, he appointed as high priest the sycophantic Jason, who represented the Hellenizing party in Jetusalem and sought permission to establish Greek institutions in Judea. Antiochus heard him gladly, for he was disturbed by the diversity and persistence of Oriental cults in Greek Asia, and dreamed of unifying his

polyglot empire through one law and one faith. When Jason went about these matters with insufficient haste Antiochus replaced him with Menelaus, who gave him larger promises and a fatter bribe." Under Menelaus Yahweh was identified with Zeus, Temple vessels were sold to raise funds, and in some Jewish communities sacrifices were offered to Helleme deities. A gymnasium was opened in Jerusalem, and Jewish youths, even priests, took part, naked, in ath ene games, some young Jews, in the ardor of their Hellemstin, underwent operations to remedy the physiological shortcomings

that might reveal their race."

Snocked by these developments, and feeling their religion challenged in its very existence, the majority of the Jewish people went over to the side and view of the Chastdim. When Antiochus IV was expelled from Fgypt by Popilius (168), the news reached Jerusalem in the form of a report that he had been killed. The rejoicing Jews deposed his appointees, massacred the leaders of the Hellenizing party, and cleansed the Temple of what they fest to be pagan abominations. Antiochus, not dead but humilated, moneyless, and convinced that the Jews had obstructed his campaign against bgy pr and were conspiring to return Judea to the Prolenses, 'marched up to Jerusalem, slaughtered Jews of either sex by the thousand, desecrated and looted the Temple, appropriated for the royal coffers its golden altar, its vessels, and its treasuries, restored Menclaus to supreme power, and gave orders for the compulsory Hellenization of all Jews (167). He commanded that the Temple be rededicated as a shrine to Zeus, that a Greek altar be built over the old one, and that the usual sacrifices be replaced with a sacrifice of swine. He forbade the keeping of the Sabbath or the Jewish festivals, and made circumcision a capital crune. Throughout Judea the old religion and its rites were interdicted, and the Greek ritual was made compulsory on pain of death. Every Jew who refused to eat pork, or who was found possessing the Book of the Law, was to be juiled or killed, and the Book wherever found was to be burned." Jerusalem itself was put to the flames, its walls were destroyed, and its Jewish population was sold into slavery. Foreign peoples were brought in to resettle the site, a new fortress was built upon Mt. Zion, and a garrison of troops was left in it to rule the city in the name of the King." At times, it seems, Antiochus thought of establishing and requiring the worship of himself as a god."

The orgy of persecution became intensified as its proceeded. There is always, in any society, a minority whose instancts rejoice in the permission to persecute, it is a release from civilization. The agents of Antiochus, having put an end to all visible expression of Judaism in Jerusalem, passed like a searching fire into the towns and villages. Everywhere they gave

the people a choice between death and participation in Hellenic worship, which included the eating of sacrificial swine." All synagogues and Jewish schools were closed. Those who refused to work on the Sabbath were outlawed as rebels. On the day of the Bacchanaha the Jews were compelled to deck themselves with ivy like the Greeks, to take part in the processions, and to sing wild songs in honor of Dionysus. Many Jews conformed to the demands, waiting for the storm to pass. Many others fled into caves or mountain retreats, lived on clandestine gleanings from the fields, and resolutely carried on the ordinances of Jewish life. The Chasidim exculated among them, preaching courage and resistance. A detachment of royal troops, coming upon some caves in which thousands of Jews- men, women, and children- were hiding, ordered them to come forth. The Jews refused, and because it was the Sabbath, they would not move the stones that might have blocked the entrance to the caves. The sokliers attacked with fire and sword, killing many of the refugees and asphyxiating the remainder with smoke "Women who had circumcized their newborn sons were east with their infants over the city walls to death." The Greeks were surprised to find the strength of the old faith; not for centuries had they seen such loyalty to an idea. The stories of martyrdom went from mouth to mouth, filled books like the First and Second Maccabees, and gave to Christianity the prototypes of its marryes and its marry rology. Judaism, which had been near assimilation, became intensified in religious and national consciousness, and withdrew into a protective isolation.

Among the Jews who in those days fled from Jerusalem were Mattathias—of the family of Hasmonat, of the tribe of Aaron—and his five sons—Johannan Caddis, Simon, Judas, Eleazar, and Jonathan. When Apelles, an agent of Ant ochus, came to Modin, where these six had sought refuge, he summoned the inhabitants to repudiate the Law and sacrifice to Zeus. The aged Mattathias came forward with his sons and said: "Even should all the people in the kingdom obey the order to depart from the faith of their fathers, I and my sons will abide by the Covenant of our ancestors." As one of the Jews approached the altar to make the required sacrifice Mattathias slew him, and slew also the King's commissioner. Then he said to the people: "Whoever is zealous for the Law, and wishes to support the Covenant, let him follow me." Many of the villagers retired with him and his sons to the mountains of Ephraim; and there they were joined by a small band of young rebels, and by such of the Chasidim as were still alive.

Soon afterward Martathias died, having designated as captain of his band

his son Judas, called Maccabee.* Judas was a warrior whose courage equaled his piety, before every battle he prayed like a saint, but in the hour of battle "he was like a lion in his rage." The little army "lived in the mountains after the manner of beasts, feeding on herbs." Every now and then it descended upon a neighboring village, killed backsliders, pulled down pagan altars, and "what children soever they found uncorcumenzed, those they circumcized valiantly." These things being reported to Antrochus, he sent an army of Syrian Greeks to destroy the Maccabean force. Judas met them in the pass of Emmaus; and though the Greeks were trained mercenaries fully armed, and Judas' band was poorly armed and clad, the Jews won a complete victory (166). Antiochus sent a larger force, whose general was so confident that he brought slave merchants with him to buy the Jews whom he expected to capture, and posted in the towns the prices that he would ask." Judas defeated these troops at Mizpah, and so decisively that Jerusalem fell into his hands without resistance. He removed all pagan altars and ornaments from the Temple, cleansed and rededucated it, and restored the ancient service amid the acclaim of the returning orthodox Jews (164).†

As the regent Lysias advanced with a new army to recapture the capital, the news came-this time true that Antischus was dead (163). Desiring to be free for action elsewhere, Lysias offered the Jews full religious freedom on condition that they lay down their arms. The Chandim consented, the Maccabeans refused, Judas announced that Judea, to be safe from further persecutions, must achieve political as well as religious liberry. Intorseated with power, the Maccabeans now took their turn at persecution, pursuing the Hellenzing faction vengefully not only in lerusalem but in the cities that bordered the frontier." In 161 Judas defeated Nicanor at Adasa, and strengthened himself by making an alliance with Rome, but in the same year, fighting against great odds at Elasa, he was slain. His brother Jonathan carried on the war bravely, but was himself killed at Acco (143). The only surviving brother, Simon, supported by Rome, won from Demetrius II, in 142, an acknowledgment of Judean independence. By popular decree Simon was appointed both high priest and general, and as these offices were made hereditary in his family, he became the founder of the Hasmonean dynasty. The first year of his reign was counted as the beginning of a new era, and an issue of coinage proclaimed the heroic rebitth of the Jewish state.

† The assisters of this Rededication (Hamilekah) is said celebrated in nearly every Jewish horac.

CHAPTER XXV

Egypt and the West

L THE KINGS' REGISTER

FIE smallest but richest morsel of Alexander's legacy was allotted to I the ablest and wisest of his generals. With characteristic loyaltyperhaps as a visible sanction of his authority-Ptolemy, son of Lagus, brought the body of the dead king to Memphis, and had it entombed in a sarcophagus of gold.* He brought with him also Alexander's occasional mistress Thais, married her, and had by her two sons. He was a plain, blunt soldier, capable both of generous feeling and of realistic thinking. While other inheritors of Alexander's realm spent half their lives in war. and dreamed of undivided sovereignty, Ptolemy devoted himself to consolidating his position in an alien country, and to premoting Fgyptian agriculture, commerce, and industry. He built a great fleet, and made Egypt as secure against navitl attack as nature had made it almost unassulable by land. He helped Rhodes and the Leagues to preserve their independence of Macedon, and so won the tale of Soter. Only when, after eighteen years of labor, he had firmly organized the political and economic life of his new realm did he call himself king (305). Through him and his successor Greek Egypt established its rule over Cyrene, Crete, the Cyclades, Cyprus, Syria, Palestine, Phoemeia, Samos, Lesbos, Samothrace, and the Hellespont. In his old age he found time to write astonishingly truthful commentaries on his campaigns, and to establish, about 290, the Museum and Labrary that were to make the fame of Alexandria. In 185, feeling his eighty-two years, he appointed his second son, Ptolemy Philadelphus, to the throne, yielded the government to hun, and took his place as a subject in the young king's court. Two years later he died.

Already the fertile valley and delta had poured great wealth into the royal treasury. Prolemy I, to give a dinner to his friends, had had to borrow their silver and rugs; Proteiny II spent \$2,500,000 on the feast that climaxed his coronation. The new Pharaoh was a convert to the philoso-

Prolemy Ploladelphus had the saccophagus removed to Alexandera. Prolemy Cocces theired down the gold for his the, and exposed the moreal remains of Alexander in a glam coffin.

phy of Cyrene, and was resolved to enjoy each monochronos bedoneevery pleasure that the moment gave. He are himself into obesity, tried a variety of mistresses, repudiated his wife, and finally married his sister Arsmoe.' The new queen ruled the Empire and managed its wars while Prolemy II reigned among the chefs and scholars of his court. Following and improving upon the example of his father, he invited to Alexandria as his guests famous poets, savants, critics, scientists, philosophers, and artists, and made his capital beautiful with architecture in the Greek style. During his long reign Alexandria became the literary and scientific capital of the Mediterranean, and Alexandrian brerature flourished as it would never do again. Nevertheless Philadelphus was unhappy in his old age, his gout and his cares increased with the extent of his wealth and his power. Looking out from his palace window he saw and envied a beggar who lay at ease in the sun on the harbor dunes, and he mourned, "Alas, that I was not horn one of these!" Haunted by the fear of death, he sought in the lore of Egyptian priests the magic clixir of eternal life."

He had so enlarged and lavishly financed the Museum and Library that later bistory named him as their founder. In 307 Demetrius of Phalerum, expelled from Athens, had taken refuge in Egypt. Ten years later we find him at the court of Ptolemy I. It was he, apparently, who suggested to Prolemy Soter that the capital and the dynasty might be made illustrious by establishing a Museum-i.e., a House of the Muses-i.e., of the arts and sciences-which would rival the universities of Athens. Inspired, probably, by Aristotle's industry in collecting and classifying books, knowledge, animals, plants, and constitutions. Demetrus appears to have recommended the crection of a group of buildings capable not only of sheltering a great collection of books, but also of housing scholars who would devote their lives to research. The plan appealed to the first two Ptolemies, funds were provided, and the new university slowly took form near the royal palaces. There was a general mess hall, where the scholars seem to have had their meals, there was an exedra, or lecture ball, a court, a closser, a garden. an astronomical observatory, and the great Library. The head of the entire institution was technically a priest, since it was formally dedicated to the Muses as actual goddesses. Living in the Museum were four groups of scholars astronomers, writers, mathematicians, and physicians. All of these men were Greeks, and all received a salary from the royal treasury. Their function was not to teach, but to make researches, studies, and experiments. In later decades, as students multiplied about the Museum, its members undertook to give lectures, but the Museum remained to the end an

Institute for Advanced Studies rather than a university. It was, so far as we know, the first establishment ever set up by a state for the promotion of literature and science. It was the distinctive contribution of the Prolemes and Alexandria to the history of civilization.

Ptolemy Philadelphus died in 246, after a long and largely beneficent reign. Ptolemy III Euergetes (Well-Doer) was another Thothmes III, intent on conquering the Near East; he took Sardis and Babylon, marched as far as India, and so effectually disorganized the Seleucid Empire that it crimbled at the touch of Rome. We shall not follow the record of his wars, for though there is drama in the details of strife, there is a dreary eterrity in its causes and results, such history becomes a menial attendance upon the vicissitudes of power, in which victories and defeats cancel one another into a resounding zero. Euergetes' young wife Berenice gave thanks for his successes by dedicating a lock of her hair to the gods; the poets celebrated the story, and the astronomers landed her to the skies by naming one of the constellations Coma Berenices—Berenice's Hair.

Prolemy IV Philopstor so loved his father that he mitated his wars and his triumphs. But his victory over Antiochus III at Raphia (217) had been won with native troops—their first use by any Ptolemy; and the Egyptians, now armed and conscious of their strength, began from this time onward to break down the authority of the Greeks on the Nile. Philopator gave himself to amusement, spent much time on his spacious pleasure boat, introduced the Bacchanalia into Egypt, and half persuaded himself that he was descended from Dionysus. In 205 his wife was killed by his mistress, and shortly afterward Philopator himself passed away. In the ensuing chaos Philip V of Macedon and Antiochus III of Seleucia were about to dismember and absorb Egypt when Rome—with which the second Ptolemy had made a treaty of friendship—entered upon the scene, defeated Philip, sent Antiochus packing, and made Egypt a Roman protectorate (205).

IL SOCIALISM UNDER THE PTOLEMIES

By far the most interesting aspect of Ptolemaic Tgypt is its extensive experiment in state socialism. Royal ownership of the land had long been a sacred custom in Egypt, the Phamoh, as king and god, had full right to the soil and all that it produced. The fellah was not a slave, but he could not leave his place without the permission of the government, and he was required to turn over the larger part of his crops to the state. The Ptole-

mies accepted this system, and extended it by appropriating the great tracts. which, under previous dynasties, had belonged to the Egyptian nobles or priests. A great bureaucracy of governmental overseers, supported by armed guards, managed all Egypt as a vast state farm.' Nearly every peasant in Egypt was told by these officials what soil to till and what crops to grow, his labor and his animals could at any time be requisitioned by the state for mining, building, hunting, and the making of canals or roads; his harvest was gauged by state measurers, registered by the scribes, threshed on the royal threshing floor, and conveyed by a living chain of fellahs into the granaries of the king. There were exceptions to the system: the Ptolemies allowed the farmer to own his house and garden, they resigned the erries to private property; and they gave a right of leasehold to soldiers whose services were rewarded with land. But this leasehold was usually confined to areas which the owner agreed to devote to vineyards, orchards, or olive groves, it excluded the power of bequest, and might at any time be canceled by the king. As Greek energy and skill improved these eleruchic (shareholders') lands, a demand arose for the right to transmit the property from father to son. In the second century such bequest was permutted by custom, but not by law; in the last century before Christ it was recognized by law, and the usual evolution from common property to private property was complete.

Doubtless this system of socialism had been evolved because the conditions of tillage in Egypt required more co-operation, more unuson of action in time and space, than individual ownership could be expected to provide. The amount and character of the crops to be sown depended upon the extent of the annual anundation, and the efficiency of irrigation and drainage; these matters naturally made for central control. Greek engineers in the employ of the government improved the ancient processes, and applied a more scientific and intensive agriculture to the land. The ancient shaduf was replaced by the noria, a large wheel sometimes forty feet in diameter, equipped with buckets hanging freely on the interior ran, at the top of the revolution each bucket was ulted by an obstructing bar, and empried its contents into an irrigation reservoir, better still, the "screw of Archimedes" and the pump of Cresibius* raised water with a speed unknown before the Ptolemies." The centralization of economic management in the hands of the government, and the institution of forced labor, made possible great public works of flood control, road construction, irrigation, and building, and prepared the way for the engineering feats of

^{*} See Chap. XXVII below,

Rome. Prolemy II drained Lake Moeris, and turned its bed into a great tract of fertile land for distribution among the soldiers. In 185 he began to restore the canal from the Nile near Heliopolis to the Red Sea near Suez; Pharnoh Necho and Darius I had built and rebuilt this, but twice the shifting sands had choked it up, as in a century they would do again.

Industry operated under similar conditions. The government not only owned the mines, but either worked them itself, or appropriated the ore." The Ptolemies opened up valuable gold deposits in Nubia, and had a stable gold comage. They controlled the copper mines of Cyprus and Sinai. They had a monopoly of oil-derived not from the soil but from plants like linseed, croton, and sesame. The government fixed, each year, the amount of land to be sown to such plants; it took the whole produce at its own price; it extracted the oil in state factories through great beam presses worked by serfs; it sold the oil to retailers at its own price, and excluded foreign competition by a heavy rarulf, its profit ranged from seventy to three hundred per cent." Apparently there were similar governmental subsidies in salt, natron (carbonate of soda used as soap), incense, papyrus, and rextiles; there were some private textile factories, but they had to sell all their product to the state." Minor industries were left in private hands; the state merely licensed and supervised them, bought a large share of their output at fixed prices, and taxed a good part of the profits into the toyal treasury. Handicrafts were carried on by ancient guilds, whose members were by tradition bound to their trade, their village, even to their domicile." Industry was well developed, chariots, furniture, terra corta, carpets. cosmetics were produced in abundance, glass blowing and the weaving of linen were Alexandrian specialnes. Invention was more advanced in Prolemate Egypt than in any economy before imperial Rome's, the screw chain, the wheel chain, the cam chain, the rarchet chain, the pulley chain, and the screw press were all in use;" and the chemistry of dves had progressed to the point of treating cloths with diverse reagents which brought forth, from immersion in one dye, a variety of fast colors." In general the factories of Alexandria were worked by slaves, whose low cost of maintenance enabled the Ptolemies to undersell in foreign trade the products of Greek handicraft.**

All commerce was controlled and regulated by the government; retail traders were usually state agents distributing state goods." All caravan toutes and waterways were owned by the state. Proleiny II introduced the camel into Egypt, and organized a camel post to the south; this carried only governmental communications, but these included nearly all the com-

mercial correspondence of the country. The Nile was busy with passenger and freight traffic, apparently under private management subject to state regulation." For the Mediterranean grade the Prolemies built the largest commercial fleet of the tune, with vessels of three hundred tons burden." The warehouses of Alexandria invited world trade, its double harbor was the envy of other cities; its lighthouse was one of the Seven Wonders.* The fields, factories, and workshops of Egypt supplied a great surplus, which found markets as far east as China, as far south as central Africa, as far north as Russia and the British Isles. Egyptian explorers sailed down to Zanzibar and Somaliland, and told the world about the Troglodytes who hved along the east African coast on sea food, ostriches, carrots, and roots." To break the Arab hold on Indian trade with the Near East, Egyptian ships sailed directly from the Nile to India. Under the wise encouragement of the Ptolemies Alexandria became the leading port of reshipment for Eastern merchandise destined for the markets of the Mediterranean.

This flowering of commerce and industry was quickened by excellent banking conveniences. Payment in kind survived to some degree, as a legacy from ancient Egypt, and the grain of the royal treasures was used as part of the bank reserve, but deposits, withdrawals, and transfers of grain might be made on paper instead of being physically performed. Beside this modified barrer rose a complex money economy. Banking was a government monopoly, but its operations might be delegated to private firms. Bills were paid by drafts on bank balances, banks lent money at interest, and paid the accounts of the royal treasury. The central bank, at Alexandria, had branches in all the important towns. Never in known history had agriculture, industry, commerce, and finance reached so rich, so unified, and so brotal a development.

The masters and beneficiaries of this system were the free Greeks of the capital. At the head of all was the Pharaoh-god king. From the viewpoint of the Greek population the Ptolemy was truly a Soter or Savior, a Euergetes or Benefactor; he gave them a hundred thousand places in the bureaucracy, endless eco-

^{*}Sostrams of Cn dus designed it for Prolein's II, at a cost of eight hundred talents (about \$2,400,000 ** It rose in several setbacks to a beight of four hundred feet, it was covered with white marble and adorned with sculprures in marble and bronze, above the pulared copola that continued the light rose a twenty-one-foot scattle of Pose don. The flame came from the burning of resinous wood and was made visible, probably by convex metal mirrors, to a discance of therey-eight index.** The scrucius was completed in 179 B.C., and was destroyed to the thereenth convery AD. The shand of Phatos, on which it stood, is now the Rai-et-Tot quarter of Alexandria, the site of the lighthrose has been covered by the sea.

nomic opportunities, unprecedented facilities for the life of the mind, and a wealthy court as the source and center of a luxurious social life. Nor was the king an incalculable despot. Fgyptian tradition combined with Greek law to build up a system of legislation which borrowed from, and improved upon, the Athenian code in every respect except treedom. The edicts of the king had full legal force, but the cities enjoyed considerable self-government, and the Egyptian, Greek, and Jewish population lived each under its own system of law, chose its own magistrates, and pled before its own courts." A Turin papyrus gives us the record of an Alexandrian lawshat, the issues are precisely defined, the evidence is carefully presented, precedents are summarized, and the final judgment is given with judicial impartiality. Other papyri preserve Alexandrian wals, and reveal the antiquity of lega, forms. "This is the will of Peistas the Lycian, son of X, of sound mind and debocrate intention."

The Proleman was the most efficiently organized government in the Hellenstic world. It took its national form from Fgyp, and Persia, its reuncipal form from Greece, and passed toers on to lo perial Rome. The country was divided into nomes or provinces, each administered by appointers of the king. Nearly all these officials were Greek. The idea of Alexander, that Greek and Opental or kgyptian should ave and mingle on equal terms, was forgotten as uninerative, the valley of the Nile became frankly a conquered and. The Greek oversears brought an advanced technology and management to the economic life of Egypt, and enormously expanded the wealth of the nation, but they took the increase. The state charged high prices for the products which it controlled, and barred compension with a tariff wall, hence olive oil that cost twenty-one drachmas in Deios cost fifty two in Alexandria. Everywhere the government took rentals, taxes, customs, and tools, sometimes labor and life itself. The peasant paid a fee to the state for the right to keep cattle, for the fodder that he fed them, and for the privilege of grazing them on the common pasture land. The private owner of gardens, vineyards, or orchards paid a sixth, under Prolemy II a half-of his produce to the state." All persons except soldiers, priests, and government officials paid a poll tax. There were taxes on salt, legal documents, and bequests, a five per cent tax on centals, a ten per cent tax on sales, a twenty five per cent levy on all fish eaught in Egyptian waters, a toll on goods passing from village to town, or along the Nile, there were high export as well as import duties at all Egyptian ports, there were special taxes to maintain the fleet and the aghthouse, to keep the municipal physicians and police in good humor, and to buy a gold crown for every new king;" nothing was overlooked that comis fatten the state. To keep track of all taxable products, income, and transactions the government maintained a swarm of scribes, and a vast system of personal and property registration, to collect the taxes it farmed them out to specialists, supervised their operations, and held their possessions as security till

the returns were in. The total revenue of the Ptolemas, in money and kind, was probably the greatest go acred by any government between the fail of Persu and the ascendancy of Rome.

III, ALEXANDRIA

Most of this wealth came to Alexandria. The nome capitals and a few other towns were also prosperous, with paved and I ghred streets, police protection, and a good water supply, but nothing quite so "modern" as Alexandrai had ever been seen before. Strobo describes it in the first century A.D. as over three majes long and a mile wide, Pliny reckons the city wall as fifteen it ies in length." Dinocrates of Rhodes and Soxtratus of Childus laid out the city on the rectangular plan, with a central accuse one hundred feet wide running from east to west, crossed by an equality wide avenue from north to south. Luch of these thorsughfares, and probably some others, was well lighted at night, and was kept cool during the day by mile after nale of shaded columnades. Of the four quarters into which the main arrenes divided the city the westernmest, Rhincotis, was occupied chally by Lgyphans, the northeast portion formed the Jewish en arter, the southeast corner, or Bruchemin, contained the royal palace, the Museum, the Library, the tombs of the Prolemics, the sarcophagas of Alexander (the Hôrel des lavahues of the age), the arsenal, the chief Greek temples, and roany spacious parks. One park had a portico six hundred feet in length, another contained the myn zoolagical collection. In the center of the city were the administrative buildings, the government storeheuses, the courthouse, the main gyrmasium, and a toousand shops and hazaars. Ontside the gates were a stadum, a hippodrome or race track, an amphirheater, and a vast cemetery known as the Secropolis, or City of the Dead. Along the beach ran a succession of bathing establishments and resorts. A dike or mole, called Heptistadium because it was seven stadia long, connected the eary with the island of Pharos, and made two harbors out of one. Behind the city lay Lake Marcutis, which provided ports and or rets for the truffe on the Nde, here the Pto emes kept their pleasure boats and took their royal ease.

The population of Alexandria about 200 a.C. was as varied as in a modern metropy list from four to five hundred thousand Macedonians, Greeks,

^{*} Hardly anything but a few cataconios and a lars have been preserved from ancient Alexandria. Its remains be directly under the present capital, making excavation expensive, probably they have made beneath the water level, and parts of the old city have been covered by the Meditestantam.

Fgyptians, Jews, Persians, Anatolians, Syrians, Arabs, and negroes. ** The growth of commerce had swe, ed the lower middle class, and filled the cosmopolitan capital with a busy, talkative, hitigious crowd of shopkeepers and traders, always on the alert for a bargain, and with no pre-odice in favor of nonesty. At the top were the Macedonians and the Greeks, living in such luxury as astonished the Roman ambassadors who were appointed to the court in 273. Athenaeus recounts the delicacies that burdened the tables and digestions of the master class," and Herodas writes "Alexandria is the house of Aphrodite, and everything is to be found there-wealth, playgrounds, a large army, a serene sky, public displays, philosophers, precious metals, fine young men, a good royal house, an academy of science, exquisite wines, and beautiful women." Alexandria's poets were discovering the literary value of virginity, and its navelists would soon trake it the theme and final casualty of many a tale, but the city was notorious for the generosity of its women and the number of its stepdaughters of juy, Polybius conplained that the finest private homes in Alexandria belonged to courtesans." Women of all classes moved freely through the streets, shopped in the stores, and mingled with the men. Some of them made a name for themselves in literature and scholarship." The Macedonian queens and ladies of the court, from Ptolemy II's Arsinne to Antony's Cleopatra, took an active part in politics, and served policy rather than love with their crimes, but they retained sufficient charm to arouse the men to unprecedented gulantry, at least in poetry and prose, and brought Into Alexandrian society an element of feminine influence and grace unknown in classic Greece.

Probably a fifth of Alexandria's population was Jewish. As far back as the seventh century there had been Hebrew sertlements in Egypt, many Jewish traders had entered in the wake of the Persian conquest. Alexander had urged Jewis to emigrate to Alexandria, and had, according to Josephus, offered them equal political and economic rights with the Greeks." Prolemy I, after taking Jerusalem, carried with him into Egypt thousands of Jewish captives, who were freed by his successor: "at the same time he invited well-to-do Hebrews to establish their homes and husinesses in Alexandria." By the beginning of the Christian era there were a million Jews in Egypt." A large number of these lived in the Jewish quarter of the capital. It was no glietto, for the Jews were free to bye in any quarter but the Brucheum, which was restricted to official families and their servi-

^{*}The population of Alexandrio in 1927 was 570,000.

tors. They chose their own gerousia or senate, and followed their own worship. In 169 the high priest Onias III built a great temple at Leontopolis, a suburb of Alexandria, and Ptolemy VI, his personal friend, assigned the revenues of Heliopolis for its maintenance Such temples served as schools and meeting places as well as for religious services, hence they were called by the Greek speaking Jews synagogia, i.e., places of assembly. Since few Egyptian Jews after the second or third generation in Egypt knew Hebrew, the reading of the Law was followed by an interpretation in Greek. Out of these explanations and applications rose the custom of preaching a sermon on a text; and out of the ritual came the first forms of the Carbolic Mass."

This religious and racial separation combined with economic rivalries to arouse, towards the end of this period, an anti-Semitic movement in Alexandria. The Greeks and I gyptimis alike were habituated to the union of church and state, and frowned upon the cultural independence of the Jews, furthermore, they fest the competition of the Jewish artisan or businessman, and resented his energy, tenacity, and skill. When Roise began to import I gyptian grain it was the Jewish merchants of Alexandria who carned the cargoes in their fleets." The Greeks, perceiving their failure to Hellenize the Jews, feared for their own future in a state where the majority remained persistently Oriental, and bred so vigorously. Forgetting the legislation of Pericles, they complained that the Jewish law forbade mixed marriages, and that the Jews for the most part kept to themselves. Anti-Semme hierarure multiplied. Manetho, the Egyptian historian, gave ourrency to the story that the Jews had been expelled from Lgypt, centuries back, because they had been afflicted with scrofula or leprosy." Feeling mounted on both sides until, in the first century of the Christian era, it broke our into destructive violence.

The Jews did what they could to allay the resentment against their amusia—their social separation and their success. Though they clung to their religion they spoke Greek, studied and wrote about Greek literature, and translated their sacred books and their histories into Greek. To acquaint the Greeks with the Jewish religious tradition, and to enable the Jewish scholars began, probably under Prolemy II, a Greek translation of the Hebrew Bible. The kings favored the undertaking in the hope that it would make the Jews of Egypt more independent of Jerusalem, and would lessen the flow of Jewish-Egyptian funds to Palestine. Legend told how Ptolemy Plaladelphus, at the suggestion of Demetrius of Phalerum,

to translate the scriptures of their people; how the King had lodged each of them in a separate room on Pharos, and had kept them without inter-communication until each had made his own rendering of the Pentateuch, how all the seventy versions, when finished, agreed word for word, proving the divine inspiration of the text and of the translators; how the King rewarded the senolars with costly presents of gold, and how from these circumstances the Greek version of the Hebreu Bible came to be known as the bermenera kata tour hebdomekonta, the Interpretation according to the Seventy—in Latin, Interpretatio Septinaginta (se Semorum)—in a word, the "Septinagint" Whatever the process of translation, the Pentateuch seems to have appeared in Greek before the close of the third century, and the Prophetic books in the second." This was the Bible used by Philo and St. Paul.

The process of Hellenization in Tgypt failed as completely with the natives as with the Jews. Outside of Alexandria the I gyptians sullenly maintained their own religion, their own dress or midity, their own immemorial ways. The Greeks thought of themselves as conquerors, not as fellow men, they did not bother to build Greek eities south of the Delta. or to learn the language of the people, and their laws slid not recognize the marriage of an Egyptian with a Greek. Proleiny I tried to unite the Greek and native faiths by identifying Serapis and Zeus, later Ptoleimes encouraged the cult of then selves as gods to offer a common and convenient object of worship to their heterogeneous population, but those Egyptians who were not courting office paid little attention to these artificial cults. The Fgyptian priests, shorn of their wealth and power, and dependent for their sustenance upon grants of money from the state, waited patiently for the Greek wave to recede. In the end it was not Hellenism that won in Alexandras, but mysticism, now were laid the foundations of Neo Platonis n and the mediev of promissory cults that competed for the Alexandrian soul in the centuries that surrounded the birth of Christ Osiris as Serapis became the favorite god of the later Egyptians, and of many Egyptian Greeks, lsis regained popularity as the goddess of women and metherhood. When Christianity came neither the clergy nor the people found it impossible to change Isis into Mary, and Serapis into Christ.

The story was based upon a letter purposting to have been written by one Aristeas in the first century a.o. The letter was proved spurious by Hody of Oxford in 1684.

IV. REVOLT

The lesson of Ptolemaic socialism is that even a government may exploit. Under the first two Ptolemies the system worked reasonably well, great engineering enterprises were con pleted, agriculture was improved, marketing was brought into order, the overseers behaved with a modest measure of impistice and partiality, and though the exploitation of materials and men was thorough, its profits went in large degree to develop and adorn the country, and to finance its cultural life. Three factors ruined the experiment. The Ptolemies went to war, and spont more and more of the people's carnings upon armies, navies, and campaigns. After Poiladelphus there was a rapid deterioration in the quality of the kings, they are and drink and mated, and allowed the administration of the system to fall into the bands of rascals who ground every possible penny out of the poor. The fact that the exploiters were foreigners was never torgotten by the Figyptians, nor by the priests who dreamed of the deshpots of Figypt that their class had enjoyed before the Persan and Greek domination.

The Proteinare conception of socialism was essentially one of intensified production rather than of wide distribution. The feilah received enough of his product to keep him anye, but not enough to encourage him in his work or in the business of rearing a family. Generation after generation the government's exactions grew. The system of detailed national control became intolerable, like the rele wlessly watchful eye of a despotic parent The state lent seed corn to the peasant to plant his crop, and then be and him to the farm until the harvest was in. No peasant inight use any of his own product until al. his debty had been paid to the state. The fellah was patient, but even he began to gramble. By the second century a substantial part of the soil had been abandoned for lack of peasants to work it, the eleruchs or lessees of royal land could get no tenants to till it for them, they tried to do it themseives, but were not up to the task, gradually the desert crept back upon tivilization. In the gold mines of Nubia the slaves worked naked in dark and narrow galteries, in cramping positions, loaded with chains, and encouraged by the whip of the overseer, their food was poor, not even enough to keep them alive, thousands of them saccumbed from malnutration and fat gue, and the only wescome event in their lives was death." The common laborer in the factories received one obol (nine cents) a day, the skaled worker two or three. Every tenth day was a day of rest.

Complaints multiplied, and strikes grew more frequent: strikes among

the miners, the quarrymen, the boatmen, the peasants, the artisans, the tradesmen, even the overseers and the police, strakes seldom for better pay, since the toners had ceased to hope for this, but of simple exhaustion and despair. "We are worn out," says a papyrus record of one strike, "we will run away"- i.e., seek sanctuary in a temple." Nearly all the exploiters were Greeks, nearly ale the exploited were Lgyptians or Jews. The priests clandestinely appealed to the religious feenings of the natives, while the Greeks resented any concession made to Jews or Egyptians by the government. In the capital the populace was bribed by state bounties and spectacles, but it was excluded from the royal quarter, was watched by a large military force, and was allowed no voice in national affairs; in the end it became an irresponsible and violent mob." In 216 the ligs plians revolted, but were put down, in 189 they revolted again, and the mutiny continued for five years. The Ptolemes won for a time by the force of their army, and by rusing their contributions to the priests, but the situation had become appossible. The country had been milked to depletion, and even the

expleners felt that nothing remained.

Disintegration set in on every side. The Ptolemies passed from natural to unnatural vice, from intelligence to stupidity; they married with a freedoin and haste that forfested the esteem of their people, luxory unfitted them for war or government, at last even for thought. Lawlessness and dishonesty, incompetence and hopclessness, the absence of competition and of the stimulus that comes from ownership, lowered year by year the productivity of the land. Literature wanted, creative art Jied, after the third century Alexandria added bittle to either. The Egyptians fost respect for the Greeks, the Greeks, if such a thing can be believed, lost respect for themselves. Year by year they forgot their own language, and spoke a corrupt mixture of Greek and I gyptian, in ire and more of them married their sisters, after native custom, or married into I gyptian families and were absorbed, thousands of them worshiped I gyptian gods. By the second century the Greeks had ceased to be the domatiant rice even politically, the Prolemes, to preserve their authority, had ad speed the I gyptian faith and ritual, and had increased the power of the priests. As the kings sank into epicurean ease the elergy reasserted its leadership, and won back year by year the lands and privileges which the earlier Prolemies had taken away." The Roserta Stone, dated 196 a.c., describes the coronation ceremonies of Ptolemy V as toilewing almost completely the Egyptian forms. Under Prolemy V (203-181) and Prolemy VI (181-145) dynastic feuds absorbed the energies of the royal house, while Lgyptian agriculture and industry decayed. Order and peace were not restored until Caesar, as a mere meident in his career, took I gypt with hardly a blow, and Augustus made it a province of Rome (30 n.c.).

V. SUNSET IN SIGILY

The Heliconstic age faced east and south, and almost ignored the west. Cyrene prospered as usual, having learned that it is better to trade than to war, out of it, in this period, came Calliniachus the poet. Fratoschenes the philosopher, and Carneodes the philosopher. Circle Italy was worried and weakened by the double challenge of multiplying natives and rising Rome, while Sicily fixed in daily tear of the Carthaganan power. I weary-three years after the coming of Timoleon a rich man's revolution suppressed the Syracusan democracy, and put the government into the hands of six hundred obgarchie families (400). These divided into factions, and were in turn overthrown by a radical revolution in which four thousand persons were labed and six thousand of the well to do were sent into banishment. Agathocles won dictatership by promising a cancellation of debts and a redistribution of the land. So periodicany, the concentration of wealth becomes extreme, and gets righted by taxation or by revolution.

After forty-seven years of chaos, during which the Carthaginians repeatedly invaded the island, and Pyrrhus came, won, lost, and went, Syracuse by unmerited good fortune fell into the power of Hieron II, the most beneficent of the many dicrators turown up by the passions and torholence of the Sicilian Greeks. Therein rined for fifty four years, says the ast cashed Polybias, "without killing, exiting, or injuring a single citizen, which indeed is the most remarkable of all things." Surrounded by all fae means of haziry, he led a modest and temperate life, and Eved to the age of nmety. On several occasions he wished to resign his authority, but the people begged him to retain it " He had the good judgment to make an alliance with Rome, and thereby kept the Carthagonans at bay for balf a century. He gave the city order and peace, and considerable freedom, he executed great public works, and without oppress ve taxation left a full treasury at his death. Under his protection or patronage Arch medes brought ancient science to its culmination, and Theocratis sang, in the last perfect Greek, the loveliness of Sicily and the expected bounty of its king. Syrucuse became now the most populous and prosperous city in Heilas."

Fileron at used his leisure by watching his artisans, under the supervision of Archanedes, construct for him a pleasure boat that en nodied all the shipbuilding art and science of antiquity. It was buf a statium (40% feet) in length, it had a sport deck with a gymnasium and a large marble bath, and a shaded garden deck

with a great variety of plants, it was manned by six hundred seamen in twenty groups of oars, and could carry in addition three hundred passengers or marines, it had sixty cabins, some with mosaic fliors, and doors of ivory and precious woods, it was elegantly furnished in every part, and was adorned with paintings and statuary. It was protected against attack by armor and turrets, from each of the eight turrets great beams extended, with a hole at the end through which large stones could be dropped upon enems vessels, through at its length Archimedes constructed a great catapiale capable of hurling atones of three talents' weight (174 pounds), of arrows twelve culats, eighteen feet) long. It could earry 1000 tons of cargo, and itself we ghed a thousand tons. Heron had hoped to use it in regular service between by racuse and Alexandra, but trading it too large for his own docks, and extravagantly expensive to manual, he filled a with corn and tish from Sully's abounding fields and seas, and sent it, vessels and contents, as a gift to Egypt, which was saffering an unusual dearth of corn.

Hieron died in 1.6. He had wished to establish a democratic constitution before his death. But his daughters prevailed upon his dotage to bequeath his power to his grandson." Hierony mus turned out to be a weakling and a scoundrel, he abandoned the Roman alliance, received envoys from Carthage, and permitted them to become in effect the rulers of Syracose. Rome, not abounding in corn, prepared to right Carthage for the wealth of an island that had never learned to govern uself. All the Viediterranean world, like a decaying truit, prepared to fall into the hands of a greater and more ruthless conqueror than Greek history had ever known.

Books

I. LIBRARIES AND SCHOLARS

TN every field of Hellenistic life except the drama we find the same ▲ phenomenon Greek civilization not destroyed but dispersed. Athens was dying, and the Greek settlements of the west, barring Syracuse, were in decay, but the Greek cities of Egypt and the East were at their material and cultural zenith. Polybuls, a man of wide experience, historical knowledge, and eareful judgment, spoke, about 145 B.C., of "the present day, when the progress of the arts and sciences has been so rapid", the words have a familiar rang. Through the dissemination of Greek as a common tongue a cultural unity was now established which would last in the eastern Mediterranean for nearly a thousand years. All men of education in the new empires learned Greek as the medium of diplomacy, literature, and science, a book written in Greek could be understood by almost any educated non-Greek in Egypt or the Near Last. Men spoke of the oikoumene, or inhabited world, as one civilization, and developed a costnopolitan outlook less stanulating but perhaps more sensible than the proud and narrow nationalism of the city-state.

For this enlarged audience thousands of writers wrote hundreds of thousands of books. We know the names of cleven hundred Hellenistic authors, the unknown are an incalculable multitude. A cursive script had developed to facilitate writing, indeed, as early as the fourth century B.C. we hear of systems of shorthand whereby "certain vowels and consonants can be expressed by strokes placed in various positions." Books were written on Egyptian papy rus until Prolemy VI, hoping to check the growth of the library at Pergaman, forbade the export of the material from Egyptications of sheep and calves, which had long been used for writing purposes in the East, and soon "parchment," from the city and the name of Pergamum, rivaled paper as a vehicle of communication and literature.

Books having grown to such numbers, libraries became a necessity. These had existed before as the luxury of Egyptian or Mesoporanian

potentates; but apparently Aristotle's library was the first extensive private collection. We may conjecture its size and worth from the fact that he paid \$18,000 for that part of it which he hought from Plate's successor Spensippus. Aristotle bequeathed his books to Theophrastos, who bequearhed them (28-) to Neleus, who took them to Scepsis in Asia Minor, where they were buried, says tradition, to escape the literary cupidity of the Pergamene kings. After almost a century of this damaging interment the volumes were sold about too B.C. to Apeilicon of Teos, an Atheman philosopher. Apelicon found that many passages had been eaten away by the damp, he made new copies, filling in the gaps as intelligently as he could, this may explain why Aristotle is not the most fascinating philosopher in history. When Sylla captured Athens (86) he appropriated Apellicon's library and transported it to Rome. There the Rhodian scholar Andronicus reordered and published the texts of Aristotle's works'-an event almost as stimulating in the history of Roman thought as the rediscovery of Aristotie was to prove in the awakening of medieval philosophy.

The adventures of this collection suggest the debt that literature owes to the Prolemies for establishing and maintaining, as part of the Museum, the famous Alexandrian Library. Prolemy I began it, Ptolemy II completed it, and added a smaller library in the suburban sanctuary of Serapis. By the end of Philadelphus' reign the number of rolls had reached 532,000 -making probably roo,000 books in our sense of this word." For a time the enlargement of this collection rivaled the strategy of power in the affections of the Egyptian kings. Ptolemy III ordered that every book brought to Alexandria should be deposited with the Library; that copies should be made, the owner to receive the copy, the Library to retain the original. The same autocrat asked Athens to lend him the manuscripts of Aesebylus, Sophoeles, and Euripides, and deposited \$90,000 as security for their return, he kept the originals, sent back comes, and told the Athemans to keep his money as a forfest." The ambition to possess old books became so widespread that men arose who specialized in dyeing and spoiling new manuscripts to sell them as antiquines to collectors of first editions."

The Library soon eclipsed the rest of the Museum in importance and interest. The office of librarian was one of the lughest in the king's gift, and included the obligation of tutoring the crown prince. The names of these abrarians have been preserved, with variations, in different manuscripts, the latest list' gives, as the first six, Zenodotus of Ephesus, Apollonius of Rhodes, Fratosthenes of Cyrene, Apollonius of Alexandria, Aristophanes of Byzantium, and Aristarchus of Samothrace, their diversity of

origin suggests again the unity of Hellenistic culture. Quite as important as these was the poet and scholar Callimachus, who classified the collection in a catalogue running to one hundred and ewenty rolls. We picture a corps of copyists, presumably slaves, making duplicates of precious origmals, and a nive of scholars separating the materials into groups. Some of these men wrote histories of various departments of literature or science. others edited definitive editions of the masterpieces, others composed commentaries on these texts for the enlightenment of any and posterity. Aristophanes of Byzantium effected a laterary revolution by separating the clauses and sentences of the ancient writings with capitals and marks of punctuation, and it was he who invented the accents that so disturb us in reading Greek. Zenodotus began, Anstophanes advanced, Aristarchus completed, the recension of the Hiad and the Odyssey, establishing the present text, and illuminating its obscurities in learned scholia. By the end of the third century the Museum, the Library, and their scholars had made Alexandria, in everything but philosophy, the intellectual capital of the Greek world.

Doubtless other Hellenstic cities had Libraries. Austrian archeologists have exhinted the remains of an ornate municipal library at Ephesus, and we hear of a great library being consumed in the destruction of Carthage by Sciplo. But the only one that evoked comparison with Alexandria's was that of Pergamum. The kings of this transient state looked with enlightened envy upon the cultural enterprises of the Proleums. In 106 Fumenes II established the Pergamene Labrary, and brought to its bills some of the finest scholars of Greece. The collection grew rapidly, when Antony presented it to Cleopatra to replace that part of the Alexandrian Labrary which was burned in the uprising against Caesar in 48 B.C., it pumbered some 200,000 rolls. Through this library, and the Attic taste of the Arralid kings, Pergamam became, towards the end of the Hellenisne pefind, the center of a purist school of Greek prose, which considered no word clean that had not come down from classic days. To the enthusiasm of these classicists we owe the preservation of the chef-d'ocuvres of Artic prose.

It was above all an age of intellectuals and scholars. Writing became a profession instead of a devotion, and generated cliques and coreraes whose appreciation of talent varied inversely as the square of its distance from themselves. Poets began to write for poets, and became artificial, scholars began to write for scholars, and became dull. Thoughtful men felt that the creative inspiration of Greece was nearing exhaustion, and that the

most lasting service they could render was to collect, shelter, edit, and expound the literary achievements of a bolder time. They established the methods of textual and literary criticism in almost all its forms. They tried to sift out the best from the mass of existing manuscripts, and to guide the reading of the people, they made lists of 'best horks," the "four hernic poers," the "nine historians," the 'ten lytic poets, ' the "ten orators," etc.' They wrote biographies of great writers and scientists, they gathered and saved the fragmentary data which are now all that we know concerning these men. They composed outlines of history, literature, drama, science, and philesophy," some of these "short cuts to knowledge, helped to preserve, some replaced and unwittingly obliterated the original works that they summarized. Saddened by the degeneration of Attic Greek into the Orientalized "pidgin" Greek of their time, Hellenistic scholars compiled dictionaries and grammars, and the Labrary of Alexandria, in the manner of the French Academy, issued edicts on the correct usage of the ancient tongue. Without their learned and patient "ant industry" the wars, revolutions, and eatastropt evof two thousand vears would have destroyed even those 'pregious minums' which have been transmitted to us as the shipwrecked legacy of Greece.

IL THE BOOKS OF THE JEWS

Through all the turnoil of the time the Jews maintained their traditional love of scholarship, and produced more than their share of the lasting literature of the age. To this period belong some of the finest portions of the Bibie. Near the close of the third century a Jewish poet (or poetess?) composed the lovely Song of Songs here is all the artistry of Greek verse from Sappho to Theoceans, but with something undiscoverable in any Greek author of the time-on intensity of imagination, a depth of feeling, and an idealist devotion strong enough to welcome the body, as well as the soul, of love and to turn the flesh itself into spirit. Partly in Jerusalem, mostly in Alexandria, partly in other cities of the eastern Mediterraneon, Hellenista, Jews wrote in Hebrew, Aramaic, or Greek isuen masterpieces as Feelesiastes, Daniel, part of Proverbs and Psalms, and most of the greater Apocryphy They composed histories like Chromeles, novelettes like Esther and Judgo, and dyls of family life like the Book of Tol it. The Soferon changed the Hel rew script from the old Assyrian to the square Syrian style, which has remained to this day." Since most of the Jews in the Near East now spoke Aramaic rather than Hebrew, the scholars explained the Scriptures in brief Aramaic Targums, or interpretations. Schools were opened for the study of the Torah, or Law, and the explanation of its moral code to growing youth; such explanations, commentaries, and disstrations, handed down from teacher to pupil across the generations, sup-

plied in a later age most of the material of the Talmud.

By the close of the third century the scholars of the Great Assembly had completed the editing of the older literature, and had closed the canon of the Old Testament," it was their judgment that the age of the prophets was ended, and that literal inspiration had ceased. The result was that many works of this epoch, full of wisdom and beauty, lost the chance of divine collaboration, and fell into the unfortunate category of Apocrypha. The two books of Esdras may owe something of their literary excellence to King James' translators; but these can hardly be credited with the touching account of how Esdras asked the angel Uniel to explain why the wicked prosper, the good suffer, and Israel is in bondage; to which the angel answers, in powerful samiles and yet simple speech, that it is not given to the part to understand or judge the whole.

The prologue of Feelesiasticus describes it as a Greek translation, completed in 132, of discourses written in Hebrew two generations before by the translator's grandfather, Jesus the son of Smach. This Joshua ben Smach was both a scholar and a man of affairs, after seeing something of the world through tray el he had settled down to make his home a school for students: and to them he delivered these essays on the wisdom of life." He denounces the rich Jews who have abandoned their faith to cut a better figure in the Gentile world, he warns youth against the courtesans who wait for it everywhere, and he offers the Law as still the best guide aimd the evils and pirfalls of the world. But he is no puritan. Unlike the Chasilim he has a good word to say for harmless pleasure, and he protests against the mystics who reject medicine on the ground that all maladies, having come from God, can be cared by God alone. The book is rich in epigrams, of which the most renowned brings together the rod and the child. "The number of whippings laid to his account," said Renan, "must be incalculable."4 Iz is a noble book, wiser and kinder than Euclesiastes.

The Old Testiment Apocrypha for hidden are those books that were each led from the Jewish canon of the Old Testiment as total product, but were rechard in the Roman Cathout Valgate are, the Latin translation, by St. Jeronte, of the Hebrew and Greek texts of the Bible. The chief O. T. Apocrypha are herlesiasticus, I and H. Esdras, and I and H. Maccabees. The spocalyptic (i.e., revealing) books are those that purport to contain prophetic divine revelations, such writings began to appear about 150 p.c., and continued into the Christian eta. Some apocalypses, I ke the Book of Enoch, are considered apocryphal and timeanouscal, others, like the Book of Revelation, are considered canonical.

In the twenty-fourth chapter of Ecclesiasticus we are told that "Wisdom is the first product of God, created from the beginning of the world." Here and in the first chapter of Proverbs are the earliest Hebrew forms of the doctrine of the Logos—Wisdom as a "demurge," or intermediate creator, delegated by God to design the world. This hypostatizing of Wisdom as personified intentigence becomes a dominating idea of Jewish theology in the last centuries before Christ. Alongside of it runs increasingly the conception of personal immortality. In the Book of Enoch, written apparently by several authors in Palestine between 170 and 66 s.c., the hope of heaven has become a vital need, the success of wicked power and the misfortunes of a pious and loval people could no longer be borne unless that hope might be entertained, without it life and listory seemed to be the work of Satan rather than of God. A Messiah will come who will establish the Kingdom of Heaven on earth, and will reward the virtuous with everlasting happiness after death.

In the Book of Daniel the whole terror of the age of Antiochus IV finds a voice. About 166, when the faithful had been persecuted to the death for their beliefs, and ever larger enemies were advancing upon the Maccabean band, one of the Chasidim, probably, undertook to rekindle the courage of the people by describing the sufferings and prophecies of Daniel in the days of Nebuchadrezzar in Babylon. Copies of the book passed secretly among the Jews; it was given out as the work of a prophet who had lived three hundred and seventy years before, had borne greater trials than any Jew under Antiochus, had emerged victorious, and had predicted a like triumph for his race. And even if the virtuous and faithful found indifferent fortune here, their reward would come at the Last Judgmene, when the Lord would welcome them into a heaven of unending happiness,

and plunge their persecutors into everlasting hell.

All in all, the extant Jewish writings of this period may be described as a mystic or imaginative literature of instruction, edification, and consolation. To the Jews of earlier ages life uself had been enough, and religion was not a flight from the world but a dramatization of morals by the poetry of faith; a powerful God, ruling and seeing all things, would reward virtue and punish vice in this existence on earth. The Captivity had shaken this belief, the restoration of the Temple had renewed it; it broke down under the bludgeoning of Antiochus. Pessanism now had a clear field; and in the writings of the Greeks the Jews found the most eloquent exposures of the injustices and tragedies of life. Meanwhile Jewish contact with Persian ideas of heaven and hell, of a struggle between good and evil,

and the final triumph of good, offered an escape from the philosophy of despair, and perhaps the ideas of immortality that had come down from Fgypt to Alexandria, and those that had animated the mysteries of Greece, co-operated to inspire in the Jews of the Greek and Roman periods that consoling hope which bore them up through all the vicissitudes of their Temple and their state. From these Jews, and from the Egyptians, Persians, and Greeks, the idea of eternal reward and ponishment would flow down into a new and stronger faith, and help it to win a disintegrating world.

III. MPNANDER

Like the other arts, the dramm enjoyed in this age its greatest quantitative prosperity. Every city, almost every third rate town, had its theater. The actors, better organized than ever, were in great depiand, enjoyed high fees, and fived with characteristic superiority to the metals of their time. Dramat six corrosped to turn our tragedies, but, whether by accident or good taste, tradition has covered them with ablivious alaba. The mond of Hellenistic Athens, like ours today, preferred the Eghthearted, lightheaded, sentamental, happy ending stories of the New Coinedy. Of this, too, only tragments remain, but we have some discouringing samples of it in the puferings of Phutus and Terence, who composed their plays by trans at mg and adapting Hellenistic comedies. The high concerns of state and soul that arnused Aristi phanes are in the New Comedy our aside as too perdous for the literary neck, usually the theme is domestic or private, and traces the devious roads by which women are led to generosity, and men nevertheless to mair many. Love enters upon its troumphant career as master of the boards, a thousand dansels in distress cross the stage, but achieve honor and wedlock in the end. The old phallic dress is abandoned, and the old phaloe bawdiness, but the story circles narrowly about the virginity of the leading lady, and virtue plays as small a role in it as in our daily press. Since the actors were masks, and the number of masks was lamted, the conne dramatist wove his plots of intrigue and mistaken identity around a few stock characters whom the audience was always delighted to recognize-the cruel father, the benevolent old man, the produgal son, the hencess mistaken for a poor girl, the bragging soldier, the clever slave, the flatterer, the parasite, the physician, the priest, the philosopher, the cook, the courtesan, the producess, and the pump.

The masters of this comedy of mannets in third-century Athens were Philemon and Menander. Of Philemon hardly anything survives except the echo of his renown. The Athensons liked him better than Menander, and gave him more prizes, but Philemon had ruised to high excellence the art of organizing a claque. Posterity, I sing ignored in the subsidy, reversed the judgment, and gave

the crown to Menander's bones. This Congreve of Arhens was a nephew of the fertile dramatist Alexis of Thurn, the paph of Theophrasms, and the friend of Epicurus, from them he scarned the secrets of drama, philosophy, and transpallity. He almost realized Aristotic's ideal he was handsome and neh, contemporated life with scremty and understanding, and took his pleasures like a gentleman. He was an meanstant layer, content to repay Glycera's devotion by touching her name with minoritativ. When Proteiny I myited him to Alexandria he sent Philemon in his stead, saying, "Philemon has no Glycera", Caycera, who had suffered much, rejoiced at having trian phed over a king." Thereafter, we are assured, he lived faithfully with her until, at the age of fifty two, he died of a crurip white swimming at the Piracus (292)."

His first play, as if autounting a new epoch, appeared in the year that followed Alexander's death. Thereafter he wrote one hundred and four cor icdes, eight of which won the first prize. Some four thousand lines remain, all in brief fragments except for a papy ray discovered in Figure in 1905, this contains half of roc I pureportes, or The Arbitrants, and has owered Menander's reputation We shall waste our reproaches if we compain that the themes of these plays are as monoronous as those of Greek sculpture, architecture, and pottery, we must remand ourselves that the Greeks judged a work not by the story it rold-which is a child's creerion but by the manner of its telling. What the Greek mind related in Menander was the next polish of his style, the philosophy concentrated in his wit, and so realistic a portraval of como en scenes that Aristophanes of Byzantai v askeo. 'O Memander, O I de, which of you matated the o ber?" In a world that had fallen furfeit to soubers nothing remaited, in Menander's view, but to contemplate laman affires as a spectra r indilgent but uninvolved He notes the various and vacillations of wor an, I'm concedes that the average wife is a vessing. The action of The Arburants turns in part upon a re-cetion of the double standard," and of course one play is about the virtuous printing who, I ke Dumas Lasty of the Carachas, refuses the man whom she loves in order to get him respectably marries to a profitable wife." I mes that are now proverbs appear in the fragments, like "Evo comm meations corrupt good manners" (quoted by St. Pane*), and "Conscience nules cowards of the bravest men"," some credit Menander with the original of Terence's famous inte-Homo aum, biomans rid a me attenum puro. I are a man, and consider mathing human to be aben to me.' Occasionally we come upon jewels of insight, as in "Everything that dies dies by its own corruption, all that in ures is within"," or in these rypical verses, prophetic of Mettander's early death.

Whom the gods love, the young, that man is blest Who, having viewed at ease this solemn show Of sun, stars, ocean, fire, doth quickly go Back to his home with calm uninjured breast.

Be life or short or long, 'tis manifest.

Thou ne'er wilt see things goodlier, Parmeno,
Than these, then take thy sojourn here as though.
Thou wert some parygoer or welding guest.
The sooner sped, the safeaer to thy rest.
Well-furms ied, foe to none, with strength at need,
Shalt thin return, while he who tarries late.
Foints on the road our-worn, with age oppressed,
Harassed by foes whom life's dull tuinalts breed,
Thus ill dies he for whom death long doth wait.*

IV. THEOCRITUS

When Philemon died (26x) Greek consedy, and in large measure Atherian literature, died with him. The theater flourished, but it produced no master-pieces that time or subclarship thought fit to preserve; and the repetition of old comedies—chiefly those of Menander and Philemon—more and more crowded out original productions. As the third century ended, the spirit of the guy society that had generated the New Comedy died away, and was replaced in Athers by the serious mood of the philosophical schools. Other cities, Alexandria in patticular, tried to transplant the dramatic art, but failed.

The great Library and the scholors whom it had attracted set the tone of Alexandrian interactic. Books had to meet the tastes of a learned and critical audience, sophist cated by science and history. Even poetry became crudite, and tried to cover up the poverty of its fancy with recondite allusions and subtle turns of phrase. Callinachus wrote dead hymns to dead gods, pretry epigrams that sparkled for a day, judicatous ralogies like The Lock of Berence, and a thidactic poem on Cauter f. littary which contained much learned lore from geography, mythology, and history, and one of the earliest lave stories in literature. Acontius, here of this tale, is incredit y handsone, and Cydippe is painfully beautiful, they fall in love at first sight, are opposed by their manney-moded parents, threaten so cide, half die of broken hearts, and finally end the remainte with marriage, this is the story that a in hop poets and novelests have told since then, and which a mill of more will tell. It must be added, however, that in one of his epigrams Callinachus returned to more orthodox Greek tastes.

Drink now, and love, Democrates, for we Shall not have wine and boys eternally.**

His only rival in his century was his pupil Apollomius of Rhodes. When the student poached upon the master's verses and competed for the favor of the Ptolemies, the two men quarreled in life and print, and Apollomius returned to

Rhodes. He proved his courage by writing, in on age that preferred brevity, a very passable epic, the Argonautica. Calliniachus disnassed at with an epigram-'A big book is a big evil' of whose truth the reader may find an instance at case hand. In the end Apodonius was rewarded, he received the coveted appointment of abrarian, and even persuaded some of his contemporaries to read his epic. It still survives, and contains an excellent psychological study of Medea's love, but at is not indispensable to a modern education.

The rise of pastoral poetry betrays almost statistically the growth of an urban civilization. The Greeks of earlier conturies had said little about the beauty of the countryside because most of them bad once lived on farms or near them, and knew the lenely hardships, as well as the quiet beauty, of rural life. Doubtless the A evandria of the Ptoleimes was as hot and dusty as Alexandria is today, and the Greeks who lived in it looked back with idealizing memory upon the hills and fields of their motherland, the great city was just the place to breed bucolic poetry. Thither came, about 276, a confident young man with the pleasant name of Theoritus. He had begun life in Socily, and had continued it in Cos, he had returned to Syracuse to seek the patronage of Hieron II, and had failed, but he could never forget the beauty of Sicily, its mountains and flowers, its coasts and bays. He moved to Alexandria, composed a panegytic on Ptolemy II, and won the passing favor of the court. For some years he seems to have lived andd royalty and scholarsh.p. while his melodious pictures of country life made him popular among the sophisticates of the capital. His Praxinoa describes the terror of Alexandria's crowded streets.

O Heavens, what a mol? I can't imagine
How we're to squeeze through, or how long at'll take,
An ant fuend is nothing to this nurly burly...
O Gorge n, darh ag, I ok'—what shall we do?
The roy a cavalry! Don't ride us down!
Euron, get out of the way!

How could a man with the soul of a poet and memories of Siedy be happy in such an environment? He praised the K og for bread, but fed his spirit on fancies of his native island, and perhaps of Cos, he covied the simple life of the shepherd pacing with his placid animals grassy slopes overlooking summy seas. In this mood he perfected the idylathe endyllion or little picture, and gave it the connotation that it keeps today, of a rustic cameo or a poetic tale. Only ten of the thirty-two pieces that have come

^{*} Virgil copied it in form, tometimes in substance, sometimes line for line, in the Aenead."

down to us from Theoretus are pastoral poetry, but these have set a halfrural stamp upon the name that covers them all. Here at last nature entered Greek literature, not as a goddess merely, but as the living and lovable features of the earth. Never before had Greek literature conveyed so feelingly the secret sense of kinship that sure the soul with grantude and affection for rocks and streams, water and soil and sky

But another theme reaches even more deeply into the heart of Theocritus -romanue love. He is still a Greek, indites two lyrics (xii and xxix) to homosexual friendship, and tells with vivid sentiment the story of Heracles and Hylas (am) how the giant, "who withstood the ferocity of the hon. loved a youth and taught him like a father everything by which he might become a good and illustrious man, nor would be leave the lad at dawn, or noon, or evening, but sought continually to fashion him after his own heart, and to make him a right voke fellow with him in mighty deeds." A more famous idyl (1) rehearses Stesichorus' tale of Daphnis the Sicilian shepherd, who piped and sang so well that legend made him the inventor of bacolie (i.e., cow-tending) poetry. For a while Daphnis watched his herd, and envied their amorous play. When the first hair had sprouted on his hip a divine nymph fell in love with him, and had him for her mate. But as the price of her favors, she made han swear that he would never love another woman. He tried hard to keep his vow, and succeeded till a king's daughter became enamored of his youth and gave herself to him in the fields. Aphrodite saw it, and revenged her fellow goddess by making Daphnis waste away with imrequited love. As he died he bequeathed his pipe to Pan in a song to which the narrator adds a haunting refram:

"Master, approach, take to thee this fair pipe Bedded in wax that breathes of honey still, Bound at the lips with twine. For Love has come To hale me off unto the house of Death." Muses, forego, forego the pastural song.

"Now let the briar and the thistle flower
With violets, and the fair narcissus bloom
On junipers; let all things go awry,
And panes grow pears, since Daphnis is for death.
Let stags pursue the hounds, and from the hills
The screeching owls oursing the rightingales."
Muses, forego, forego the pastoral song.

So said he then—no more. And Aphrodite

Was fain to raise him; but the Destmies

Had spun his thread right our. So Daphnis went

Down-stream, the whirlpool closed above his head,

The head of him whom all the Muses loved,

Of him from whom the Nymphs were not estranged.

Muses, forego, forego the pastoral song."

The second idyl continues the theme of love, but in a fiercer mood. Simuetha, maid of Syracuse, seduced and deserted by Delphis, seeks to command his love by filters and charms, if she fails she is resolved to poson him. Standing under the stars she tells Scienc, goddess of the moon, with what hot jealousy she saw Delphis walking with his comrade.

Scarce had we reached the midpoint of the road by the dwelling of Lycon.

Delphis when I beheld with Eudamppus advancing:
Blonder of cheek and chin were the youths than vellowing say,
Yea, and their breasts far brighter of sheen than thou, O Selene,
Showing they just had come from the noble toil of the wrestlers.
Think on my love, and think whence it came, thou Lady Selene.

I, when I saw, how I raged, how the flame took hold of my hosom, Burned my love-lost heart. My beauty wanted, and no longer Watched I the pomp as it passed, nor how I returned to my homestead.

Knew I, for some feet bane, some parching disease had undone me. Ten days, stretched on my bed, and ten rights dwelt I in anguish. Think on my love, and think whence it came, thou Lady Science.

Often the bloom of my flesh grew dry and yellow as dye-wood, Yea, and the hairs of my head fell off, and of all that I once was Neight but sain was left, and hones, and to whom did I not turn. Whose road left I unsought where an old crone chanted a love-charm?

Still no sulace I found, and time sped ever a-flying.

Think on my love, and think whence it came, thou Lady Selene.

The third idyl introduces us to the nymph Amaryllis, and her unattainable charms, the fourth to the shepherd Corydon, the seventh to the poetic goatherd Lycidas names destined to be invoked by a thousand poets again from Virgil to Tennyson. These rustics are idealized, and speak the most

exquisire Greek, any one of them can sing hexameters lovelier than Homer's, but we learn to accept their incredible gifts as a tolerable convention when we surrender to the plaintive lift of their songs. Theocritus redeems their reality with the smell of their jackets and the occasional obscenity of their thoughts, a listy year of humor salts their sentiment, and makes them men. All in all, this is the most perfect Greek poetry written after Europides, the only extant Hellemstic verse that has the breath of life.

V. POLYBIUS

If the Hellenistic age inspired but one great poet, it produced an unprecedented quantity and variety of prose. It invented the imaginary conversation, the essay, and the encyclopedia, it continued the tradition of
writing brief and vivid biographies, and in the Roman sequel Greek literature would add the sermon and the novel. Oratory was a dying mode, for
it had depended upon the game of politics, litigation before popular courts,
and the democratic right to talk. The letter became a favorite vehicle,
for both communication and literature, now were established the epistolary
forms and phrases that we find in Cicero, and even the famous exordain
dear to our grandfathers. "Hoping that this finds you as well as it leaves
me."

Historiography flourished. Ptolemy I, Aratus of Achaea, and Pyrrhus of I pieus wrote memoirs of their campaigns, establishing a tradition that culminated in Caesar. The Egyptian high priest Manetho wrote in Greek an Argyptiaka, or Annals of Egyps, which buildted the Pharaolis somewhat arbitratily into those dynasties that classify them to this day. Berosus, high priest of the Chaldeans, dedicated to Antiochus I a history of Babylon based upon the cureiform records. Megasthenes, ambassador of Seleucus I to Chandragupta Maurya, startled the Greek world, about 300, with a book on India. "There is among the Brahmans," said a suggestive passage, "a sect of philosophers who . . . hold that God is the Word, by which they mean not articulate speech but the discourse of reason"," here again was that doctrine of Logos which was destined to make such an impress upon Christian theology. Timaeus af Tauromemum (Taorinna), having been exiled from Sichy by Agathocles (317), traveled widely in Spain and Caul, and then settled down in Athens to write a history of Sicily and the West. He was an industrious student, so anyious to include everything that some of his rivals called him "an old ragpicker." He labored to arrive at

an accurate chronology, and hit upon the scheme of dating events by O.ympiads. He criticized his predecessors severely, and was lucky enough to die before seeing the brutal attack made upon his work by Polybius."

The greatest of the Hellenistic historians, and the only Greek fit to make a triad with Herodotus and Thicky dides, was born at Megalopolis, in Arcadia (208). His father, Lycortas, was one of the leading men of the Achaean League, being ambassador to Rome in 186 and strategos in 184. The boy was brought up in the odor of politics, was trained as a soldier under Philopoemen, for ght in the Ri man campaign against the Gauls in Asia Minor, was associated with his father on an embassy to I gypt (181), and was made the League's hipparchos, or commander of the cavalry, in 160." He paul for his pronunence, when the Romans punished the League for supporting Perseus against them they took a thousand leading. Achaeans to Rome as hostages, and Polybus was among them (165) For sixteen years he suffered exile, and at times, he teils us, "otter loss of spirit and turalysis of mind "" But the younger Scip o befriended him, introduced hun to the Semionic circle of educated Romans, and persuaded the Senate, when it was scattering the other exiles throughout Italy, to let Polybous live with him in Rome. He accompanied Scions on many camp igns, gave ham valuable mititary advice, explored for him the coasts of Spain and Africa, and stood beside him at the burning of Carthage (146). He had received his freedom in 151, and in 140 he was curp oyed as the representative of Rone in arranging a modus errends between the cases of Greece and their distant master, the Roman Senate. He must have performed this ungrateful task weal, for several cities honored him with minuments though one can never tell in what tense man's gratitude is fear. Having aved through sixty fell years of action, he retired to write a Treatise on Lactics, a late of Philopoemen, and his comiense Historics. He died ake a gentleman by failing from his horse as he was returning from a hunt, at the age of eighty-two.

No man ever wrote history from a wider background of education, travel, and experience. His work was conceived on a grand scale, and proposed to tell the story, not only of Greece but of "the whole world" (i.e., the Mediterrinean nations) from 221 to 146 His. "Such is the plan I propose, but all depends upon Fortune's granting me a life long enough to execute it." He rightly felt that the center of political history, in the period which he covered, lay in Ronie, he gave his book unity by miking Rome the focus of its events, and stedying with a diplomat's currosity the methods by which Rome, with British casualness, had mastered the Medi-

terranean world." He admired the Romans intensely, for he had seen them in their greatest epoch, and had known chiefly the best of them in Scipio's group, they had, he felt, just those qualities that were fatally lacking in Greek character and government. House, an aristocrat, and betriended by aristocrats, he had no sympathy with what second to him mere mobifule in the later stages of Greek democracy. Poincial history appeared to him to be a repetitions cycle of monarchy (if dictatorship) aristocracy, obgarchy, democracy, and monarchy. The best escape from this cycle, he rhought, was through a 'mixed constitution' like that of Lycurgus of Rome, an enfranchised but limited citizenty choosing its own magistrates, but checked by the power of a continuous and aristocratic senate." It was from this view point that he wrote down the record of his times.

Polybias is 'the historians bistorian' because he is as interested in his method as in his subject. He likes to talk about his plan of procedure, and pheosophizes at every opportunity. Humanly he pictures his own qualibeatti ny as ideal. He insists that history should be written by those who have seen or have directly consulted or iers who have seen, the events to he described. He denot nees I imacus for having relied on his ears rather than his eyes, and tells with pride of his own travels in search of data, documents, and geographical veracity, he reminds us how, in returning from Spain to Iroy, he crossed the Alps by the same pass that Hann by had used, and bow he went down into the very toe of Italy to decipher an inscript on left by Hann ha, in Brutaan " He proposes to make his aistory as accordite as the magnitude of the work and its comprehensive treatment' will allow," and he succeeds so far as we can say, better than any other Greek except Thucydides. He argues that the historian should have been a man of affairs, versed in the actual processes of statesmanship, nolities, and war, otherwise he will never understand the behavior of states or the course of history." He is a realist and a rationalist, he pierces the moral phrases of diplemats to the actual motives of pelicy. It amuses him to observe how easily men can be deceived, singly or en masse, and even repeatedly by the same tricks" "What is good," says a scandalous presage if Machinelli, 'very seldom coincides with what is advantageous, and few are those who can con bine the two and adapt them to each other " He accepts the Store theology of a Divine Providence, but he merely pines the popular cults of his day, and smales at stones of supernatural intervention." He recognizes the role of chance in history, and the occasional efficacy of great men," but he is resolved to lay bare the factual and often impersonal chain of causes and effects, so that lustors may be a lantern of understanding held up to the present and the future." "There is no more ready corrective of conduct than knowledge of the past", and "the soundest education and training for a life of active politics is the study of history"," "it is history, and history alone, which, without involving us in actual danger, will matute our judgment and prepare us to take ng it views, whatever may be the crisis or the posture of affairs "" The best method of history, he thinks, will be that which sees the life of a nation as an organic unity, and weaves the story of each part into the life history of the whole. "He who believes that by studying isolated histories he can acquire a just view of history as a whole is, as it seems to me, much in the case of one who, after having looked at the dissevered limbs of an animal once alive and beautiful, fancies he has been as good as an even itness of the creature itself in all its action and grace."

Of the forty books into which Polybius divided his Histories, time has preserved tive, and the epitomists have rescued substantial fragments of the rest. It is a great pity that the execution of this vast conception is marred by degenerate Greek, peevish crinques of other historians, an almost exclusive preoccupation with politics and war, and an absurd segmentation of the narrative into Olympiads, giving the history of all the Mediterranean nations in each four year period, and leading to exasperating digressions and a baffling discontinuity. Sometimes, as in the story of Hannibal's my asion. Poly bios me units to drama and eloquence, but he reacts so strongly against the florid thetoric popular among his immediate predecessors that he makes it a point of honor to be dull " "No one," said an ancient enric, "ever read him through ". The world has almost forgotten him, but historians wall long continue to study hun because he was one of the greatest theorets and practitioners of historiography, because he dared to take a wide view and write a "universal bistory" and because, above all, he understood that mere facts are worthless except through their interpretation, and that the past has no value except as our roots and our illumination.

The Art of the Dispersion

I. A MISCELLANY

THE decline of Greek civilization was longest deferred in the sphere of art. Here the Hel enistic age beats comparison, not only in tertiliny but even in originality, with any period in history. Certainly the rumor arts suffered no determination. Skilled workers in wood, work, silver, and gold were scattered throughout the expanded Creek world. The engraving of gems and coins now reached its lighest execulence, as far east as Bactria He femized langs lay of ed are upon their currency, and in the west the dekadrachma of H cron II might be detended as the firest com in ministratic record. Alexandria become famous for its go digit has and salveren tribs, whose artistry rivaled the faultiess style of its poets, for its dehightful cameos precious stones or she'lls carved in colored relief, for its blue or green faience its skills lly grazed pottery, its del catery designed and many colored glass. The Pertland Vase, very likely a product of Alexandria, shows this art at its best elegant figures cut into a layer of milk-white gass superimposed a pon a body of blue glass, this is, so to speak, the Jos ah Wedgewood mastern sece of antiquity."

Music remained popular in ad classes of the population. Scales and modes changed in the direction of refinement and movelity, transcrit discords were admitted into harmony, anstron ents and composita its increased in complexity. Towards 240, at Alexandria, the old 'pipes of Pin, were enlarged into an organ of bronze pipes, and about 175 Cites bias improved this into an organ operated by a combination of water and air and enabling the player to control vist waves of sound. We know nothing more of its construction, but we shall see how rapidly it developed, in Roman days, into the organ of Christian and modern times. Instruments were combined into orchestras, and seems in the movements, were given in the treaters of Alexandria, Athens, and Syricuse. Professional virtuosos rose to great prominence, and to a social standing continuous rise with their legities. About

[&]quot;It deeres to name from the Done of Poet of who torget it of Rome It is now in the British Museum.

318 Aristoxenus of Taras, a pupil of Aristotle, wrote a small treatise, Harmonics, which became the classic ancient text in musical theory. Aristoxenus was a very serious man, and like most philosophers he did not enjoy the music of his time. Athenaeus represents him as saying, in words that many generations have heard. "We also, since the theaters have become completely barbanzed, and since music has become urterly runned and vulgar—we, being but a few, will recall to our minds, sitting by ourselves, what music used to be.19

The architecture of the Hellenistic age cannot impress us, for time has leveled it away with indiscriminate liestility. And yet we know, from brefature and the remains, that the Greek hunding are spread its sway in this period from Bactria to Spain. The mutual influence of Greece and the Orient brought in a mixture of styles the colonnade and the archurave invaded inner Asia, while the arch, the vault, and the cupula entered the West, even so ancient an Helienie center as Delos rased I gypt in and Persian capitals. The Danc order seemed too stern and stiff for an age that loved refinement and ornament, it gave ground city by city, while the ornate Connt, an style advanced to its highest excenence. The securarization of art kept page with the secularization of government, law, morals, letters, and ponosophy, stoas, porticoes, market places, courts, assembly rooms, libraries, theaters, gymnasianis, and baths began to crowd out the temples, and regal or private palaces gave a new outlet to Greek design and deciration. Damest conteriors were ademed with paintings, statues, and wall reacts. Private gardens sucrounded the more paintal homes. Roya, parks, gardens, takes, and paythens were brain in the capitals, and were usually opened to public use. Town panning developed as a sister art to architecture, streets were laid out on Hippodamis' rectangular scheme, with main avenues as wide as thirty feet an ample width for horse-and-chariot days. Suryrna boasted of paved thoroug stares," but presumably most Hemenistic streets were trampled dirt, and knew all the vicissitudes of mud-

Fine bullings developed beyond any precedent. At Athens, in the second century, the lotty Corint can columns of the Olympicum were set up, and the general design of the extended educe, the most magnificent in Athens, was laid down by the Riman architect Cossanus—a strange inversion of Rome's usual dependence upon the artists of Greece. Livy described this temple of the Olympian Acas as the only structure he had seen that could be a fit dwelling for the gold of gods. Since columns of it stand—the most beaut ful existing specimens of the Corinthian style. At Leusa the dying piery of Athens and the genus of Philon completed the majestic terriple of the Mysteries which Pericles had begun on a sate already sacred in Mysecasean times, only fragments are left,

but some of them show Greek design and carving still at their best. At Delos the French have excavated the ground plan of Apolio's sanctuary, and have reyeard a city once crowded with editices devoted to commence or the protection of a handred Greek or foreign gods. At Syracuse Hieron II raised many impressive buildings, and restored and enlarged the extant manappal theater, to this day we may read his name on its stones. In Figs pt the Processes adorned Alexan fra with ed fices that gave the city a reputation for benory, but no sign of them survives. Proteiny III erected at I dry a temple which is the noblest architectural relic of the Greenan occupation, and his successors built or rebuilt the temple of Isis at Philae. In Lima new homes were given to the gods at Miletus, Priene, Magnesia, and eisewhere, the third temple of Arteries at Ephesus was foushed about 400 kg. A still vaster fane was raised by the architects Pacomus and Daplinis at Didyma, near Ableras, in honor of Apono 1332 B.C.-A D. 41), some drams of the superb lone columns still remain. At Pergamum Lumenes II made his capital the talk of Greece by building, among many noble structures, that fathous Astar to Zeus which the Germans exhumed in 1858, and have skillfully reconstructed in the Perganium Museum in Berlin. A majestic flight of steps mounted between two portuges to a spacious colonnaded court, and around one hundred and thirty feet of the base ran a frieze as supreme in its period as that of the Mauseleum in the fourth century, or the Parthenon in the fifth. Never had Greece been so handsomety adorned, and never had the enthusiasm of its catizens and the skill of its artists transformed with such splendor so many habitations of men.

II. PAINTING

Painting is usually the last great art to mature in a civilization, in the early stages of a culture it is subordinated to rengious architecture and statuary, and it acquires independence only when private life and private wealth invite the decoration of the home or the commemoration of a name. The death of democracy having weakened the sense of the state, the individual returned to domestic ecosolations. Rich men built themselves palatial residences, and gave high fees to artists who could adorn a fountain or brighten a wal. Alexandria used painting on glass as one form of mural organization, all Hellenstic cities en ployed for this purpose movable panels of wood, princes and magnates preferred to have immense pictures painted on detachable marble slabs. Pausamas describes a productous mainber of paintings seen by him in his tout of Greece, but nothing of this flourishing art has cheated time except some taded time on pottery or stone. We are left to guess at its quality from the pale and middling copies found at Pompen, Hereulaneum, and Rome

Greece continued to rank its pointers as high as its sculptors and architects, perhaps higher. It paul them American commissions, and told a thousand fond stories about their lives. Cresicles of I phesus, faming to receive a desired boon from Queen Stratonice, painted her romping with a fisherman, exhibited the picture, and then took ship to safety, Stratonice, because 'the likenesses of the two figures were so admirably expressed," forgave him and let him return." When Aratus took Sievon he ordered all portraits of its past dictators destroyed, one dictator. Archestratus, had been shown by Meianthus (a fourth-century painter) beside his chariot, and so vividity that the artist Neacles entreated Aratus to spare the picture. Aratus consented, on condition that the figure of Archestratus be replaced by some less offensive form Protogenes, says Strabo, painted a satist with a partridge so realistically that live partridges called to it, the painter finally blotted out the bird so that people might appreciate the excellence of his satter. The same artist, Puny tells us, applied four coats of paint to his most famous picture, las rus (supposed founder of the rown of that name in Rhodes), so that when time wore out the uppermost layer the colors might still be fresh and clear. Vexed by his inability to represent with sufficient vensionlitude the foam that dropped from the mouth of falvsus' dog. Protogenes lost his temper and hurled a sponge at the picture, willing to destroy it, the sponge, of course, struck just at the right place, and, where it tell, left a blotch of color marvelously like the foam of a panting hound. When Demetrus Poliorcetes besieged Rhodes he refrained from setting fire to the town lest this painting be destroyed. During the siege Protogrenes continued at work in his village studio, in the direct line of the Macedonian advance. Demetrius sent for him and asked why he had not. like the other valagers, taken relige within the city walls. "Because I know," answered Protogenes, "that you are waging war with the Rhodians, and not with the arts." The King assigned a guard to protect him, and neglected the siege to watch the artist work."

Hellenistic painters knew the tricks of perspective, foreshortening, lighting, and grouping. Though they used landscapes only as background and decoration, and rendered them (if we may judge from the Pompeian copies) in a lifeless and conventional way, they at least realized the existence of nature, and brought it into art at the same time that Theocritus was importing it into poetry. But they were so interested in man and all his works that they had little time for trees and thought Their predecessors had painted only the gods and the rich, the Hellenistic artists were fascinated by anything human, and discovered that an ugive subject might make a

beaunful painting or at least a handsome fee. They turned to common life with a Durch zest, and delighted in picturing barbers, cellibers, prostitutes, scanistresses, denkeys, determed it en, or peculiar animals. To these gente pattures they audit representation of a place cover and eggs, fruit and vegetables, fish and gaine, with and all the parasistration of its ancient ritual. Sosius of Pergamani aniused his contentionaries by intuiting, in a deceptively realistic floor mosaic, an unswept floor still lattered with the leavings of a feast. The sedate were scandalized, and denounced these gloribers of common things as parmographou and rhypmographous por trayers of obscenity and fifth. In Thebes the representation of ugly objects was forbidden by law."

Certain larger masterpieces of the age were rescued nor from anonymity but from oblivior by the avail of Vesicias. A fresco found at Osta is apparently a weak copy of a Hollenste or good we know it as Fire did himd in Wedding from the Italian family to which it be enged before it found a place in the Vancan. Approach, Rubensianly robust warns up the courage of the timid bride while the bridegroom, needing it prodding, waits impatiently beside the couch, timer than these central personsives is a graceful woman playing some hymenical strain on a fided line. A Pourpolan moral, traced uncertainly to a third-century Greek original, shows Acal less with Patrochas beside him, angely surrendering Brises to Againemnous Lot. The Ligures in these paintings seem to our went and taste more ample than beaut ful, we are accust med to less body and longer legs, but it must be conceded that anomal artists knew Greek men and women better than we shall ever know them. Time has taken the billiance and freshness that doubtless were once the admiration of multitudes and kings.

More impressive are certain Roman mosaus that have apparently been detived from Heikenstic paintings. Mosaic was in old art in Egypt and Mesopotamia, the Greeks took it over, and ifted it to the peak of its hittory. A painting was divided by lines into bitle squares, and tim, cubes of marble were so colored that when put together they reproduced the picture in a form surprisingly durable, several mosaics, though trodden by innumerable feet through many centuries, still retain their order and tell their ancient is e. The Battle of Irius, found in the House of the haun at Pompen, and data asky connected with a fourth century Greek painting by Philoxenus, its composed of approximately 1,000,000 stones, each some two or three minimeters square, the whole mosaic measuring eight by sixteen feet. It was badly minted by the earthquake and eruption that overwhelmed Pompen in a total back and disheveled with the heat and skill and vigor of the work. Alexander, black and disheveled with the heat and

^{*} This monue, and the Achiver and Bright, are in the Napies Museum.

filth of war, is leading the attack, and has ruden his Bucephalus to within a few feet of the chariot that carries Darius. A Persian grandee has flung himself between the kings, and has received Alexander's lance in his body. Darius, ignoring his own danger—for the completor's next lance is aimed at him—leans from his chariot towards his failen friend, his face full of anxiety and grief. Persian cavalrymen rush up to rescue their ruler, and Alexander's weapon stays poised in the air. The representation of complex emotions in Darius, face is the outstanding accomplishment of the work, but the most attractive head in the composition is that of Alexander's horse. There is no greater mosaic than this.

III. SCULPTURE

Never has statuary been more abundant than in the Hellenistic age. Temples and palaces, homes and streets, gardens and parks were crowded with it, every pouse—fluorantate and many aspects of the plant and animal world, were represented in it, portrait basts inanomalized for a moment dead heroes and living celebrates, at last even abstractions ake fortune, Peace, Calumny, or the Nick of Time, became concrete in stone. Eury chides of Sievon, a papil of Livi ppus, modded for Antioch a famous fische, or Fortune, to serve as the incumation of the city is soul and hope. The sons of Prayiteles. I much is and Ceph solitons—carried on the refined tradition of Athenian sculpture, and in the Peli pointesus Damophon of Messene scaled the heights of fame with a colossal group of Demeter, Persephone, and Artemis. But nost of the new sculptors to lowed the line of least starvation to the paaces and courts of Greeco Omental magnates and kings.

Rhodes, in the third century, developed a school of sculpture characteristically its own. There were a lumdred colossal statues in the island, any one of which, says Pliny, 'would have made a city famous. The greatest of them was the bronze colossus of the sun-god Helios, set up in successive blocks by Chares of Lindus about 280. Chares, says a naive tradition, committed suicide when the cost seriously exceeded his estimate, and Laches, also of Lindus, completed the work. It did not bestride the harbor, but rose near it to a height of one handred and five feet. Its dimensions might suggest that Rhodian taste ran to display and size, but perhaps the Rhodians proposed to use it as a lightmouse and a symbol. If we may believe a poem in The Greek Anthology,' the statue head a light aloft, and symbolized the freedom that Rhodes emoyed a curious anticipation of a famous statue in a modern port. It was, of course, included among the Seven Wonders of the World. "This statue," Pliny reports,

^{*} The Statue of Laborry is one hundred and bity one feet high from base to tarch

was thrown down by an earthquake fifty six years after it was erected. Few men can clasp the thumb in their arms, and its fingers are larger than most statues. When the limbs are broken asunder vast caverns are seen yawning in the interior. Within it, too, are to be seen large masses of rock by whose weight the artist steaded it while in process of erection. It is said that it was twelve years in the making, and that three hundred talents were spent upon it—a sum raised from the engines of war abandoned by Demetrius after his futile siege.**

Almost as famous in history was another product of the Rhodian school, the Lauceon Plany saw it in the palace of the Emperor Litus, it was found in the ruips of the Baths of Titus in AD 1306, and is almost certainly the original work of Agesander, Posyd rus, and Athenodorus, who carved it out of two blocks of marble in the second or first century Bi." Its discovery stirred Renaissance Italy and profoundly impressed Michelangelo, who tried, without success, to restore the lost right arm of the central figure ? Langoon was a Trojan priest who, when the Greeks sent the wooden horse to Trev, advised against receiving it, saying (says Virgit), Timeo Danaos et dona ferenter. "I fear the Greeks even when they bring gifts." To punish his wisdon. Athena, who favored the Greeks, commissioned two serpents to kill hon. They seized first upon his two sons, seeing which k-succoon rushed to their aid, only to be caught in the coils in the end all three were crushed, and died from the venom of the fangs. The sculptors took the liberty assumed by Virgil (and in the Philocteres, by Sophocles) to describe pain vigorously, but the result does not accord with the natural repuse of stone. In literature, and usualty in life, pain passes, in the Laocoon the ery of agony has been given an unnatural peri anence, and the speciator is not so moved as by Demeter's silent grief ! What nevertheless evokes our admirate n is the mastery of design and technique, the musculature is exaguerated, but the old priest's links, and the bodies of his sons, are molded with dignity and restraint. Perhaps if we had known the story before seeing the group we should have been as impressed as Pliny, who thought this the greatest achievement of ancient plastic art."

[&]quot;It reviewed where it felt tall an disa, when the baracers sold the materials. Sine hundred camels were required to remove them."

t The restored are in the Vancan is the work of Bernau, well done in Jerad, but entitions to the centil petal son to of the composer in Wardelmann nevertheless liked the group so well that Lessing was at used, by resoung him, to write a book of exhetic criticain around in and operationally about it.

² in the Demeter of the British Museum.

Many other Greek centers had flourishing schools of sculpture in this underestimated age. Alexandria turned over its son, and its buildings too often in the long course of its fustory to preserve the works that Greek artists made for the Principles. The sole in portant survivor is the screne Vile of the Vatican, humorously supported by sixteen water liables symbolizing the sixteen cubits of the river's annual rise. At Yolon Greek sculpture out for unknown dign taries a series of sarry phage of which the best, misnamed the parcophagus of Atexander, is the pride of the Constantinople Museum. Its carving is equal, on a similar scale, to that of the Parthenon trieze, the figures are handsome and we a proportioned, the action is a gorous but clear, and the soft tints that still rung to the stone ever plats the pid that Greek painting gave to Greek sc. litture. At Trailes, in Caria about 140 Res., Apollonias and Lauriscus east for Rhodes a collissal bronze group now known as the Farnes Built two hambonic youths are lasting the lovery Directorthe horns of a wild built because she has distreated their mother Annope, who looks on in repulsive vicalin satisfaction.* At Pergamuin Greek se aprom cast in branze several battle groups, which Attacks first dedicated in his capital to be el rate by repulse of the Camis. To express the debt which as Greek culture telt to Athens, and perhaps to spread his fame, Attalus presented martie reports of these figures to be set up on the Atheman Acropotic Fragmentary markle copies have survived in The Dying Gaul of the Capatoine Museum, in the possess of Pagents and Ar 12' a Crass who, preferring death to capture, ki is birst his wife and then himse I and in several smaller pieces now scattered through I gript and I ompe. Perhaps to the same group belongs a Dead Amazon I in prescale a monded in every detail except the incredibly perfeet breasts. These begins show a classic restraint in the expression of emorion the canquered men suffer the extremes of pain and grief, but die without operaand the conquerors have allowed the arrists to portray the varties, as well as the detest, of their enemies. There is no sign here of any falling off in power of conception, accuracy of anaromical observation, or skill and patience of techmajor. Almost as perfect is the great react that ran along the base of the Altar of Zeus on the Acropolis of Pergamonn, and told again the story of the war between the gods and the grants presiming a modest allegory for Pergamenes and Canes. The work is exercisowided, and sometimes theatrically spolent but some figures stand out as in the best tradition of Greek art. The headless Zeur is carried with the strength of Scopas, and the goddess Hecate is a lyric of grace and beauty aimed the terror and carnage of war

^{*} The original of the A R is an earthle copy of the third century was was fixed in the material and the the Barts of the track a was true at 1.5 Micheangelo, was housed for a third of the Paris to Larness and the new in the Naples Museum.

^{\$} In the Nuples Museum.

The age was rich in now anonymous masterpieces that almost call the roll of the major gods. The majestic Head of Zeur to und at Orngon, and the Ludovan Hera now in the Museo delie Terme so pleased the young Goethe that he rook cases of them with him to Germany as, so to speak, the authentic autographs of Juve and Juno. The once acclaimed Apoilo Bervedere* is academically cout and lifeless; and yet, two centuries ago, it set Winekrimann affame " A world away from this smooth weakling is the Farnese Heracles, copied by Cayeon of Athens from an original attributed to I yoppus-all muscle in the overdone body, all weariness, kindliness, and wonder in the face-as it power was asking itself its never answered question, what should be its goal. Of Aphrodate the age had representatives only less numerous than her devotees, several of these statues have survived, mostly through Roman copies. The Aphrodic of Millios-the Venus de Mdo of the Louvre-18 apparents an original Greek work of the second century B.c. It was found on the mand of Melos in 1820, near a pedestal fragment bearing the letters-randros, perhaps Agesander of Antioch carved this prodest mudity. The face is not as desicately fair as that which forms the symbol of this volume, but the figure itself is a poem of that health where natural flower is beauty, the wasp waist finds no encouragement in this I. body and these sturds hips. Not so near perfection, but still pleasant to the eye, are the Capitonne Venus and the Venus de Medicit Candidly and a sermingly sensual is the Venus Catapyge, or Venus et the Lane v Burnocks,; was drapes her charms to reveal them, and turns to admire her mires in the pool. More unpressive than any of these is the superb Nike, or Victory of Simunthrace, found there in 1863, and now the sculptura masserpace of the Louvre & The god less of victory is shown as it anglithing in fall flight upon the prow of a switch moyany ship and seading the vessel on to attack, her great wangs seem to pull the craft along in the face of the breeze that confuses her robes. Again if e Greek conception of woman as no more debusey, but as a strong mother, tomanates the work, this is not the frait and passing beauty of youth, but the Lifeling call of the woman to the man to life hanself up to achievement, as if the arrest had wished to mustrate the last lines of Goethe's Faust. The en mastion that could conceive and curve this figure was yet far from dead.

The gods were not the chief interest of the sculptors who brightened the eveming of Greek art. These men looked upon Onviopus as a quarry of subjects, and no more. When that quarry had been worn down by repetition they turned

to the earth and took delight in representing the wisdom and loveliness, the strangeness and absurdines of human life. They carved or east appressive heads of Homer, Europides, and Socrates. They made a number of smooth and delicate Hermaphrodates, whose equivoca, beauty arrests the eye in the Archeologica. Mascum at Constant nople, or the lloughese Cia lery in Rome, or the Louvie. Children offered refreshing, a natural poses, the the boy who removes a thorn from his foot, and another who strugges with a goose, and finest of this class—the trustful Praying Fourth attributed to I visippus' pupil Boethus. Or the sculptors went to the woods and depicted sylvan sprines like the Barberian Faun of Manich, or hilanous satyrs like the Drunken Silenus of the Naples Museum. And here and there, with joily frequency, they inserted among their figures the rosy cheeks and imposh pranks of the god of love.

IV. COMMENTARY

This sudden irruption of homer into the once formal sanctuaries of Greek sculpture is a distinctive mark of Heilerustic art. Every museum has preserved from the rums of the age some languing faun, some singing Pan, some rioting Bacchus, some uream serving as a fountain with alarming indecency. Perhaps the return of Greek art to Asia restored to it the variety, feeling, and warnith which it had almost lost in its classic subordination to religion and the state. Nature, which had been adored, began now to be enjoyed. Not that classic moderation disappeared, the Youth of Subjaco in the Museo delle Ternie, the Sleeping Ariadne of the Vatican, the String Maiden of the Palace of the Conservatori continue the delicate tradition of Praxireles, and in Athens, throughout this period, many sculptors fought the "modernistic" tendencies of their time by dehberarely going back to fourth- and fifth-century styles, even, now and then, to the archaic dignity of the sixth. But the spirit of the age was for experiment, individualism, naturalism, and realism, with a strong countercurrent toward imagination, idealism, sentiment, and dramatic effect. Artists excefully followed the progress of anatomy, and worked more from models in studios, sculptors carved their figures to be seen not only from in front, but from all sides. They used novel materials, crystal, charcedony, topaz, glass, dark basalt, black marble, porply ry-to imitate the pigment of Negroes or the ruddy faces of savyrs alumined with wine.

Their fertility of invention equaled their mastery of technique. They

Both in the Vatican.

were tired of repeating types, they anticipated Riskin's criticism," and were resolved to show the reality and individuality of the persons and objects they portrayed. They no longer connucd themselves to the perfect and the beautiful, to athletes, heroes, and gods, they made genre pictures or terra cottas of workingmen, bishermen masicians, market men pockeys. ennuchs, they sought unbackpeved subjects in children and peasants, in characterful features like those of Socrates, in batter old men like Demostheres, in powerful almost bruta, faces like that of Fuths demis the Greco-Bactrian king, in desolate dereliets like the Old Market Woman of the Metropolitan Museum in New York, they recognized and relished the variety and complexity of life. They did not hesitate to be sensial, they were not parents anxious about the chastity of their daughters, nor philosophers disturbed by the social consequences of an encurean individual ism, they saw the charms of the flesh, and carved them into a beauty that might for a while laugh at wrinkles and time. Freed from the conventions of the classic age, they indulged themselves in tender sent ment, and picgured, possibly with sincere feeling, shepherds dving of undis basis ned love, pretty heads lost in romantic revenue mothers fondly contemparting their children, these, too, seemed to them a part of the reasts, they would record And finally they faced the facts of pain and grief, of tragic catastrophes and untin ely death, and they resolved to find a place for them in their representation of human life.

No student with a mind of his own will join in any sweeping judgment about Helenistic decay, a general conclusion to this effect serves too easily as an excuse for enting the stury of Greece before the tisk is done. We teel in this period a slackering of creative impulse, but we are compensated by the layish abundance of an art now completely master of its mode. Youth cannot last to rever, not are its charms supreme, the life of Greece like every life, had to have a natural subsidence, and accept a ripe old age. Decadence had set in, it had bitten into religion, morals, and letters, and had left its sugmata upon in hydral works here and there, but the impetus of the Greek genius kept Greek art, like Greek science and philosophy, near their remith to the end. And never in its isolated youth had the Greek passion for beauty, or the Greek power and patience to embody it, spread so triumphantly, or with such rich standalation and result, into the sleeping cities of the liast. There Rome would find it, and pass it on.

^{*}There is no personal transcere in Greek art that her least count and go strength and twiftness a rule in lance were but there is no individual ty. *Raskin through control of bith and fourth-century Greek art loss as Winckennam and Lenning knew chiefly the art of the Hellenskin age.

CRAPTER XXVIII

The Climax of Greek Science

L EUCLID AND APOLLONIUS

THE fifth century saw the zenath of Greek literature, the fourth the flowering of philosophy, the third the culmination of science. The kings proved more to error and belotul to research than the democracies Mexander sent to the Creek cines of the Asiatic coast camel loads of Babylonian astronomical tablets, most of which were soon translated into Greek. the Proleimes buar the Museum for advanced studies, and gathered the serence as well as the literature of the Mediterranean cultures into the great Library, Apol onias dedicated his Comes to Attalus I, and under the protection of Hieren II Archaneues drew his circles and reckoned the sand The tading of frontiers and the establishment of a common language, the flad interchange of books and ideas, the exhaustion of metaphysics and the weakening of the old theology, the rise of a secularly minded commercial crass in Arexandria, Rhodes, Antioch Pergantum, and Syracuse, the multiplication of schools, universities, observatories, and libraries, combined with wealth, industry, and reval patronage to free science from phalosophy. and to encourage it in its work of enlightening, enriching, and endangering the world.

About the opening of the third century -perhaps long before it the tools of the Greek mathematician were sharpened by the development of a sin piet notation. The first type letters of the appliabet were used for the digits, the next letter for 10, the next time for 10, 10, etc., 10, etc., the next time into the next for 200, too, and so torth. Fractions and ordinals were expressed by an acuse accent after the effect 50, according to the context, 1 stood for one time or tenth and a small 1 miller a letter manuated the corresponding thousand. This arithmetical shorthand provided a convenient system of our potation, some expans Greek papture crowd the plasted calculations, ranging from fractions to malhous, into less space than six day recknings would require in our own numerical notation.

To this period belongs build, whose name would for two thousand years pro-

[&]quot;There as it are not discribed A countries that one they are the province digarding to represent 6 in is probable that the aphabetical notation antedated the Healenstic age.

vide geometry with a synonym. All that we know of his life is that he opened a school at Alexandria, and that his students exceeded all others in their he di that he cared nothing about money, and when a pupil asked, "What sha, I profit from learning geometry - bade a slave give him an olon, whice he must make a gain out of what he learns, that he was a man of great modesty and kindiness. and that when alway 100, he wrote his famous Figurents, it never occurred to fam to credit the various propositions to their discoverers, because he made no presense at doing more than to bring together in logical order the geometrical knowledge of the Litecks. He began, without preface or apology, with a mose definitions, then postulates of necessary assumptions, then "common notions" or axions. Fellowing Patris injurier one, he confined himself to such figures and proofs as needed no other instruments than ruler and con passes. He ad pred and perfected a method of progressive exposit on and Jemonstration already familiar to his predecessors, proposit in, diagrammatic illustration, proof, and conclusion. Despite minor flaws the total result was a mathematical archaecture that rivaled the Parthenon as a symbol of the Greek mind. Actually it out used the Parthenon as an integral form, for until our own century the Elements of Lucial constituted the accepted textbook of geometry in nearly every European university. One must go to the B ble to find a rival for it in enduring influence

A lost work of I achd, the Comer, summarized the studies of Menaechmus, Aristhem, and others on the geometry of the cone. Apoi on us of Perga, after years of study in Euclid's school, took this treatise as the starting point of his own Comes, and explored in eight 'books' and 387 propositions the properties of the curves generated by the intersection of a cone by a plane. To three of these curves (the fourth being the circle) he gave their using names—parabola, ellipse, and hyperbola. The discoveries made possible the the irv of projectiles, and substantially advanced mechanics, navigation, and astronomy. The exposition was laborious and verbose, but his method was completely scientific, his work was as definitive as Fuchd's, and its seven extant books are to this day the nost original classic in the literature of geometry.

IL ARCHIMEDES

The greatest of ancient scientists was born at Syracuse about 287 n.c., son of the astronomer Pheidias, and apparently consavto Hieron II the most enlightened ruler of his time. Like many other Hel clastic Greeks who were interested in science and could afford the expense. Archimedes went to Alexandria, there he studied under the successe is of Finchd, and derived

^{*} Books I and II summerize the geometrical work of Pythagorax, Book III. If processes of Chief Book V. F. Livis, Books IV. VI. VI. and XII. the later Pythagorean and Assentan geometric area. Issues VII. X deal with ligher transplantes.

an inspiration for mathematics that gave him two boons, an absorbed life and a sudden death. Returning to Syracuse, he devoted banself monasneally to every branch of mathematical science. Often, like Newton, he neglected tood and drink, or the care of his body, in order to mirsue the consectionees of a new theorem, or to draw figures in the oil on his body, the ashes on the hearth or the sand with which Greek geometers were wont to strew their floors." He was not without humor in what he considered his best book. The Sphere and the Colonier he deliberately inserted false propositions (so we are assured), partly to play a jeke upon the friends to whom he sent the manuscript, parily to ensuare poachers who liked to appropriate other men's thoughts.' Sometones he amused hunself with puzzles that brought him to the verge of inventing algebra, like the famous Cartle Proble in that so beguled Lessing, sometimes he made strange mechanisms to study the principles on which they operated. But his perennial interest and designt lay in pure science conceived as a key to the understanding of the universe rather than as a tool of practical construction or expanding weath. He wrote not for pupils but for professional scholars, communicaring to them in pulsy monographs the abstruse conclusions of his research. Ale rater antiquity was fascinated by the originality, depth, and clarity of these treatises. 'It is not possible," said Plutarch, three centuries later, "to find in all geometry more difficult and introcate questions, or more simple and acid explanations. Some ascribe this to his natural genius, others think that these easy and anlabored pages were the result of incredible effort and toil."

Ten of Archimedes' works survive, after many adventures in Europe and Arabia. (1) It's Method explains to I ratosthenes, with whom he had to med a friends up at A exandria, how mechanical experiments can extend geometrical knowledge. This essay enfect the ricer and compass to gin of Plan, and opened the court to experimental methods even so it reveals the different mood of ancest and modern sentice the one toterared practice for the sake of theoretical understantleg, the other toterates theory for the sake of possible practical resolute. (2) \(\lambda\) (ollection of I eminar discusses fifteen 'choices,' or alternative his potheses, in plane geometry. (3) The Measurement of a Circle arrives at a value between 3'- and 3" if for \(\pi\) - the ratio of the excumisference to the diministration, that the area of a circle equals that of a right angled triangle whose perpendicular equals the radius, and whose base equals the circumterence, of the circle (4) The Quadrature of the Parabota studies, by a form of integral calculus, the area cut off from a parabola by a chord, and the problem of finding

the area of an ellipse (5) On Spirals defines a spiral as the figure made by a point moving from a fixed point at a uniform rate along a straight line which is revolving in a plane at a unitorm rate about the same fixed point, and finds the area enclosed by a spira, curve and two radu vectores by methods approximating differential calculus. (6) The Sphere and the Cylinder seeks formulas for the volume and surface area of a pyramid, a cone, a cyander, and a sphere (2) On Consids and Spheroids studies the solids generated by the revolution of conic sections about their axes. 18. The Sand-Reckoner passes from geometry to arithmetic, almost to logarithms, by suggesting that large numbers may be represented by multiples, or "orders," of 10,000, by this method Archimedes expresses the number of grains of sand which would be needed to fill the universe-assuming, he genially adds, that the universe has a reasonable size. His conclusion, which any one may verity for himself, is that the world contains not more than sixty-three 'ten-million units of the eighth order of numbers' sor, as we should pur it, 10° References to lost works of Archimedes indicate that he had also discovered a way of finding the square root of nonsquare numbers (9) On Plane Equilibriums applies geometry to mechanics, studies the center of gravity of various hodis, configurations, and achieves the oldest extant form a ation of scientific statics. (10) On Floating Bodies founds livid-islatics by acrising at mathematical formulas for the position of equilibrium of a floating tody. The work begins with the then start, ng thesis that the surface of any liquid leady at rest and in equilibrium is spherical, and that the sphere has the same center as the earth.

Perhaps Archamedes was led to the study of hydrostatics by an incident almost as famous as Newton's apple. King Hieron had go en to a Syracusan Cellini some geld to be formed into a crown. When the crown was delivered it weighted as much as the gold, but some doubt arose whether the arrise had made up part of the weight by using silver, keeping the saved gold for houself. Theren turned over to Archanedes his suspicion and the crown, presumable supulating that the one should be resolved without injuring the other. For weeks Archimedes puzzled over the problem. One day, as he stepped into a tub at the public baths, he noticed that the water overflowed according to the depth of his immersion, and that his body appeared to weigh or press downward less, the more it was submerged, I lis curious mind, exploring and utilizing every experience, suddenly formulated the 'principle of Archimedes"-that a floating looks loses in weight an amount equal to the weight of the water which it displaces. Surmising that a submerged body would displace water according to its volume, and perceiving that this principle offered a test for the crown, Archimedes (if we may believe the stand Vitruvius) dashed our naked into the street and

rushed to his dwelling, crying out "Eureka" eureka"—I have found it! I have found it! Home, he soon discovered that a given weight of silver, since it had more volume per weight than gold, displaced more water, when immersed, than an equal weight of gold. He observed also that the submerged crown displaced notre water than a quantity of gold equaling the crown in weight. He concluded that the crown had been alloyed with some metal less dense than gold. By replacing gold with silver in the gold weight which he was using for comparison, until the compound displaced as much water as the crown. Archibodes was alle to say just how much silver had been used in the crown, and bow much gold had been stolen.

I hat he had sat shed the curios ty of the King did not mean so much to han as that he had discovered the law of floating bodies, and a method for measuring specific gravity. He made a planetarium representing the sun, the earth, the moon, and the five pomets then known (Saturn, Jugiter, Mars, Venus, and Mercury), and so arranging their that by turning a crank one could set all these bodies in motions differing in direction and speed," but he probably agreed with Plato that the laws that govern the movements of the heavens are more beaut ful than the stars." In a list treatise partly preserved in summaries. Archimedes so accurately formulated the laws of the lever and the balance that no advance was made a pon his work until A.D. + 686 "Commensurable magnitudes," said Proposition VI, "will fullance at distances inversely propertional to their gravities" a useful truth whose but any simplification of complex relationships moves the soul of a scientist as the Hernies of Prayiteles moves the artist. Almost intoxicated with the smon of power which he saw in the lever and the polley. Archimedes announced that if he had a fixed folcrom to work with he could move anything "Pa bo kar tan gan kino," he is reported to have said, in the Dorie dialect of Syracuse. Towe me a place to stand on and I will move the earth " Hieron challenged him to do as well as say, and pointed to the difficulty which his men were experiencing in beaching a large ship in the royal fleet. Archinedes arranged a series of eogs and pul cys in such wise that he alone, string at one end of the mechanism, was able to draw the fully loaded vessel out of the water onto the land "

Delighted with this demonstration, the King asked Archimedes to design some engines of war. It was characteristic of the two men that Archimedes,

[&]quot;Once have the apparatus we occurred for read marketed at its construction of White Course quied the poor." In writes, it was a trait to that the market is make a many recommendation I be supposed by I represented on the way and agree with the number of days it was belieful in in the sky. Thus the same cultipse of the sun supposed on the globe in would happen in actuality."

having designed them, forgot them, and that Hieron, loving peace, never used them. Archamedes, says Plutaren,

possesse I so high a spirit, so profound a soul, and such treatures of scientific knowledge, that though these inventions but now obtained for him the renown of more than human sugarity, he vet would not deign to leave I chind him any writing on such subjects, I or, repudating as sould and ignoble. The every sort of art that lends used to mere use and profit, he placed his whole affection and as but on in those purer speculations where there can be no reterence to the traiger needs of life-strucks whose superior ty to all others is unquestioned, and in which the only donot can be whether the beauty and grandeer of the subjects examine a, or the precision and cogency of the methods and means of proof, must deserve our admiration."

But when Hieron was dead Syracuse became embroiled with Rome, and the doughty Marcollus assauled it by land and sea. I hough Archimedes was now (212) 2 man of seventy-five, he superintended the detense on hoth froms. Behind if e-wais that protected the harbor he set up catapults able to hurl heavy stones to a considerable distance, their run of procecules was so devisiting that Marcellas retreated this he could advance by night. But when the slups were seen near the shore the sai ors were harassed by bown on who s tot at them through the holes that Archandes' aides had pierced in the war. Mercever, the inventor lad arranged wathin the walls great cranes which, when the Rom in vessels came within reach, were turned by cranks and pulleys so as to drop upon the shaps heavy weights of stone or lead that sank menty of them. Other cranes, arned with gigantic books, grasped vessels, afted them into the air, dashed them against the rocks, or planged them end-foremost into the sea." Marcell is withdrew bis fleet, and put his hopes in an atrack by land. But Archimedes bomburded the to sups with large stones thrown by catapults to such effect that the Romans fled saving that they were being of posed by gods, and they refused to idvance again." "Such a great and it arvelous thing," constricts Posybias, "does the genius of one man show uself to be when properly applied. The Romans, strong both by sea and by land, had every hope of capturing the town at once if one old man of Syracuse were removed, as long as he was present they did not centure to attack ""

Abandoning the idea of taking Syrucuse by storm, Marcellus resigned

[&]quot;The ran is that earliest and not quare reliable authority for the sairy that Archivedes set Roman in the on fire by concentrating the sun's rays upon them through the use of great concert nurrous."

hunself to a slow blockade. After a siege of eight months the starying city surrendered. In the slaughter and pillage that followed Marcellus gave orders that Archimedes should not be in ured. During the sack a Roman sold or came upon an aged Syracusan absorbed in studying if onces that he had traced in the sand. The Roman communited has to present himself at once to Marcellus. Archimedes refused to go until he had worked out his problem, he "earnestly besought the soldier," says Plurarch "to wait a little while, that he might not leave what he was at work their moconclusive and in perfect, but the soldier, nothing moved by this entre its instantly killed him " When Marcethis heard of it he mourned, and did everything in his power to console the relatives of the dead man.' The Roman general erected to his memory a handsonic tomb, on which was engraved, in accordance with the mathematician's expressed wish, a sphere within a cylinder, to have found formulas for the area and volume of these figures was, in Archimedes' view, the supreme achievement of his life. He was not far wrong, for to add one sign heant proposition to geometry is of greater value to humanity than to be sege or defend a city. We must rank Archimedes with Newton, and ereda from with "a sum of mathematical achievement unsurpassed by any one man in the world's lustory."*

But for the abundance and cheapness of slaves Archimedes might have been the head of a veritable industrial Revolution. A treatise on Mechanical Problems wrongly attributed to Atistotle, and a Treatise on Weights wrongly averibed to buchd, had laid down certain elementary principles of statics and dynamics a century before Archinedes Strato of Lampsacus, who succeeded Incophrasias as head of the Lycoum, turned his detertrimstic material sii to physics, and (shout \$85) formulated the doctrine that "nature abhers a vacuum."" When he added that "a vacanin can be created by artificial means," he opened the way to a thousand inventions. Cresions of Alexandria (ea. 206) studied the physics of siphons (which had been used in I gypt as far back as 1500 B C), and developed the force pump, the hydraulic organ, and the hydraulic clock. Archimedes probably improved and unwittingly gave his name to- the ancient I gyptian water screw, which literally made water flow upbil? Philon of Byzantium, about 150, invented preumatic machines, and various engines of war." The steam engine of Heron of Alexandria, which came after the Roman conquest of Greece, brought this period of mechanical development to a climax and close. The philosophical tradition was too strong, Greek thought went back to theory, and Greek industry contented itself with slaves. The

Greeks were acquainted with the magnet, and the electrical properties of amber, but they saw no industrial possibilities in these curious phenomena. Antiquity unconsciously decided that it was not worth while to be modern.

III. ARISTARCHUS, HIPPARCHUS, ERATOSTHENES

Greek mathematics owed its Helienistic stamulus and blossoming to Laylit, Greek astronomy to Babylon. Alexander's opening of the East led to a res in priori and extension of that trade in ideas which, three centuries earlier, had issisted at the bath of Greek science in Linia. To this fresh contact with Egypt and the Near East we may ascribe the anomaly of Greek science reacting its height in the Holenistic age, when Greek literature and art were in decline.

Anstarchus of Sonios was a bright interregium in the rule of the geocentric theory over Greek astronous. He barned with such real that he stacked almost all its branches, and achieved distinction in many of them." In his only extrust treatise. (In the Siles and Distances of the Sun and the Hoon," there is no har of helpecentricism, on the contrary it assumes that the sun and the moon move in circles about the earth. But Archimedes' Sand Reckaner expectity cred to Anstarchas with the hypothesis that the fixed stars and the sun remain unspoved, the earth revolves about the sun in the circumference of a circle, the san lying in the middle of the orbit"." and Plutarch reports that Cleanthes the Store held that Aristarchus should be indicted for "putting the Hearth of the Universe" (i.e., the earth) "in morion " Selevens of Selevens detended the behovement view, but the opinion of the Creek wenting world decided against it. Arist irches himself. seems to have abundoned his hypothesis when he failed to reconcile it with the supposedly circular novements of the beavenly bodies, for all Greek astronomers took it for granted that these orbits were circular. Perhaps a distaste for bendock moved. Aristarchus to be the Galileo as well as the Conemicus of the ancient world.

It was the mistigation of Hellenstie science that the greatest of Greek astronomers attacked the belocentric theory with arguments that seemed

Apparehousestin ated the volume of the sim as three him field it is over a mill on times that of the earth an even it they seem that to as list with have ast inished Aparagonia or I have as lite valid to list the times as the name at one third that if the earth an even of eight are cent and our rises we from the sun as two over it is a lost four him fred times our issues than the most one processing. The sun and the moon are then element to our eye.

prefutable before Copernicus. Hipparchus of Nicaea (in Bithynia), despite what seems to us an epoch-making blunder, was a scientist of the highest type endlessly currous to know, devotedly patient in research and so carefully accurate in observation and report that annuality called him "the lover of truth ". He touched and adorned nearly every held of intronoms, and fixed its conclusions for seventeen centuries. Only one of his many works remains a commentary on the Phantomena of Fudoxus and Aratus of Soli, but we know him from Claudous Prolemy's Almagest (ca. x p. (40). which is based upon his researches and calculations. Prolein in astronomy." should be called Happarchian. He in proved, probably on Babyloman models, the astrolabes and quadrants that were the chief astronomical pastruments of his time. He invented the method of determinant terrestrial positions by lines of latitude and longitude, and tried to organize the astronomery of the Mediterrangua world to make elservations and measurements that would fix in these terms the location of all unportant cause, political disturbances frustrated the plan until Profesio's more order's age. His mathematical studies of astronomic relations led Hipparel as to form due a table of sines, and thereby to create the science of tron nometry. Eldired, ne doubt, by the cureatorm recerds which had been brought from Bibyhand, he determined with approximate accuracy the length of the solir, lunar, and sidercal years. He reckoned the solar year as 16c1, days names 4 it inutes and 48 seconds - an error of 6 transfer according to current calenlations. His time for a mean lunar in both was 19 days, 12 hours, 44 by mites. and a seconds less than a second away from the accepted figure " He computed with impressive approximation to modern measurements, the synodic periods of the planets, the obliquity of the ecliptic and of the moon's orbit, the apogee of the sun, and the horizontal para as of the moon." He estimated the distance of the moon from the earth as 250 000 miles an error of only five per cent.

Armed with all this knowledge, Hipparchus concluded that the geocentric view better explained the data than did the his pothesis of Amstarchus, the he occentric theory could not stand mathematical analysis except by supposing an elliptical arbit for the earth, and this supposition was so on congenial to Circek thought that even Aristarchus dies not appear to have considered it. If prairings verged upon it by his theory of "eccentrics," which accounted for the apparent arregularities in the orbital velocities of the sun and the moon by suggesting that the centers of the so at an I limit orbits were slightly to one side of the earth. So near did Hipparchus come to being the greatest theorist, as well as the greatest observer, among ancient astronomers.

Watching the sky night after night, Hipparchus was surprised one evening by the appearance of a star where he was sure there had been none before. To cirrity later changes he made, about 129 8 c., a catalogue, a map, and a globe of the heavens, giving the positions of 1080 fixed stars in terms of colostial latitude and longitude—an in mense boon to subsequent students of the sky. Comparing his chart with that which Timochares had made 166 years before. Hipparchus calculated that the stars had shifted their apparent position some two degrees in the interval. On this basis he made the subtlest of his discoveries, the precession of the equinoxes—the slight advance, day by day of the moment when the equinoctial points come to the mendian. He calculated the precession as thirty six seconds per year, the current estimate is fitty.

We have displaced from his chiefful og cal position between Aristarchus and The archas a scholar whose ecumenical enduron won him the nicknames of Pentat an and Beta because he arrained distinction in many fields, and ranked second only to the best in each. Tradition give Eratost lenes of Cyrene exceptional teachers. Zen, the Stole, Arcesilaus the skeppe. Cal-Incremes the poet, I want is the grammarian. By the age of forty his reputation for varied knowledge was a great that Prolony III made hun head of the Mexindran I brary. He wrote a volume of verse, and a listery of councily. He Clean graph a sociality to determine the dates of the major events in Mediterranean list of He wrote mathematical monographs, and der all a size canical method for finding mean proportions in continued protection between two strught lines. He measured the obliquity of the co apric at 23° 51', an error of one balf of one per cent. His greatest achievement was his calculation of the earth's circumference 25 24,661 miles." we compute it at 24.847. Observing that at noon on the summer solstice the sun at Svene shone directly upon the deep surface of a narrow well, and tearning that at the same it offices the slip low of an obelish at Alexandria. some five hundred notes meeth, showed the sun to be as proximately -1 .* away from the zenith as it casared on the meridian of longitude that con-

nected the two cities, he concluded that an arc of 71,2 on the earth's circumference equaled five hundred miles, and that the entire circumference

would equal 360 7 \$ \$ 500, or 14,000 macs.

Having measured the earth, I ratosthenes proceeded to describe it. His Geographica brought regether the reports of Alexander's surveyors, of travelers like Megistheres, voyagers like Nearchis, and explorers like Pytheas of Massalia, who, about 120, hid sailed around Scotland to Notway, and perhaps to the Arctic Carele." I citostheses did not merely denset the physical features of each region, he sought to explain them through the action of water, fire, earthquake, or volcanic emption." He hade the Greeks abandon their provincial division of mail and into Hellenes and barbarrans, men should be divided not paramally but individually, many Greeks, be thought, were scoundrels, many Persons and Hundus were refined, and the Romans had shown a greater aptitude than the Greeks for social order and competent government." He knew little of northern Europe or northern Asia, less of India south of the Ganges, nothing of south Africa, but he was, so far as we know, the first geographer to mention the Chinese, "If," said another significant passage, 'the extent of the Atlantic Ocean were not an obstacle, we might easily pass by sea from Iberia (Spain) to India, keeping in the same parallel.""

IV. THEOPHRASTUS, HEROPHII US, FRASISTRATUS

Zoology never rose again in antiquity to the level that it had reached in Aristotle's History of Annuals. Probably his an agreed division of labor his successor. Theophrastus wrote a classic treatise, The History of Plants, and a more theoretical discussion called The Causes of Plants. Theopheastus loved gardening, and knew every aspect of his subject. In many ways he was more scientific than his master, more careful of his facts, and more orderly in his exposition, a book with tour classification, he said, was as untrustworthy as an unbindled horse. He divided all plants is to trees, bushes, shrubs, and herbs, and distinguished the chief parts of a plant as root, stem, branch, two leaf, flower, and fruit a class heation not improved on rid an 1361" "A plint," he wrote, has the power of germination in all its parts, for it has life in them all. The methods of generation of plants are these spontaneous, from a seed, a root, a piece form off, a branch, a twig, pieces of wood out up small, or troin the trunk itself. " He had no clear idea of sexual reproduction in plants, except in a few species like the fig. tree or the date palin, here he followed the Bahy us and in describing tertiogation and caprification. He discussed the geography all extrabution of plants, their industrial uses, and the cumatic conditions most conductive to their health. He

studied the minutiae of half a thousand species with an accuracy of detail astonobing in an age that rid in microscope. I wently continues before Coothe he recign red that the flower is a metail robosed eaf. He was a naturalist in more way than one stouch receiving the supernatura explanations current in his day for comain corrosine of Lorany. He had all the impositiveness of a scientist, and edition think it beneath his dignity as a philasopher to write monographs on stones, in nearly, weather, winds, wear ness, geometry, astronomy, and the physical theories of the pre-Sociatic Greeks. If there had been no Austone," says Sarton, this period would have been called the time of Theophrastus."

Theophrastus' moth 'book' summarized all that the Greeks knew about the medicinal properties of plants. One passage harted at anesthesia in describing "dittans, a plant especially useful for labor in women people say that either it makes had easy, or it stops the pains." Medicalle progressed rapidly in this age, perhaps because it had to keep page with the novel and in Implying diseases of a conspicy union civilization. The Greek study of Figs plant medical fore stimulated a fresh advance. The Ptoleinies were right essay he pful, they not only permitted the diseases in of animals and cadavers, but turned over some condemned criminals for vivisection." Under these encouragements hum an anatomy became a science, and the absurdance into which Aristotle had fallen were substantially reduced.

Hemphilus of Chalcedon, working at Alexandria about 185, dissected the eye and gave a good account of the retina and the optic nerves. He desected the brain, described the cerebeum, the cerebellium, and the meninges, lett his name in the torcular Her ope a, and restrict the Urain to honor as the seat of thought He understood the role of the nerves, originated their division into sensors and motor, and separated the cramal from the spinal nerves. He distinguished arreries from yours, discerned the function of the arreries as carrying blood from the heart to various parts of the body, and in effect docovered the circulation of the blood a neteen centuries before Harvey." It flowing a suggestion of the Coan physician Pravagoras, he included the taxing of the purse in diagnosis, and used a water clock to measure its frequency. He dissected and described the ovaries, the aterus, the sen inal vesicles, and the prostate gland he studied the fiver and the panereas, and gave to the duodenism the name that it sin bears." "Science and art, wrote Herophilus, "have nothing to show, strength is incapable of effort, wealth is useless, and eloquence is powerless, where there is no heelth. Het

Heroph lus was, so far as we can now judge, the greatest anatomist of antiquity, and I rasistratus was the greatest physiologist. Born in Coos, Erasistratus studied in Athens, and practiced medicine in Atexandria about 208 B.c. He dis-

A confluence of bood senses in the dura mater, or outer mendrane of the brain.

tinguished more carefully than Herophilos between cerebrum and cerebellum, and made experiments on living subjects to study the operation of the brain. He described and explained the working of the epiglottis, the facteal vessels of the mesentery, and the aortic and pulmonary valves of the heart. He had some notion of basal metabolism, for he devised a crude respiration calorimeter. Every organ, said Frasistratus, is connected with the rest of the organism in three ways—by artery, vem, and nerve. He sought to account for all physiological phenomena by natural causes, rejecting any reference to mystical entities. He discarded the humoral theory of Hippocrates, which Herophilus had retained. He conceived the art of medicine as prevention through hygiene rather than as ture through therapy, he opposed the frequent use of drugs and bloodletting, and relied upon diet, bathing, and exercise."

Such men made Alexandria the Vienna of the ancient medical world. But there were great schools of medicine also at Iralles, Miletus, Ephesus, Pergamum, Taras, and Syracuse. Many cities had a muracipal medical service, the physicians so employed received a modest salary, but were honored for making no distinction between rich and poor, free and slave, and for devoting themselves to their work at any time and risk. Apodomius of Miletus fought the plague in near-by islands without reward, when an the doctors of Cos were laid low by an epidenne which they had abored to control, others came to their rescue from neighboring towns. Many public decrees of gratitude were issued to Helicustic physicians; and though ancient jests railed at mercenary incompetence, the great profession kept high that standard of ethics which had come down to it from Hippocrates as its most precious aberitance.

CHAPTER XXIX

The Surrender of Philosophy

THRI I strains merged in Greek philosophy the physical, the metaphysical, and the ethical. The physical culminated in Aristotle, the metaphysical in Plato, the ethical in Zeno of Citium. The physical development ended in the separation of science from philosophy in Arch medes and Hipparchus, the metaphysical ended in the skepticism of Pytrho and the later Academy, the ethical remained until I picureanism and Stoicism were conquered or absorbed by Christianity.

I. THE SKEPTICAL ATTACK

Amid this spread on Hellenstie culture Athens—mother of much of it, mistress of most of it retained her leadership in two realms, the drama and philosophy. The world was not too busy with war and revolutions, new sciences and new rengions, the love of beauty and the quest of gold, to spare some time for the unanswerable but mescapable problems of truth and error, matter and mind, freedom and necessity, nobility and baseness, life and death. From all the cities of the Mediterranean young men made their way, often through a thousand burdships, to study in the halls and gardens where Plato and Acistotle had left atmost living memories.

At the Lycomo the indistricus Theophrastus of Lesbos carried on the empirical tradition. The Peripatetics were scientists and scholars rather than philosophers, they devoted themselves to specialist research in zoology, be tany, hiography, and the history of science, physoophy, literature, and law. In his thirty four years of leadership (322 288) Theophrastus explored many fields, and published four hundred volumes dealing with almost every subject from love to war. His pain phlet "On Marriage" severely handled the female sex, and was severely handled in turn by I pictures' mistress Leontium, who wrote a learned and devastating reply. Nevertheless it is to Theophrastus that Arhenaeus attributes the tender sentiment that "it is through modesty that beauty becomes beautiful." Disigenes Laertius describes him as "a most benevolent man, and very affable", so eloquent that

his original name was forgotten in that which Aristotle gave him, meaning that he spoke like a god, so popular that two thousand students flocked to his fectures, and Menander was among his most faithful followers.' Postenty preserved with especial care his book of Chinacters, not because it created a literary form, but because it sharply satirized the faults that all men ascribe to other men. Here is the Garrulous Man who "begans with a cology of his wife, relates the dream he had the night before, tells dish by dish what he had for supper," and concludes that "we are by no means the men we were" in former times. And here is the Stupid Man who "when he goes to the play, is left at the end fast asleep in an empty house . . after a hearty supper he has to get up in the night, returns only half awake, misses the right door, and is bitten by his neighbor's dog."

One of the few events in Theophrastus' life was the issuance of a state decree (301) requiring the Assembly's approval in the selection of leaders for the philosophical schools. About the same time Agnonides indicted Theophrastus on the old charge of impiery. Theophrastus quietly left Athens; but so many students followed hun that the storekeepers complained of a rumous fall in trade. Within a year the decree was annulled, the indictment was withdrawn, and Theophrastus returned in triumph to preside over the Lycenm almost till his death at eighty-five. "All Athens," we are told, arrended his tuneral. The Periparetic school did not long survive him- science left approvershed Athens for affluent Alexandria, and the Lyceum, which had dedicated itself to research, subsided into a penurious

obscurity.

Meanwhile Speusippus had succeeded Plato, and Xenocrates Speusippus, at the Academy. Aenocrates governed the school for a quarter of a century (339-314), and brought new credit to philosophy by the honorable simplicity of his life. Absorbed in study and teaching, he left the Academy but once a year, to see the Dionysian tragedies; when he appeared, says Laertius, "the turbulent and quarrelsome rabble of the city made way for him to pass." He refused all fees, and became so poor that he was on the verge of being imprisoned for taxes when Demerrius of Phalerum paid his acrears and had him freed. Philip of Macedon said that among the many Atheman ambassadors sent to him Xenocrates was the only one who proved incorruptible. His reputation for virtue annoved Phryme. Pretending that she was being pursued, she took refuge in his house, and seeing that he had but one bed she asked if she might stare it with him. He consented, we are told, out of humane considerations, but he proved so cold to her entreaties and her charms that she fled from his bed and board, and complained to

her friends that she had found a statue instead of a man.' Xenocrates would have no mastress but philosophy.

With his death the irretaphysical strain in Greek thought neared exhaustion in the very grove that had been its shinne. The successors of Plato were mathematicians and moraists, and spent little time on the abstract questions that had once against the Academy. The skeptical challenges of Zeno the Flenic, the subjectivism of Heracleitois, the methodical doubt of Gorgias and Protagoras, the metaphysical agnosticism of Socrates, Aristippus, and Lucleides of Megara resumed control of Greek philosophy, the Age of Reason was over. Every hypothesis had been conceived aired, and forgotten, the inverse had preserved its secret, and men had grown weary of a search in which even the most brilliant it ands had failed. Aristotle had agreed with Plato on only one paint, the poss bitty of acquiring illimate truth. Pytrho voiced the suspicions of his time in suggesting that it was above all on this point that they had both been mistaken.

Pyrrho was born at I liv about 360. He followed Alexander's army to India studied under the Crymnosophists, there, and perhaps learned from them something of the skepticism for which his name became a synonym. Returning to I lis he lived in serene poverty as a teacher of philosophy. He was too modest to write books, but his pup. Timon of Phlins, in a series of Sillot or Sat res, sent Pyrrho's opinions abroad into the world. These opinions were basically three, that certainty is united only e, that the wise man will suspend palgment and will seek transquality rather than truth, and that, since all theories are probably false, one might as well accept the myths and conventions of his time and place. Neither the senses nor reason can give us sure knowledge, the senses distort the object in perceiving it, and reason is merely the sophist servant of desire. Every vellogism begy the question, for its major premise assumes its conclusion. "Every reason has a corresponding reason opposed to it", the same experience may be delightful or unple sant according to c remostance and maid, the same object may seem small or large, ugly or beautiful, the same practice may be moral or immoral according to where and when we live, the same gods are or are not, according to the different nations of mankind everything is opinion, nothing is quite true. It is food on then, to take sides in disputes, or to seek some other place or mode of living, or to envy the future or the past, all desire is dear sion. Even life is an uncertain good, death not a certain evil, one should have no prejudices against either of them. Best of all is a caun acceptance not to reform the world, but to bear with it patiently, not to fever ourselves with progress, but to content ourselves with peace. Pyrrho tried

sincerely to live this half Hindu philosophy. He conformed humbly with the customs and worship of I lis, made no effort to avoid dangers or prolong his life," and died at the age of ninety. His fellow citizens so approved of him that it his honor they exempted philosophers from taxation.

By the irony of time it was the followers of Plato who carried forward this artack upon metaphysics. Arcesilaus, who became head of the "Middle Academy" in 269, transformed Plato's rejection of sense knowledge into a skepticism as complete as Pyrrho's, and probably under Pyrrho's influence" "Nothing is certain," said Arcesilaus, "not even that." When he was told that such a doctrine made life impossible he answered that life had long since learned to manage with probabilities. A century later a still more vigorous skeptic took charge of the "New Academy," and pressed the doctrine of universal doubt to the point of intellectual and moral pibilism. Carneades of Cyrene, coming to Athens like a Greek Abelard about 103, made life better for Chrysippus and his other teachers by arguing with galling subtlets against every doctrine that they taught. As they had undertaken to make him a logician he used to say to them (rurning the tables on Protigoras) "If my reasoning is right, well and good, if it is wrong, give me back my runion fee "When he set up shop for himself he lectured one morning for an opinion, the next morning against it, proving each so well as to destroy both, while his pupils, and even his biographer, sought in vain to discover his real views. He undertook to refute the materialistic realism of the Stores by a Platonic-Kantian critique of sensation and reason. He attacked all concessions as intellectually indefensible. and bade his students be satisfied with probability and the customs of their time Sent to Rome by Athens as one of an embassy (155), he shocked the Senate by speaking one day in defense of justice, and on the ii orrow deriding it as an impracticable dream if Rome wished to practice justice it would have to restore to the nations of the Mediterranean all that it had taken from them by superior force. 'On the third day Cato had the embassy sent home as a danger to public morals. Perhaps Polybius, who was then a bostage with Scipio, heard these addresses or of them, for he speaks with the anger of a practical man against those philosophers

who in the discussions of the Academy have trained themselves in entering readiness of speech. For some of them, in their efforts to paizle the minds of their hearers, resort to such paradoxes, and are so fertile in inventing plansifalities, that they wonder whether or not it is possible for those in Athens to smell eggs roasted in I phesos, and are in doubt whether all the time they are discussing the matter in

the Academy they are not lying in their beds at home and composing this discourse in a dream. . From this excessive love of paradox they have brought all philosophy into disrepute. They have implanted such a passion in the minds of our young men that they never give even a thought to the ethical and pro tical questions that really benefit students of phinosophy, but spend their lives in the vain attempt to invent useless absurdities."

II. THE EPICUREAN ESCAPE

Though he described for many ages the theorist who loses his life in the cobwebs of speculation, Powybius was wrong in supposing that moral problems had lost their fare for the Greek mind. It was precisely the ethical strain that in this period replaced the physical and the metaphysical as the dominant note in plan sophy. Polatical problems were indeed in abevance, for freedom of speech was lurassed by the presence or memory of royal garrasons, and naminal liberry was implicitly un lerstood to depend upon quiescence. The glory of the Athenian state had departed, and philosophy had to face what to Greeke was an upprecedented divorce between politics and ethics. It had to find a way of life at once forgivable to philosophy and compatible with political impotence. Therefore it conceived its problem no langer as one of building a just state, but as that of forming the self-contained and contented individual.

The ethical development now took two opposite directions. One followed the lead of Heracleirus, Socrates, Antisthenes, and Diogenes, and expanded the Cyme into the Store philosophy, the other stemmed from Democritus, leaned neavily on Aristippos, and drew out the Cyrenaic into the I picurcan creed. Both of these philosophical compensations for religious and political decay came from Asia. Storeism from Semitic panthesim, fatalism, and resignation, I picurcanism from the pleasure-loving Greeks of the Asiatic coast.

I picurus was he in at Samos in 341. At twelve he fell in love with philosophy, at numeron he went to Athens and spent a year at the Academy Like Francis Bacon ne preferred Den occitus to Plato and Aristotle, and took from him many bricks for his own construction. From Aristippus he learned the wisdom of pleasure, and from Sociates the pleasure of wisdom, from Pyrrho he took the doctrine of tranquishry, and a ringing word for it ataraxa. He must have watched with interest the career of his contemporary Theodorus

of Cyrene, who preached an unmoralistic atheism so openly in Athens that the Assembly indicted him for impiety"-a lesson that I picurus did not forget Then he returned to Asia and lectured on philosophy at Colombon, Myttlene, and Lampsacus. The Lampsacenes were so impressed with his ideas and his character that they felt qualms of selfishness in keeping him in so remote a city, they raised a fund of eighty minas (\$4000), hought a house and garden on the outskirts of Athens, and presented it to Fpicurus as his school and his home. In 306, aged thirty-five, I picurus took up his residence there, and taught to the Athenians a philosophy that was I picurean m name only. It was a sign of the growing freedom of women that he welcomed them to his lectures, even into the little community that lived about him. He made no districtions of station or race he accepted courtesans as well as matrons, slaves as well as freemen, his favorite pupil was his own slave, Mysis. The courresan Leontium became his mistress as well as his pupil, and found him as jealous a mate as if he had secured her by due process of law. Under his influence she had one child and wrote several books. whose purity of style did not interfere with her morals,"

For the rest I picurus lived in Store simplicity and prudent privacy. His morro was tinhe broass—"are unobtrusively." He took part duntielly in the reagious ritual of the city, but kept his hands clear of politics, and his spirit free from the affairs of the world. He was content with water and a little wine, bread and a little cheese. His rivals and enemies charged that he gorged himself when he could, and became abstennous only when overcaming had ruined his digestion. "But those who speak thus are all wrong," Diogenes Lacritus assures us, and he adds. "There are many witnesses of the unsurpassable kindness of the man to everybody—both his own country, which bonured our with statues, and his friends, who were so numerous that they could not be contained in whole cities." He was devoted to his parents, generous to his brothers, and gentle to his servants, who joined with him in philosophical studies. "His pupils looked upon him, says Seneca, as a god and my men, and after his death their morto was. "Live as though the eye of Epicurus were upon thee,"

Between his lessons and his loves he wrote three hundred books. The asses of Herculaneam preserved for as son e tragments of his central work. On Nature, Diogenes Laerous, the Plutarch of philosophy, handed down three of his letters, and late discoveries have added a few more. Above all, Lucretius enshrined the thought of Epicurus in the greatest of philosophical poems.

Perhaps already conscious that Alexander's conquest was letting loose upon Greece a hundred mystic cults from the East. I picurus begins with the arresting proposition that the aim of philosophy is to free men from tear more than anything else, from the fear of gods. He dislikes religion because, he thinks, it thrives on ignorance promotes it and darkens life with the terror of celestial spies, relentless furies, and endless punishments. The gods exist, says I picurus, and enjoy, in some far-off space among the stars, a screne and deathless life, but they are too sensible to bother with the affairs of so infin resimal a species as mankend. The world is not designed, nor is it guided, by them, how could such divine Epicureans have created so midding a nit verse, so confused a scene of order and disorder, of beauty and surfering?" If this disappoints you, Emeurus adds console yourself with the thought that the gods are too remote to do you any more harm than good. They cannot watch you, they cannot judge you they cannot plange you into bell. As for evil gods, or demons, they are the unhappy fantusies of our dreams.

Having rejected religion, Epicurus goes on to reject metaphysics. We can know nothing of the suprasensual world, reason must confine itself to the experience of the senses, and must accept these as the final test of truth. All the problems that I tooke and I edmira were to debate two the usund years later are here settled with one sentence of knowledge does not come from the senses, where else can it come from? And I the senses are not the ultimate arbiter of fact, how can we find such a enterior in reason, whose data must be taken from the senses?

Nevertheless the senses give us no certain knowledge of the external world, they catch not the of jective thing itself, but only the tiny atoms thrown off by every part of its surface, and leaving upon our senses little replicas of its nature and form. If, therefore, we must have a theory of the world (and really it is not altogether necessary), we had better accept Democritis' view that nothing exists, or can be known to us, or can even be imagined by us, except bothes and space, and that all bod is are composed of indivisible and unchangentile at it is. These atoms have no court, temperature, sound, taste, or smell, such qualities are created by the circustin size, weight, and form, for only by this supposition can we account for the infinite variety of things. It pactures would like to explain the operation of the atoms on purely nicehanical principles, but as he is interested in ethics far more than in cosmology, and is anxious to preserve free will as the source of moral responsibility and the prop of personality, he abandons

Democritus in mad-air, and supposes a kind of spontaneity in the atoms: they swerve a bit from the perpendicular as they fail through space, and so enter into the combinations that make the four elements, and through them the diversity of the objective scene. There are imagineral le worlds, but it is unwise to interest ourselves in them. We may assume that the sun and the moon are about as large as they appear to be, and then we can give our time to the study of man.

Man is a completely natural product. Life probably began by spontaneous generation, and progressed without design through the natural selection of the fittest forms." Mind is only another kind of matter. The soul is a delicate material substance diffused throughout the body. It can feel or act only by means of the body, and dies with the body's death. Despite all this we must accept the testimony of our immediate consciousness that the will is free, else we should be meaningless puppers on the stage of life. It is better to be a slave to the gods of the people than to the Fate of the philoso-

phers."

The real function of philosophy, however, is not to explain the world, since the part can never explain the whole, but to guide us in our quest of happiness. "That which we have in view is not a set of systems and vain opinions, but much rather a life evempt from every kind of disquietide." Over the entrance to the garden of Epicurus was the inviting legend: "Guest, thou shalt be happy here, for here happiness is esteemed the highest good. Virtue, in this philosophy, is not an end in uself, it is only an indispensable means to a happy life." "It is not possible to live pleasantly without aiving prudently, lumorably, and justly not to live prudently, honorably, and justly without living pleasantly." The only certain propositions in philosophy are that pleasure is good, and that pain is bad. Sensual pleasures are in themselves legitimate, and wisdom will find some room for them, since, however, they may have evil effects, they need such discriminating pursuit as only intelligence can give.

When, therefore, we say that pleasure is the chief good we are not speaking of the pleasures of the debauched man, or those that he in sensual en ownent. but we mean the freedom of the body from pain, and of the soul from disturbance. For it is not continued drinkings and revels, or the emoyntem of female society, or feasts of fish or other expensive foods, that make life pleasant, but such sober contemplation as examines the reasons for choice and avoidance, and puts to flight the vain opinions from which arises most of the confusion that troubles the soul.

In the end, then, understanding is not only the highest virtue, it is also the highest happiness, for it avails more than any other faculty in us to avoid pain and grief. Wisdom is the only liberator, it frees us from bondage to the passions, from fear of the gods, and from dread of death, it teaches us how to bear misfortune, and he w to derive a deep and lasting pleasure from the simple goods of life and the quiet pleasures of the mind. Death is not so frightful when we view it into ligently, the suffering it involves may be briefer and slighter than that which we have borne time and again during our lives, it is our foolish fancies of what death may bring that lend to it so much of its terror. And consider how little is needed to a wise content fresh air, the cheapest foods, a modest shelter, a bed, a few books, and a friend. "Everything natural is easily procured, and only the useless is costly " We should not fret our lives out in realizing every desire that comes into our heads. "Desires may be ignored when our fadure to accomplish them will not really cause us pain." Even love, marriage, and parentage are unnecessary, they bring us fitful pleasures, but perennial graef." To accustom ourselves to plain living and simple ways is an almost certain road to health." The wise man does not burn with an bition or hist for fame, he does not envy the good fortune of his enemies, nor even of his friends, he avoids the fevered competition of the city and the turnoil of political strife he seeks the calm of the countryside, and finds the surest and deepest happiness in tranquillity of body and mind. Because he controls his appetites, lives without pretense, and puts aside all fears, the natural "sweetness of life" (bedone) rewards him with the greatest of all goods, which is децсе.

This is a likably honest creed. It is encouraging to find a philosopher who is not afraid of pleasure, and a logic an who has a glood word to say for the senses. There is no subtlety here, and no warm pass on for understanding; on the contrary F picureanism, despite its transmission of the atomic theory, marks a reaction from the brive curiosity that had created Greek science and plulosophy. The profoundest defect of the system is its negativity in thinks of pleasure as freedom from pain, and of wisdom as an escape from the hazards and fullness of life, it provides an excellent design for bachelor-hood, but hardly for a society. I picurus respected the state as a necessary evil, under whose protection he might live unmolested in his garden, but he appears to have cared I tile about national independence, indeed, his school scens to have preferred monarchy to democratey as less method to perse-

cute heresy. an arresting inversion of modern behiefs. Epicurus was ready to accept any government that offered no hindrance to the unobtrusive pursuit of wisdom and companionship. He dedicated to friendship the devotion that earlier generations had given to the state. "Of all the things that wisdom provides for the happiness of the whole life, by far the most important is friendship." The friendships of the Epicureans were proverbial for their permanence, and the letters of the master abound in expressions of ardent affection." His disciples returned this feeling with Greek intensity. Young Colotes, on first hearing I picurus speak, fell on his knees, wept, and hailed him as a god."

For thirty-six years F picurus taught in his garden, preferring a school to a family. In the year 170 he was brought down with the stone. He bore the pains stoically, and on his deathbed found time to think of his friends. "I write to you on this happy day which is the last of my life. The obstruction of my bladder, and the internal pains, have reached the extreme point, but there is marshaled against them the delight of my mind in thinking over our talks together. Take care of Metrodorus' children in a way worthy of your lifelong devotion to me and to philosophy." He willed his property to the school, hoping "that all those who study philosophy may never be in want...so far as our power to prevent it may extend."

He left behind him a long succession of disciples, so loyal to his memory that for centuries they retused to change a word of his teaching. His most famous pupil, Metrodorus of Lampsacus, had already shocked or amused Greece by reducing I picureanism to the proposition that "all good things have reference to the belly "-meaning, perhaps, that all pleasure is physiological, and ultimately visceral. Chrysippus countered by calling the Gastrology of Archestratus "the metropolis of the Epicurean philosophy." Popularly misunderstood, Epicureanism was publicly denounced and privarely accepted in wide circles throughout Hedas. So many Hellenizing Jews adopted it that Apikoros was used by the rabbis as a synonym for apostate." In 173 or 155 two Epicurean philosophers were expelled from Rome on the ground that they were corrupting youth." A century later Cicero asked, "Why are there so many followers of Epicurus?" and Lucretins composed the fullest and finest extant exposition of the Epicurean system. The school had professed adherents until the reign of Constantine, some of them, by their lives, degrading the name of the master to mean "epicure," others faithfully teaching the simple maxims into which he had once condensed his philosophy. "The gods are not to be feared, death cannot be felt, the good can be won, all that we dread can be conquered."

III. THE STOIC COMPROMISE

Since an increasing number of I picurus' followers interpreted him as critisching the partial of personal pleasure, the essential problem of ethics what is the good life. That reached not a sommon but only a new formulation how can the natural epic treation of the individual be reconciled with the stoicism necessary to the group and the race. Those can the members of a society be inspired to or frightened forto, the self-control and self-sacrifice indispensed to cool ective survivals. The old religion could no longer fulfill this to rection, the old city state no longer bifted mentup to self-torgetfulness. I have additioned from religion to philosophy for an answer, they take at philosophy so a divise or considerthem in the crises of life, they asked their philosophy with eworld yew that would give to human existence a permittent meaning and value in the scheme of things, and that would enable them to look without terror upon the certainty of death. Stoicism is the last effort of classical antiquesy to find a natural critic. Zeno tried once in are to accomplish the risk in which Plate had failed.

Zeno was a native of Cirium in Cyprus. The ciry was partly Phoenician, chiefly Greek, Zene is frequently called a Phoenician sometimes an Egyptian, he was almost certainly of mixed Hellense and Semitic parentage." Appolenius of Tyre describes him as thin, tall and dark, his head was bent to one sale, and his legs were weal, Apl rodite, though dephaestus was no last et, would to se surrendered fam to Atlena Have gino distractions, he tay divin, assed wealth as a merchant, viben he first come to athens, we are teld I e had over a thousand talents. According to Diogenes I actions he was slapweeded on the Ame coast, list his fortune, and arrived in others about 314, almost destitute " Sitting down by a bookseler's stall he began to re d'Aenophen's Memorabilia, and was soon fascinated by the the racret of Socrates. "Where are such men to be found today." he asked at sharm on ent Crates, a Cymic philosopher, passed by "Follow that man," the bookseller advised him. Zeno, aged thirty enrolled in Crates' school, and rejoiced in having discovered placesophy. "I made a prosperous voyage," he said "when I was wrecked " Crates was a Theban who had turned over his fortune of three hundred talents to his fellow citizens and had taken up the ascette life of a Cymic mendicant. He denounced the sexual acceeness of his time, and counseled hunger as a cure for love. His paged Hypparchia, having plenty to eat, fell in leve with him, and threatened to kal herself unless her parents gave her to him. They begged Crites to dissuade her, which he tried to do by laying his beggar's wallet at her feet,

saying. "This is all my fortune, think now what you are doing." Undiscouraged, she left her rich home, donned the beggar's garb, and went to live with Crates in free love. Their nuptials, we are informed, were consummated in public, but their lives were models of affection and fidelity."

Zeno was impressed by the stern simplicity of the Cynic life. The followers of Antisthenes had now become the Franciscan monks of antiquity, vowed to poverty and abstinence, sleeting in any natural shelter that they came upon, and hving upon the alms of people too industrious to be saints. Zeno took from the Cymics the outlines of his ethic, and did not conceal his debt. In his first book, The Republic, he was so far under their influence that he espoused an anarchist communism in which there should be no money, no property, no marriage, no religion, and no laws." Recognizing that this utopia and the Cynic regimen offered no practicable program of life, he left Crates and studied for a time with Xenocrates at the Academy. and with Stilpo of Megara. He must have read Heracicatus receptively, for he incorporated into his own thought several Heraclettean ideas—the Divine Fire as the soul of man and of the cosmos, the eternity of law, and the repeared creamon and conflagration of the world. But it was his custom to say that he owed most of all to Socrates, as the fountainhead and ideal of the Store philosophy.

After many years of humble tutelage Zeno at last, in yor, set up his own school by discoursing informally as he walked up and down under the colonnades of the Stoa Poecile, or Pointed Porch. He welcomed poor and rich alike, but discouraged the attendance of young men, feeling that only mature manhood could understand philosophy. When a youth talked too much Zeno informed him that "the reason why we have two cars and only one mouth is that we may hear more and talk less." Antigonus II, when in Athens, attended Zeno's classes, became his admiring friend, sought his advice, seduced him into momentary luxury, and invited him to come and live as his guest in Pella. Zeno excused lumself and sent his pupil Persacus instead. For forty years he taught in the Stoa, and lived a life so consistent with his teachings that "more temperate than Zeno" became a proverh in Greece. Despite his intimacy with Antigonus the Athenian Assembly gave him the "keys to the wals," and voted him a startie and a crown. The de-

cree read.

Whereas Zeno of Catum has passed mony years in our city in the study of philosophy, being in all other respects a good man sur),

^{*} All dates for Zeno are district the sources are communicated. Ze les concludes to 350 for his both and 250 for his death.**

and also exhorting all the young men who have sought his company to the practice of temperance, making his own lite a model of the greatest excellence. It has been resolved by the people to honor Zeno... to present him with a golden crown... and to build him a tomb in the Ceramicus at the public expense."

"He died," says Laertins, "to the following manner," reputedly in his minetieth year. "When he was going out of his school he tripped and broke a toe. Striking the ground with his hand, he repeated a line from the *Niobe*: "I come, why call me so?" And immediately he strangled himself."

His work at the Stoa was carried on by two Asiane Greeks - by Cleanthes of Assus and then by Chrysippus of Soli. Cleanthes was a pugilist who came to Athens with four drachinas, worked as a common laborer, refused public rehef, studied for nineteen years under Zeno, and lived a life of industry and ascetic powerty. Chrysippus was the most learned and prolific of the school, he gave the Stoic doctrine its historic form by expounding it in 750 books, which Dionysius of Halicarnassus held up as models of learned dullness. After him Stoicism spread throughout Helias, and found its greatest expenents in Asia in Panaetias of Rhodes. Zeno of Tarsis, Boethus of Sidon, and Diogenes of Seleucia. Out of the casual tragments that survive from a once volunamous literature we must piece together a composite pierure of the most widespread and influential philosophy in the ancient world.

It was probably Chrysippus who divided the Store system into logic, natural science, and ethics. Zeno and his successors jurided themselves on their contributions to logical theory, but the streams of ink that flowed from them on this subject have left no appreciable residue of enlightenment or use.* The Stores agreed with the I picureans that knowledge arises only out of the senses, and placed the final test of truth in such perceptions as compel the assent of the mind by their vividness or their persistence. Experience, however, need not lead to knowledge, for between sensation and reason lies emotion or passion, which may distort experience into error even as it distorts desire into vice. Reason is the supreme achievement of man, a seed from the Logos Spermatikos, or Seminal Reason, that made and rules the world.

The world itself, like man, is at once completely material and inherently divine. I verything that the senses report to us is material, and only ma-

[•] Facepa in certain additions to term money. For the word logic mast. Zero's pupil Aristo likened logic and to perquesting obsters, who take a great deal of trouble for a latter morsel of most concealed in much shell.

terial things can cause or receive action. Qualities as well as quantities, virtues as well as passions, soul as well as body. God as well as the stars, are material forms or processes, differing in degrees of fineness, but essentially one." On the other hand all matter is dynamic, full of tensions and powers, perpetually engaged in diffusion or concentration, and animated by an internal and eternal energy, heat, or fire. The universe lives through innumerable cycles of expansion and contraction, development and dissolution, periodically it is consumed in a grand conflagration, and slowly it takes form again, then it passes through all its previous history, even in numitest detail, for the chain of causes and effects is an ambreakable circle, an end less rejection. All events and all acts of will are determined, it is as unpossible for anything to happen otherwise than it does as it is for something to come out of nothing, any break in the chain would disrupt the world.

God, in this system, is the beganning, the middle, and the end. The Stores recognized the necessity of religi in as a basis for morality, they looked with a genial colerance upon the popular faith, even upon its demons and its divination, and found allegories) interpretations to bridge the chasm between superstinon and philosophy. They accepted Chaldean astrology as essentially correct, and thought of earthly affairs as in son e mystic and continuous correspondence wata the movements of the stars" one phase of that universal sympathem by which whatever happened to any part affected all the rest. As I preparing not enay an ethic but a theology for Christianity, they conceived the world, law, lite, the som, and destray in terms of God, and defined morality as a willing surrender to the divine will. God. ake man, is living matter, the world is his body, the order and law of the world are his mind and will, the universe is a gigantic organism of which God is the soul, the animating breath, the fertilizing reason, the activating fire " Sometimes the Stores of needed God in impersonal terms, more often they picture him as a Providence designing and guiding the cosmos with supreme intelligence, adjusting all its parts to rational purposes, and making everything redound to the use of vartnous men. Cleanthes identifies him with Zens in a monotheistic hymn worths of Ikhnaton or Isaah.

Thou, O Zeus, art pensed above all gods many are thy names and thine is all power for ever.

The beginning of the world was from thee, and with law thou rulest over all things.

[.] We are relieved to learn that some of the Stokes were not quite certain on this point,

Unto thee may all flesh speak for we are thy offspring,

Therefore will I raise a hymn unto thee, and will ever sing of thy power.

The whole order of the heavens obeyeth thy word as it moveth around the earth-

With little and great lights mixed together how great art thou, King above all for ever!

Nor is anything done upon the earth apart from thee, nor in the firmament, nor in the seas:

Save that which the wacked do by their own folly

But thene is the st. If to set even the erocked straight, what is without fashion is fashioned and the alien akin before thee.

This bast thoa fitted together all things in one, the good with the evil

That thy word should be one in all things, abiding for ever

Let folly be dispersed from our souls, that we may repay thee the honor wherewith those hast honored us:

Singleg praise of thy works for ever as Leconieth the suns of men."

Man is to the universe as interocosm to macrocosm, he too is an organism with a material bedy and a material soul. For whatever moves or influences the tody, or is moved or influenced by the body, must be corporeal. The soul is a fiery breath or procurae diffused through the tody, just as the world soul is diffused through the world. At death the soul survives the body, but only as an impersonal energy. At the final conflagration the soul will be reabsorbed, like Atman into Brahman, into that ocean of energy which is God.

Since man is a part of God or Nature, the problem of ethics can be easily solved goodness is co-operation with God, or Nature, or the Law of the World. It is not the pursuit or enjoyment of pleasure, for such pursuit sub-ordinates reason to passion, often upures the body or the mind, and seldom satisfies us in the end. Happiness can be found only through a rational adulation of our aims and conduct to the purposes and laws of the universe. There is no contradiction between the good of the individual and the good of the cosmos, for the law of well-being in the individual is identical with the law of Nature. If evil comes to the good man it is only temporary, and is not ready evil, if we could understand the whole we should see the good.

belund whatever evil appears in the parts." The wise man will study science only sufficiently to find the law of Nature, and will then adapt his life to that Law. Zen kate physin, to live according to Nature-this is the purpose and sole excuse of science and philosophy. Almost in Newman's words Cleanthes surrenders his will to God's

> Lead me, O God, and thou my Destiny, To that one place which you we, have me fill. I follow gladly Should I strive wall thee, A recream. I needs nust follow still.

The Stoic, therefore, will shim fuxury and complexity, economic or polittical strife, he will content hursest with little, and will accept without complaint the difficulties and disappe imments of afe. He will be indifferent to everything but virtue and vice-to sickness and pain, good or ill repute, freedom or slavery, life or death. He wal suppress all feelings that may obstruct the course or question the wisdom of Nature if his son dies he was not grieve, but will accept hate's decree as in some hidden way the best. He wal seek so complete an apatheia or absence of feeling, that his peace of mind will be secure against all the attacks and vicissitudes of fortune, pity, or love. He will be a hard teacher and a stern administrator. Determinism does not imply indiagence, we most hold ourselves, and others, morally responsible for every action. When Zeno beat his slave for stealing, and the slave, having a tartle learning, said, "But it was fated that I should steal," Zeno answered, "And that I should beat you." The Store looks upon virtue as its own reward, and as an absolute dury or categorical imperative, derived from his participan in in Jismity, and he will console himself. in ausfortune, by ren embering that in following the divine law he becomes an incurnate god." When he is tired of life, and can leave it without muring others, he will have no scruples against suic de Cleanthes, having reached his seventieth year, entered upon a long fast, and then, saying that he would not go back after coming halfway, communed it until he died."

The Store, however, is not unsocial, neither so proud of poverty as the Cyme, nor so enamored of solitude as the I picurean. He accepts marriage and the family as necessary, though he has no praise for romantic love, he

terrice of preventing as from oversleeping."

† Chrompons proposed to must the care of dead relates as to the simplest and quietest burial, at would be stor better he thought, to use their flesh as food."

Wers, said Chrysoppus, are a useful corrective of inverpopulation, and bedbugs do us the

dreams of a propia in which all women will be in common." He accepts the state, even monarchy, he has no fond memories of the city-state, and considers the average man a dangerous simpleton, he prefers the Antigonials to King Mob. In truth he cares little for any government, he wishes that all men might be philosophers, so that laws would be unnecessary, he thinks of perfection not, as Plato and Aristotle did, in terms of the good society, but in terms of the good man. He may take part in political affairs, and will support every move, however modest, toward human freedom and dignity, but he will not fetter his hapt mess to place or power. He may give his life for his country, but he will reject any patriotism that hinders his lovality to all mankind, he is a citizen of the world. Zeno, in whose veins, as we have seen, there probably flowed both Greek and Semue blood, longed like Alexander for a breaking down of racial and national barriers, and his internationalism reflects Alexander's passing unification of the eastern Mediterranean world. Unmately, Zeno and Chrysippus hoped, all those warring states and classes would be replaced by one vast society in which there would be no nations, no classes, no rich or poor, no masters or slaves, in which philosophers would rule without oppression, and all men would be brothers as the children of one God."

Storeism was a noble philosophy, and proved more practicable than a modern cyric would expect. It brought together at the elements of Greek thought in a final effort of the pagin mind to create a system of morals acceptable to the classes that had all indoned the ancient greed, and though it naturally won only a small numerity to its standard, those few were everywhere the best. I ke its Christian counterparts, Calvinism and Puritanism, it produced the strongest characters of its time. Their etically it was a monstrons doctrine of an isolated and patless perfection. Actually it created men of courage, sainthness, and good will like Cato the Younger, I pietetus, and Marcus Aurelias, it influenced Roman jurisprudence in building a law of rangus for non-Rumans, and it belped to hold ancient society together until a new fash came. The Strats lent countenance to superstation, and had an injurious effect upon science, but they saw clearly the basic problem of their age, the collapse of the theological basis of morals and they made an honest attempt to bridge the gap between religion and philosophy. Epicurus won the Greeks, Zeno won the aristocracy of Rome, and to the end of pagan lastory the Stones ruled the Epicureans, as they always will When a new ret gion took form out of the intellectual and moral chaos of the dying Hellenistic world, the way had been prepared for it by a philosophy that acknowledged the necessity of faith, preached an ascetic doctrine of simplicity and self-restraint, and saw ad things in God.

IV. THE RETURN TO RELIGION

The conflict between religion and philosophy had now seen three stages the attack on religion, as in the pre-Socratics, the endeavor to replace religion with a natural ethic, as in Aristotle and I picurus, and the return to religion in the Skepnes and the Stotes—a movement that culminated in Neo-Platonism and Christianity. A like sequence has occurred more than once in history, and may be taking place today. Thales corresponds to Cableo, Democratis to Hobbes, the Sophists to the Encyclopedists, Protagonis to Voltaire, Aristotle to Spencer, I picurus to Anatole France, Pyrrho to Pascal, Arcesilaus to Hume, Carneades to Kant, Zeno to Schopenhauer, Plotinus to Bergson. The chronology resists the anatogy, but the basic line of development is the same.

The age of the great systems gave way to doubt in the ability of reason either to understand the world or to control the impulses of men into order and evaluation. The skepties were such not in the Humian but in the Kantian sense they doubted philosophy at well as dogma, sapped the foundations of materialism, and advised a quiet acceptance of the ancient cult, in Pyrrho, as in Pascal, skepticism led not from but to religion, and Pyrrho lumself ended as the venerated high præst of his city. The Emcurean abandonment of politics for ethics, the flight from the state to the soul, could only represent a moment in the return of the pendulum, and the concentration on individual salvation paved the way for a region that would appeal to the individual rather than to the state. There were many who could not find in life the consolations that had satisfied Epictimis, poverty, misfortune, disease, bereavement, revolution, or war overrook them, and all the counsels of the sage left them empty-souled. Flegesias of Cyrene, though he started like I picurus from the standpoint of the Cyrenaics, concluded that life has in it more pain than pleasure, more grief than joy, and that the only logical outcome of a naturalistic philosophy is suicide . Philosophy, like a produgal daughter, after bright adventures and dark disillusionit citis, gave up the pursuit of truth and the quest of happiness, returned repentant to her mother, religion, and sought again in faith the foundations of hope and the sanctions of charity

[&]quot;He argued the print so eloquently that a wave of suicides rose in Alexandria, and Ptolomy II had to banish him from Egypt."

Stoicism, while seeking to construct a natural ethic for the intellectual classes, sought to preserve the old supernatural aids for the morality of the common man, and, as time went on, gave a more and more religious color to its own metaphysical and ethical thought. Zeno denied any real existence to the popular gods," but a generation later Cleanthes proposed to prosecute Aristarchus for heresy Zeno offered no personal immortality, but Seneca spoke of heavenly bliss in terms almost identical with those of the Eleusinian and Christian faiths." After Zeno Stoicism became a theology rather than a philosophy, and nearly every proposition in it took a theological form. The greater part of the system was composed of arguments about the existence and nature of God, the emanation of the world from God, the reality of Providence, the correspondence of virtue with the divine will, the brotherhood of man under the fatherhood of God, and the final return of the world to God. In this philosophy we find the sense of sin that was to play so stern a role in primitive and in Protestant Christianity, the lofty inelusiveness that as in the new religions welcomed all ruces and ranks, and a celibate ascericism that derived from the Cynics and culminated in a long line of Christian monks. From Zeno of Tarsus to Paul of Tarsus was but a step, which would be taken on the road to Damascus.

Many components of the Stoic creed were Asiatic in origin, some were specifically Semitic. In essentials Stoicism was one elemental phase of the Oriental triumph over Hellenic civilization. Greece had ceased to be

Greece before it was conquered by Rome.

CHAPTER XXX

The Coming of Rome

L. PYRRHUS

"TITHO is so worthless or indolent," Polybias demands to know, "as VV not to wish to understand by what means and under what system of polity the Romans in less than fifty-three years have succeeded in subjecting the whole inhabited world to their sole government -a thing unique in history? Who is so passionately devoted to other studies as to regard anything of greater moment than the acquisition of this knowledge?" It is a permissible inquiry, which may engage us later, but there have been so many conquests since Polybius wrote that we cannot spend much time on any of them. We have tried to show that the essential cause of the Roman conquest of Greece was the disintegration of Greek enviloation from within. No great nation is ever conquered until it has destroyed itself. Deforestation and the abuse of the soil, the depletion of precious metals, the migration of trade coures, the disturbance of economic life by political disorder, the corruption of democracy and the degeneration of dynastics, the decay of morals and patriotism, the decline or deterioration of the population, the replacement of curven armies by mercenary troops, the human and physical wastage of fratricidal war, the gu llotining of ability by morderous revolutions and counterrevolutions-all these had exhausted the resources of Hellas at the very time when the little state on the Tiber, ruled by a ruthless and farseeing anstocracy, was training hardy legicus of landowners, conquering its neighbors and competitors, capturing the food and minerals of the western Mediterranean, and advancing year by year opon the Greek settlements in Italy. These ancient communities, once proud of their wealth, their sages, and their arts, had been impoverished by war, by the depredations of Dionysius I, and by the growth of Rome as a rival center of trade. The name tribes that, centuries before, had been enslaved by the Greeks or pushed back into the hinterland, increased and multiplied while their masters cultivated comfort through infanticide and abortion. Soon the native stocks were contesting the control of southern Iraly. The Greek cines turned to Rome for help, they were helped, and absorbed.

Taras, frightened by the growth of Rome, called to its aid the dashing young king of I parus. In that preturesque and mountainous country, known to us as southern Albania, Greek culture had kept a precarrous footing ever since the Domains had raised a sheine to Jeus at Dode na " In 205 Perrhus, who traced his ancestry to Achilles, became king of the Mol assans, the dominant I pirote tribe. He was handsome and brave, a despotic but popular ruler. His subjects thought that he could cure the spicers by pressing his right toot upon their prostrate backs, nor was any one so poor as to be refused his ministrations." When the Tarentines appealed to him he saw an alluring opportunity the would conquer Rome, the danger in the West, as Alexander had conquered Persia, the danger in the hast, and he would prove his geneal by his contrage. In an he crossed the lonian (Adrianc) Sea with 23,000 infantry, three thousand horse, and twenty elephants, the Greeks had taken elephants as well as myst cism from India. He met the Remans at Heracleia, and wim a "Pyrrhic victors" his losses were so great, and his resources in men and materials were now so small, that when an a de complimented him on his success he created an historic phrase by replying that another such trainiph would ruin han.' The Romans sent Casus Fabricius to treat with him for an exchange of prisoners. At suppor, says Plutarch,

amongst all sorts of things that were documesed of, but more particularly Greece and its philosophers, Cineas [the I pirote diplomat] spoke of I picurus, and explained the opinions his followers hold about the goas and the commonwealth, and the objects of life, placing the chief happiness of man in pleasure, and declaring public affairs is an injury and disturbance of a happy life, removing the gods afar off both from kindness or anger, or any concern for us at al., to a life whomy with at business and flowing in pleasures. Before he had done speaking. 'O Hercules' Fabricias cried out to Pyrrhus, "may Pyrrhus and the Sammtest entertain themselves with opinions as long as they are at war with us."

Impressed by the Romans, and despairing of adequate aid from the Greeks of Itals. Pyrrhus dispatched Lineas to Rome to negotiate peace. The Senate was about to agree when Applies Claudios, blind and dving, had himself carried into the senate house and protested against making peace with a foreign army on Italian soil. Frustrated Pyrrhus to aglic again, won another swieids, victory at Ascolum, and then, hopeless of success against Rome, sailed to Socily with the generous resolve to free it from the Carthaginians. There he drive the Carthaginians back with reckiess heroism, but whether it was that the Sicilian Greeks

† The strongest of Rome's enemies in Italy.

Itazan archeologists in 1929 ancarched at Batrinto the ancient Bathrotom numerous architectural and son-proval remains of Greek and Roman evolutation, including a Greek theater of the third contrary arc.

were too timed to rally to him, or that he governed them as willfully as any tyrant, he received so little support that he had to abandon the island after a three years' compagn, making the prophetic remark, "What a battlefield I am leaving to Carthage and Rome!" Arriving with depleted forces in Italy, he was defeated at Beneventum (275), where for the first time the light armed and mobile cohorts proved their superiority to the unwirldy phalanxes, and thereby wrote a chapter in military lustory." Pyrthus returned to I pirus, says the pathosophical Plutarch,

after he had consumed any years in these wars; and though unsuecessful in his affairs, yet preserved his courage unconquerable among all these mistortunes, and was held, for military experience and personal valor and enterprise, above all the other princes of his time, but what he got by brave actions he lost again by vain hopes, and by new desires of what he had not, kept nothing of what he had."

Pyrrhus went out now to fresh wars, and was killed with a tile by an old woman in Argos. In that same year (272) Taras yielded to Rome.

Eight years later Rome began her century-long struggle against Carrhage for the mastery of the western Mediterranean. After a generation of fighting Carthage ceded to Rome Sardina, Corsica, and the Carthaganian portions of Sauly. In the Second Punce War Syracuse made the mistake of siding with Carthage, whereupon Marceilus starved it into surrender. The victors plandered the city so thoroughly that at never recovered. Marceilus removed to Rome," says Livy, "the ornaments of Syracuse—the statues and pictures in which it abounded... The spous were almost greater than if Carthage itself had been taken." By 210 all Sicily had fallen forfeit to Rome. The island was transformed into a granary for Italy, and relapsed into an agricultural economy in which nearly all the work was done by hope ess slaves. Industries were discouraged, trade was limited, wealth was stuiced off to Rome, and the free population withered away. Sauly disappeared from the lustory of civilization for a thousand years.

IL ROME THE LIBERATOR

At every step the expansion of Rome was aided by the mistakes of her enemies. In the year 130 two Romans were sent to Scodea, capital of Il vria (northern Albania) to reministrate against the attacks of Illyrian praires upon Roman shipping. Queen Teuta, who had been allowed to share the spoils, answered that "it was contrary to the custom of the Illyrian rulers to hinder their subjects from winning boory from the sea." When one envoy threatened was Teuta had hun killed. Pleased with so mex-

pensive an excuse for seizing the Dalmatian coast, Rome dispatched an expedition which reduced II vira to a Roman protectorate a most as easily in 229 B.C. 28 III A.D. 1949. Corey ta (Cortu). I pidamnus (Durazzo), and other Greek settlements became Roman dependencies. Since Greek trade had also softered from Illyman piency, Athens, Cormich, and the two leagues applanded Roma as a deliverer, accepted her ambassadors, and admirred the Romans to patricipation in the Leusman mysteries and the Isthman games.

In 216 Hannibal ann bilated the Reman army at Cannae, and marched up to the gates of Rome. While Rome faced the greatest crisis in the history of the republic, Phiap V. King of Alacedon, signed an alliance with Hannibal and prepared to invide Italy (214). In the conference at Naupactus (213) the Actorian disegrite Agelans appealed for the unity of all Greeks, in this First Maccdonian War, against the rising power in the west.

ft would be best of all if the Greeks never made war upon each other, but regarded at as the highest favor in the grit of the gods could they always speak with one heart and voice, and marching arm in arm like men fording a river, repel barbar an invaders and same in preserving themselves and their cities. . . For it is evident that whether the Carthag mans beat the Romans or the Romans the Carchag mans in this war, it is not in the least likely that the victors we be content with the sovereigns of Italy and Sicry, but they are sure to come here and extend their anitim ox beyond the bounds of justice. Therefore Lamplore voicall to secure courselves against this danger, and Laodress invielf especially to King Philip. For you, Sire, the last security is, instead of exhausting the Greeks and making them an easy prey to the invader, on the contrary to take thought for them as for your own body, and to attend to the safety of every province of Greece as if it were part and parce, of your own domusions.

Philip heard him politely, and became for a moment the idol of Greece. But his treaty with Hannibal, if we may beneve the too patriotic Lovy, specified that in return for Philip's attack upon Italy, Carthage, if successful in the present war, would help Philip to subdue all maintaind Greece to Macedonia. Perhaps because the terms of such an agreement became known to the Greek states, most of them, including Agelaus' Actolian League entered into a pact with Rome against Wheedon, and kept Philip so harassed at home that his invasion of Italy was indefinitely postponed. In 205 Rome signed a treaty with Philip so that she might give all her attention

to Hannibal, and three years later the elder Scipio overwhelmed the Carthan man at Zama. As the last great century of Greek cavilization came to an end Fgypt, Rhodes, and Pergamom appealed to Rome for help against Pinap Rome responded by anviting the Second Macedonian War. Opposed by nearly al. of Greece as well as by Rome, Plump fought with the ferocity of a beast at bay. He used every treachery, stole whatever he found to as purpose, and treated captives with such cruelty that every man in Abydos, when Philip's siege was proving arresiable, killed his wife and children and then himself. In 197 Titus Quanctius Hanuninus, a patrician of the type that made Polybius a pro-Rojian enthusiast, so overwhelmed Philip at Cyaoscephalae that suddenly all Macedonia-indeed, all Greece lay at the mercy of Rome. To the disgust of his Actorian allies (who claimed that they had won the barrle), I ama mus, after exacting severe independes and appropriating a slupload of spoils, allowed the safely weakened Philip to keep his throne, on the ground that Macedonia was needed as a bulwark against the barbarians in the north.

The Roman general had learned Greek at Tarentum (as Rome called Taras), and had ant wit the fascilition of Greek literature, pail sophy, and art. It was apparently his sincere resolve to oberate the Greek city-states from Macedonian domination, and to give them every opportunity to live in freedom and peace. Having with some difficulty convinced the Roman commissioners that this was a wise policy, he went to the Isthanian games at Corner (1961, where all the important Greek world was gathered (each than telling the next, says Polyh us, what the Romans would do now), and announced through a heraid. "The Senate of Rome, and Titus Quinctius the proconsul, having overcome King Ph up and the Macedomans, leave the following people free, with hit garnsons, subject to no tribute, and governed by their own laws the Corinth ins, Phoenins, Locrims, Euboeans, Philipotic Achaeans, Magnesians, Thessadans, and Perrhaelmans" i.e., all thise mainland Greeks wind were net already free. The greater part of the assemblage, unable to credit so imprecedented an act of I bera its , cried out that the ann uncement should be repeated. When the herald read it again, "such a mighty burst of enecong arose," says Polybrus, "that those who listen to the tale today emnor easily conceive what it was." Many doubted the sincerity of the declaration, and looked for a trick behind it, but Flaminimus that day began the removal of Roman troops from Coranth, and by 194 his entire army was back in Italy. Greece hailed him as "Savior and Liberator," and entered happily upon its last days of freedom.

III. ROME THE CONQUEROR

The Aetolians were not satisfied with these arrangements. Some of the cities that Rome had freed had once been under Aetolian domination, and were not now restored to the League. The Second Macedonian War was hardly over when the Aetolians invited Antiochus III to rescue Greece from Rome. Pergamini and Lampsacus, caught between the restless Gauls on the north and the expanding Seleucid power on the south, appealed to Rome for help against Antiochus. The Senare senr its abiest general, Pub ius Scipio Africanus, victor of Zama. With a few legions and the troops of Fumenes II, the Roman generals defeared Antiochus at Magnesia, and turning north ward, drove back the Gauls. The Romans extended their protection over nearly all the Mediterranean coast of Asia, and then returned to Italy Fumenes was grateful, but mainland Greece denounced him as a tranor to Hellas for calong in the barbarous Romans against his fedow Greeks.

For fickle Greece already regretted that she had ever accepted the favors of her rude rescuer from the west. It was observed that though Flamminus and his successors had given Greece freedom, they had taken in payment from any city that had supported Philip or Antiochus or the Actolians -so much booty that the Greeks dreaded another such liberation. For three days, in Flaniminus' triumph, the spoils of his Greeian campaign passed in continuous train before the eves of Rome on the first day arms, armor, and innumerable statues of marble or branze, on the second day 18,000 pounds of saver, 3,774 pounds of gold, and 100,000 silver coins, on the third day 114 coroners." Moreover, the Romans had supported, and now through their representatives continued actively to support, the moneyed classes in Greece against the poorer entirens, and had forbid len all manifestations of class war. The Greeks did not want peace at such a price, they wished to be free to settle their own disputes, and to give play to national territorial ambitions, they could not bear change, essness. Sonn the rival leagues were at odds, and faction ran rife every where. Each city or group laid conflicting claims before the Roman Senate, the Senate dispatched commissions to investigate and adjudiente, the Greeks denounced this interference as vassalage. The chains of foreign control were invisible but real, year after year the Greeks, alt but the rich, felt them more sharply, and prayed for an end to this freedom. The benate began to listen to those of its members who contended that there would never be order or quiet in Greece until Rome took full control.

In 129 Philip V died, and his eldest son Perseus, not without bloodshed,

inherited his throne. Seventeen years of peace had restored the economy of Macedon, and had raised up a fresh generation of youths for the jaws of war. Persons negotiated an amance with Seleutus IV, and married Seleutus' daughter, Rhodes joined the alliance, and sent a great fleet to escort the bride. An Greece repoteed, and saw in Perseus a living hope against the power of Rome. I umenes II, fearful for the independence of Pergamiim, journeyed to Rome and urged the Senate, for its own sike, to destroy Macedon. On his way home he was almost killed in a private quarrel. It suited Rome to interpret the brawl as a plot of Perseus to assessmate the king, and a parmone exchange of diplomane recriminations announced the Third Vacedonian War. Only Epiros and Llying had the courage to help Perseus, the Greek states sent him secret letters of sympathy, but did northing. In 168 Aemilius Paulus an unasted the Macedonian army at Pydna. destroyed seventy. Macedonian cities, hamshed their upper classes to Italy, and quartered the kingd on into four autonomous but tributary republics, among which all trade and intercourse were forbidden. Perseus was imprisoned in Italy, and died of multicamient in two years. Epirus was devastated, and 100,000 h pirots were sold into slavery at a dollar a head." Rhodes, which had played its active part in the war, was punished by the liberation of her possessions on the Asiatic coast, and by the establishment of a competitive and tree port at Delos. The private papers of Perseus were captured, and all Greeks who had offered him aid or comfort were banished or jailed. A thousand of the Achaeun League's most prominent representatives, including Polybius, were deported to Italy, they remained in exile there for sixteen years, doring which seven hundred of them died. The adfluration of Greece for Rame the oberator had never been so intense as was now the Greek harred of Rome the conqueror

The severny of the victors had unwilled results. The weakening of Rhodes ended her policing of the Aegean, and revived a trade-destroying piracy. The removal of so many aristocrars left the field open to radical leadership in the enties of the Achaean League, and the class war enjoyed one of its batterest periods. The non-clung to the protection of Rome, the pion demanded the expulsion both of the rich and of the Roman power. In its the surviving Achaean exists returned from Italy, and joined in the demand for the repudiation of Roman authority in Greece. To weaken the Achaean power Rome sent to Greece a commission that ordered Corinth, Orchomenos, and Argos to secede from the League. The ladies of Corinth replied by emprying pails of refuse upon the heads of the commissioners." In 146 the League voted for a war of liberation, hoping that Rome's cam-

paigns in Spain and Africa would divert her energies and incline her to a complaisant peace. A fever of pairiousin swept the rities of the League Slaves were freed and armed, a moratorium on debts was proclaimed, and land was promised to the poor, while the unhappy rich, trembling between socialism and Rome, rejuctantly contributed their jewelry and their money to the cause of freedom. Athens and Sparta remained aloof, but Bocotta, Locria, and Euboca committed themselves bravely to the war. The republics of Macedonia joined in open revolt against Rome.

The angry Senate sent over an army under Monumus and a fleet under Metessus. Their combined forces overcame all resistance, and in 146 Mummaus captured Connith, the citadel of the League. Whether to destroy a commercial rival in the cast as the younger Scipio was in that year destroying Carrhage in the west, or to give rebillions Greece a lesson after the fashion of Alexander at Thebes, the rich city of merchants and courtesans was put to the flames, all the men were shoughtered, and all the women and children were sold into slavery. Mammuus carried off to Italy whatever wealth could be moved, including the works of art with which the Corinthians had adorned their cities and their homes. Polybius tells how Roman soldiers used world-famous paintings as boards for their games of draughts or dice. The League was dissolved, and its leaders were put to death. Greece and Macedonia were united into one province under a Roman governor. Bocotta, Locras, Coronth, and Luboea were subjected to annual tribute, Athens and Sparts were spared, and were allowed to remain under their own laws. The party of property and order was upheld everywhere, and all attempts to wage war, or make revolutions, or change the constiturion, were prescribed. The turbulent ciries had at last found peace.

Our Greek Heritage

REFK envilvation was not dead, it had yet several centuries of life J before it, and when it died" it bequeathed itself in an incomparable legacy to the nations of Europe and the Near Fast. Every Greek colony poured the clixir of Greek art and thought into the cultural blood of the funterland into Spain and Gaul Firturia and Rome, Egypt and Palestine. Syria and Asia Minor, and along the shores of the Back Sea. Alexandria was the port of reshipment for ideas as well as goods, from the Museum and the Library the works and views of Greek poets, mystics, philosophers, and scientists were scattered through scholars and students into every city of the Mediterranean concourse. Rome took the Greek heritage in its Hellenistic form her playweights adopted Menander and Philemon, her poets imitated the modes, measures, and then es of Alexandrian literature, her arts used Greek craftsmen and Greek forms, her law absorbed the statutes of the Greek cities, and her later imperial organization was modeled upon the Greco-Oriental monarchies. Hel enism, after the Roman conquest of Greece, conquerted Rome even as the Orient was conquering Greece Every extension of Roman power spread the terment of Helleme civilization. The Byzamine Empire wedited Cirick to Asiatic culture, and passed on some part of the Greek inheritance to the Near I ast and the Slavic north The Syrian Christians took up the torch and handed it to the Arabs, who carried it through Africa to Spain. By zantine, Moslem, and Jewish scholars conveyed or translated the Greek masterpieces to Italy, arousing first the philosophy of the Schoolmen and then the fever of the Renaissance. Since that second birth of the European mind the spirit of Greece has seeped so thoroughly anto modern culture that "all civilized nations, in all that concerns the activity of the intellect, are colonies of Helius' today to

If we include in our Hellenic heritage not only what the Greeks in vented but what they adapted from of ler cultures and transmitted by these

^{*}We as arthreams dute this at an and when Constanting to note I Constanting be and Christ in Heading on heating began to replace the page. Greek can be notice exacting Mediterraneam.

t bracesse I knowledge of Egy, a an and Anaric conditions compens extensive modification of Sir He by Maine's classe by wellate. In each he hand forces of nature, nothing moves in this world which is not Greek in its origin."

diverse routes to our own, we shall find that patrimony in almost every phase of modern life. Our handicrafts, the technique of mining, the essentials of engineering, the processes of finance and trade, the organization of labor, the governmental regulation of commerce and industry—all these have come down to us on the stream of history from Reine, and through Rome from Greece. Our democracies and our dictatorships alike go back to Greek exemplars, and though the widened reach of states has evolved a representative system unknown to Hellas, the democratic idea of a government responsible to the governed, of trial by jury, and of civil liberties of thought speech, writing assemblage, and worship, have been profoundly stimulated by Greek history. These things above all list nguished the Greek from the Oriental, and gave him an independence of spirit and enterprise that made linn smile at the obeisances and mercia of the East.

Our sebools and universities, our gymnasiums and stadiants, our athletics and Olympic games, trace their laneige to Greece. The theory of eugenic triating, the conception of self-contaminent and of self-control, the call of health and natural living, the pagan ideal of a shanceless enjoyment of every sense, found their historic formulations in Greece. Christian the dogy and practice (the very words are Greek) stein in large part from the mystery reagions of Greece and I gypt, from I leusinian, Orpine, and Osirian rites, from Greek doctrines of the divine son dying for mankind and rising from the dead, from Greek ritials of religious procession, ceremonal purification, holy sacrifice, and the sacred common meal, from Greek ideas of hell, demons, purgatory, indulgences, and licaven, and from State and Neo-Platonic theories of the Logos, creation, and the final conflagration of the world. Even our superstition is indebted to Greek liogies, witches, curses, others, and unlikely days. And who could understand linguish literature, or one ode of Kents, without some functure of Greek mythology?

Our literature could bardly have existed without the Greek tradition. Our alphabet came from Greece through Cumae and Rome, our language is lattered with Greek words, our science has forged an international language through Greek terms, our grammar and rhetotic, even the punctuation and paragraphing of this page, are Greek inventions. Our literary genres are Greek, the lyric, the ode, the adyl, the novel, the essay, the oration, the biography, the history, and above all the drama, again nearly all the words are Greek. The terms and forms of the modern drama, tragedy, comedy, and pantiminum are Greek, and though I lizabethan tragedy is unique, the comic drama has come down almost unchanged from Menander and Philemon through Plautus and Terence, Ben Jonson and Molière. The Greek dramas themselves are among the richest portions of our inheritance.

Nothing else in Greece seems so foreign to us as its music, and yet modern music (until its return to Africa and the Orient) was derived from medieval chants and dances, and these went back in part to Greece. The oratorio and the opera owe something to the Greek choral dance and drama, and the theory of music, so far as we know, was first explored and expounded by the Greeks from Pythagoras to Atistoxenus. Our debt is least in painting, but in the are of fresco a direct line can be traced from Polygnorus through Alexandria and Pompen, Giorto and Michelangelo, to the arresting inurals of our own day. The forms and much of the technique of modern sculpture are still Greek, for upon no other art has the Hedenic genius stamped itself so despotically. We are only now freeing ourselves from the fascination of Greek architecture, every city in Europe and America has some temple of commerce or finance whose form or columnar fagade came from the shrines of Greek gods. We miss in Greek art the study of character and the portraval of the soul, and its infatuation with physical beauty and health leaves it sess mature than the musculine statuary of I gypt or the profound painting of the Chinese, but the lessons of moderation, purity, and harmony embodied in the sculpture and architecture of the classic age are a precious heirloom for our race.

If Greek civilization seems more akin and "modern" to us now than that of any century before Voltaire, it is because the Hellene loved reason as much as form, and boldly sought to explain all nature in nature's terms. Lie liberation of science from theology, and if e independent develops ent of scientific research, were parts of the heady adventure of the Greek nund. Greek mathematicians laid the foundations of trigonometry and calculus, they began and completed the study of come sections, and they brought three-dimensional geometry to such relative perfection that it remained as they left it until Descartes and Pascal Democritus illuminated the whole area of physics and chemistry with his atomic theory. In a mere aside and holiday from abstract studies Archanedes produced enough new mechanisms to place his name with the highest in the records of invention Aristarches anticipated and perhaps inspired Copernicus,* and Happarchus, through Claudius Proiemy, constructed a system of astronomy which is one of the landmarks in cultural history. I ratosthenes measured the earth and mapped it. Anaxagoras and Empedocles drew the outlines of a theory of evolution. Aristotle and Theophrastus classified the animal and plant kingdums, and almost created the sciences of meteerology, zoology, embryolog), and botany. Hippocrates freed medicine from navsticom and philo-

[&]quot;Copernius knew of Americk of believement has others, for he mentioned it in a paragraph that disopported from man contions of his book."

sophical theory, and ennobled it with an ethical code. Herophilas and Frasstratus raised attatomy and physiology to a point which, except in Galen, I urope would not reach again till the Renaissance. In the work of these men we breathe the quiet air of reason, always uncertain and unsafe, but cleansed of passion and myth. Perhaps, if we had its masterpieces entire, we should rate Greek science as the most signal intellectual achievement of mankind.

But the lover of philosophy will only reluctantly yield to science and art the supreme places in our Creecian heritage. Greek science uself was a child of Greek philosophy of that reckless challenge to legend, that youthful love of anguary, which for centuries united science and philosophy in one adventurous quest. Never had men examined nature so critically and yet so affectionately the Greeks did no dishonor to the world in thinking that it was a cosmos of order and therefore amenable to understanding. They invented logic for the same reason that they made perfect statuary harmony, unity, proportion, form, in their view, provided both the art of logic and the logic of art. Curious of every fact and every theory, they not only established philosophy as a distinct enterprise of the Furopean nund, but they conceived nearly every system and every hypothesis, and left little to be said on any major problem of our life. Realism and nominalism, idealism and materialism, monotheism, pontheism, and atteism, fem nism and communism, the Kantian coroque and the Schopenhauman despair, the primitivism of Reusseau and the momeralism of Nietzsche, the symbosis of Spencer and the psychoanalysis of Freudial, the dreams and wisdom of philosophy are here, in the age and land of its birth. And in Greece men not only talked of philosophy, they hved it the sage, rather than the warrior or the saint, was the punnacle and ideal of Greek life. Through all the centuries from Tholes that exhibitating philosophical bequest has come down to us, inspiring Roman emperors, Christian Fathers, Scholastic theologians, Renaissance hereties, Cambridge Platonists, the rebels of the Inlightenment, and the devotees of philosophy today. At this more ent thousands of eager spirits are reading Plato, perhaps in every country on the earth.

Civilization does not die, it migrates, it changes its habitat and its dress, but it lives on. The decay of one endization, as of one individual, makes room for the growth of another, life sheds the old skin, and surprises death with fresh youth. Creek civilization is alive, it moves in every breath of mind that we breathe, so much of it remains that none of us in one lifetime could absorb it all. We know its defects its insane and priless wars, its stagnant slavery, its subjection of woman, its lack of moral restraint, its

corrupt individualism, its tragic failure to unite liberry with order and peace. But those who cherish freedom, reason, and beauty will not linger over these blemishes. They will hear behind the turmoil of polinical history the voices of Solon and Socrates, of Plato and Furipides, of Pheidias and Praxiteles, of Epicurus and Archimedes, they will be grateful for the existence of such men, and will seek their company across alien centuries. They will think of Greece as the bright morning of that Western civilization which, with all its kindred faults, is our nourishment and our life.

Notes

The full title of a book it given only at the first reference to it. Later references may be filled out by consulting the fillingra if y. In references to modern works a Roman number (in capitals) making its the volume to the Arabic number the page. In references to classical texts the Roman number to send enters an analysis the book or name assume, the Arabic number industes it e section, if e marginal disciplin, or the verse. Where sections are long a subdivision is industed by an Arabic number after a period.

A NOTE ABOUT THE AUTHOR

Will Durant was born in 1885 at North Adams, Mass. He received his education in the Catholic parochial schools of North Adams, Mass., and Kearney, N. J.; at St. Peter's (Jesuit)College, Jersey City; and at Columbia University, New York. For a summer be served as cub reporter on the New York Journal, in 1907; but finding the work too exciting for his temperament he contented himself with teaching Latin, French, English and other subjects at Seton Hall College, South Orange, N. J. (1907-11). He entered the seminary there in 1909, but withdrew in 1011, for reasons which he has described in his book, TRANSITION. He passed from a seminary to the radical circles in New York, and became the teacher of the Ferrer School (1911-13), an experiment in libertarian education. In 1912 be toured Europe at the expense of Alden Freeman, who had befriended him and had undertaken to broaden his borders. In 1913 he gave honself over to graduate studies at Columbia University, specializing in biology under Morgan and Calkins, and in philosophy under Woodbridge and Dewey. He received the Ph.D. degree there in 1917, and taught philosophy at Columbia University for one year. In 1914 he began, in a Presbyterian church at Fourteenth Street and Second Avenue, New York, those lectures on the history of philosophy and literature which prepared him for THE STORY OF PHI-LOSOPHY and THE STORY OF CIVILIZATION; for bis audiences there were mostly workingmen and women, who demanded complete clarity, and some contemporary significance to all historical material considered worthy of study. In 1921 he organized the Labor Temple School, which became one of the most successful of recent experiments in adult education. He retired in 1927 to devote himself to the story of civilazation. He toured Europe again in 1927; went around the world for a study of Egypt, the Near East, India, China, and Japan in 1930; and circled the globe again in 1932 to visit Japan, Manchuria, Siberia, and Russia. These travels went towards making our oriental measurage, the first volume of the story of civilazation, the magisterial work it was. Before embarking on the writing of the second volume, the life of Greece, visiting the famous sites and examining the remains of Hellenic civilization.
